Frost, Douglas V., Waukegan, assignor to Abbott Laboratories, North Chicago, Ill. Therapeutic solutions. 2,407,412; Sept. 10.

Fruehauf Trailer Company, assignee: *See*—
Reid, Frederick M.

Furkert, Ernst A., Chicago, Ill. Heat-treating apparatus. 2,407,230; Sept. 10.

Gale, Richard D. assignee, et al.: *See*—
Dessaur, Murray.

Galstaun, Lionel S., Oakland, assignor to Tide Water Associated Oil Company, San Francisco, Calif. Moisture removal in isomerization processes. 2,407,231; Sept. 10.

Garrett Corporation, The, assignee: *See*—
Chapman, James E.

Gaylord Container Corporation, assignee: *See*—
Williams, B. M.

Gearhart, Roy E., assignor of three-tenths to R. B. McCreary and three-tenths to B. McCreary, Kansas City, Mo. Wrench. 2,407,546; Sept. 10.

Gearhart, Roy E., assignor of three-tenths to B. L. McCreary and three-tenths to R. B. McCreary, Kansas City, Mo. Wrench. 2,407,547; Sept. 10.

Geigy, J. R., A. G., assignee: *See*—
Stammbach, Walter.

Geller, Max, Brooklyn, N. Y. Jointed mannequin doll. 2,407,367; Sept. 10.

General Controls Co., assignee: *See*—
Ray, William R.

General Electric Company, assignee: *See*—
Crever, Frederick E.
D'Alello, Gaetano F.
Hart, Lucas P., Jr.
Martin, Harold M.
Michel, Philip C.
St. Palley, Zoltan O.

General Motors Corporation, assignee: *See*—
Chapman, Frederick W.
Fischer, Albert W.
Kettering, Charles F.
Martin, Edward J., and Grinstead.
Scott, Gifford G.
Wirshing, Ralph J., and Smith.

General Tire & Rubber Company, The, assignee: *See*—
Thiry, Leon F.

Gerhart, Howard L., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Plasticized styrene-maleic resin composition. 2,407,413; Sept. 10.

Giammatteo, Charles: *See*—
Judd, Charles H., and Giammatteo.

Gilbert, Chalmers W., Penn Township, Allegheny County, assignor to The Union Switch & Signal Company, Swissvale, Pa. Impulse actuated timing means. 2,407,232; Sept. 10.

Gillmore, Kenneth B., and G. H. F. Brown, assignors to The De Havilland Aircraft Company Limited, Hatfield, England. Variable pitch propeller. 2,407,414; Sept. 10.

Ginzton, Edward L., Wantagh, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Ultra high frequency attenuator. 2,407,267; Sept. 10.

Goldman, Joseph, New Brunswick, N. J., assignor to Fibre Products Laboratories, Inc. Fibrous structural material and method and apparatus for making same. 2,407,548; Sept. 10.

Goldschmidt, Rudolf, Sheffield, England. Percussion tool. 2,407,604; Sept. 10.

Goodman Manufacturing Company, assignee: *See*—
Eberle, Herman R.

Goodrich, B. F., Company, The, assignee: *See*—
Antonson, John O.
Hollerith, Charles.
Krotz, Alvin S.
Mathes, Roger A.
Mathes, Roger A., and Jones.
Sprigg, Edward A.

Goss, Worth C., Seattle, Wash., assignor to William A. Carlisle, Jr. Calcining coal for production of an activated primary carbon. 2,407,268; Sept. 10.

Graflex, Inc., assignee: *See*—
Hineline, Edson S.

Gray, Allen G., Rocky River, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Electrodeposition of zinc. 2,407,489; Sept. 10.

Graziano, Joseph S., Joliet, Ill. Dispensing package. 2,407,415; Sept. 10.

Greer, John J., Conimicut, and A. Luongo, Wickford, R. I. Insulated wire stripping device. 2,407,233; Sept. 10.

Gregg, Jonas F., assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Surface checking and comparing device. 2,407,490; Sept. 10.

Greider, Harold W.: *See*—
Smith, Marion F., and Greider.

Gries, Otto, New Rochelle, N. Y., assignor to Gries Reproducer Corporation. Buckle and producing the same. 2,407,491; Sept. 10.

Gries Reproducer Corporation, assignee: *See*—
Gries, Otto.

Grinstead, Carl E.: *See*—
Martin, Edward J., and Grinstead.

Gross, George C.: *See*—
Degering, E. F., and Gross.

Guaranty Plastic Caps Limited, assignee: *See*—
Weber, Henryk.

Gudmundson, John E., Brakpan, Transvaal, Union of South Africa. Level or like surveying instrument. 2,407,416; Sept. 10.

Gurwick, Irving, New York, N. Y. Surface coating tissue paper with thermo-responsive resins. 2,407,549; Sept. 10.

Guthrie, Robert G., and J. Chumasero, Chicago, Ill., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electromagnetic product and making the same. 2,407,234; Sept. 10.

H-P-M Development Corporation, assignee: *See*—
Summers, Otto M.

Hall, Larry G., St. Louis, Mo., and Herman G. Boucher, Wood River, Ill., assignors to Shell Development Company, San Francisco, Calif. Production of gasoline. 2,407,492; Sept. 10.

Halstead, Laban R., assignor to Eugene Dietzgen Co., Chicago, Ill. Drafting machine. 2,407,235; Sept. 10.

Halstead, William S., Purchase, N. Y., assignor, by mesne assignments, to Farnsworth Television & Radio Corporation, Fort Wayne, Ind. Communications system. 2,407,417; Sept. 10.

Hammond, John V., Spangler, and D. J. Keenan, Barnesboro, Pa., said Keenan assignor to said Hammond. Blasting unit and short-circuiting device. 2,407,605; Sept. 10.

Handt, Maria M., New York, N. Y. Garment. 2,407,550; Sept. 10.

Hanff, Ludovic, Warwick, R. I. Relay device. 2,407,418; Sept. 10.

Hanford, William E., Easton, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilization of tetrafluoroethylene. 2,407,419; Sept. 10.

Hannant, Theodore N., Cedar Grove, assignor to Specialties Development Corporation, Bloomfield, N. J. Actuator. 2,407,269; Sept. 10.

Harding, M. R., assignee, et al.: *See*—
Burk, Robert.

Harrison, Bertram M., Newton Highlands, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling. 2,407,270; Sept. 10.

Hart, Harold M., Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,407,271; Sept. 10.

Hart, Harold M., Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Method and apparatus for radio ranging. 2,407,272; Sept. 10.

Hart, Lucas P., Jr., Pittsfield, Mass., assignor to General Electric Company. Electric apparatus. 2,407,493; Sept. 10.

Hart, Robert W., Lynn, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Method and means for distance and direction finding. 2,407,273; Sept. 10.

Hartley, Ralph V. L., and A. L. Samuel, Summit, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ultra-high frequency electronic device. 2,407,274; Sept. 10.

Hartmann, Hans, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. High voltage transformer. 2,407,420; Sept. 10.

Hartvigsen, Harman, Scotch Plains, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Low temperature process of polymerizing iso-olefinic material. 2,407,494; Sept. 10.

Hays, Robert F., Jr., Syosset, N. Y., assignor to Sperry Gyroscope Company, Inc. Radio scanning apparatus. 2,407,275; Sept. 10.

Hazeltine Research, Inc., assignee: *See*—
Johnson, John K., and Wheeler.

Heiney, John W., Allentown, Pa., assignor to Mack Manufacturing Corporation, New York, N. Y. Rubber spring mounting. 2,407,236; Sept. 10.

Hendel, Joseph A., and M. J. Stupelli, New York, N. Y. Shock absorber for hydraulic systems. 2,407,276; Sept. 10.

Henjum, Gerald J., Hollywood, assignor of one-third to A. H. Farness, North Hollywood, and one-third to C. H. Sherer, Los Angeles, Calif. Development and layout instrument. 2,407,368; Sept. 10.

Henson, Walter A.: *See*—
Wenck, Peter R., and Henson.

Hercules Powder Company, assignee: *See*—
Borglin, Joseph N.

Herold, Walter F., Easton, assignor to The Bassick Company, Bridgeport, Conn. Floor-cleaning implement. 2,407,421; Sept. 10.

Heron, Sam D., Detroit, Mich., assignor to Ethyl Corporation, New York, N. Y. Making lead alkyls. 2,407,551; Sept. 10.

Herring, George B., assignee: *See*—
Lewis, Henry M.

Heynisch, Paul, Zug, Switzerland, assignor to Landis & Gyr, A. G. Mean-value indicator with excess counter. 2,407,369; Sept. 10.

High, Le Roy B., and G. C. T. Lindh, assignors to The Udylite Corporation, Detroit, Mich. Method and apparatus for forming thermoplastic inner soles. 2,407,495; Sept. 10.

Hineline, Edson S., assignor to Graflex, Inc., Rochester, N. Y. Motor-driven curtain-shutter and release mechanism for photographic cameras. 2,407,277; Sept. 10.

Hobart, Franklin G., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Engine valve mounting. 2,407,422; Sept. 10.

Hodges, Arthur J., Washington, D. C. Method of and apparatus for testing the hardness of materials. 2,407,278; Sept. 10.

Hoe, R., & Co., Inc., assignee: *See*—
Albrecht, Alexander J.

Hoesel, Anthony F., Chicago, Ill. Pipe thread gasket. 2,407,552; Sept. 10.

Hoesel, Anthony F., Chicago, Ill. Internal-combustion engine. 2,407,606; Sept. 10.

Hoesel, Anthony F., assignor to Flow Controls, Incorporated, Chicago, Ill. Pipe thread gasket. 2,407,553; Sept. 10.

Hoffmann, Norma, Bearings Corporation, assignee: *See*— Smith, Charles H., and Longman.

Hollerith, Charles, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Wheel structure. 2,407,423; Sept. 10.

Hollingsworth, R. Lee, Riverhead, N. Y., assignor to Radio Corporation, of America. Electron capacity and electron capacity modulator. 2,407,424; Sept. 10.

Horn, Charles L., assignee: *See*— Reed, Cortes F.

Horning, Francis and H., Galion, Ohio. Material handling attachment for tractors. 2,407,425; Sept. 10.

Horning, Howard: *See*— Horning, Francis and H.

Hughey, Howard G., Fanwood, N. J., assignor to Air Reduction Company, Incorporated. Flame hardening torch. 2,407,370; Sept. 10.

Hull, David C., and J. R. Snodgrass, Kingport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of neutral esters of phosphoric acid. 2,407,279; Sept. 10.

Hyman, Mark, Jr., assignor to Polaroid Corporation, Cambridge, Mass. Mold for use in the manufacture of optical elements. 2,407,280; Sept. 10.

Imperial Chemical Industries Limited, assignee: *See*— Rogers, Maurice A. T. Shakesby, Leonard, and Smith. Williams, Vernon H., and Wright. Wright, Harold R., and Taylor.

Industrial Patents Corporation, assignee: *See*— Phelps, Guy W., and Black. Vinsant, Granville F.

Ingersoll-Rand Company, assignee: *See*— Doyle, Frank B.

Interchemical Corporation, assignee: *See*— Wickwire, Arthur M., Jr.

International Plastic Harmonica Corporation, assignee: *See*— Magnus, Finn H.

Isserstedt, Siegfreid G., Toronto, Ontario, Canada. Blind. 2,407,554; Sept. 10.

Jack & Heintz Precision Industries, Inc., assignee: *See*— Gregg, Jonas F.

Jahnig, Charles E., Roselle, N. J., assignor to Standard Oil Development Company. Conversion of hydrocarbon oils. 2,407,371; Sept. 10.

Jandasek, Joseph, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid transmission. 2,407,496; Sept. 10.

Jandasek, Joseph, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid transmission. 2,407,497; Sept. 10.

Jarman, Gordon N.: *See*— Wearn, Richard B., and Jarman.

Jasco, Inc., assignee: *See*— Hartvigsen, Harman.

Jodell, Georg E., Prahran, Victoria, assignor to Electrolux Pty. Limited, Sydney, Australia. Kerosene burner for use in refrigerators or in other heat-actuated apparatus. 2,407,426; Sept. 10.

Johansson, Ernest G., Belmont, assignor to Anchor Manufacturing Company, Boston, Mass. Disconnect for electrical terminal blocks. 2,407,372; Sept. 10.

Johns-Manville Corporation, assignee: *See*— Rembert, Ernest W. Smolak, George.

Johnson, Harry H., Brookline, Mass. Shoe. 2,407,498; Sept. 10.

Johnson, John K., Deerfield, assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. System for indicating mechanical motion. 2,407,282; Sept. 10.

Johnson, John K., Deerfield, Ill., and H. A. Wheeler, Great Neck, N. Y., assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Radiated-signal direction finder. 2,407,281; Sept. 10.

Johnson, Victor S., assignee: *See*— White, Sidney Y.

Jones, James A., Fayetteville, Ark. Self-locking wedge. 2,407,427; Sept. 10.

Jones, Paul C.: *See*— Mathes, Roger A., and Jones.

Jones, Peter: *See*— Walton, George H., Quayle, and Jones.

Joyce, Robert M., Jr.: *See*— Dietrich, Melvin A., and Joyce.

Judd, Charles H., and C. Glammatteo, assignors to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,407,608; Sept. 10.

Judd, Charles H., and C. Glammatteo, assignors to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,407,609; Sept. 10.

Kammer, George S., Bradford, England. Fuel injection in internal-combustion engine. 2,407,610; Sept. 10.

Kearby, Kenneth K., Elizabeth, N. J., assignor to Standard Oil Development Company. Dehydrogenation of hydrocarbons. 2,407,373; Sept. 10.

Keema, Alexander W.: *See*— Walley, Herbert H., Jr., and Keema.

Keenan, Dennis J., assignee: *See*— Hammond, John V., and Keenan.

Keiser, David H., Jr., West Lawn, Pa. Shears. 2,407,237; Sept. 10.

Kelhoffer, Florence, Brooklyn, N. Y. Mechanotherapeutic equipment. 2,407,283; Sept. 10.

Kelsey-Hayes Wheel Company, assignee: *See*— Forbes, Joseph A.

Kennedy, Walter W., assignor to Barber-Colman Company, Rockford, Ill. Air distribution outlet. 2,407,284; Sept. 10.

Kettering, Charles F., assignor to General Motors Corporation, Detroit, Mich. Automatic control. 2,407,555; Sept. 10.

Kinetic Chemicals, Inc., assignee: *See*— Benning, Anthony F., and Park.

King, Jesse J., Dayton, Ohio. Seal for running shafts. 2,407,285; Sept. 10.

Kinkead, Fullerton S., deceased, New York, by R. S. Kinkead, administratrix, Trudau, and G. A. Locke, Glenwood Landing, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Communication system. 2,407,286; Sept. 10.

Kinkead, Rita S., administratrix: *See*— Kinkead, Fullerton S., and Locke.

Klausner, Bertha: *See*— Krasner, Harold E., and Klausner.

Kleimack, Joseph J., Bayonne, and G. L. Pearson, Towaco, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Resistor device. 2,407,288; Sept. 10.

Kleven, Samuel L., Augusta, Maine. Shoe. 2,407,556; Sept. 10.

Klossner, Stanley H., assignor to Divine Brothers Company, Incorporated, Utica, N. Y. Measured tension control for abrasive belt systems. 2,407,490; Sept. 10.

Kneisley Electric Company, assignee: *See*— Kneisley, Richard F.

Kneisley, Richard F., assignor to Kneisley Electric Company, Toledo, Ohio. Article surfacing machine. 2,407,557; Sept. 10.

Kollenberg, Conrad H., Goose Creek, Tex., assignor to Standard Oil Development Company. Catalytic cracking process. 2,407,374; Sept. 10.

Kolter, Robert M., Decatur, Ind. Wire enameling die. 2,407,337; Sept. 10.

Krasner, Harold E., and B. Klausner, New York, N. Y. Container for explosive shells. 2,407,500; Sept. 10.

Kraus, Charles E., Rochester, N. Y. Cutter. 2,407,501; Sept. 10.

Kraus, Charles E., Rochester, N. Y. Milling cutter. 2,407,502; Sept. 10.

Kreiling, August H., assignor to Eugene Dietzgen Co., Chicago, Ill. Slide rule indicator. 2,407,338; Sept. 10.

Kress, Willard C., assignor to J. H. Williams & Co., Buffalo, N. Y. Ratchet for socket wrenches. 2,407,558; Sept. 10.

Kretchman, Stanley, Chicago, Ill. Cover removing tool. 2,407,428; Sept. 10.

Krotz, Alvin S., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Making resilient bushings. 2,407,559; Sept. 10.

Kuhn, Richard, and T. Wieland, Heidelberg, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Manufacture of the optically active forms of pantothenic acid. 2,407,560; Sept. 10.

Kuttner, Julius, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Wrist pin assembly. 2,407,429; Sept. 10.

Labin, Emile, New York, N. Y., assignor to Federal Telephone & Radio Corporation. Course beacon. 2,407,287; Sept. 10.

La Brie, Ludger E., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,407,289; Sept. 10.

Land, Edwin H., assignor to Polaroid Corporation, Cambridge, Mass. Range finder. 2,407,306; Sept. 10.

Landis & Gyr, A. G., assignee: *See*— Heynisch, Paul.

Langstroth, Hall: *See*— Lundy, Clarence C., and Langstroth.

Langstroth, Hall, Hempstead, and F. C. Wallace, Flushing, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Scanning device. 2,407,305; Sept. 10.

Leadbeater, Luther: *See*— Pyne, Kenneth E. and C. D., and Leadbeater.

Lebus, William A., assignor to Prismacolor, Inc., Chicago, Ill. Film gate release. 2,407,339; Sept. 10.

Lewis, Henry M., assignor of fifty per cent to G. B. Herring, Canton, Miss. Starter adapter terminal. 2,407,611; Sept. 10.

Linch, Adrian L.: *See*— Downing, F. B., and Linch.

Linch, Adrian L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetra alkyl leads. 2,407,262; Sept. 10.

Linch, Adrian L., assignor to E. I. du Pont de Nemours & Company, Wilmington Del. Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetraalkyl leads. 2,407,263; Sept. 10.

Linch, Adrian L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetraalkyl leads. 2,407,307; Sept. 10.

Lincoln, Rush A., Tarentum, Pa., assignor to Allegheny Ludlum Steel Corporation. Hollow valve for internal-combustion engine. 2,407,561; Sept. 10.

Lindh, Gunnar C. T.: *See*— High, Le Roy B., and Lindh.

Line Material Company, assignee: *See*— Woolfolk, Arthur R.

Littler, Clarence A.: *See*— Flenner, Alfred L., and Littler.

Locke, George A.: *See*— Kinkead, Fullerton S., and Locke.

Lofgren, Elnar G., Minneapolis, Minn. Induction heater. 2,407,562; Sept. 10.

Longman, Ernest G.: *See*— Smith, Charles H., and Longman.

Lorenzen, Robert, and F. Spiegel, New York, N. Y. Method and apparatus for secret signaling. 2,407,308; Sept. 10.

Losee, Kathryn A.: *See*— Lott, William A., Bergeim, and Losee.

Lott, William A., Maplewood, F. H. Bergeim, Highland Park, and K. A. Losee, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Chemotherapeutic agents of the sulphonamide type. 2,407,309; Sept. 10.

Luckock, Wayne J.: *See*— Bielski, Alex J., and Luckock.

Lundal, Ingie J., and R. P. Robichaux, assignors, by mesne assignments, of one-half to Cherry-Burrell Corporation, Chicago, and one-half to Sugar Creek Creamery Company, Danville, Ill. Making butter and butter oil concentrate. 2,407,612; Sept. 10.

Lundy, Clarence C., Floral Park, N. Y., and H. Langstroth, Greenwich, Conn., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Scanning device. 2,407,310; Sept. 10.

Luongo, Albert: *See*— Greer, John J., and Luongo.

Lynch, Charles S., Plainfield, and H. G. Codet, Mountainside, N. J., assignors to Standard Oil Development Company. Chemical process. 2,407,311; Sept. 10.

Mack Manufacturing Corporation, assignee: *See*— Heiney, John W.

MacRae, Walter S., Castle Hot Springs, Ariz. Truck unloading apparatus. 2,407,430; Sept. 10.

Madsen, Stanley, Princeton, N. J. Picture frame or the like. 2,407,431; Sept. 10.

Magerkurth, Wilhelm A., and H. E. Buecken, assignors to National Rubber Machinery Company, Akron, Ohio. Apparatus for extruding thermoplastic materials. 2,407,503; Sept. 10.

Magnus, Finn H., West Caldwell, assignor to International Plastic Harmonica Corporation, Newark, N. J. Plastic harmonica. 2,407,312; Sept. 10.

Malhiot, Clarence J., Oak Park, assignor to F. B. Redington Co., Chicago, Ill. Wrapping machine. 2,407,313; Sept. 10.

Mallett, John D.: *See*— Micher, Walter W., and Mallett.

Manewich, Anthony P., Detroit, Mich. Traffic signaling system. 2,407,432; Sept. 10.

Manitoba Bridge & Iron Works Limited, assignee: *See*— McCulloch, John A., and Slasor.

Mann, Miles H., Miami, Fla., assignor to Underwood Corporation. Typewriting machine. 2,407,433; Sept. 10.

Mann, Reginald W., Monkseaton, and R. C. Wiles, Newcastle-on-Tyne, England, assignors to Victor Products (Wallsend), Limited. Compressed air-driven drill. 2,407,613; Sept. 10.

Marhoefer, Laurence J., Haddon Heights, assignor to Vidal Corporation, Camden, N. J. Glider. 2,407,563; Sept. 10.

Markle, Joseph F., Camden, N. J. Can punch and closure. 2,407,434; Sept. 10.

Marlin Firearms Company, The, assignee: *See*— Crowe, John.

Martin, Edward J., Pleasant Ridge, and C. E. Grinstead, assignors to General Motors Corporation, Detroit, Mich. Light meter. 2,407,564; Sept. 10.

Martin, Harold M., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,407,504; Sept. 10.

Martin, Russell, assignor to The Coleman Lamp and Stove Company, Witchita, Kans. Furnace assembly. 2,407,375; Sept. 10.

Mason, Veyne V., Scotch Plains, assignor to Elastic Stop Nut Corporation of America, Union, N. J. Fastening device and manufacture thereof. 2,407,314; Sept. 10.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Liquid medium for ultrasonic compressional wave transmission. 2,407,315; Sept. 10.

Mathes, Roger A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Zinc mercaptide-aminothiazoline reaction product. 2,407,565; Sept. 10.

Mathes, Roger A., Akron, and P. C. Jones, Silver Lake, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Bisdimethylene thiuram polysulphides. 2,407,566; Sept. 10.

Maxwell, Charles S., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Colloidally dispersed dimethylol urea resins. 2,407,376 Sept. 10.

McCarthy, Henry J., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Lamp socket. 2,407,567; Sept. 10.

McCarthy, Louise E., Flushing, N. Y. Maternity garment. 2,407,340; Sept. 10.

McCreary, Byram L., assignee, et al.: *See*— Gearhart, Roy E.

McCreary, Richard B., assignee, et al.: *See*— Gearhart, Roy E.

McCulloch, John A., and N. R. Slasor, assignors to Manitoba Bridge & Iron Works Limited, Winnepeg, Manitoba, Canada. Weigh beam assembly. 2,407,435; Sept. 10.

McKesson, Martha F., assignee: *See*— Bloomheart, John L.

McLaughlin, John R., New Brunswick, N. J., assignor, by mesne assignments, to Tampax Incorporated, New York, N. Y. Automatic cutter. 2,407,316; Sept. 10.

Meltz, Julius B.: *See*— Rubin, Irving, and Meltz.

Mennesson, Marcel L., Neuilly-sur-Seine, France; vested in the Alien Property Custodian. Control device for variable pitch propellers. 2,407,317; Sept. 10.

Meriam, Charles, Cleveland, Ohio, assignor to The Meriam Instrument Company. Manometer. 2,407,568; Sept. 10.

Meriam Instrument Company, The, assignee: *See*— Meriam, Charles.

Merit Engineering, Inc., assignee: *See*— Walley, Herbert H., Jr., and Keema.

Merritt, Glenn W., assignor to The Mining Safety Device Company, Bowerston, Ohio. Car-dumping apparatus. 2,407,569; Sept. 10.

Meyer, George J., Milwaukee, Wis. Vise. 2,407,341; Sept. 10.

Meyer, Max L., Los Angeles, Calif. Tiltable trap chamber measuring dispensing device. 2,407,377; Sept. 10.

Meyerhoefer, Carl E., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y. Motor mounting for retractable lamps. 2,407,570; Sept. 10.

Michel, Philip C., Schenectady, N. Y., assignor to General Electric Company. Electric discharge device circuit. 2407,505; Sept. 10.

Micher, Walter W., Mineola, and J. D. Mallett, Garden City, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. High-frequency apparatus. 2,407,318; Sept. 10.

Milheizler, Joseph M., assignor to H. K. Porter Company, Inc., Pittsburgh, Pa. Engine housing for locomotives or the like. 2,407, 506; Sept. 10.

Miller, Edward G., and R. E. Engberg, assignors, by mesne assignments, to Allied Control Company, Inc., New York, N. Y. Switch. 2,407,378; Sept. 10.

Miller, Kay, assignor to The Atwood Vacuum Machine Company, Rockford, Ill. Two-way clutch. 2,407,319; Sept. 10.

Miller, Milo F., Kansas City, Mo. Intermittent switch. 2,407,571; Sept. 10.

Miller, Ohmer R., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electronic counter. 2,407,320; Sept. 10.

Miller Pottery Engineering Company, assignee: *See*— Miller, William J.

Miller, Robert H., Brisbane, Calif. Glue clamping device. 2,407,436; Sept. 10.

Miller, William J., assignor to Miller Pottery Engineering Company, Swissvale, Pa. Apparatus for producing pottery ware. 2,407,321; Sept. 10.

Mining Safety Device Company, The, assignee: *See*— Merritt, Glenn W.

Minneapolis-Honeywell Regulator Company, assignee: *See*— Guthrie, Robert G., and Chumasero. Wilson, John M.

Minnesota Mining & Manufacturing Co., assignee: *See*— Smith, Fred A.

Mitchell, Luther L., Anniston, Ala. Basket. 2,407,507; Sept. 10.

Montgomery, Robert, and G. W. Schane, assignors to The Budd Company, Philadelphia, Pa. Structure for supporting fuel tank in aircraft wings. 2,407,614; Sept. 10.

Moon, Cecil F., Cricklewood, London, and N. Collinson-Jones, Hatch End, England. Fire resisting coating and impregnating compositions. 2,407,615; Sept. 10.

Morehouse, Walter B., Auburndale, Mass. Combination bactericidal and illuminating lamp. 2,407,379; Sept. 10.

Morris, Rupert C., Berkeley, and E. C. Shokal, Oakland, assignors to Shell Development Company, San Francisco, Calif. Unsaturated bicyclic carbonylic compounds and their preparation. 2,407,508; Sept. 10.

Morrison, David K., Arlington, Va. Differential control device. 2,407,322; Sept. 10.

Moss, Curtis W., Detroit, Mich. Music leaf turner. 2,407,572; Sept. 10.

Mossberg, Harold F., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn. Rear sight for firearms. 2,407,437; Sept. 10.

Mossberg, O. F., & Sons, Inc., assignee: *See*—
Mossberg, Harold F.

Nachman, Joseph, Philadelphia, Pa. Sewing machine. 2,407,342; Sept. 10.

National Rubber Machinery Company, assignee: *See*—
Magerkurth, Wilhelm A., and Buecken.

Nelson, Alex E., Los Angeles, assignor to Douglas Aircraft Comypany, Inc., Santa Monica, Calif. Metal forming machine. 2,407,573; Sept. 10.

Nelson, Bernard C., Norwood, Mass. Machine for treating skins and the like. 2,407,380; Sept. 10.

Newman, Eric P., Clayton, assignor to Automatic Control Corporation, St. Louis, Mo. Burner control. 2,407,438; Sept. 10.

New Wrinkle, Inc., assignee: *See*—
Waldie, William A.

Nicholson, Madison G., Jr., assignee: *See*—
Carlson, Robert W., and Nicholson.

Northern Metal Products Company, assignee: *See*—
Anstedt, Paul.

O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Method and apparatus for receiving radio signals. 2,407,323; Sept. 10.

O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Equisignal radio beacon system. 2,407,324; Sept. 10.

Oetzel, John G., Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill. Circuit controller. 2,407,509; Sept. 10.

Oetzel, John G., Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill. Brake control. 2,407,510; Sept. 10.

Olson, Obie E., Sandwich, Ill. Automotive gas tank cover switch. 2,407,439; Sept. 10.

Osborne, Walter, Glendale, Calif. Piston for internal-combustion engines. 2,407,440; Sept. 10.

Owens-Corning Fiberglas Corporation, assignee: *See*—
Ebaugh, Paul.
Simison, Allen L., and Fletcher.

Painter, John L., Jr., West Newton, Pa. Form to provide air passages in concrete walls. 2,407,441; Sept. 10.

Panes, Isidore, New York, N. Y. Adjustable breast pocket. 2,407,574; Sept. 10.

Park, Joseph D.: *See*—
Benning, Anthony F., and Park.

Parkinson, David B., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Range converter. 2,407,325; Sept. 10.

Parr, Josephus O., Jr., assignor to Olive S. Petty, San Antonio, Tex. Separation of blasting circuit leads. 2,407,442; Sept. 10.

Parthemos, Pete, assignee: *See*—
Stevens, George.

Patterson, Everett M., Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Woven-wire resistance and forming the same 2,407,326; Sept. 10.

Pavelka, Joseph, assignee: *See*—
Becker, Lester O.

Pearson, Gerald L.: *See*—
Kleimack, Joseph J., and Pearson.

Pecher, Charles, Berkeley, Calif., assignor to Research Corporation, New York, N. Y. Transmitting secret intelligence. 2,407,381; Sept. 10.

Peck, William F., Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass. Projection apparatus. 2,407,511; Sept. 10.

Perma-Seal Closure Co., assignee: *See*—
Zesbaugh, Lawrence G.

Peterson, Eric W., Glen Ellyn, assignor to Ditto, Incorporated, Chicago, Ill. Sheet moistening device for duplicating machines. 2,407,443; Sept. 10.

Petty, Olive S., assignee: *See*—
Parr, Josephus O., Jr.

Petzold, Earl E., Burbank, Calif. Machine. 2,407,512; Sept. 10.

Pfingsten, August F., Rock Rapids, Iowa. Tractor operated post driver. 2,407,444; Sept. 10.

Phelps, Guy W., and H. C. Black, assignors to Industrial Patents Corporation, Chicago, Ill. Deodorization. 2,407,616; Sept. 10.

Philco Corporation, assignee: *See*—
Spielman, Sterling C.

Phillips, Dwight M., Fullerton, assignor to Chicksan Tool Company, Brea, Calif. Electrical conducting swing joint. 2,407,445; Sept. 10.

Pitcairn, Harold F., Bryn Athyn, assignor to Autogiro Company of America, Philadelphia, Pa. Aircraft with power driven rotor. 2,407,327; Sept. 10.

Pittsburgh Plate Glass Company, assignee: *See*—
Gerhart, Howard L.
Pollack Maxwell A.

Polaroid Corporation, assignee: *See*—
Hyman, Mark, Jr.
Land, Edwin H.

Pollack, Maxwell A., Austin, Tex., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Unsaturated esters of carbonic acid and polymers thereof. 2,407,446; Sept. 10.

Pollard, Charles E., Detroit, Mich. Fifth wheel mechanism for tractors. 2,407,447; Sept. 10.

Porter, H. K., Company, Inc., assignee: *See*—
Milheizler, Joseph M.

Pounds, Richard T., assignor to The Exact Weight Scale Company, Columbus, Ohio. Tare weight compensating apparatus for weighing scales. 2,407,513; Sept. 10.

Powers, Frank T., Glen Cove, N. Y. Traffic light. 2,407,382; Sept. 10.

Previdi, William T., Englewood, N. J. Garment sleeve. 2,407,383; Sept. 10.

Prismacolor, Inc., assignee: *See*—
Lebus, William A.

Productive Inventions, Inc., assignee: *See*—
Anderson, John W.

Protectoseal Company, The, assignee: *See*—
Dixon, Cletus L.

Purdue Research Foundation, assignee: *See*—
Degering, E. F., and Gross.
Spence, John A., and Degering.

Pursell, John D., St. Louis, Mo. Lithographic plate and making same. 2,407,290; Sept. 10.

Pyne, Clifford D.: *See*—
Pyne, Kenneth E., and C. D., and Leadbeater.

Pyne, Kenneth E. and C. D., West Wickam, and D. L. Leadbeater, Prittlewell, England. Hydraulic pump. 2,407,343; Sept. 10.

Quattlebaum, William M., Jr., Charleston, and W. J. Toussaint, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Making olefines. 2,407,291; Sept. 10.

Quayle, Joshua C.: *See*—
Walton, George H., Quayle, and Jones.

Radio Corporation of America, assignee: *See*—
Charrier, George M.
Compton, Robin D.
Hollingsworth, R. Lee.
Sachtleben, Lawrence T.
Van Ryn, Bernard.

Rainey, James L.: *See*—
Auten, Robert W., and Rainey.

Ramsay, Erskine, Birmingham, Ala. Mining machine. 2,407,448; Sept. 10.

Ramsay, Erskine, Birmingham, Ala. Mine car coupler. 2,407,449; Sept. 10.

Ramsey, Joseph D., Watertown, Mass. Ladder support. 2,407,575; Sept. 10.

Ray, William R., Glendale, Calif., assignor to General Controls Co., Thermoelectric generator. 2,407,517; Sept. 10.

Redington, F. B., Co., assignee: *See*—
Malhiot, Clarence J.

Reed, Cortes F., Anoka, assignor to C. L. Horn, Minneapolis, Minn. Chemical methods and products. 2,407,344; Sept. 10.

Reid, Frederick M., assignor to Fruchauf Trailer Company, Detroit, Mich. Spring suspension. 2,407,345; Sept. 10.

Reilly, Grace M.: *See*—
Reilly, Joe and G. M.

Reilly, Joe and G. M., Elmhurst, Ill. Torque wrench. 2,407,450; Sept. 10.

Reiniger, Haigh, Sebring, Fla. Wing tip gun position. 2,407,451; Sept. 10.

Rembert, Ernest W., Hinsdale, Ill., assignor to Johns-Manville Corporation, New York, N. Y. Manufacture of fibro-cementitious sheets. 2,407,514; Sept. 10.

Research Corporation, assignee: *See*—
Pecher, Charles.

Resinous Products & Chemical Co., The, assignee: *See*—
Auten, Robert W., and Rainey.

Rickenmann, Alfred, Zurich, Switzerland. Measuring and testing device. 2,407,576; Sept. 10.

Rickenmann, Alfred, Zurich, Switzerland. Device for dressing grinding disks. 2,407,577; Sept. 10.

Ritchie, Alexander J., assignor to Electric Boat Company, Bayonne, N. J. Synthetic fog or smoke. 2,407,384; Sept. 10.

Roberts, Dudley, Jr., executor: *See*—
Roberts, Dudley.

Roberts, Dudley, deceased, by D. Roberts, Jr., executor, assignor to Rubatex Products, Inc., New York, N. Y. Self-sealing tank. 2,407,515; Sept. 10.

Roberts, Richard F., Freeport, N. Y. Safety razor. 2,407,516; Sept. 10.

Robichaux, Roy P.: *See*—
Lundal, Ingie J., and Robichaux.

Robinson, Robert, and R. H. Cornforth, Oxford, and T. F. West, London, N. 1., assignors to Stafford Allen and Sons Limited, London, England. Preparation of 6-substituted homologues of indole. 2,407,452; Sept. 10.

Rogers, Maurice A. T., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of new coloring matters. 2,407,346; Sept. 10.

Röhm & Haas Co., assignee: *See*—
Butterbaugh, Darrel J., and Spence.

Rougier, Harry J., Dayton, Ohio. Off-peak hot-water heater. 2,407,453; Sept. 10.

Rubatex Products, Inc., assignee: *See*—
Roberts, Dudley.

Rubin, Irving, Brookline, and J. B. Meltz, Everett, Mass. Collapsible wheeled tray. 2,407,385; Sept. 10.

Sachtleben, Lawrence T., Indianapolis, Ind., assignor to Radio Corporation of America. Objective. 2,407,347; Sept. 10.

St. Palley, Zoltan O., Pittsfield, Mass., assignor to General Electric Company. Electric protective system. 2,407,521; Sept. 10.

Salmon, Reginald D.: *See*—
Thompson, Alfred E., and Salmon.

Salzberg, Paul L., Carrcroft, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Product. 2,407,292; Sept. 10.

Samuel, Arthur L.: *See*—
Hartley, Ralph V. L., and Samuel.

Sartori, Paul, Plymouth, Wis. Curd mixing and kneading machine. 2,407,617; Sept. 10.

Schane, George W.: *See*—
Montgomery, Robert, and Schane.

Schauweker, George H., assignor to American Optical Company, Southbridge, Mass. Eye protection device. 2,407,518; Sept. 10.

Scheeline, Harold W., Elizabeth, N. J., assignor to Standard Oil Development Company. Recovery of secondary olefins from acid extracts. 2,407,386; Sept. 10.

Schott, Rudolph D., Los Gatos, Calif., assignor, by mesne assignments, to Fairbanks, Morse & Co. Impeller mounting. 2,407,348; Sept. 10.

Schreiber, Max, Philadelphia, Pa., and A. Stebbins, Delanco, assignors to Century Mills, Riverside, N. J. Thread cutter. 2,407,578; Sept. 10.

Schweikher, Ernest W., Shaker Heights, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Electrodeposition of tin. 2,407,579; Sept. 10.

Schwitzer-Cummins Company, assignee: *See*—
Beier, Kurt A.

Scott, Gifford G., assignor to General Motors Corporation, Detroit, Mich. Long period pendulum. 2,407,580; Sept. 10.

Seewer, Paul W., Rugby, assignor to The English Electric Company Limited, London, England. Automatic speed limiting device for hydraulic turbine rotors. 2,407,454; Sept. 10.

Segal, Helen, assignee: *See*—
Segal, Hyman R.

Segal, Hyman R., assignor to H. Segal, New York, N. Y. Cowl fastener. 2,407,618; Sept. 10.

Segal, Hyman R., assignor to H. Segal, New York, N. Y. Cowl fastener. 2,407,619; Sept. 10.

Seymour, Mary E., Wichita, Kans. Clothesline. 2,407,387; Sept. 10.

Shakesby, Leonard, Wolverhampton, and S. H. Smith, Manchester, England, assignors to Imperial Industries Limited. Liquid container. 2,407,455; Sept. 10.

Shaw, Walter M., Moline, Kans. Air-cooled gas burner. 2,407,349; Sept. 10.

Shell Development Company, assignee: *See*—
Blott, John F. T., and Alexander.
Hall, Larry G., and Boucher.
Morris, Rupert C., and Shokal.

Shepherd, William G., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Frequency modulation. 2,407,293; Sept. 10.

Sherer, Chester H., assignee: *See*—
Henjum, Gerald J.

Shockley, William, Madison, and G. W. Willard, Fanwood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave propagation device. 2,407,294; Sept. 10.

Shokal, Edward C.: *See*—
Morris, Rupert C., and Shokal.

Simison, Allen L., and E. Fletcher, Newark, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio. Apparatus for producing fibrous glass. 2,407,295; Sept. 10.

Simison, Allen L., and E. Fletcher, Newark, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio. Producing fibrous glass. 2,407,456; Sept. 10.

Skellett, Albert M., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric discharge apparatus. 2,407,296; Sept. 10.

Skellett, Albert M., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,407,297; Sept. 10.

Skellett, Albert M., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,407,298; Sept. 10.

Slasor, Nicholas R.: *See*—
McCulloch, John A., and Slasor.

Slater, Wilfred, Quinton, Birmingham, England. Inserted tooth tool. 2,407,519; Sept. 10.

Smith, Charles H., and E. G. Longman, Chelmsford, England, assignors to Norma Hoffmann Bearings Corporation, Stamford, Conn. Cage for ball bearings. 2,407,388; Sept. 10.

Smith, Edward W., Melrose, Mass. Communication in pipe line. 2,407,299; Sept. 10.

Smith, Frank E.: *See*—
Wirshing, Ralph J., and Smith.

Smith, Fred A., Newport Beach, Calif., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Definite-length adhesive tape dispenser. 2,407,300; Sept. 10.

Smith, Marion F., and H. W. Greider, Wyoming, Ohio, assignors to The Philip Gary Manufacturing Company. Asbestos sheet material. 2,407,581; Sept. 10.

Smith, Sydney H.: *See*—
Shakesby, Leonard, and Smith.

Smolak, George, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Manufacture of dielectric shapes. 2,407,520; Sept. 10.

Snodgrass, Jerry R.: *See*—
Hull, D. C., and Snodgrass.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Stover, William A.

Soday, Frank J., Swarthmore, Pa., assignor to The United Gas Improvement Company. Resilient insulating batt. 2,407,582; Sept. 10.

Sokoloff, Herman, Kansas City, Mo. Broom holder. 2,407,457; Sept. 10.

Specialties Development Corporation, assignee: *See*—
Hannant, T. N.

Spence, John A., and E. F. Degering, West La Fayette, assignors to Purdue Research Foundation, La Fayette, Ind. Condensation of ketenes with diketones. 2,407,301; Sept. 10.

Spence, John A., and E. F. Degering, West La Fayette, assignors to Purdue Research Foundation, La Fayette, Ind. Condensation of ketenes with ketoesters. 2,407,302; Sept. 10.

Spence, Le Roy U.: *See*—
Butterbaugh, Darrel J., and Spence.

Sperry Gyroscope Company, Inc., assignee: *See*—
Ginzton, Howard L.
Hays, Robert F., Jr.
Langstroth, Hall, and Wallace.
Lundy, Clarence C., and Langstroth.
Mieher, Walter W., and Mallett.

Spiegel, Felix: *See*—
Lorenzen, Robert, and Spiegel.

Spielman, Sterling C., Huntingdon Valley, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. High voltage regulator circuit. 2,407,458; Sept. 10.

Spooner, Harry, Stephens, Ark. Nutcracker. 2,407,350; Sept. 10.

Sprigg, Edward A., Wadsworth, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Method and apparatus for testing compressible hardness of materials. 2,407,583; Sept. 10.

Squibb, E. R., & Sons, assignee: *See*—
Lott, William A., Bergeim, and Losee.

Stafford Allen and Sons Limited, assignee: *See*—
Robinson, Robert, Cornforth, and West.

Stammbach, Walter, assignor to the firm J. R. Geigy A. G., Basel, Switzerland. Manufacture of o-sulphobenzoic acids. 2,407,351; Sept. 10.

Standard Oil Development Company, assignee: *See*—
Franklin, William B.
Jahnig, Charles E.
Kearby, Kenneth K.
Kollenberg, Conrad H.
Lynch, Charles S., and Codet.
Scheeline, Harold W.
Watkins, Charles H.

Stange, Ferdinand F.: *See*—
Cotchett, Louis M., Campbell, and Stange.

Stebbins, Alphonso: *See*—
Schreiber, Max, and Stebbins.

Stevens, George, Campbell, assignor of one-third to P. Parthemos, Youngstown, Ohio. Mason's guide. 2,407,389; Sept. 10.

Stieglitz, Henry M., assignor to Frank Adam Electric Company, St. Louis, Mo. Ring catch. 2,407,459; Sept. 10.

Strobridge Lithographing Company, The, assignee: *See*—
Wathen, Ernest L.

Storey, Oliver W., trustee: *See*—
Bussey, William H.

Storey, Q. W., & Associates, assignee: *See*—
Bussey, William H.

Stover, William A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation process. 2,407,584; Sept. 10.

Stover, William A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation process. 2,407,585; Sept. 10.

Stritter, Karl A., Nahant, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Making shoes. 2,407,352; Sept. 10.

Stupelli, Michael J.: *See*—
Hendel, Joseph A., and Stupelli.

Submarine Signal Company, assignee: *See*—
Batchelder, Laurence.
Benioff, Hugo.
Dallin, Edwin B.
Harrison, Bertram M.
Hart, Harold M.
Hart, Robert W.
Turner, Edwin E., Jr.

Sugar Creek Creamery Company, et al. assignee: *See*—
Lundal, Ingle J., and Robichaux.

Summers, Otto M., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Stress free stud. 2,407,586; Sept. 10.

Sylvania Electric Products Inc., assignee: *See*—
McCarthy, Henry J.

Tamburro, Francis P., Ozone Park, assignor to Willcox & Gibbs Sewing Machine Company, New York, N. Y. Thread guide. 2,407,587; Sept. 10.

Tampax Incorporated, assignee: *See*—
McLaughlin, John R.

Taylor, James: *See*—
Wright, Harold R., and Taylor.

Teale, Harold A., Brooklyn, assignor to Filter Media Corporation, Irvington-on-Hudson, N. Y. Apparatus for reducing the fluid content of fluid-solid intermixture. 2,407,303; Sept. 10.

Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Shock absorber. 2,407,588; Sept. 10.

Thomson, Alex, administrator: *See*—
White, Sidney Y.

Thompson, Alfred E., and R. D. Salmon, Croydon, assignors to Creed and Company Limited, Croydon, Surrey, England. Device for preparing messages for facsimile transmission. 2,407,304; Sept. 10.

Thornes, Leslie S.: *See*—
Birch, Stanley F., Fidler, and Thornes.

Tide Water Associated Oil Company, assignee: *See*—
Galstaun, Lionel S.

Timken Roller Bearing Company, The, assignee: *See*—
Boden, Ernest G.

Tinnerman Products, Inc., assignee: *See*—
Judd, Charles H., and Giammatteo.

Toledo Scale Company, assignee: *See*—
Williams, Lawrence S.
Wood, George R.

Toussaint, Walter J.: *See*—
Quattlebaum, William M., Jr., and Toussaint.

Tremain, Henry E., and L. R. Bacon, assignors to Wyandotte Chemical Corporation, Wyandotte, Mich. Aqueous alkaline reacting cleaning bath having reduced foaming characteristics. 2,407,589; Sept. 10.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Sending and receiving apparatus. 2,407,328; Sept. 10.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,407,329; Sept. 10.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Direction determining system. 2,407,330; Sept. 10.

Udylite Corporation, The, assignee: *See*—
High, Le Roy B., and Lindh.

Underwood Corporation, assignee: *See*—
Mann, Miles H.

Union Switch & Signal Company, assignee: *See*—
Gilbert, Chalmers W.
Wells, Wesley B.

United Aircraft Corporation, assignee: *See*—
Caldwell, Frank W.

United Gas Improvement Company, The, assignee: *See*—
Soday, Frank J.

United Shoe Machinery Corporation, assignee: *See*—
Chandler, James D.
Stritter, Karl A.

Vanderpoel, Albert G. H.: *See*—
Crozier, Harold E., and Vanderpoel.

Van Ryn, Bernard, Chelmsford, England, assignor to Radio Corporation of America. Switch for high-frequency circuits. 2,407,460; Sept. 10.

Van Velzer, Harry L., State College, Pa. Glass bulb and flask holder. 2,407,331; Sept. 10.

Vesely, Josef, London, N. 21, England. Magazine for firearms. 2,407,461; Sept. 10.

Victor Products (Wallsend), Limited, assignee: *See*—
Mann, Reginald W., and Wiles.

Vidal Corporation, assignee: *See*—
Marhoefer, Laurence J.

Vineberg, Samuel S., Buffalo, N. Y. Heating apparatus. 2,407,590; Sept. 10.

Vinsant, Granville F., Fort Worth, Tex., assignor to Industrial Patents Corporation, Chicago, Ill. Switch for trolley rails. 2,407,620; Sept. 10.

Wagner, Julius A., Cleveland Heights, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y. Coiling apparatus. 2,407,353; Sept. 10.

Waldie, William A., Oakwood, assignor to New Wrinkle, Inc., Dayton, Ohio. Modified linseed oil wrinkle finish. 2,407,623; Sept. 10.

Wallace, Fred C.: *See*—
Langstroth, Hall, and Wallace.

Walley, Herbert H., Jr., and A. W. Keema, Providence, R. I., assignors to Merit Engineering, Inc. Spring tester. 2,407,591; Sept. 10.

Walton, George H., Helsby, near Warrington, J. C. Quayle, Helsby, and P. Jones, Kelsall, near Chester, assignors to British Insulated Cables Limited, Prescot, England. Machine for covering wires with insulating materials. 2,407,354; Sept. 10.

Warner Electric Brake Manufacturing Company, assignee: *See*—
Oetzel, John G.

Wathen, Ernest L., Rocky River, assignor to The Strobridge Lithographing Company, Cincinnati, Ohio. Display device. 2,407,592; Sept. 10.

Watkins, Charles H., Cranford, N. J., assignor to Standard Oil Development Company. Chemical process. 2,407,390; Sept. 10.

Watson, Edwin, near Littleton, Colo. Hay stacking attachment for tractors. 2,407,593; Sept. 10.

Wearn, Richard B., and G. N. Jarman, U. S. Army. Purification of acetylene by means of arsenic trichloride. 2,407,332; Sept. 10.

Weber, Henryk, Bedford, assignor of two-thirds to Guaranty Plastic Caps Limited, London S. W. 1, England. Electric lamp base or cap and bonding cement therefor. 2,407,621; Sept. 10.

Wells, Merritt R., York, Pa. Fuel tank. 2,407,622; Sept. 10.

Wells, Wesley B., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Light signal. 2,407,355; Sept. 10.

Wenck, Peter R., and W. A. Henson, assignors to The Dow Chemical Company, Midland, Mich. Fumigation method. 2,407,333; Sept. 10.

Wessel, Carl, assignor to C. Wessel and L. W. Cleminson, Chicago, Ill., as trustees. Casting machine. 2,407,334; Sept. 10.

West, Trustham F.: *See*—
Robinson, Robert, Cornforth, and West.

Western Electric Company, Incorporated, assignee: *See*—
Ewaldson, Waldemar C.
Wagner, Julius A.

Wethly, Frans, Manhasset, assignor to Wilputte Coke Oven Corporation, New York, N. Y. Regenerative coke oven battery. 2,407,356; Sept. 10.

Weyandt, Carl S., Homer City, Pa. Apparatus for conveying material. 2,407,357; Sept. 10.

Wheeler, Harold A.: *See*—
Johnson, John K., and Wheeler.

Whisnant, John K., assignor to American Enka Corporation, Enka, N. C. Method and apparatus for twisting thread. 2,407,358; Sept. 10.

White, Sidney Y., Wilmette, assignor to V. S. Johnson, deceased, Chicago, Ill.; A. Thomson, administrator. Radio apparatus. 2,407,359; Sept. 10.

White, Sidney Y., Wilmette, assignor to V. S. Johnson, deceased, Chicago, Ill.; A. Thomson, administrator. Temperature compensating tuned circuits. 2,407,360; Sept. 10.

Whiteley, Edward O., New York, N. Y. Supersonic treatment of fluid masses. 2,407,462; Sept. 10.

Whiteley, Fred H., Kansas City, Kans. Lettering instrument. 2,407,594; Sept. 10.

Wickwire, Arthur M., Jr., Great Barrington, Mass., assignor to Interchemical Corporation, New York, N. Y. Apparatus for smoothing hot melt coatings. 2,407,335; Sept. 10.

Wieland, Theodor: *See*—
Kuhn, Richard, and Wieland.

Wiles, Robert C.: *See*—
Mann, Reginald W., and Wiles.

Willard, Gerald W.: *See*—
Shockley, William, and Willard.

Willcox & Gibbs Sewing Machine Company, assignee: *See*—
Tamburro, Francis P.

Williams, Benjamin M., assignor to Gaylord Container Corporation, St. Louis, Mo. Container. 2,407,463; Sept. 10.

Williams, J. H., & Co., assignee: *See*—
Kress, Willard C.

Williams, Lawrence S., assignor to Toledo Scale Company, Toledo, Ohio. Ticket printing mechanism. 2,407,522; Sept. 10.

Williams, Vernon H., Androssan, and H. R. Wright, West Kilbride, Scotland, assignors to Imperial Chemical Industries Limited. Manufacture of detonating explosives and products obtained thereby. 2,407,595; Sept. 10.

Willoughby, Victor, Concord, N. H., assignor to American Car and Foundry Company, New York, N. Y. Side plate construction for freight cars. 2,407,523; Sept. 10.

Wilputte Coke Oven Corporation, assignee: *See*—
Wethly, Frans.

Wilson, Alfred W., New Westminster, British Columbia, Canada. Trailer hitch. 2,407,464; Sept. 10.

Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Temperature measuring system. 2,407,361; Sept. 10.

Winterfeld, Henry, New York, N. Y. Permutation lockbox. 2,407,362; Sept. 10.

Winthrop Chemical Company, Inc., assignee: *See*—
Kuhn, Richard, and Wieland.

Wirshing, Ralph J., and F. E. Smith, assignors to General Motors Corporation, Detroit, Mich. Drawing reproduction. 2,407,596; Sept. 10.

Wisecarver, George B., Pikeville, Ky. Shoe heel construction. 2,407,524; Sept. 10.

Wood, Carlos C.: *See*—
Clauser, Francis H., and Wood.

Wood, George R., Montreal, Quebec, Canada, assignor to Toledo Scale Company, Toledo, Ohio. Food handling apparatus. 2,407,525; Sept. 10.

Woolfolk, Arthur R., Wauwatosa, assignor to Line Material Company, South Milwaukee, Wis. Making three-phase transformers. 2,407,391; Sept. 10.

Wright, Harold R.: *See*—
Williams, Vernon H., and Wright.

Wright, Harold R., West Kilbride, and James Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited. Explosive compositions comprising low freezing liquid mixtures of aromatic-nitro-compounds. 2,407,597; Sept. 10.

Wyandotte Chemical Corporation, assignee: *See*—
Tremain, Henry E., and Bacon.

Young, Norman H., Jr., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Method and means for transmitting intelligence. 2,407,336; Sept. 10.

Zesbaugh, Lawrence G., Minneapolis, Minn., assignor, by mesne assignments, to Perma-Seal Closure Co. Method and apparatus for making caps or covers. 2,407,465; Sept. 10.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Preselecting mechanism. E. J. Mastney and J. H. Williams. Re. 22,790; Sept. 10.
Control means for change-speed transmissions. G. T. Randol. Re. 22,791; Sept. 10.
Conveyer. E. E. Brunner. Re. 22,789; Sept. 10.

LIST OF DESIGN INVENTIONS

Brooch or similar article. A. Phillipe. 145,585; Sept. 10.
Button or similar article. M. Ballot. 145,558; Sept. 10.
Button or similar article. W. Drell. 145,565–71; Sept. 10.
Casing, Carpet sweeper. P. Dale. 145,563; Sept. 10.
Casing or body for lighter or the like. L. Soklaski. 145,590; Sept. 10.
Clip. M. Boucher. 145,561; Sept. 10.
Clock. M. Hallward. 145,576; Sept. 10.
Coat. M. Frascino. 145,574; Sept. 10.
Extraction machine, Rug and upholstery. T. W. Doyle. 145,564; Sept. 10.
Frame for mirrors, pictures, and the like. L. M. Tolpo. 145,593; Sept. 10.
Game board. J. U. Bihl. 145,559; Sept. 10.
Hat or similar article. H. Bonn. 145,560; Sept. 10.
Lamp. H. Rubin. 145,588; Sept. 10.
Lamp, Electric. J. Lolli. 145,583; Sept. 10.
Lamp, Table. A. I. Alter. 145,557; Sept. 10.
Pen, Fountain. M. Reynolds. 145,586–7; Sept. 10.
Pin or similar article. K. Speck. 145,591; Sept. 10.
Receptacle, Pipe. F. C. Chambers. 145,562; Sept. 10.
Ring, Finger. B. Esh. 145,572; Sept. 10.
Shoe. J. Henkel. 145,577; Sept. 10.
Spoon or other article of flatware. A. G. Kintz. 145,580; Sept. 10.
Tablecloth, Lace. H. Hooven. 145,578; Sept. 10.
Tablecloth, Lace. F. P. Otto. 145,584; Sept. 10.
Towel or similar article. I. H. Hall. 145,575; Sept. 10.
Towel or similar article. A. Lange. 145,581–2; Sept. 10.
Toy figure. J. H. Wright. 145,594; Sept. 10.
Toy guitar. G. F. Kearney. 145,579; Sept. 10.
Tray. H. S. Scholl. 145,589; Sept. 10.
Tray or similar article, Ash. S. K. Frank. 145,573; Sept. 10.
Vehicle, Automotive delivery. W. S. Tandler and F. A. de Weiss. 145,592; Sept. 10.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorber, Shock. L. F. Thiry. 2,407,588; Sept. 10.
Acetylene by means of arsenic trichloride, Purification of. R. B. Wearn and G. N. Jarman. 2,407,332; Sept. 10.
Actuator. T. N. Hannant. 2,407,269; Sept. 10.
Actuator, Power operated. J. E. Chapman. 2,407,537; Sept. 10.
Adsorbent, Bonded. S. W. Briggs. 2,407,247; Sept. 10.
Air-cooled gas burner. W. M. Shaw. 2,407,349; Sept. 10.
Aircraft with power-driven rotor. H. F. Pitcairn. 2,407,327; Sept. 10.
Alkylation process. W. A. Stover. 2,407,584; Sept. 10.
Alkylation process. W. A. Stover. 2,407,585; Sept. 10.
Alkyls, Making lead. S. D. Heron. 2,407,551; Sept. 10.
Antenna, Directive. H. G. Busignies. 2,407,250; Sept. 10.
Antibumping device. G. L. Doelling. 2,407,226; Sept. 10.
Apparatus for conveying material. C. S. Weyandt. 2,407,357; Sept. 10.
Apparatus for determining geographic positions celestially. W. R. Barry. 2,407,467; Sept. 10.
Apparatus for extruding thermoplastic materials. W. A. Magerkurth and H. E. Buecken. 2,407,503; Sept. 10.
Apparatus for freezing. F. B. Doyle. 2,407,482; Sept. 10.
Apparatus for producing fibrous glass. A. L. Simison and E. Fletcher. 2,407,295; Sept. 10.
Apparatus for producing pottery ware. W. J. Miller. 2,407,321; Sept. 10.
Apparatus for reducing the fluid content of fluid-solid intermixture. H. A. Teale. 2,407,303; Sept. 10.
Apparatus for smoothing hot melt coatings. A. M. Wickwire, Jr. 2,407,335; Sept. 10.
Apparatus for submarine signaling. L. Batchelder. 2,407,244; Sept. 10.
Apparatus for submarine signaling. H. M. Hart. 2,407,271; Sept. 10.
Apparatus for submarine signaling. E. E. Turner, Jr. 2,407,329; Sept. 10.
Apparatus for treating material on propeller blades. J. O. Antonson. 2,407,528; Sept. 10.
Aqueous alkaline reacting cleaning bath having reduced foaming characteristics. H. E. Tremain and L. R. Bacon. 2,407,589; Sept. 10.
Attenuator. Ultra high frequency. E. L. Ginzton. 2,407,267; Sept. 10.
Automatic control. C. F. Kettering. 2,407,555; Sept. 10.
Automatic cutter. J. R. McLaughlin. 2,407,316; Sept. 10.
Automotive gas tank cover switch. O. E. Olson. 2,407,439; Sept. 10.
Basket. L. L. Mitchell. 2,407,507; Sept. 10.
Battery, Regenerative coke oven. F. Wethly. 2,407,356; Sept. 10.
Beacon, Course. E. Labin. 2,407,287; Sept. 10.
Beacon system, Equisignal radio. W. J. O'Brien. 2,407,324; Sept. 10.
Beam assembly, Weigh. J. A. McCulloch and N. R. Slasor. 2,407,435; Sept. 10.
Bearing mounting. E. G. Boden. 2,407,532; Sept. 10.
β-substituted homologues of indole, Preparation of. R. Robinson, R. H. Cornforth, and T. F. West. 2,407,452; Sept. 10.
Bicyclic carbonylic compounds and their preparation, Unsaturated. R. C. Morris and E. C. Shokal. 2,407,508; Sept. 10.
Bisdimethylene thiuram polysulphides. R. A. Mathes and P. C. Jones. 2,407,566; Sept. 10.
Bituminous composition containing mineral aggregates. J. F. T. Blott and P. Alexander. 2,407,470; Sept. 10.
Blanket and preparing same, Hectograph. R. C. Bour. 2,407,395; Sept. 10.
Blasting circuit leads, Separation of. J. O. Parr, Jr. 2,407,442; Sept. 10.
Blasting unit and short-circuiting device. J. V. Hammond and D. J. Keenan. 2,407,605; Sept. 10.
Blind. S. G. Isserstedt. 2,407,554; Sept. 10.
Bottle holder and carrier. W. A. Bertram. 2,407,529; Sept. 10.
Bracket: *See*—
Ladder bracket.
Brake. J. A. Forbes. 2,407,487; Sept. 10.
Brake control. J. G. Oetzel. 2,407,510; Sept. 10.
Brass, Anodically polishing. C. L. Faust. 2,407,543; Sept. 10.
Brooder. H. L. Clark. 2,407,601; Sept. 10.
Broom holder. H. Sokoloff. 2,407,457; Sept. 10.
Buckle and producing the same. O. Gries. 2,407,491; Sept. 10.
Building, Prefabricated. E. R. Closs. 2,407,252; Sept. 10.
Burner: *See*—
Air-cooled gas burner.
Burner control. E. P. Newman. 2,407,438; Sept. 10.
Burner for use in refrigerators or in other heat-actuated apparatus, Kerosene. G. E. Jodell. 2,407,426; Sept. 10.
Bushings, Making resilient. A. S. Krotz. 2,407,559; Sept. 10.
Butter and butter oil concentrate, Making. I. J. Lundal and R. P. Robichaux. 2,407,612; Sept. 10.
Cabin pressure control valve. B. E. Del Mar. 2,407,540; Sept. 10.
Cage for ball bearings. C. H. Smith and E. G. Longman. 2,407,388; Sept. 10.
Caps or covers, Method and apparatus for making. L. G. Zesbaugh. 2,407,465; Sept. 10.
Car-dumping apparatus. G. W. Merritt. 2,407,569; Sept. 10.
Carbureter. H. A. Carlson. 2,407,534; Sept. 10.
Carbureter. H. A. Carlson and O. J. Eickmann. 2,407,535; Sept. 10.
Carrier: *See*—
Bottle holder and carrier.
Casting machine. C. Wessel. 2,407,334; Sept. 10.
Catalytic cracking process. C. H. Kollenberg. 2,407,374; Sept. 10.
Catch, Ring. H. M. Stieglitz. 2,407,459; Sept. 10.
Cathode ray sweep circuit. G. M. Charrier. 2,407,475; Sept. 10.
Checking and comparing device, Surface. J. F. Gregg. 2,407,490; Sept. 10.
Chemical methods and products. C. F. Reed. 2,407,344; Sept. 10.
Chemical process. C. S. Lynch and H. G. Codet. 2,407,311; Sept. 10.
Chemical process. C. H. Watkins. 2,407,390; Sept. 10.
Chemotherapeutic agents of the sulphonamide type. W. A. Lott, F. H. Bergeim, and K. A. Losee. 2,407,309; Sept. 10.
Circuit: *See*—
Cathode ray sweep circuit. High voltage regulator circuit. Duplex control circuit.
Electric circuit.
Electric discharge device circuit.
Circuits, Temperature compensating tuned. S. Y. White. 2,407,360; Sept. 10.
Clamping device, Glue. R. H. Miller. 2,407,436; Sept. 10.
Clasp. L. N. Alberts. 2,407,466; Sept. 10.
Cleaning machine, Carpet and rug. C. E. Erickson. 2,407,408; Sept. 10.
Closure, Lever-track controlled boom bucket. J. H. Fitzgerald. 2,407,410; Sept. 10.
Clothesline. M. E. Seymour. 2,407,387; Sept. 10.
Clutch: *See*—
Two-way clutch.
Coal for production of an activated primary carbon, Calcining. W. C. Goss. 2,407,268; Sept. 10.
Coating and impregnating compositions, Fire-resisting. C. F. Moon and N. Collinson-Jones. 2,407,615; Sept. 10.
Coiling apparatus. J. A. Wagner. 2,407,353; Sept. 10.
Colloidally dispersed dimethylol urea resins. C. S. Maxwell. 2,407,376; Sept. 10.
Coloring matters, Manufacture of new. M. A. T. Rogers. 2,407,346; Sept. 10.
Combination bactericidal and illuminating lamp. W. B. Morehouse. 2,407,379; Sept. 10.
Communication in pipe line. E. W. Smith. 2,407,299; Sept. 10.
Communications system. W. S. Halstead. 2,407,417; Sept. 10.
Communication system. F. S. Kinkead. 2,407,286; Sept. 10.
Communication system, Carrier. L. G. Abraham. 2,407,238; Sept. 10.
Compass. F. W. Chapman. 2,407,536; Sept. 10.
Compressed air-driven drill. R. W. Mann and R. C. Wiles. 2,407,613; Sept. 10.
Container: *See*—
Liquid container.
Container. B. M. Williams. 2,407,463; Sept. 10.
Container for explosive shells. H. E. Krasner and B. Klausner. 2,407,500; Sept. 10.
Control arrangement, Lateral. F. H. Clauser and C. C. Wood. 2,407,401; Sept. 10.
Control device, Differential. D. K. Morrison. 2,407,322; Sept. 10.
Control device for variable pitch propeller. M. L. Mennesson. 2,407,317; Sept. 10.
Control for pressure cabins. B. E. Del Mar. 2,407,258; Sept. 10.
Control in signaling systems, Transmission. A. C. Dickieson. 2,407,259; Sept. 10.

Control system, Television. R. D. Compton. 2,407,403; Sept. 10.
Control system, Television. S. F. Essig. 2,407,485; Sept. 10.
Controller, Circuit. J. G. Oetzel. 2,407,509; Sept. 10.
Converter, Range. D. B. Parkinson. 2,407,325; Sept. 10.
Conveyor, Shaker. H. R. Eberle. 2,407,407; Sept. 10.
Cooling and charging apparatus, Engine. F. W. Caldwell. 2,407,223; Sept. 10.
Copper compounds of mercaptans derived from terpenes and producing them. A. L. Fox. 2,407,265; Sept. 10.
Copper compounds of mercaptans derived from pinene. A. L. Fox. 2,407,266; Sept. 10.
Counter, Electronic. O. R. Miller. 2,407,320; Sept. 10.
Coupler, Mine car. E. Ramsay. 2,407,449; Sept. 10.
Coupling device. A. J. Bielski and W. J. Luckock. 2,407,530; Sept. 10.
Cover removing tool. S. Kretchman. 2,407,428; Sept. 10.
Cowl fastener. H. R. Segal. 2,407,618–19; Sept. 10.
Crushing device. E. A. and J. A. Clemetsen. 2,407,365; Sept. 10.
Curtain-shutter and release mechanism for photographic cameras, Motor-driven. E. S. Hineline. 2,407,277; Sept. 10.
Cutter: *See*—
Automatic cutter. Thread cutter.
Milling cutter.
Cutter, C. E. Kraus. 2,407,501; Sept. 10.
Dampening device, Antiknock or detonation. H. E. Crozier and A. G. H. Vanderpoel. 2,407,478; Sept. 10.
Definite-length adhesive tape dispenser. F. A. Smith. 2,407,300; Sept. 10.
Deodorization. G. W. Phelps and H. C. Black. 2,407,616; Sept. 10.
Developer, Photographic. F. R. Bean. 2,407,600; Sept. 10.
Development and layout instrument.. G. J. Henjum. 2,407,368; Sept. 10.
Device for dressing grinding disks. A. Rickenmann. 2,407,577; Sept. 10.
Device for preparing messages for facsimile transmission. A. E. Thompson and R. D. Salmon. 2,407,304; Sept. 10.
Dielectric shapes, Manufacture of. G. Smolak. 2,407,320; Sept. 10.
Direction determining system. E. E. Turner, Jr. 2,407,330; Sept. 10.
Direction finder, Radiated-signal. J. K. Johnson and H. A. Wheeler. 2,407,281; Sept. 10.
Discharge apparatus, Electric. A. M. Skellett. 2,407,296; Sept. 10.
Discharge apparatus, Electron. A. M. Skellett. 2,407,297–8; Sept. 10.
Disconnector for electric terminal blocks. E. G. Johansson. 2,407,372; Sept. 10.
Dishwashing device. M. M. Brock. 2,407,533; Sept. 10.
Dispenser: *See*—
Definite-length adhesive tape dispenser. Non-friction bearing ball dispenser.
Dispensing device. J. R. Clem. 2,407,402; Sept. 10.
Dispensing device, Tiltable trap chamber measuring. M. L. Meyer. 2,407,377; Sept. 10.
Display device. E. L. Wathen. 2,407,592; Sept. 10.
Distance and direction finding, Method and means for. R. W. Hart. 2,407,273; Sept. 10.
Distributing apparatus. W. C. Ewaldson. 2,407,542; Sept. 10.
Doll, Jointed mannequin. M. Geller. 2,407,367; Sept. 10.
Drafting machine. L. R. Halstead. 2,407,235; Sept. 10.
Drain, Window screen. H. C. Freese. 2,407,229; Sept. 10.
Drill: *See*—
Compressed air-driven drill.
Drive for triplex pumps. A. A. Ashton. 2,407,392; Sept. 10.
Drive for web propelling rollers, Friction. A. J. Albrecht. 2,407,239; Sept. 10.
Duplex control circuit. R. W. Carlson and M. G. Nicholson, Jr. 2,407,395; Sept. 10.
Dust collecting composition. M. E. Cupery. 2,407,255; Sept. 10.
Dynamoelectric machine. H. M. Martin. 2,407,504; Sept. 10.
Ejector mechanism for firearms. J. Crowe. 2,407,477; Sept. 10.
Electric apparatus. L. P. Hart, Jr. 2,407,493; Sept. 10.
Electric circuit. F. E. Crever. 2,407,476; Sept. 10.
Electric discharge device circuit. P. C. Michel. 2,407,505; Sept. 10.
Electrical apparatus. L. Batchelder. 2,407,242; Sept. 10.
Electrical apparatus. H. Benioff. 2,407,245; Sept. 10.
Electrical apparatus. W. H. Bussey. 2,407,363; Sept. 10.
Electrical conducting swing joint. D. M. Phillips. 2,407,445; Sept. 10.
Electromagnet. E. A. Derungs. 2,407,603; Sept. 10.
Electromagnetic product and making the same. R. G. Guthrie and J. Chumasero. 2,407,234; Sept. 10.
Electron discharge device employing hollow resonators. J. E. I. Cairns. 2,407,607; Sept. 10.
Electronic device, Ultra high frequency. R. V. L. Hartley and A. L. Samuel. 2,407,274; Sept. 10.
Engine: *See*—
Internal-combustion engine
Engine valve mounting. F. G. Hobart. 2,407,422; Sept. 10.
Esters of carbonic acid and polymers thereof, Unsaturated. M. A. Pollack. 2,407,446; Sept. 10.
Esters of phosphoric acid, Preparation of neutral. D. C. Hull and J. R. Snodgrass. 2,407,279; Sept. 10.
Explosive compositions comprising low freezing liquid mixtures of aromatic-nitro compounds. H. R. Wright and J. Taylor. 2,407,597; Sept. 10.
Explosives and products obtained thereby, Manufacture of detonating. V. H. Williams and H. R. Wright. 2,407,595; Sept. 10.
Fabrics containing wool and cellulose acetate, Milling. A. S. Cluley and T. G. Allen. 2,407,602; Sept. 10.
Fastener: *See*—
Cowl fastener.
Fastening device. C. H. Judd and C. Giammatteo. 2,407,608–9; Sept. 10.
Fastening devices and manufacture thereof. V. V. Mason. 2,407,314; Sept. 10.
Firing mechanism for firearms. G. N. Albree. 2,407,526; Sept. 10.
Floor-cleaning implement. W. F. Herold. 2,407,421; Sept. 10.
Fluid masses, Supersonic treatment of. E. O. Whiteley. 2,407,462; Sept. 10.
Fluid mechanism, Elastic. R. Birmann. 2,407,531; Sept. 10.
Fluoro-chloro hydrocarbons and making them. A. F. Benning and J. D. Park. 2,407,246; Sept. 10.
Fog or smoke, Synthetic. A. J. Ritchie 2,407,384; Sept. 10.
Form to provide air passages in concrete walls. J. L. Painter, Jr. 2,407,441; Sept. 10.
Forming machine. G. O. Conner. 2,407,253; Sept. 10.
Forming machine. G. O. Conner. 2,407,254; Sept. 10.
Forming machine, Metal. A. E. Nelson. 2,407,573; Sept. 10.
Frame or the like, Picture. S. Madsen. 2,407,431; Sept. 10.
Frequency modulation. W. G. Shepherd. 2,407,293; Sept. 10.
Fuel or an aviation or motor fuel constituent, Production of an aviation or motor. S. F. Birch, F. A. Fidler and L. S. Thornes. 2,407,214; Sept. 10.
Fuel tank. M. R. Wells. 2,407,622; Sept. 10.
Fuel tank in aircraft wings, Structure for supporting. R. Montgomery and G. W. Schane. 2,407,614; Sept. 10.
Fumigation method. P. R. Wenck and W. A. Henson. 2,407,333; Sept. 10.
Furnace assembly. R. Martin. 2,407,375; Sept. 10.
Fuselage and wing construction, Aircraft. A. G. Dean. 2,407,480; Sept. 10.
Garment. M. M. Handt. 2,407,550; Sept. 10.
Garment, Maternity. L. E. McCarthy. 2,407,340; Sept. 10.
Gas unit, Multiple purpose. J. L. Bloomheart. 2,407,221; Sept. 10.
Gasket, Pipe thread. A. F. Hoesel. 2,407,552; Sept. 10.
Gasket, Pipe thread. A. F. Hoesel. 2,407,553; Sept. 10.
Gasoline, Production of. L. G. Hall and H. G. Boucher. 2,407,492; Sept. 10.
Gate release, Film. W. A. Lebus. 2,407,339; Sept. 10.
Generator: *See*—
Thermoelectric generator.
Glass bulb and flask holder. H. L. Van Velzer. 2,407,331; Sept. 10.
Glass, Producing fibrous. A. L. Simison and E. Fletcher. 2,407,456; Sept. 10.
Glass, Treating fibrous. P. Ebaugh. 2,407,483; Sept. 10.
Glider. L. J. Marhoefer. 2,407,563; Sept. 10.
Grinding machine. M. B. Boyce. 2,407,222; Sept. 10.
Guide, Mason's. G. Stevens. 2,407,389; Sept. 10.
Guide, Thread. F. P. Tamburro. 2,407,587; Sept. 10.
Gun barrels, Inspecting. A. C. W. Aldis. 2,407,598; Sept. 10.
Gun position, Wing tip. H. Reiniger. 2,407,451; Sept. 10.
Handling apparatus, Food. G. R. Wood. 2,407,525; Sept. 10.
Hardness of materials, Method and apparatus for testing the. A. J. Hodges. 2,407,278; Sept. 10.
Harmonica, Plastic. F. H. Magnus. 2,407,312; Sept. 10.
Heater: *See*—
Induction heater. Off-peak hot-water heater.
Heat-treating apparatus. E. A. Furkert. 2,407,230; Sept. 10.
Heating apparatus. S. S. Vineberg. 2,407,590; Sept. 10.
Heel construction, Shoe. G. B. Wisecarver. 2,407,524; Sept. 10.
High-frequency apparatus. W. W. Mieher and J. D. Mallett. 2,407,318; Sept. 10.
High voltage regulator circuit. S. C. Spielman. 2,407,458; Sept. 10.
Hitch, Trailer. A. W. Wilson. 2,407,464; Sept. 10.
Holder: *See*—
Broom holder. Glass bulb and flask holder.
Holding and feeding device, Pad. M. Dessaur. 2,407,404; Sept. 10.
Housing for locomotives or the like, Engine. J. M. Milheizler. 2,407,506; Sept. 10.

Hydraulic pump. K. E. and C. D. Pyne, and D. L. Leadbeater. 2,407,343; Sept. 10.
Hydrocarbon oils, Conversion of. C. E. Jahnig. 2,407,371; Sept. 10.
Hydrocarbons, Dehydrogenation of. K. K. Kearby. 2,407,373; Sept. 10.
Igniter for internal-combustion engines. E. D. Chaplin. 2,407,474; Sept. 10.
Impeller mounting. R. D. Schott. 2,407,348; Sept. 10.
Indicator: *See*—
Slide rule indicator.
Indicator with excess counter, Mean-value. P. Heynisch. 2,407,369; Sept. 10.
Induction heater. E. G. Lofgren. 2,407,562; Sept. 10.
Injection in internal-combustion engine, Fuel. G. S. Kammer. 2,407,610; Sept. 10.
Inner soles, Method and apparatus for forming thermoplastic. Le R. B. High and G. C. T. Lindh. 2,407,495; Sept. 10.
Inserted tooth tool. W. Slater. 2,407,519; Sept. 10.
Insulating batt, Resilient. F. J. Soday. 2,407,582; Sept. 10.
Intermittent switch. M. F. Miller. 2,407,571; Sept. 10.
Internal-combustion engine. A. F. Hoesel. 2,407,606; Sept. 10.
Interpolymerization products. G. F. D'Alelio. 2,407,479; Sept. 10.
Isomerization process. W. B. Franklin. 2,407,488; Sept. 10.
Joint: *See*—
Electrical conducting swing joint.
Juice absorber, Tobacco pipe. W. Ehrhardt. 2,407,484; Sept. 10.
Ketenes with diketones, Condensation of. J. A. Spence and E. F. Degering. 2,407,301; Sept. 10.
Ketenes with ketoesters, Condensation of. J. A. Spence and E. F. Degering. 2,407,302; Sept. 10.
Ladder bracket. V. C. Ehnborn. 2,407,541; Sept. 10.
Ladder support. J. D. Ramsey. 2,407,575; Sept. 10.
Lamp: *See*—
Combination bactericidal and illuminating lamp.
Lamp base or cap and bonding cement therefor, Electric. H. Weber. 2,407,621; Sept. 10.
Leaf turner, Music. C. W. Moss. 2,407,572; Sept. 10.
Lettering instrument. F. H. Whiteley. 2,407,594; Sept. 10.
Level or like surveying instrument. J. E. Gudmundson. 2,407,416; Sept. 10.
Light: *See*—
Traffic light.
Light meter. E. J. Martin and C. E. Grinstead. 2,407,564; Sept. 10.
Light signal. W. B. Wells. 2,407,355; Sept. 10.
Liquid container. L. Shakesby and S. H. Smith. 2,407,455; Sept. 10.
Lock box, Permutation. H. Winterfeld. 2,407,362; Sept. 10.
Low temperature process of polymerizing iso-olefinic material. H. Hartvigsen. 2,407,494; Sept. 10.
Machine. E. E. Petzold. 2,407,512; Sept. 10.
Machine for covering wires with insulating materials. G. H. Walton, J. C. Quayle, and P. Jones. 2,407,354; Sept. 10.
Machine for treating skins and the like. B. C. Nelson. 2,407,380; Sept. 10.
Magazine for firearms. J. Vesely. 2,407,461; Sept. 10.
Manometer. C. Meriam. 2,407,568; Sept. 10.
Measuring and testing device. A. Rickenmann. 2,407,576; Sept. 10.
Measuring system, Temperature. J. M. Wilson. 2,407,361; Sept. 10.
Mechanical motion, System for indicating. J. K. Johnson. 2,407,282; Sept. 10.
Mechanotherapeutic equipment. F. Kelhoffer. 2,407,283; Sept. 10.
Meter: *See*—
Light meter.
Milling cutter. C. E. Kraus. 2,407,502; Sept. 10.
Mining machine. E. Ramsay. 2,407,448; Sept. 10.
Mixing and kneading machines, Curd. P. Sartori. 2,407,617; Sept. 10.
Modulator, Electron capacity and electron capacity. R. L. Hollingsworth. 2,407,424; Sept. 10.
Moistening device for duplicating machines, Sheet. E. W. Peterson. 2,407,443; Sept. 10.
Moisture removal in isomerization processes. L. S. Galstaun. 2,407,231; Sept. 10.
Mold for use in the manufacture of optical elements M. Hyman, Jr. 2,407,280; Sept. 10.
Molecular absorption of vibration, Method and apparatus for. C. W. Chamberlain. 2,407,400; Sept. 10.
Monitoring system. H. M. Bascom. 2,407,241; Sept. 10.
Mounting: *See*—
Bearing mounting. Impeller mounting.
Engine valve mounting. Rubber spring mounting.
Mounting for retractable lamps, Motor. C. E. Meyerhoefer. 2,407,570; Sept. 10.
Non-friction bearing ball dispenser. J. D. Farries. 2,407,409; Sept. 10.
Nutcracker. H. Spooner. 2,407,350; Sept. 10.
O-sulphobenzoic acids, Manufacture of. W. Stammbach. 2,407,351; Sept. 10.
Objective. L. T. Sachtleben. 2,407,347; Sept. 10.
Off-peak hot-water heater. H. J. Rougier. 2,407,453; Sept. 10.
Olefins from acid extracts, Recovery of secondary. H. W. Scheeline. 2,407,386; Sept. 10.
Olefins, Making. W. M. Quattlebaum, Jr., and W. J. Toussaint. 2,407,291; Sept. 10.
Optical system. A. H. Bennett. 2,407,219; Sept. 10.
Optically active forms of pantothenic acid, Manufacture of. R. Kuhn and T. Wieland. 2,407,560; Sept. 10.
Ornament, Lady's hair. S. Behr. 2,407,393; Sept. 10.
Oscillator, Magnetostriction. L. Batchelder. 2,407,243; Sept. 10.
Outlet, Air distribution. W. W. Kennedy. 2,407,284; Sept. 10.
Package, Dispensing. J. S. Graziano. 2,407,415; Sept. 10.
Padlock. H. B. Dutton. 2,407,406; Sept. 10.
Paper with thermoresponsive resins, Surface coating tissue. I. Gurwick. 2,407,549; Sept. 10.
Pendulum, Long period. G. G. Scott. 2,407,580; Sept. 10.
Percussion tool. R. Goldschmidt. 2,407,604; Sept. 10.
Pin assembly, Wrist. J. Kuttner. 2,407,429; Sept. 10.
Piston for internal-combustion engines. W. Osborne. 2,407,440; Sept. 10.
Plate and making same, Lithographic. J. D. Pursell. 2,407,290; Sept. 10.
Plate construction for freight cars, Side. V. Willoughby. 2,407,523; Sept. 10.
Pocket, Adjustable breast. I. Panes. 2,407,574; Sept. 10.
Post driver, Tractor operated. A. F. Pfingsten. 2,407,444; Sept. 10.
Powder from wheat, wood pitch and resin, and making. Thermosetting molding. C. L. Dixon. 2,407,225; Sept. 10.
Power transmission. L. E. LaBrie. 2,407,289; Sept. 10.
Printing mechanism, Ticket. L. S. Williams. 2,407,522; Sept. 10.
Privacy system. A. C. Dickieson. 2,407,260; Sept. 10
Product. P. L. Salzberg. 2,407,292; Sept. 10.
Projectile. C. B. Ferrel. 2,407,264; Sept. 10.
Projectiug and retracting mechanism for an underwater signal source. C. C. Barber. 2,407,240; Sept. 10.
Projection apparatus. W. F. Peck. 2,407,511; Sept. 10.
Propagation device, Wave. W. Shockley and G. W. Willard. 2,407,294; Sept. 10.
Propeller, Variable pitch. K. B. Gillmore and G. H. F. Brown. 2,407,414; Sept. 10.
Protection device, Eye. G. H. Schauweker. 2,407,518; Sept. 10.
Protective system, Electric. Z. O. St. Palley. 2,407,521; Sept. 10.
Pump: *See*—
Hydraulic pump.
Punch and closure, Can. J. F. Markley. 2,407,434; Sept. 10.
Radio apparatus. S. Y. White. 2,407,359; Sept. 10.
Radio ranging, Method and apparatus for. H. M. Hart. 2,407,272; Sept. 10.
Range finder. E. H. Land. 2,407,306; Sept. 10.
Ratchet for socket wrenches. W. C. Kress. 2,407,558; Sept. 10.
Ratchet mechanism. L. O. Becker. 2,407,468; Sept. 10.
Razor, Safety. R. F. Roberts. 2,407,516; Sept. 10.
Receiver, Self-quenched superregenerative. E. E. Birr. 2,407,394; Sept. 10.
Regulating means for pressure cabins. B. E. Del Mar. 2,407,257; Sept. 10.
Relay device. L. Hanff. 2,407,418; Sept. 10.
Reproduction, Drawing. R. J. Wirshing and F. E. Smith. 2,407,596; Sept. 10.
Resinous compositions and making same. R. W. Auten and J. L. Rainey. 2,407,599; Sept. 10.
Resistance and forming same, Woven-wire. E. M. Patterson. 2,407,326; Sept. 10.
Resistor. H. Christensen. 2,407,251; Sept. 10.
Resistor device. J. J. Kleimack and G. L. Pearson. 2,407,288; Sept. 10.
Retting method. T. Earle. 2,407,227; Sept. 10.
Rosin and polymerized rosin ester, Stabilizing a polymerized. J. N. Borglin. 2,407,248; Sept. 10.
Rotor for elastic fluid mechanism. R. Birmann. 2,407,469; Sept. 10.
Rubber spring mounting. J. W. Heiney. 2,407,236; Sept. 10.
Safety guard, Punch press. P. Anstedt. 2,407,527; Sept. 10.
Scanning apparatus, Radio. R. F. Hays, Jr. 2,407,275; Sept. 10.
Scanning device. H. Langstroth and F. C. Wallace. 2,407,305; Sept. 10.
Scanning device. C. C. Lundy and H. Langstroth. 2,407,310; Sept. 10.
Seal for running shafts. J. J. King. 2,407,285; Sept. 10.
Sealing device, Fluid. K. A. Beier. 2,407,218; Sept. 10.
Secret intelligence, Transmitting. C. Pecher. 2,407,381; Sept. 10.

Secret signaling, Method and apparatus for. R. Lorenzen and F. Spiegel. 2,407,308; Sept. 10.
Selector and recorder, Menu. F. L. Folis. 2,407,411; Sept. 10.
Self-sealing tank. D. Roberts. 2,407,515; Sept. 10.
Sending and receiving apparatus. E. E. Turner, Jr. 2,407,328; Sept. 10.
Sewing machine. J. Nachman. 2,407,342; Sept. 10.
Shears. D. H. Keiser, Jr. 2,407,237; Sept. 10.
Sheet material, Asbestos. M. F. Smith and H. W. Greider. 2,407,581; Sept. 10.
Sheets, Manufacture of fibro-cementitious. E. W. Rembert. 2,407,514; Sept. 10.
Shock absorber for hydraulic systems. J. A. Hendel and M. J. Stupelli. 2,407,276; Sept. 10.
Shoe. H. H. Johnson. 2,407,498; Sept. 10.
Shoe. S. L. Kleven. 2,407,556; Sept. 10.
Shoe and making the same. J. D. Chandler. 2,407,224; Sept. 10.
Shoes, Making. K. A. Stritter. 2,407,352; Sept. 10.
Sight for firearms, Rear. H. F. Mossberg. 2,407,437; Sept. 10.
Signal: *See*—
Light signal.
Signaling apparatus, Submarine. E. B. Dallin. 2,407,256; Sept. 10.
Signaling, Submarine. B. M. Harrison. 2,407,270; Sept. 10.
Signaling system, Traffic. A. P. Manewich. 2,407,432; Sept. 10.
Signals, Method and apparatus for receiving radio. W. J. O'Brien. 2,407,323; Sept. 10.
Sleeve, Garment. W. T. Previdi. 2,407,383; Sept. 10.
Slide rule indicator. A. H. Kreiling. 2,407,338; Sept. 10.
Slip, Nursing. M. A. Blocker. 2,407,220; Sept. 10.
Socket, Lamp. H. J. McCarthy. 2,407,567; Sept. 10.
Softener, Water. A. R. Forsyth. 2,407,228; Sept. 10.
Solutions, Therapeutic. D. V. Frost. 2,407,412; Sept. 10.
Speed limiting device for hydraulic turbine rotors, Automatic. P. W. Seewer. 2,407,454; Sept. 10.
Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetraalkyl leads. F. B. Downing and A. L. Linch. 2,407,261; Sept. 10.
Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetraalkyl leads. A. L. Linch. 2,407,262–3; Sept. 10.
Stabilizing or deactivating sludges, precipitates, and residues occurring or used in the manufacture of tetraalkyl leads. A. L. Linch. 2,407,307; Sept. 10.
Stacking attachment for tractors, Hay. E. Watson. 2,407,593; Sept. 10.
Stick, Picker. H. Carlson. 2,407,398; Sept. 10.
Stripping device, Insulated wire. J. J. Greer and A. Luongo. 2,407,233; Sept. 10.
Structural material and method and apparatus for making same, Fibrous. J. Goldman. 2,407,548; Sept. 10.
Stud, Stress-free. O. M. Summers. 2,407,586; Sept. 10.
Styrene-maleic resin composition, Plasticized. H. L. Gerhart. 2,407,413; Sept. 10.
Sulphamide, Preparing. E. F. Degering and G. C. Gross. 2,407,481; Sept. 10.
Support: *See*—
Ladder support.
Supporting device, Conduit. J. Banneyer. 2,407,217; Sept. 10.
Surfacing machine, Article. R. F. Kneisley. 2,407,557; Sept. 10.
Suspension, Spring. F. M. Reid. 2,407,345; Sept. 10.
Switch: *See*—
Automotive gas tank cover Intermittent switch.
switch.
Switch. E. G. Miller and R. E. Engberg. 2,407,378; Sept. 10.
Switch for high-frequency circuits. B. Van Ryn. 2,407,460; Sept. 10.
Switch for trolley rails. G. F. Vinsant. 2,407,620; Sept. 10.
Take-up and tension circular knitting machines, Fabric. R. H. Carhart. 2,407,397; Sept. 10.
Tank: *See*—
Fuel tank. Self-sealing tank.
Tension control for abrasive belt systems, Measured. S. H. Klossner. 2,407,499; Sept. 10.
Terminal, Starter adapter. H. M. Lewis. 2,407,611; Sept. 10.
Tester, Spring. H. H. Walley, Jr., and A. W. Keema. 2,407,591; Sept. 10.
Testing compressible hardness of materials, Method and apparatus for. E. A. Sprigg. 2,407,583; Sept. 10.
Testing device, Thread friction. R. J. Fish. 2,407,545; Sept. 10.
Tetrafluoroethylene, Stabilization of. M. M. Brubaker. 2,407,396; Sept. 10.
Tetrafluoroethylene, Stabilization of. M. A. Dietrich and R. M. Joyce, Jr. 2,407,405; Sept. 10.
Tetrafluoroethylene, Stabilization of. W. E. Hanford. 2,407,419; Sept. 10.
Thermoelectric generator. W. R. Ray. 2,407,517; Sept. 10.
Thread cutter. M. Schreiber and A. Stebbins. 2,407,578; Sept. 10.
Thread, Method and apparatus for twisting. J. K. Whisnant. 2,407,358; Sept. 10.
Ties for reinforcing rods, Chair. B. F. Burner and L. A. Brooke. 2,407,249; Sept. 10.
Timing means, Impulse actuated. C. W. Gilbert. 2,407,232; Sept. 10.
Tin, Electrodeposition of. E. W. Schweikher. 2,407,579; Sept. 10.
Tire preserver. W. C. Carlton. 2,407,473; Sept. 10.
Toluene from oils, Recovery of. C. R. Clark. 2,407,364; Sept. 10.
Tool: *See*—
Cover removing tool. Percussion tool.
Inserted tooth tool.
Tool adapter, Rotary. R. Burk. 2,407,471; Sept. 10.
Torch, Flame hardening. H. G. Hughey. 2,407,370; Sept. 10.
Torque wrench. J. and G. M. Reilly. 2,407,450; Sept. 10.
Tractors, Material handling attachment for. F. and H. Horning. 2,407,425; Sept. 10.
Traffic light. F. T. Powers. 2,407,382; Sept. 10.
Transformer, High-voltage. H. Hartmann. 2,407,420; Sept. 10.
Transformers, Making three-phase. A. R. Woolfolk. 2,407,391; Sept. 10.
Transmission, Fluid. J. Jandasek. 2,407,496–7; Sept. 10.
Transmission, Liquid medium for ultrasonic compressional wave. W. P. Mason. 2,407,315; Sept. 10.
Transmitting intelligence, Method and means for. N. H. Young, Jr. 2,407,336; Sept. 10.
Tray, Collapsible wheeled. I. Rubin and J. B. Meltz. 2,407,385; Sept. 10.
Two-way clutch. K. Miller. 2,407,319; Sept. 10.
Typewriting machine. M. H. Mann. 2,407,433; Sept. 10.
Unloading apparatus, Truck. W. S. MacRae. 2,407,430; Sept. 10.
Unsaturated nitriles, Preparation of. D. J. Butterbaugh and L. U. Spence. 2,407,472; Sept. 10.
Valve: *See*—
Cabin pressure control valve.
Valve for internal-combustion engine, Hollow. R. A. Lincoln. 2,407,561; Sept. 10.
Valve system and control therefor. L. G. Daniels. 2,407,539; Sept. 10.
Variable resistance. A. W. Fischer. 2,407,544; Sept. 10.
Veterinary compositions. A. L. Flenner and C. A. Littler. 2,407,486; Sept. 10.
Vise. G. J. Meyer. 2,407,341; Sept. 10.
Water treating device, Automatic. L. G. Daniels. 2,407,538; Sept. 10.
Watering device for fowl. A. P. Ball. 2,407,216; Sept. 10.
Wedge, Self-locking. J. A. Jones. 2,407,427; Sept. 10.
Weight compensating apparatus for weighing scales, Tare. R. T. Pounds. 2,407,513; Sept. 10.
Wheel mechanism for tractors, Fifth. C. E. Pollard. 2,407,447; Sept. 10.
Wheel structure. C. Hollerith. 2,407,423; Sept. 10.
Windshield wiper system. J. W. Anderson. 2,407,215; Sept. 10.
Winding machine, Yarn. L. M. Cotchett, L. Campbell, and F. F. Stange. 2,407,366; Sept. 10.
Wire enameling die. R. M. Kolter. 2,407,337 Sept. 10.
Wrapping machine. C. J. Malhiot. 2,407,313; Sept. 10.
Wrench: *See*—
Torque wrench.
Wrench. R. E. Gearhart. 2,407,546–7; Sept. 10.
Wrinkle finish, Modified linseed oil. W. A. Waldie. 2,407,623; Sept. 10.
Zinc, Electrodeposition of. A. G. Gray. 2,407,489; Sept. 10.
Zinc mercaptide-aminothiazoline reaction product. R. A. Mathes. 2,407,565; Sept. 10.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 10, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

2— 14: 2,407,518	72— 122: 2,407,249	119— 74: 2,407,216	177— 353: 2,407,286	214— 59: 2,407,410	260— 313: 2,407,346

U. S. GOVERNMENT PRINTING OFFICE: 1946

Patents Nos. 2,407,624 to 2,407,969

THE OFFICIAL GAZETTE OF THE United States Patent Office

Vol. 590—No. 3 TUESDAY, SEPTEMBER 17, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Public Law 620—79th Congress

[CHAPTER 775—2D SESSION]

[H. R. 4080]

AN ACT

To authorize the Commissioner of Patents to designate Examiners to serve temporarily as Examiners in Chief.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions of section 476 of the Revised Statutes (U. S. C., title 35, sec. 2), the Commissioner of Patents is authorized to designate Examiners of the Principal Examiner grade or higher, having the requisite ability, to serve as Examiners in Chief and such Examiners so designated shall be fully qualified to act as members of the Board of Appeals constituted by section 482 of the Revised Statutes (U. S. C., title 35, sec. 7): *Provided,* That no such Examiner shall so serve for more than ninety days in any calendar year but thereafter they shall have authority to act and sign decisions and papers necessary to complete action on cases heard during such ninety days: *And provided further,* That not more than one such Examiner shall be among the members of the Board of Appeals hearing an appeal.

SEC. 2. This act shall take effect on the date of approval and shall expire three years after such date.

Approved August 7, 1946.

Order No. 4079

August 16, 1946.

The following units of the United States Patent Office are hereby transferred from Richmond, Va., to Gravelly Point, Washington, D. C., beginning on or about September 30, 1946:

The First Assistant Commissioner's Office;
The Law Examiner's Office;
The Supervisory Examiners' Office;
The Law Library;
The Drafting Division;
The parts of the following divisions still remaining in Richmond:
The Chief Clerk's Office;
The Personnel Office;
The Issue and Gazette Division;
The Docket Clerk's Division;
The Financial Clerk's Division;
The Mail Room;
The Assignment Division;
The Stockroom;
The following Examining Divisions: 1, 2, 4, 5, 8, 9, 11, 12, 13, 14, 17, 18, 19, 20, 22, 28, 29, 30, 32, 33, 34, 35, 36, 39, 40, 44, 45, 46, 47, 49, 52, 53, 57, 58, 61, and 62; and any and all units or parts thereof now remaining in Richmond.

THOMAS F. MURPHY,
Acting Commissioner.

Approved for change of station:

H. A. WALLACE,
Secretary of Commerce.

Trade-Mark Registrations Canceled

146,225. Wheat flour. Fisher Flouring Mills Company, Seattle, Wash. Registered Sept. 6, 1921. Canceled Aug. 7, 1946.

387,012. Thermoplastic mending adhesive tape. Textileather Corporation, Toledo, Ohio. Registered Apr. 29, 1941. Canceled July 9, 1946.

411,941. Shoes. Sears, Roebuck and Co., Chicago, Ill. Registered Feb. 13, 1945. Canceled Aug. 7, 1946.

416,683. Certain named chemicals. Monsanto Chemical Company, St. Louis, Mo. Registered Sept. 25, 1945. Canceled Aug. 7, 1946.

421,577. Shaving cream and soaps. Golden Arrow Toiletries, New York, N. Y. Registered June 4, 1946. Canceled Aug. 7, 1946.

421,578. Deodorants. Golden Arrow Toiletries, New York, N. Y. Registered June 4, 1946. Canceled Aug. 7, 1946.

Condition of Applications Under Examination at Close of Business August 30, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 123,022; Trade-Mark Division, 10,061. Oldest new case, March 23, 1945; oldest amended, March 21, 1945.)
(The dates given are 1945 except where † indicates 1946.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

DRAEGER ET AL. *v.* BRADLEY

No. 5,137. Decided May 7, 1946. Petition for rehearing denied July 9, 1946

[— F.(2d) —; 70 USPQ 183]

1. INTERFERENCE — EVIDENCE — STIPULATED ORAL TESTIMONY.

Where Draeger et al. entered into a stipulation as to the testimony which would be given by Bradley and his witnesses, if called to testify, *Held* that they were bound by the stipulated testimony and in no position to challenge the finding of the Board of Interference Examiners that, though unsupported by documents, it was sufficient to establish prior conception by Bradley.

2. APPEAL—INTERFERENCE.

Where the Board of Interference Examiners ruled that Bradley had not established actual reduction to practice, but nevertheless awarded priority to him, *Held* that, as an appellee, he was entitled to contest this ruling, although he took no cross-appeal .

APPEAL from the Patent Office. Affirmed.

Mr. W. E. Currie, Mr. P. L. Young and *Mr. W. F. Weigester* (*Mr. J. Cashman* of counsel) for Draeger et al.

Mr. Sol Shappirio for Bradley.

GARRETT, *P. J.:*

This is an appeal from the decision of the Board of Interference Examiners of the United States Patent Office awarding Bradley priority in an interference proceeding, declared between applications, involving the following two counts:

1. Process of producing alkymers from isoparaffins and olefins which comprises alkylating an isoparaffin with an olefin by contacting and agitating the olefin, isoparaffin and concentrated sulfuric acid catalyst and maintaining the molecular ratio of isoparaffin to olefin at the point where the olefin initially contacts the sulfuric acid catalyst at least about fifty to one.

2. Process of producing alkymers from isobutane and butylene which comprises alkylating isobutane with butylene by contacting and agitating said butylene, isobutane and concentrated sulfuric acid catalyst and maintaining the molecular ratio of isobutane to butylene at the point where the butylene initially contacts the catalyst at least about fifty to one.

The questions presented before use do not require detailed analysis of the counts. The first count is directed to isoparaffins and olefins broadly. The second is limited to isobutane and butylene. Both counts recite the maintaining "at least about fifty to one" the molecular ratio of the substances at the point of their initial contact with the catalyst.

The joint application (Serial No. 238,966) of Draeger and Shewell was filed November 5, 1938. On January 3, 1939, there was filed a joint application (Serial No. 248,928) in the names of Bradley and one Karl J. Korpi, and an interference (No. 78,868) was declared (in which two applications of other parties were involved) on December 6, 1940. Prior to the expiration of the time for filing preliminary statements Korpi filed an affidavit disclaiming inventorship, the joint application, Serial No. 248,928, was converted, under the regular procedure of the Patent Office, into a sole application by Bradley, and the interference was reformed (under the same interference number) on February 19, 1941.

At some time during the proceedings the other two applications were eliminated from the interference and were not involved in the decision of the Board here on appeal.

So, the controversy before us is limited to the Draeger and Shewell joint application on the one hand, and the Bradley sole application on the other.

As the junior party, it was incumbent upon Bradley (whose application was assigned to his employer, the Union Oil Company of California) to establish priority by a preponderance of the evidence. To that end evidence, hereinafter discussed, was introduced.

So far as disclosed by the record before us, Draeger et al. did not file a preliminary statement. They introduced no evidence of any character, and, therefore, are limited to the filing date (November 5, 1938) of their joint application.

Upon the record, the Board held, in substance, (1) that Bradley had established conception of the invention "not later than March, 1938"; (2) that Bradley had not established actual reduction to practice and, consequently, was dependent on the constructive reduction to practice resulting from the filing of the application, Serial No. 248,928, on January 3, 1939, but (3) that Bradley had proved diligence during the critical period, and on the basis of the findings of fact so made awarded priority to Bradley.

Before us counsel for Draeger et al. challenge the Board's holding as to (1) Bradley's conception date and (2) its holding as to Bradley's diligence. Counsel for Bradley defends those holdings and, in addition, insists that, upon the record presented, Bradley should be awarded actual reduction to practice prior to the filing date of the Draeger et al. application.

The Board, as is apparent from its decision, analyzed the record with great care, quoting much of the testimony upon which its finding of Bradley's conception was based; pointed out wherein it deemed the evidence insufficient to establish actual reduction to practice by Bradley, and recited in considerable detail the evidence upon which it based its finding of Bradley's diligence.

[1] Upon the question of Bradley's conception the evidence consists solely of testimony which counsel for Draeger et al. stipulated with counsel for Bradley (or his assignee) would be given by Bradley himself and six other persons, if called to testify.

The several witnesses are described as follows in the decision of the Board:

The junior party's [Bradley's] record consists of the stipulated testimony of seven witnesses, all employed by

Union Oil Company of California, assignee of the Bradley application. Bradley was employed as a research chemist in the research department from April 27, 1931, to April 1, 1938, and as a technical assistant in the patent department between April 1, 1938, and February 17, 1939. Korpi worked as a research chemist in the research department between June, 1937, and January 3, 1939. Moulton and Vermeulen were both employed as research chemists in the research department until the filing date of the Bradley application, the former entering upon this capacity November 1, 1937, and the latter August, 1937. Bradley, Korpi, Moulton, and Vermeulen all worked under the direct supervision of Blount, who was research supervisor in the research department during the years 1937 through 1939. Parker was employed as a process engineer in the development between April 25, 1938, and January 3, 1939. Lee has been working as a research chemist in the research department since 1932.

No documentary exhibits bearing upon the question of Bradley's conception were filed in support of the stipulated oral testimony and the lack of documentary evidence was emphasized before the Board which stated:

• • • It is true that written records are a great aid in fixing the date and nature of a disclosure and that in a doubtful case the presence or absence of such records may be an important factor. However, documentary evidence is not essential to proof of conception and conception may be established by proper oral testimony alone. *Clark* v. *Birdsey*, 56 App. D. C. 136, 1926 C. D. 199, 350 O. G. 687, 10 F.(2d) 1001; *Jardine and Jehle* v. *Long*, 19 C. C. P. A. 1243, 1932 C. D. 493, 423 O. G. 933, 58 F.(2d) 836, 13 USPQ 254. In the present case the stipulated testimony of four corroborating witnesses, Korpi, Blount, Moulton, and Vermeulen is completely consistent and was not attacked or weakened by cross-examination. Aside from the mere lack of written records, there is no reason for holding that this stipulated testimony is not credible evidence and this single deficiency alone is not fatal to Bradley's proof of conception.

In its decision the Board quoted the pertinent stipulated testimony of Korpi, Blount, Moulton, and Vermeulen, and we here quote that of Blount:

Prior to March, 1938, said Bradley had carried out small scale laboratory experiments in the laboratory of Union Oil Company on the alkylation of isoparaffins, such as isobutane with olefins, such as butylene in the presence of concentrated sulfuric acid and during this period, said Bradley conceived and disclosed to him the idea of alkylating isobutane with butylene by contacting and agitating a mixture of butylene and isobutane with concentrated sulfuric acid while maintaining a molecular ratio of isobutane to butylene at the point where the butylene initially contacts the sulfuric acid at least about fifty to one.

The stipulated testimony of Korpi, Moulton, and Vermeulen, quoted by the Board, is the same in purport as that of Blount.

The Board's holding that conception may be established by proper oral testimony is, of course, amply supported by the authorities which it cited and it does not seem to us that Draeger et al., having stipulated as they did, are now in any position which warrants their challenge of the correctness of the Board's finding. They, of course, were under no compulsion to enter into the stipulation. Had they not done so, undoubtedly it would have been necessary for Bradley and at least some of the corroborating witnesses to have been examined in the regular manner, in which event they could have been fully cross-examined.

It is true, as is suggested in the brief for Draeger et al. before us, that the stipulated testimony quoted by the Board is "in language virtually identical to the language of the counts," and it is a fair assumption that the stipulation was entered into long after the time of the conception claimed by Bradley, but the fact remains that Draeger et al. did enter into the agreement as to what the witnesses would testify and so are bound by the stipulated testimony which, clearly, is sufficient to establish Bradley's conception prior to the entry of Draeger et al. into the field.

The evidence relating to Bradley's claimed reduction to practice is described by the Board as follows:

The party Bradley's evidence of reduction to practice relates to forty-nine runs reported in weekly reports W. R. 1 to W. R. 44 inclusive and monthly reports M. R. 1 to M. R. 8 inclusive. The reports are adequately identified by Bradley and the corroborating witnesses Korpi, Moulton, Vermeulen, Blount, and Parker and the conduct of the operations reported therein is sufficiently described by the corroborating witnesses Korpi, Moulten and Vermeulen.

Further, the Board said:

In order to prove that these runs resulted in a reduction to practice Bradley must establish by sufficient observation and proper calculation that the molecular ratio of isoparaffin in general or isobutane in particular to olefin in general or butylene in particular at the point where the olefin or butylene initially contacts the sulfuric acid catalyst was maintained at least about fifty to one. The observations must be sufficient to permit of proper calculation and any assumptions involved in the calculation must be warranted by the actual facts or by accepted scientific principles.

[2] Following the foregoing, the Board proceeded to analyze a number of the runs (it being conceded that many of them were unsuccessful) in the light of the stipulated testimony relative to the calculations, formulas, etc., concerning them, and, for the reasons stated by it, concluded that the proof was deficient as to any actual reduction to practice by Bradley, but upon the basis of runs, as shown in weekly and monthly reports during the critical period, held that he had established diligence.

As has been indicated, counsel for Bradley (or his assignee) contends before us that the evidence is sufficient to support an award of actual reduction to practice on his part prior to the filing date of the Draeger et al. application—that is prior to November 5, 1938.

Being an appellee, Bradley was entitled to make the contention (although he took no cross-appeal) and we have given consideration to the arguments concerning it, with the result that we are not persuaded that the Board's holding concerning that phase of the controversy was erroneous. Since, however, we find ourselves in agreement with the Board's holding upon the matter of Bradley's diligence, it is unnecessary to our decision to discuss in detail the matter of his alleged reduction to practice.

Draeger et al. contended below and here contend that the critical period with respect to diligence began just prior to October 29, 1938, the date on which the oath to the Draeger et al. application was taken, rather than just prior to November 5, 1938, the date of filing the application in the Patent Office. The contention was noted by the Board but was not ruled upon because of its view that upon the record "the holding with respect to diligence will be the same no matter which date is treated as the beginning of the critical period."

The Board based its finding of diligence upon various runs made at a pilot plant of Bradley's assignee, as shown by documentary evidence in the form of weekly and monthly reports filed as exhibits and explained in the stipulated oral testimony of various witnesses.

From the Board's decision, we quote the following:

According to Korpi's testimony additional runs were made on the following dates which were reported in the following Bradley exhibits:

32	October 24, 1938	W. R. 34, M. R. 6
33	October 27, 1938	W. R. 34, M. R. 6
34	October 31, 1938	W. R. 35, M. R. 6
35	November 2, 1938	W. R. 35, M. R. 6
36	November 11, 1938	W. R. 36, M. R. 6
37	November 17, 1938	W. R. 37, M. R. 7
38	November 21, 1938	W. R. 38, M. R. 7
39	November 30, 1938	W. R. 39, M. R. 7
40	December 7, 1938	W. R. 40
41	December 12, 1938	W. R. 41, M. R. 8
42	December 15, 1938	W. R. 41, M. R. 8
43	December 16, 1938	W. R. 41, M. R. 8
44	December 19, 1938	W. R. 42, M. R. 8
45	December 22, 1938	W. R. 42, M. R. 8
46	December 28, 1938	W. R. 43, M. R. 8
47	December 31, 1938	W. R. 43, M. R. 8
48	January 3, 1939	W. R. 44, M. R. 8
49	January 5, 1939	W. R. 44, M. R. 8

Bradley Exhibits M. R. 6, 7, and 8 are entitled monthly reports for the months of October, 1938; November, 1938; and December, 1938, and January, 1939. Bradley Exhibits W. R. 34 through 44 are weekly reports for each of the weeks from the week ending October 28, 1938, to the week ending January 6, 1939, inclusive. The reports were identified not only by Korpi but also by Bradley, Moulton, and Blount. Korpi, Moulton, and Blount also testified concerning the work reported in these documents. All this evidence shows diligence during the critical period in attempting to reduce to practice the invention here in issue, even though the proof is deficient as to actual reduction to practice. It may be noted that the reports include calculated data as to volumetric reaction zone ratios of isobutane to olefins for all runs except 33, 34, and 40. On the basis of this evidence, the party Bradley is deemed to have made the required showing of diligence.

We concur with the decision of the Board of Interference Examiners upon all phases of the controversy presented, and its decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BECK ET AL.

No. 5,135. Decided May 7, 1946

[155 F.(2d) 398; 69 USPQ 520]

1. REFERENCE—COPENDING PATENT.

Where appellants' application and the prior application for a cited patent were copending, and during the period of copendency became assigned to the same assignee, *Held* that the patent was a reference not only "for what it claims but for what it discloses"; that "the mere fact that the two inventors, having a common assignee, cannot have an interference under the rules of the Patent Office does not change the situation"; and that the "rule of election as to which application will carry the claims in an interference has nothing to do with the question."

2. SAME—SAME.

"It would be in contravention of the statute to allow the appealed claims since under section 4886 R. S. a patent can only be granted where the patent sought is for an invention which had not previously been known or used by others. Upon the instant record, Altwicker et al. knew about the invention before appellants' filing date."

3. SAME—SAME—RULE 75.

The case of *The Alexander Milburn Co.* v. *Davis-Bournonville Co.*, 270 U. S. 390, 344 O. G. 817, "supports the conclusion that when a patent is issued it constitutes evidence that everything disclosed by it was known by others in this country at least as early as the filing date of the application on which the patent issued. Another applicant can, under rule 75, get behind such filing date, but no such effort was made here and the mere fact that there was copendency in the applications and that they finally found common ownership does not change the situation."

APPEAL from the Patent Office. Affirmed.

Mr. Samuel Z. Gordon for Beck et al.

Mr. John Boyle for Alien Property Custodian.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

BLAND, *J.*:

The Board of Appeals of the United States Patent Office affirmed the action of the Primary Examiner in finally rejecting claims 14 to 18, inclusive, and claim 24 of appellants' application for a patent on a magnesium base alloy. The Examiner had also rejected claims 21, 22, 23, and 25, but the Board reversed his decision as to those claims and allowed the same and the question of their patentability is not before us.

Appellants have appealed from the decision of the Board affirming that of the Examiner in rejecting claims 14 to 18, inclusive, and claim 24. In this court appellants' brief states, "claim 24 is withdrawn," which leaves for consideration only claims 14 to 18, inclusive.

Claim 14 is regarded as illustrative and reads as follows:

14. A cast article of a magnesium base alloy, said alloy containing between about 0.1 and about 2.0% of cerium and between about 0.5 and about 12.0% of zinc and having been annealed at a temperature between about 120° and about 250° C., the alloy being characterized by greater freedom from micro-shrinkage than a magnesium base alloy of the same composition but not containing said amount of cerium.

In appellants' brief, under the caption, "Questions Presented", the following is stated:

Two broad questions are presented by this appeal. The first is to what extent the Altwicker patent may legally be used as a reference in view of the common ownership of the Altwicker patent and appellant's application at the time they were copending in the Patent Office. • • •

The second question at issue is whether, assuming that the disclosure of a copending patent may legally be a bar to the common owner, the Altwicker patent discloses the same invention as appellant's.

The invention is briefly described in the brief of the Solicitor for the Patent Office as follows:

The application here involved discloses a magnesium base alloy containing between 0.1 and 2% of cerium and between 0.5 and 12% of zinc. It also discloses the heat treatment of such alloys at a temperature such as 515° C. and annealing at 175° C.

The rejection by the Examiner of the claims before him was on the ground that they were not patentable in view of the reference, Altwicker et al., 2,221,319, November 12, 1940, and some of the claims were rejected by combining the Altwicker et al. patent with the French patent to Haughton, 810,610, March 24, 1937.

In a supplemental statement made after the application had been remanded to the Examiner in

view of certain papers filed on behalf of the Alien Property Custodian, who prosecuted the instant application and represents the applicants here, the Examiner adhered to his original rejection of the claims. The supplemental statement was prompted by the fact that the papers filed presented evidence that the application of the patent to Altwicker et al. (which patent comprises the principal reference) and the instant application were copending at the time of the final rejection of the latter and were at that time both owned by the same party. The appellants there contended, and here contend, that the Altwicker patent should not be used as a reference in view of the common ownership of the two applications, urging that they had the right of election as to which application should contain the instant disputed matter, and also urging that, in any event, the said patent could only be used as a reference for what it claimed and not for what it disclosed.

The Board of Appeals in its decision held that the evidence disclosed by the affidavits submitted by appellants to the effect that during the last five months of pendency of the patent application title to the instant application was in the same company owning the patent did not require a holding that the Altwicker patent could not be properly used as a reference. It pointed out that there was no assignment of record of the instant application. (An assignment was subsequently recorded.) We find it unnecessary to discuss the effect of the assignment on the record because we disagree with the contention of the appellants that under the circumstances of this case it is improper to regard the Altwicker patent as a reference.

On the controlling issue in the case, and in applying the references, the Board stated:

> We have been unable to find in the decisions any indication that the common assignee obtains any right as against the public by virtue of common ownership which he would not have had in the absence of common ownership. Ordinarily when claims of an application are rejected on the *unclaimed disclosure* of a patent of prior date, the only way that the patent can be overcome is by proceedings under rule 75. Just why an inventor other than the patentee should find himself relieved of rule 75 proceedings merely because he had, during the pendency of the patent application, assigned his application to the owner of the patent, is not apparent, and our attention has not been called to any such ruling. It is not seen how an inventor can assign any greater rights than he acquired by the filing of his application.
>
> Applying this reasoning to the present case we see no reason to question the soundness of the Examiner's position in taking the *disclosure* of the patent as the reference. [Italics quoted.]

The authorities we have consulted are as follows: Rule 94; *Schreiber* v. *Bauer*, 1919 C. D. 4; *Tunstall* v. *White*, 1926 C. D. 19; *Haight* v. *Nell*, 1927 C. D. 4; *Chillas* v. *Weisberg*, 1928 C. D. 24; *In re Dunbar*, 1922 C. D. 105, 278 Fed. 334; *Ex parte Clawson*, 1929 C. D. 67; *In re Mann et al.*, 1931 C. D. 252, 47 F.(2d) 370; *In re Howard*, 1932 C. D. 73, 53 F.(2d) 896; *In re Willoughby*, 1937 C. D. 427, 88 F.(2d) 482; and *In re Allen*, 1940 C. D. 598, 112 F.(2d) 840.

Altwicker discloses an alloy which *contains* magnesium, manganese, cerium, zinc and aluminum. The instant application, among its various disclosures of alloys would include an alloy having the five metals above mentioned and in addition one or more of the following: cadmium, tin, and silver. [Italics quoted.]

Claims 17 and 18 read in terms on the Altwicker disclosure. In claim 18 there is an indirect reference to aluminum and silicon which have not been included in the positive recital of components. The reference is "the aluminum content * * * being less than * * *" and the same type of reference to silicon is made. This claim does not necessitate the presence of either material; so both are disregarded.

* * * * * * *

> Claims 14, 15, and 16 are for a cast article of a specified alloy, which has been annealed within a specified temperature range, and has certain properties. The ingredients of the alloy and their proportions fall within the disclosure of Altwicker. The Examiner has cited a French patent which shows a heat treatment within the claimed range of a magnesium base, cerium-containing alloy, of somewhat different composition. Applicant's argument emphasizes the difference of the compositions but does not controvert the Examiner's position that it is notoriously old to heat treat metals having a predominance of magnesium. We are of the opinion that the Examiner's position is sound that these claims lack invention over the art.
>
> Commenting on the Examiner's supplemental statement we note that claim 1 of the Altwicker patent recites the four ingredients of Example 6; that claims 1 and 2 are closed as to composition, and that claim 3 is open, reciting that the alloy *contains* cerium and manganese in addition to magnesium. This does not exclude the alloys of the appealed claims. If one were to rely solely on the claims of the patent, certain of the appealed claims do not draw a clear line of division with the claims of the patent. The need for drawing a clear line that would not require speculation is pointed out in *In re Willoughby*, cited above. [Italics quoted.]

The Altwicker patent, among its various disclosures, sets out in Example No. 6 an alloy composed of pure magnesium with 2% manganese, 0.4% cerium and 0.6% zinc.

The French patent to Haughton discloses the improvement of magnesium alloys containing cerium by heat treatment at 400° C. and tempering at 130 to 220° C.

It was the view of the Board, as it was that of the Examiner, that claims 17 and 18 "read in terms on the Altwicker disclosure." These two claims are for a base casting alloy, while claims 14, 15 and 16 are for a cast article of a specified alloy which has been annealed within a certain temperature range. The Board pointed out that the ingredients of the alloy and their proportions fall within the disclosure of Altwicker and that the French patent "shows a heat treatment within the claimed range of a magnesium base."

The Examiner and the Board pointed out that it was "notoriously old" to heat treat metals having a predominance of magnesium.

Claim 15 adds to claim 14 the statement that the alloy, prior to annealing, is heated to a temperature "below but in the vicinity of the solidus point," which, according to the application, is "about 515° C." The French patent discloses heating to about 400° C. prior to the heat treating or annealing at the lower temperature. These is nothing in the record which shows the difference between 400° C. and 515° C. as being critical.

Claim 16, while similar to 15, merely states that the annealing period is longer than the heating period. The French patent meets this by stating that the heating period is 400° C. for fifteen minutes while the annealing period is "one or more days."

The first and most important question involved is whether or not the contentions of appellants either that the Altwicker patent is not a proper reference (no affidavit under rule 75 of the Rules of Practice in the United States Patent Office was filed) or that the Altwicker patent can only be considered for what it claims rather than for what it discloses are sound. We are in entire agreement with the holding of the Board in this respect.

The application involved in the patent was filed October 22, 1938, the patent issuing on November 12, 1940, while the instant application, which as far as the record discloses was an independent invention (the inventors in the application being different parties from those in the patent), was filed March 2, 1940. The two applications were copending for about eight months before the issuance of the patent. The affidavit and record disclose that the instant application was assigned to the common assignee, the Magnesium Development Corporation, on October 23, 1940, about three weeks before the issuance of the patent.

[1] We are in agreement with the holding of the Board that the Altwicker patent is not only a proper reference for what it claims but for what it discloses and the mere fact that the two inventors, having a common assignee, cannot have an interference under the rules of the Patent Office does not change the situation. Patents must be issued to the first inventor. The record clearly indicates that any patentable subject matter involved in the appealed claims was first invented by Altwicker. The rule of election as to which application will carry the claims in an interference has nothing to do with the question.

Neither is this a case where there is a voluntary division or a requirement for division, and although appellants have stated that the subject matter of the patent claims and of the appealed claims is "divisible" they have not argued here that they are entitled to have the instant application regarded as a true division of the application which has developed into the patent.

We think the law applicable to this situation is somewhat clarified by the reasoning in the decisions in *Chillis* v. *Weisberg*, 1928 C. D. 24, 370 O. G. 3, and in *In re Dunbar*, 51 App. D. C. 251, 1922 C. D. 105, 278 Fed. 334, 300 O. G. 201.

[2] It would be in contravention of the statute to allow the appealed claims since under section 4886 R. S. a patent can only be granted where the patent sought is for an invention which had not previously been known or used by others. Upon the instant record, Altwicker et al. knew about the invention before appellants' filing date. They said nothing about annealing, but this was admittedly old and sufficiently disclosed in the Haughton patent.

[3] In *The Alexander Milburn Co.* v. *Davis-Bournonville Co.*, 270 U. S. 390, 344 O. G. 817, this subject matter is treated in a way that we think is convincing of the correctness of the Board's position. This case supports the conclusion that when a patent is issued it constitutes evidence that everything disclosed by it was known by others in this country at least as early as the filing date of the application on which the patent issued. Another applicant can, under rule 75, get behind such filing date, but no such effort was made here and the mere fact that there was copendency in the applications and that they finally found common ownership does not change the situation.

The decision of the Board of Appeals as to appealed claims 14 to 18, inclusive, is affirmed for reasons assigned by the Board, and the appeal is dismissed as to claim 24.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE RIDDLE

No. 5,153. Decided May 7, 1946

[155 F.(2d) 268; 69 USPQ 535]

PATENTABILITY—INSULATION.

Claims to an alumina insulating material and method of making the same *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Scott H. Lilly (*Messrs. Owen & Owen* of counsel) for Riddle.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims (Nos. 1, and 3 to 9, inclusive) in appellant's application for a patent for an alleged invention relating to an "alumina insulating material and method of making the same."

Claims 1, 3, 4, 5, and 6 are product claims, of which claim 3 is illustrative. Claims 7, 8, and 9 are method claims, of which claims 8 and 9 are illustrative.

Claims 3, 8, and 9 read:

> 3. A stable, dense, fine grained, vitreous, sintered electric insulator consisting of crystallized alumina and glass, and comprising at least 75% alumina, from 5% to 15% silica, and alkaline earth compound in an amount at least two-fifths as much as there is silica.
>
> 8. The method of making an electric insulator which consists in firing to vitrification a ceramic body comprising a major portion of alumina crystals and mullite mineral that is transformed into mullite below cone 20, and mineralizers that bring the maturing point of the body below cone 20 but leave it above the transforming temperature of the mullite mineral, the mineralizers comprising alkaline earth compounds, and governing the time of firing and the proportion of silica to alkaline earth compound so that not more than 2% of mullite crystals are left in the fired body.
>
> 9. The method of making an electric insulator which consists in firing to vitrification a ceramic body comprising about 84% alumina crystals, about 10% mullite materials and about 6% mineralizers consisting chiefly of alkaline earth compounds, and continuing the firing until there are no mullite crystals detectable in the fired body.

The references are: Wood, 2,195,950, April 2, 1940; Fessler et al., 2,272,618, February 10, 1942.

Appellant's insulator consists essentially of crystals of alumina bonded together by silica glass, and is substantially free from mullite. The process comprises the firing of ceramic materials which include alumina and silica. It appears that under certain conditions ceramic materials combine to form mullite, which is an aluminum silicate, and which, according to the record, is undesirable in an electric insulator. Appellant states in his applica-

tion that mullite may be eliminated from the insulating material by the use of "alkaline earth fluxes"; that "Compounds of beryllium have the least inhibiting effect of this group of compounds, while compounds of magnesium are more effective, and compounds of calcium, strontium and barium are still more effective"; and that mullite may be entirely inhibited by the use of oxides of calcium, strontium and barium. Appellant's insulating material is alleged to be particularly suitable for use in spark plugs.

The patent to Wood discloses a process of making a refractory body by firing a mixture consisting mainly of alumina and silica. The patentee states that the occurrence of mullite in the final product may be avoided by the use of a flux containing fluorspar (calcium fluoride) or cryolite (sodium aluminum fluoride). Calcium is an alkaline earth metal, the oxide of which is called alkaline earth, and sodium is an alkali metal. See Webster's New International Dictionary. The patentee also states:

> If, however, the body be found to contain mullite, either the firing temperature should be reduced or the quantity of fluorine-containing substance should be increased, or both, until mullite disappears from the body * * *.

The Fessler et al. patent relates to spark plug insulators, and discloses a process which includes the firing of materials including alumina and silica in the presence of alkaline earth fluxes, such, for example, as magnesium oxide. The patentees teach that corundum (alumina) and glass are effective electric insulators. However, they do not teach how the firing conditions could be regulated to eliminate mullite from the insulator, nor do they suggest that it is desirable to eliminate it. On the contrary, the patentees state that their spark plug insulator constains mullite, and some of the claims of their patent expressly call for the presence of mullite crystals.

The Primary Examiner rejected all of the appealed claims as being unpatentable over each of the references of record.

In affirming the decision of the Primary Examiner, the Board of Appeals relied mainly on the disclosure in the Fessler et al. patent. It very briefly discussed the patent to Wood, and stated that Wood's product was substantially the same as that defined in appealed claim 1 and that his disclosure anticipated the subject matter defined in method claims 7 and 8. The Board did not expressly reverse the holding of the Primary Examiner that each of the appealed claims was unpatentable over the disclosure in the patent to Wood, but, on the contrary, entered a general affirmance of the Examiner's decision, which includes an affirmance of the rejection of all of the appealed claims on the disclosure in the Wood patent. See *In re Boyce*, 32 C. C. P. A. (Patents) 718, 144 F.(2d) 896, 63 USPQ 80, 568 O. G. 568, and cases therein cited.

It may be, as stated by the Board, that the spark plug insulator disclosed in the patent to Fessler et al. is free from mullite crystals. However, as hereinbefore noted, the patentees not only do not suggest the desirability of eliminating mullite from their insulator, but some of the claims of the patent expressly call for the presence of mullite. But, be that as it may, we are of opinion, for the reasons hereinafter stated, that the tribunals of the Patent Office were right in holding that the appealed claims are unpatentable over the references of record.

Each of the appealed claims recites, in its introductory clause, an "electric insulator" or a "method of making an electric insulator," and counsel for appellant urge that those introductory clauses are limitations in the claims which distinguish them from the disclosure in the Wood patent.

It will be recalled that the composition disclosed in the patent to Wood consists substantially of corundum (alumina) and glass. As hereinbefore noted, both of those materials are effective insulators, and it is evident that the composition disclosed by Wood has electric insulating properties. Whether the patentee's product is as effective as an insulator as that of appellant, or whether it would be suitable for use in spark plugs, is not material to the issues here presented, since the appealed claims do not specify any particular degree of insulation nor do they contain any reference to spark plugs. Accordingly, even though, as argued by counsel for appellant, the introductory clauses be regarded as placing definite limitations on the claims, the claims do not distinguish from the composition disclosed in the Wood patent.

It is stated in each of the appealed claims, with the exception of claim 1, that an alkaline earth compound is used in making appellant's product, and it is alleged by counsel for appellant that the use of alkaline earth compounds to eliminate mullite from appellant's product, instead of calcium fluoride or sodium aluminum fluoride (used by the patentee Wood for the same purpose), involves invention.

It is the contention of counsel for appellant that the alkaline earth compounds called for by the appealed claims are intended to include only such compounds as contain oxygen, and were not intended to include compounds which do not contain oxygen, such as calcium fluoride (fluorspar) a compound of the earth metal, calcium, used by Wood.

Assuming that counsel's interpretation of claims 3 to 9, inclusive, is correct, and that those claims are limited to the use of alkaline earth compounds which contain oxygen, the question presented is whether the use of such compounds renders those claims patentable over the prior art. The mere fact that a difference exists between the fluxing materials used by the patentee Wood and those called for by the claims here on appeal is not sufficient to warrant a holding that the appealed claims are patentable. "It is elementary that novelty alone is not sufficient to impart patentability to a claim. Invention must be present." See *In re Hass et al.*, 31 C. C. P. A. (Patents) 895, 141 F.(2d) 122, 60 USPQ 544, 563 O. G. 576, and cases therein cited.

It is not stated in appellant's application that oxygen is an essential or important ingredient of the fluxing material. While it is true that the materials given in the specific examples all contain oxygen, the specification contains broad references to "compounds of calcium, strontium and barium," and compounds of magnesium or beryllium, and the effectiveness of those compounds is compared solely on the basis of the particular metal which they contain. This clearly suggests that it is the metal which is considered the vital element of the compound, and that the other elements in the compound are not important.

In an affidavit filed during the prosecution of his application before the Primary Examiner, appellant asserted that Wood's products, made by the use of "alkali compounds," would not be as effective as insulators as appellant's products, made by the use of alkaline earth compounds, and gave as his reason for that statement that Wood's compounds contain fluorine and that "fluorine in any considerable quantities is detrimental to the insulating qualities of a ceramic composition at high temperatures." It is not alleged in appellant's application or in his affidavit that his fluxing material, which contains oxygen, is superior to a fluxing material which does not contain oxygen.

Under such circumstances, we are unable to hold that the use of a fluxing material, which contains oxygen, produces an insulating material which is patentably different from the insulating material disclosed in the patent to Wood.

Counsel for appellant also contend that the patent to Wood fails to disclose "mullite material," called for by appealed claims 5, 6, and 9, or "mullite mineral," called for by appealed claims 7 and 8, within the meaning of those terms as defined in appellant's application.

Appellant states in his application that—

> In the appended claims, the term "mullite material" is employed to cover either previously formed mullite or materials which would be transformed to mullite during the normal firing of the body, in the absence of an inhibitor, while "mullite mineral" is employed to cover andalusite, cyanite, sillimanite, dumortierite, and similar aluminum silicate minerals that are transformed into mullite upon heating at temperatures below the temperature at which pure alumina and silica unite to form mullite.

The patentee Wood plainly states that his product may contain mullite, unless a sufficient amount of flux is included. The flux, therefore, acts as an inhibitor and, since the materials used would be transformed to mullite if the flux were not present, they are mullite materials or mullite minerals within the meaning of those terms as employed by appellant.

Claims 1, 3, 4, 5, 6, 8, and 9 contain references to specific proportions of ingredients, and, in addition, claim 8 contains reference to specific temperatures. The proportions and temperatures specified in the claims closely approximate those disclosed in the patent to Wood, and it has not been established that such differences as exist differentiate appellant's insulating material from that disclosed by Wood.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE SCHARF

No. 5,133. Decided May 7, 1946

[— F.(2d) —; 69 USPQ 518]

1. APPEAL—EFFECT OF GENERAL AFFIRMANCE BELOW.
   "The Board did not refer to the Primary Examiner's rejection of the appealed claims on the grounds of aggregation and undue multiplicity either in its original decision or in its decision on appellant's request for reconsideration of its original decision. However, it entered a general affirmance of the Examiner's decision, which amounts to an affirmance of the Examiner's holding that the claims were unduly multiplied."
2. SAME—REASONS OF APPEAL.
   "In his appeal to this court, appellant did not assign as one of his reasons of appeal that the Board erred in rejecting the appealed claims on the ground of undue multiplicity. That ground of rejection, therefore, is not before us for consideration. Accordingly, should we disagree with the Board's holding that the appealed claims are unpatentable over the disclosures in the prior art, the decision of the Board would, nevertheless, have to be affirmed."
3. CLAIMS—MULTIPLICITY.
   "It is well settled that undue multiplicity of claims is a proper ground of rejection."

APPEAL from the Patent Office. Affirmed.

Mr. Charles E. Carney (*Mr. A. Ponack* of counsel) for Scharf.

Mr. W. W. Cochran for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims (Nos. 1, 2, 3, 5, 6, and 9) in appellant's application for a patent for an alleged invention relating to a product comprising soybean lecithin (soybean phosphatide), in an amount not less than 20%, and a substance rich in vitamin B complex, and a process of making the same.

Claims 1 and 3 are sufficiently illustrative of the appealed claims. They read:

> 1. A product containing commercial soybean lecithin and a substance rich in the vitamin B complex the amount of phosphatides being not less than about 20% of the vitamin B containing material.
> 3. The process of preparing a mixture of soybean phosphatides and a substance containing the vitamin B complex which comprises triturating the phosphatides with the substance containing the vitamin B complex, the amount of phosphatide being at least 20% of the vitamin B containing material.

The references are: Bresnick, 2,007,108, July 2, 1935; Holmes, 2,051,257, Aug. 18, 1936; Schultz et al., 2,136,399, Nov. 15, 1938; Thurman, 2,201,064, May 14, 1940; Nitardy, 206,113; July 2, 1940; U. S. Dispensatory, 22d Ed. (1937) pages 1448, 1449; William & Spies publication "Vitamin B_1 and Its Use in Medicine," page 283.

Reference showing the state of the art: Sollman—Manual of Pharmacology (1932) page 412.

Appellant's alleged invention is sufficiently described in the quoted claims.

In his application, appellant states:

> It has been found that a higher intake of vitamin B_1 in the diet will require more choline in the diet, while an increased intake of phosphorus in the diet will require more vitamin B_1, and that it is advantageous to administer said substances together and in the proper relation.

This can be achieved with lecithin, which yields during digestion both choline and phosphoric acid and which may be combined with some vitamin B containing material such as yeast or rice-polish.

Appellant further states in his application that vitamin B_1 aids in the conversion of sugar to fat, and that "choline has a hormonal effect in maintaining the normal level of liver fat and the normality of the lipoid metabolism."

The appealed claims were rejected by the Primary Examiner on all the foregoing stated references, except the William & Spies publication. The claims were further rejected by the Examiner as covering merely an aggregation of old and well-known medicinals in which each performs its function without co-action with the other medicinals, and also on the ground of undue multiplicity.

As to the latter ground of rejection, the Primary Examiner said:

The claims are further rejected as being unduly multiplied. Claim 1 as amended and claim 6 fail to differ patentably. Claim 1 uses the expression "soybean lecithin" while claim 6 uses the expression "soybean phosphatides." The soybean phosphatide, however, is soybean lecithin as shown by the dispensatory and by page 2, lines 3 and 6, of the specification. Hence, claims 1 and 6 are for the same composition. It does not appear necessary to have two claims for the same thing.

[1] In affirming the decision of the Primary Examiner, the Board of Appeals cited the William & Spies publication, which had not been cited by the Examiner, and apparently relied upon the disclosure in that reference and the disclosures in the patents to Schultz et al. and Nitardy. The Board did not refer to the Primary Examiner's rejection of the appealed claims on the grounds of aggregation and undue multiplicity either in its original decision or in its decision on appellant's request for reconsideration of its original decision. However, it entered a general affirmance of the Examiner's decision, which amounts to an affirmance of the Examiner's holding that the claims were unduly multiplied.

[2] In his appeal to this court, appellant did not assign as one of his reasons of appeal that the Board erred in rejecting the appealed claims on the ground of undue multiplicity. That ground of rejection, therefore, is not before us for consideration. Accordingly, should we disagree with the Board's holding that the appealed claims are unpatentable over the disclosures in the prior art, the decision of the Board would, nevertheless, have to be affirmed. Under the circumstances "it would avail appellant nothing for us to decide" the issues raised by his reasons of appeal which aver that the Board erred in holding that the appealed claims are unpatentable over the prior art and that they are aggregative. See *In re Boyce*, 32 C. C. P. A. (Patents) 718, 144 F.(2d) 896, 63 USPQ 80, 568 O. G. 568, wherein we quoted from the headnotes of our decision in the case of *In re Wagenhorst*, 20 C. C. P. A. (Patents) 991, 64 F.(2d) 780, 17 USPQ 330, 433 O. G. 223, as follows:

The Board of Appeals having affirmed the decision of the Examiner in rejecting the claims of appellant on certain grounds and upon certain named references, *held* that such affirmance has the legal effect of a rejection upon the grounds and references cited by Examiner, and not expressly reversed by the Board. [Italics quoted.]

We then said:

The rule thus announced was not deemed to be revolutionary in character but was thought to be based upon sound reason in the light of the statute defining the court's jurisdiction in patent appeals. Its reasonableness has never been challenged before us by the patent bar, but, repeatedly, we have been confronted with appeals in cases where the Board made no mention of some of the references cited by Examiners and appellants failed (as appellant here failed) to challenge their application in the reasons of appeal so as to require or admit of their consideration by us. Such situations have frequently caused embarrassment to counsel, and, in some measure, to the court, since it is our desire to give full consideration to every element involved in cases brought before us. This we do when the reasons of appeal conform to the statute and the rules.

It is our hope that all the attorneys engaged in the practice of patent law may become familiar with the rule announced in the Wagenhorst case, supra, and appreciate the necessity of observing it, and, with the thought in mind that it may aid in emphasizing its importance, we have collated an extensive list of cases in which it has been applied since its original announcement more than eleven years ago, from which time it has been consistently followed by us.

The court then cited twenty-seven cases in support of the stated rule, and held that as the Board had entered a general affirmance of the Examiner's decision rejecting the claims there on appeal, but referred in its decision to but one of the references relied upon by the Examiner, and as appellant in his reasons of appeal in this court assigned error only as to the applicability of the reference referred to by the Board, the court was required to treat all of the references cited by the Examiner as valid, and stated that should we be of opinion that the claims were patentable over the reference referred to by the Board, the Board's decision would, nevertheless, have to be affirmed. See also *In re Dichter*, 27 C. C. P. A. (Patents) 1060, 110 F.(2d) 644, 45 USPQ 91, 519 O. G. 1049; *In re Rosenblatt*, 28 C. C. P. A. (Patents) 1036, 118 F.(2d) 590, 49 USPQ 117, 530 O. G. 506; *In re Arter*, 32 C. C. P. A. (Patents) 882, 886, 147 F.(2d) 701, 64 USPQ 563, 574 O. G. 395; *In re Charles Brown Dalzell et al.*, 32 C. C. P. A. (Patents) 938, 941, 148 F.(2d) 357, 65 USPQ 215, 576 O. G. 7; *In re Smith*, 32 C. C. P. A. (Patents) 1256, 150 F.(2d) 700, 66 USPQ 306; *In re Gustav Glocker*, 33 C. C. P. A. (Patents) —, 153 F.(2d) 119, 68 USPQ 194, 586 O. G. 3,

[3] It is well settled that undue multiplicity of claims is a proper ground of rejection. *In re Buttolph*, 22 C. C. P. A. (Patents) 973, 75 F.(2d) 629, 24 USPQ 375, 456 O. G. 503.

Although we are without jurisdiction in the instant case to determine the soundness of the Primary Examiner's rejection of the appealed claims on the ground of undue multiplicity, we have expressed our views with regard to the latitude that should be permitted applicants in defining their invention in claims worded in different language in our decision in the case of *In re Glenn D. Wood and Fred L. Turner* (appeal No. 5,138, decided April 1, 1946), 33 C. C. P. A. (Patents) —, — F.(2d) —, 69 USPQ 337.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,594,162, M. A. Feinstein, Heel, D. C., N. D. Ohio, E. Div., Doc. 21903, *M. A. Feinstein* v. *I T S Co.* Order dismissing case July 25, 1946.

1,624,887. (See Re. 20,092.)

1,635,784, J. Griffith, Bowling alley; 1,714,310, E. Hedenskoog, Ball retarder for bowling alleys, D. C., S. D. N. Y., Doc. 16273, *The Brunswick-Balke-Collender Co.* v. *American Bowling & Billiard Corp.* Patent 1,635,784 held not infringed Oct. 26, 1943; Patent 1,714,310 held not infringed Feb. 23, 1943; order on mandate affirming and amending decree of Feb. 23, 1943, by holding claim 1 of 1,714,310 invalid July 9, 1945.

1,673,727. (See Re. 19,023.)

1,696,119, R. E. Heisel, Paper machinery; 1,912,605, F. W. Wickery, Doctor for paper-making and like machines, D. C. Mass., Doc. 4546, *Vickery, Inc.*, v. *Loding Engineering Corp.* Consent judgment for plaintiff for injunction as to 1,912,605 Jan. 3, 1946.

1,714,310. (See 1,635,784.)

1,744,016, A. P. Steckel, Metal rolling; 1,779,195, same, Method and apparatus for rolling thin sheetlike material, filed July 22, 1946, D. C., N. D. Ohio, E. Div., Doc. 24189, *The Union National Bank of Youngstown, Ohio* v. *Greer Steel Co.*

Notice of Cancellation

U. S. PATENT OFFICE, *Richmond, Va., August 21, 1946.*

American Gear Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Burd Piston Ring Company, 2401 Tenth Street, Rockford, Ill., to effect the cancellation of trade-mark registration of American Gear Company, 212 South Horton Street, Jackson, Mich., No. 228,726, dated June 7, 1927, and the notice of such proceeding sent by registered mail to the said American Gear Company, at the said address, having been returned by the post office undeliverable, notice is hereby given that unless said American Gear Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

Adjudicated Patents

(C. C. A. N. Y.) Hill patent, No. 1,526,982, for a stencil sheet, claims 2, 3, 4, 6, 7, 11, 16, 18, 21, and 22 *Held* valid and infringed. *A. B. Dick Co.* v. *Marr*, 155 F.(2d) 923; 70 USPQ 27.

(D. C. Calif.) Thompson patent, No. 1,694,996, for a pressure cooker and pressure cooler, claims 1, 2, and 3 *Held* valid but not infringed. *Food Machinery Corp.* v. *Pacific Can Co.*, 66 F. Supp. 109.

(C. C. A. N. Y.) Livingston patent, No. 1,708,625, for refrigeration, claims 16, 21, and 23 *Held* invalid. *Safety Car Heating and Lighting Co.* v. *General Elec. Co.*, 155 F.(2d) 937; 69 USPQ 401.

(C. C. A. N. Y.) Livingston patent, No. 1,708,626, for refrigeration, claims 9, 11, 12, 18, and 19 *Held* invalid. *Id.*

(D. C. Mo.) Kesling patent, No. 2,034,400, for a vacuum operated mechanism, claims 25 to 29, inclusive, *Held* valid and infringed. *Kesling* v. *General Motors Corp.*, 66 F. Supp. 1.

(D. C. N. Y.) Myerson patent, No. 2,202,713, for an artificial tooth, claims 8 and 9 *Held* invalid. *Myerson* v. *Dentists' Supply Co. of N. Y.*, 66 F. Supp. 31, 69 USPQ 220.

(D. C. Calif.) Thompson patent, No. 2,211,801, for a pressure cooker and pressure cooler, claims 3 to 8, inclusive, 12 to 16, inclusive, 19, and 22 *Held* valid, and infringed. *Food Machinery Corp. v. Pacific Can Co.*, 66 F. Supp. 109.

(D. C. N. Y.) Myerson patent, No. 2,300,305, for an artificial tooth, claims 1, 2, 3, 5, 6, 9, and 10, *Held* invalid. *Myerson* v. *Dentists' Supply Co. of N. Y.*, 66 F. Supp. 31; 69 USPQ 220.

Disclaimers

1,967,221.—*William R. Allen*, Shaker Heights, and *Emmett C. Hartley*, Euclid Village, Ohio. PRINTING PLATE AND HOLDING MEANS THEREFOR. Patent dated July 24, 1934. Disclaimer filed Aug. 17, 1946, by the assignee, *Addressograph-Multigraph Corporation.*

Hereby enters this disclaimer to claims 7 and 8 in the specification of said patent.

2,275,154.—*Edward O. Merrill*, West Roxbury, *James W. Reddie*, Hull, and *John M. Anderson*, Woburn, Mass. METHOD FOR MAKING CAPSULES. Patent dated Mar. 3, 1942. Disclaimer filed Aug. 19, 1946, by the assignee, *United-Rexall Drug Company.*

Hereby disclaims from said patent the claims numbered 1, 2, 3, 4, 5, and 6.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,218,186. GASKET CUTTING MACHINE. Patented Oct. 15, 1940. Gaskets of rubber, cork, or similar material, for closure caps of various kinds, are sliced from a column of rod-like or tubular material by machine. Machine is provided with mechanism for automatically feeding the gasket material to the cutters. The mechanism is adjustable to produce gaskets of various thickness. (Owner) James M. Teash, 50 Park Terrace West, New York 34, N. Y. Group 35—59. Reg. No. 3,823.

Pat. 2,279,302. ANCHOR. Patented Apr. 14, 1942. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A high-holding power anchor made by casting is strong but light in weight. Consists of a shank, a stock and a fluke assembly with a slotted crown and arms extended from sides and terminating in a pair of flukes. One end of shank is secured for pivotal movement in slotted portion of crown. When inoperative stock slides through slotted crown and folds alongside shank. May be housed within a small space such as a hawse pipe. (Owner) Edward C. Craig, Capt., U. S. N., 7 Grassmere Ave., Winchester, Mass. Group 33—92. Reg. No. 3,824.

Pat. 2,081,147. STROPPING DEVICE. Patented May 25, 1937. Groups 32—91; 33—51. Reg. No. 3,825.

Pat. 2,001,727. AUTOMATIC RAZOR EDGING MACHINE. Patented May 21, 1935. Groups 32—91; 33—51. Reg. No. 3,826.

These two patents relate to like subject matter. Patent 2,081,147 describes a portable stropping device for resharpening double-edge blades. Because the stropping members are eccentrically mounted, a cross-wiping abrading action results and "tracking" is eliminated, producing an evenly sharpened edge. Patent 2,001,727 incorporates the above feature but relates particularly to a machine for the commercial manufacture of this double-edge razor blade in which all honing, grinding and stropping operations are accomplished within a single passage. By using progressively finer abrasive surfaces the operations are continuously and successively performed on a single machine, saving time and labor. (Owner) Arthur J. Holman, 174 Monteroy Road, Rochester 10, N. Y.

Pat. 2,345,602. APPARATUS FOR TELEVISION PICKUP FROM FILM. Patented Apr. 4, 1944. The apparatus consists of an arrangement of revolving lens wheel which comprises an optical rectifying system, a three frame film aperture, a collector and condenser series of fixed lenses and a low source of illumination. The film image projected into the iconoscope is, the inventor states, continuous, that is, as free from time pattern and variations as any "live set" televised in a studio. The image may be scanned at any interval and at any speed; the process not being limited to any particular number of lines per frame or to any arrangement of interlacing. (Owner) Arthur J. Holman, 174 Monteroy Road, Rochester 10, N. Y. Group 36—61. Reg. No. 3,827.

Pat. 2,381,449. SPHERICAL SURFACE GENERATING DEVICE. Patented Aug. 7, 1945. Group 39—13—14. Reg. No. 3,828.

Pat. 1,827,748. APPARATUS FOR GRINDING AND POLISHING SPHERICAL LENSES. Patented Oct. 20, 1931. Group 39—13—14. Reg. No. 3,829.

Pat. 2,377,344. LENS BLANK AND LAP MOUNTING FOR PRECISION LENS GENERATING MECHANISMS. Patented June 5, 1945. Group 39—13—14. Reg. No. 3,830.

Pat. 2,398,790. PRECISION CYLINDRICAL SURFACE GENERATING DEVICE. Patented Apr. 23, 1946. Group 39—13—14. Reg. No. 3,831.

These four patents relate to grinding and polishing apparatus for the formation of various optically precise surfaces. The apparatus differs from the conventional lens surfacing machines in that neither work nor tool is free floating, the lap or polisher and the work being rigidly supported with respect to the center of the curvature of the surface being generated. Both tool and work are so constrained that all movements take place about the center of the curvature (depending, of course, on the surface desired). Thus the cutting action between the lap and the lens blank is not the result of spinning, but rather of oscillation. Since the wearing influence on the blank is equalized, the accuracy of the product depends on the mechanism instead of the skill of the operator. Patent 2,377,344, is applicable to the grinding of ultra precise surfaces required in telescopes and photographic objectives. Patent 2,381,449 is adaptable to a greater range of surface curvatures, especially short radius curves, while Patent 2,398,790 is for the production of cylindrical lenses used in the astigmatizers of rangefinders, aviation drift sights and lenses used in exciter systems of sound pick-up units of motion picture projectors. (Owner) Arthur J. Holman, 174 Monteroy Road, Rochester 10, N. Y.

Pat. 2,373,957. TOY. Patented Apr. 17, 1945. For catapulting a toy glider or rocket into the air. A longitudinally split cylinder has a plunger and coiled spring. A disc on inner end of plunger has a projecting tongue slidable in the slit. A clip beneath glider frictionally grips tongue. When plunger is pulled back and released the spring drives glider along length of cylinder and into the air. (Owner) E. A. Hornberger, 7435 Blvd. East, North Bergen, N. J. Group 39—41. Reg. No. 3,832.

Pat. 2,282,238. LAWN MOWER FOR GRASS, GRAINS, AND THE LIKE. Patented May 5, 1942. Manually operated mower will cut grass or grains of various heights with equal facility by reason of the particular formation and arrangement of the cutters, several modified forms of which are shown. A series of spaced cutters on a rotating shaft sweep laterally over a toothed stationary cutter bar. Mower is supported by two sprocketed wheels on one side and a single wheel on the opposite side. The sprocketed wheels are provided with a caterpillar tractor belt which engages a pinion to rotate the shaft and cutters. Cutters may be rendered inoperative by tilting mower until belt and sprocketed wheels are off the ground. (Owner) Richard T. Newton, 277 Park Ave., New York 17, N. Y. Group 35—22. Reg. No. 3,833.

Pat. 2,400,699. MECHANICAL BAND SPREAD FOR RADIO TUNING. Patented May 21, 1946. A two speed dial arrangement which will cover desired ranges and provide a

geared-down vernier drive so that weak signals will not be passed over without hearing them. A drum is rotatably mounted on the shaft in connection with the rotor of a tuning condenser of a receiver and activated by a cable connecting the drum to the signal selector dial for normal rough tuning. A series of rocker arms are connected to the shaft by an eccentric cam positioned on the drum to effect high reduction operation of the condenser for fine tuning. The shift is made by disconnecting the drum and simultaneously connecting one of the rocker arms by means of a dial controlled key pivotally mounted in a slot of the shaft. (Owner) Charles F. Mathewson, Mathewson Electronics Labs., Buffalo 15, N. Y. Group 36—61. Reg. No. 3,834.

Pat. 2,169,498. DEVICE FOR CONTROLLING AND PLANNING PRODUCTION, ORDER DISPATCHING, STORES, AND SALES Patented Aug. 15, 1939. This patent presents a visual method for the control of stock, recording of sales and other activities in relation to planned business management. It consists of several panels on which are mounted printed forms, cards and tags which are moved or changed as work progresses so that an over-all view of a business may be provided instantaneously. The scheme allows a workable means to analyze, standardize and unify conditions which effect production, delivery or sales without the necessity of wading through a mass of data. (Owner) Henry Molz, 363 West Lexington Drive, Glendale 3, Calif. Groups 27—82; 35—79. Reg. No. 3,835.

Pat. 1,869,988. HEEL AND SOLE PROTECTOR. Patented Aug. 2, 1932. Protector is adapted to fit over the heels of shoes, galoshes, and the like, to prevent slipping on wet or icy pavements. It is made of stiff leather and has a tread insert of high grade thick felt. It may be carried in pocket or handbag and is easily attached and detached by straps or other means. (Owner) Stephen Vellner, 529 W. 141st St., New York 31, N. Y. Group 31—41. Reg. No. 3,836.

Pat. 2,195,305. COIN CONTROLLED VENDING AND CHANGE MAKING MACHINE. Patented Mar. 26, 1940. Machine for vending magazines or newspapers. The article is partially projected through a normally closed opening and grasped by a customer. Machine may be adjusted to function by the insertion of either a nickel, dime, or three pennies. May also be adjusted to return two cents change upon insertion of a nickel. Two separate coin slots are opened and closed by slides. If wrong coins are inserted they will drop into housing without operating or jamming machine. (Owner) Thomas L. Heaton, 305 Broadway, Blytheville, Ark. Group 35—73. Reg. No. 3,837.

Pat. 2,399,960. STOOL-TYPE LATRINE AID. Patented May 7, 1946. May be used by campers or field armies. Comprises a ring-like seat with U-shaped brackets on under side to which supporting legs are detachably and slantingly connected. Each leg is pointed and has a stop to limit penetration into the ground. May be readily assembled or knocked-down for shipment in small space. (Owner) Charles L. Turner, 5902 Elston Ave., Chicago 30, Ill. Group 25—11—99. Reg. No. 3,838.

Pat. 2,376,336. RELEASING DEVICE. Patented May 22, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757). An auxiliary fuel tank supported on a cradle on top of a tank or other military vehicle is anchored by straps. The straps are automatically released by remote control from within the tank to permit tank and straps to fall to the ground. The conduit connecting the auxiliary tank to a regular fuel tank is automatically disconnected from the regular tank when the releasing means is actuated. Both tanks may be filled by introducing fuel into the auxiliary tank alone. Several cradles of modified form are illustrated. (Owner) Arthur S. Brown, % Morse Chain Co., 7601 Central Ave., Detroit 8, Mich. Group 33—X1. Reg. No. 3,839.

Pat. 1,805,843. INTERNAL COMBUSTION ENGINE. Patented May 19, 1931. Group 37—32. Reg. No. 3,840.

Pat. 1,971,620. INTERNAL COMBUSTION ENGINE. Patented Aug. 28, 1934. Group 37—32. Reg. No. 3,841.

Pat. 1,910,561. MARINE PROPULSION DEVICE. Patented May 23, 1933. Group 37—32. Reg. No. 3,842.

These three patents relate to outboard motors. In Patent 1,910,561 a pair of horizontally aligned propellers are mounted forwardly and rearwardly on the lower end of a vertical, sectional drive shaft and housing. Propellers are automatically and momentarily stopped by clutches should they strike obstructions and part of the housing will pivot vertically. A cooling system having no moving parts is provided, water being continuously taken from and discharged back into the sea, circulation through the system being effected by suction created by rotation of rear propeller. The vertical shaft and housing may be lengthened by inserting a removable section to position propellers deeper into the water. Either propeller may be dispensed with if desired. Patent 1,971,620, which is a division of Patent 1,910,561, shows an intake valve arrangement for controlling the flow of fuel into the crankcase through the bottom wall of the housing. A rotatable disc inside the crankcase has an opening adapted to register with a port in the housing. The disc, in addition, forces collected oil in the crankcase to vital parts of the motor and bearings. Patent 1,805,843 shows a similar intake valve which controls the flow of fuel into the crankcase through the top wall of the housing. Fan blades placed in the opening in the disc accelerate the flow into the crankcase and also act as a supercharger. A modification is shown. (Owner) Maxwell K. Murphy, 535 Golden Gate West, Detroit 3, Mich.

Pat. 2,294,122. IGNITION CIRCUIT BREAKER. Patented Aug. 25, 1942. Group 36—19. Reg. No. 3,843.

Pat. 2,182,300. EMERGENCY CIRCUIT BREAKER. Patented Dec. 5, 1939. Group 36—19. Reg. No. 3,844.

In these two patents the device used to close the circuit of the wiring system of an automobile is a small metal ball snugly held in an insulated casing. In the event of collision, etc., the ball is unseated and the primary circuit opened to prevent short circuits, fire, etc. Patent 2,294,122 has, in addition, a retaining spring to hold the ball in place during normal operation of the vehicle and spring conductor extensions which are driven out of electrical engagement when the ball is dislodged. (Owner) Paul C. McCandless, 1039 New Castle St., Butler, Pa.

Pat. 2,302,806. COMBINED TOWEL RACK AND BOOK HOLDING ATTACHMENT FOR BATHTUBS. Patented Nov. 24, 1942. Rack enables bather to read while reclining in tub. The angular rack is provided with suction cups so that it may be secured to tub. When positioned at one side of tub the rack serves as a towel holder. The rack may also be swung across the tub to function as a book or magazine holder, being provided with a ledge, back rest, and resilient page holder. The rack may be adjusted to conform to the width of the tub. (Owner) Mrs. Jessie B. Senter, 2713 N. W. 20th St., Oklahoma City, Okla. Groups 25—99; 39—39. Reg. No. 3,845.

Pat. 2,184,981. HAIR CUTTING MACHINE. Patented Dec. 26, 1939. Mower-like blades, which form the rotary cutter of this motor driven hair clipper, bear against a stationary blade fitted in the recess of a removably mounted comb member. Rockers on the side arms of the frame carrying the rotary cutter, etc., may be adjusted so that the hair may be cut to any length or used to trim hair on any part of the head for a complete haircut without the use of scissors necessary with former hair clipping mechanisms. (Owner) Joseph Suozzi, 630 Fifth Ave., New York 20, N. Y. Group 33—51. Reg. No. 3,846.

Pat. 2,292,175. HAIR CLIPPER. Patented Aug. 4, 1942. Clipper has spiral rotary cutter which makes shearing contact with stationary blade positioned in a comb member fixed to the clipper frame. By compression of the usual spring handles, a pin, riding in the spiral groove of a sliding plunger, rotates a hollow cylindrical housing associated with a pair of gears which impart motion to the rotary cutter. An adjustable lever may be regulated to trim the hair to any length as described in Patent 2,184,981. (Owner) Joseph Suozzi, 630 Fifth Ave., New York 20, N. Y. Group 33—51. Reg. No. 3,847.

Pat. 2,156,911. MICROSCOPE. Patented May 2, 1939. A microscope, the objective (lenses which form the image of the object) of which employs mirrors includes a curved mirror so that the light from the object does not pass through any lens to form a spectrum, but is reflected. The mirror is comparatively small and in the form of a concave ellipsoid being designed so that it is focused on an object close to the objective to create a magnified image capable of being again magnified by the eyepiece of the microscope. Corresponds to a reflecting telescope. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Group 39—13. Reg. No. 3,848.

Pat. 2,159,202. EXPOSURE METER. Patented May 23, 1939. An extinction type exposure meter for cameras in the form of a single chart on which are printed shutter speeds and stop numbers according to the "F" or any other standard system. Since all readings are made from a single chart with no moving parts the device is more compact than usual exposure meters so that it may be built into a camera and occupy a space of only one quarter cubic inch. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Group 39—12. Reg. No. 3,849.

Pat. 2,250,179. GUN SIGHT. Patented July 22, 1941. Group 33—X4. Reg. No. 3,850.

Pat. 2,253,948. GUN SIGHT. Patented Aug. 26, 1941. Group 33—X4. Reg. No. 3,851.

The two patents listed above relate to a front sight for rifles which replaces the usual sight. Made of thin wire or strip metal set in a frame (the base of which is dovetailed in a slot in the barrel). A turnable knob provided with calibrations may be set with an index etched on the frame. Acts as a stadia range finder so that the marksman can quickly regulate the elevation of the gun in accordance with the trajectory of the ammunition used. May also be incorporated as the reticle in a rifle scope. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y.

Pat. 2,338,488. REAR-VISION DEVICE. Patented Jan. 4, 1944. An optical arrangement in which a wedge-shaped prism is associated with a complementary member which has the shape of a spherical segment. In the first mentioned prism the bottom edge is thinner and the front wall is silvered to provide a reflecting surface; the segmental member has a thinner lower wall. The combination produces maximum correction of the light being refracted. The arrangement may be used in airplanes or automobiles. In an automobile it affords a wider angle of view unobstructed by the auto body. In an airplane it eliminates wind resistance caused by a mirror mounted above the cockpit and also eliminates the distortion caused by viewing through the Plexiglas canopy at an oblique angle. (Owner) L. H. Brown 24 West 45th St., New York, N. Y. Group 39—13. Reg. No. 3,852.

Pat. 2,361,347. STEREOSCOPIC PICTURE AND METHOD OF MAKING THE SAME. Patented Oct. 24, 1944. Method of making stereoscopic pictures involving two carriers, one of which is a transparent plastic on resin film having a lenticulated surface (a series of double convex portions, the edges of which meet) and a ribbed rear face separated by depressions of the same width (one-half the width of the lenticulation). The other carrier is opaque and light reflecting (usual coated paper used in printing magazines). The opaque carrier has a complete picture printed on its surface while only a portion of the picture (at a different angle according to conventional practice) is printed on the face of rear depression. Both pictures are located within the foci of the lenticulation, however one of the pictures is inverted so that a stereoptic effect is provided when viewed with the naked eye. The picture may be produced by the usual printing press method using halftone plate. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Groups 27—94; 39—12. Reg. No. 3,853.

Pat. 2,362,611. WINDSHIELD CONSTRUCTION. Patented Nov. 14, 1944. The conventional windshield of airplanes or racing automobiles is replaced by two prismatic members made of glass or "Lucite" so that the thin edge of one member is aligned with the thick edge of the other. The height of the windshield described is about half the conventional height and gives the same view. It also has half the wind resistance. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Groups 32—29; 38—31; 39—81. Reg. No. 3,854.

Pat. 2,388,673. DUAL POWER OPTICAL SYSTEM. Patented Nov. 13, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) An optical system for a telescope which may be used either in an observation instrument or in a gun sight. Enables the observer to see the target at two different magnifications simultaneously through one eyepiece. This is particularly valuable for use against moving targets as the instrument affords high magnification and a wide field of view simultaneously, not obtainable in conventional instruments. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Groups 33—X4; 39—13. Reg. No. 3,855.

Pat. 2,391,675. STEREOSCOPE. Patented Dec. 25, 1945. An optical instrument in which stereoscopic pairs of pictures are viewed through one large lens instead of the usual two small lenses. The device has several applications. It may, for example, be used in stereoscopic television as it magnifies the images in addition to supplying a stereoscopic presentation. Unlike conventional stereoscopes the user is not required to place his eyes close to the instrument, but may instead view the image from a distance making it easier to use and excellent for advertising displays. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Group 39—12—13. Reg. No. 3,856.

Pat. 2,393,308. SIGHT. Patented Jan. 22, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Gun sight has the appearance of a vertical glass plate one-fourth inch thick. Mounted on the plate are a number of very small circular converging lenses disposed on the same plane and spaced equally apart. Each lens has an identical reticle (or cross-bar) at its focus. Because the eye of the observer receives light from the target (through the spaces between the lenses) and parallel rays of light from the reticles the images of the reticles are readily superimposed on the target for sighting. The sight is more compact than telescopic, reflex or open sights and allows a

greater latitude of eye positioning. Any size or shape of reticle may be incorporated. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Groups 33—X4; 39—13. Reg. No. 3,857.

Pat. 2,359,843. WATCH. Patented Mar. 5, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A water- and air-tight stem for watches and clocks. Stem is positioned within a chamber sealed by a flexible diaphragm. Construction has advantage over usual water-proof watches in that there is no rubbing surface. Applicable to watches in which stem is either pushed inwardly or pulled outwardly in setting. (Owner) L. H. Brown, 24 West 45th St., New York, N. Y. Group 34—61. Reg. No. 3,858.

Pat. 2,085,290. WINDOW BOX AND HANGER THEREFOR. Patented June 29, 1937. Window box is supported by a hanger. Hanger consists of a strip of metal bent to form jaws which receive window sill and a portion of the window box. The jaws grip the box and the sill when a clamping bolt between the jaws is tightened. The arrangement is easily detached for removal or transfer of box from outdoor to indoor location. A feature of the window-box is that excess water may be withdrawn through a small faucet or petcock. The clamping jaws are padded so that they will not mar the surfaces of porch rails, sills or any other support. Box does not interfere with screens, shades or the opening and closing of windows. (Co-owner) J. D. Black, Drawer 1, Oldsmar, Fla. Groups 32—98; 33—59. Reg. No. 3,859.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 17, 1946

[VOL. 590. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 492,663. THE RAYON PROCESSING CO. OF R. I. INC., Central Falls, R. I., and elsewhere. Filed Dec. 4, 1945.

RAYTELLICS

FOR FINELY CUT OR COMMINUTED METALS—NAMELY, GOLD OR SILVER PLATED COTTON RIBBON, USED AS A SURFACE COATING MEDIUM OR AS A DECORATIVE FILLER FOR TRANSPARENT PLASTICS.

Claims use since October 1940.

Ser. No. 497,373. CORNELIUS PRODUCTS COMPANY, New York, N. Y. Filed Feb. 28, 1946.

EMULSOWAX

FOR SYNTHETIC WAX INTENDED AS A REPLACEMENT FOR CARNAUBA WAX FOR USE IN THE MANUFACTURE OF FLOOR WAX.

Claims use since November 1944.

CLASS 2

RECEPTACLES

Ser. No. 490,178. DURAMOLD AIRCRAFT CORPORATION, New York, N. Y. Filed Oct. 19, 1945.

DURAMOLD

FOR AIRCRAFT FUEL TANKS MADE FROM LAMINATED MOLDED MATERIAL, PARTICULARLY PLYWOOD.

Claims use since Nov. 22, 1942.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 492,200. INGBER & COMPANY, Philadelphia, Pa. Filed Nov. 26, 1945.

Ingber

The mark is a facsimile of a part of the signature of Benjamin Ingber, one of the members of the firm.

FOR LADIES' HANDBAGS.

Claims use since Oct. 11, 1945, and since July 1910 as to other forms of the mark.

Ser. No. 501,192. NEW REXBILT LEATHER GOODS CORPORATION, New York, N. Y. Filed Apr. 30, 1946.

Airex

FOR LEATHER GOODS—NAMELY, BRIEF CASES, PORTFOLIOS, TRAVELLING BAGS, SUIT CASES, MUSIC CASES, MUSIC SATCHELS, BILL FOLDS, POCKETBOOKS, CATALOG CASES, SAMPLE CASES, OVERNIGHT CASES, AND COMPOSITE OVERNIGHT AND BRIEF CASES.

Claims use since Apr. 19, 1946.

Ser. No. 501,193. NEW REXBILT LEATHER GOODS CORPORATION, New York, N. Y. Filed Apr. 30, 1946.

REXPAK

FOR LEATHER GOODS—NAMELY, BRIEF CASES, PORTFOLIOS, TRAVELLING BAGS, SUIT CASES, MUSIC CASES, MUSIC SATCHELS, BILL FOLDS, POCKETBOOKS, CATALOG CASES, SAMPLE CASES, OVERNIGHT CASES, AND COMPOSITE OVERNIGHT AND BRIEF CASES.

Claims use since Apr. 19, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 495,252. CARL G. MURANO, doing business as Formax Company, New Haven, Conn. Filed Jan. 23, 1946.

FORMAX

FOR MEDICATED SOAP IN GRANULATED OR POWDERED FORM.
Claims use since June 15, 1918.

CLASS 5

ADHESIVES

Ser. No. 493,793. MARVEL PRODUCTS, INC., New York, N. Y. Filed Dec. 22, 1945.

Marvel

FOR MUCILAGE AND ADHESIVE PASTE.
Claims use since Dec. 11, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 485,599. PROFESSIONAL PHARMACAL CO., San Antonio, Tex. Filed July 9, 1945.

AUROBROM

PREPARATION FOR THE TREATMENT OF WHOOPING-COUGH AND OTHER SPASMODIC COUGHS.
Claims use since Feb. 8, 1944.

Ser. No. 489,496. WALLACE LABORATORIES, INC., New Brunswick, N. J. Filed Oct. 5, 1945.

INTRADERM
SKIN PENETRANT
SULFUR SOLUTION

The words "Skin Penetrant" and "Sulfur Solution" are disclaimed apart from the mark. Applicant is the owner of Reg. No. 405,041 for the mark "Intraderm."
FOR PREPARATION FOR USE IN THE TREATMENT OF ACNE AND LIKE DISORDERS OF THE SKIN.
Claims use since Sept. 21, 1945.

Ser. No. 489,603. NEW PROCESS SERVICE COMPANY, San Francisco, Calif. Filed Oct. 8, 1945.

NEW PROCO

No claim is made to the word "New" apart from the mark.
FOR CHEMICAL SOLVENT PREPARATION FOR CLEANING TANKS, SUCTION LINES AND OIL SYSTEMS.
Claims use since Sept. 19, 1944.

Ser. No. 489,648. BOL, LTD., New York, N. Y. Filed Oct. 9, 1945.

LIPEX

FOR COSMETICS—NAMELY, PERFUMES, FACE AND BODY POWDERS, LIPSTICKS, ROUGE, COMPACTS FILLED WITH FACE POWDER OR ROUGE.
Claims use since Sept. 1, 1945.

Ser. No. 490,725. WETHERHOLT'S PERFUME CO., Chicago, Ill. Filed Oct. 29, 1945.

Out of This World

FOR PERFUME AND COLOGNE.
Claims use since Sept. 16, 1942.

Ser. No. 492,109. GEZA STIASSNEY, New York, N. Y. Filed Nov. 23, 1945.

NIRVANA

FOR ASTRINGENTS, ASTRINGENT CERATES, BLEACH CREAMS, BEAUTY CREAMS, HORMONE CREAMS, COLD CREAMS, CLEANSING CREAMS, OBESITY CREAMS, REFRESHING CREAMS, OBESITY ASTRINGENTS, DRY ROUGES, LIP ROUGES, LIQUID ROUGES, FACE BLEACHES, SKIN WHITENER IN LIQUID AND SOLID FORM, FACE PACKS, EYEBROW AND EYELASH GROWER, EYE DROPS, EYEBROW PENCILS, CHEMICAL PREPARATIONS SUITABLE FOR THE DARKENING OF EYELASHES AND EYEBROWS, HAND LOTIONS, SKIN LOTIONS, AFTER-SHAVING LOTIONS, POMADES, FACE POWDERS, TALCUM POWDERS, BODY POWDERS, SACHET POWDERS, HAIR SALVES, HAIR ELIXIRS, HAIR LOTIONS, HAIR SETTING LOTIONS, DANDRUFF PREPARATIONS, HAIR TONICS, HAIR OILS, SHAMPOOS, HAIR DYES, BODY LOTIONS, HEALING SALVES, PREPARATIONS FOR THE TREATMENT OF THE RESPIRATORY ORGANS, FOUNDATION FACE MASKS, SUN TAN PEROXIDES, BATH SALTS, SMELLING SALTS, LIP STICKS, INCENSE, TOOTH POWDERS, MOUTH WASHES, DENTIFRICES, TOOTH PASTES, DEPILATORIES, NAIL POWDERS, NAIL CREAMS, NAIL POLISHES, WITCH HAZEL, PEROXIDE, PETROLEUM JELLIES, WITCH HAZEL SALVES, CAMPHOR CREAMS, FOOT POWDERS, CORN SALVES, DEODORANTS, DISINFECTANTS, BAY RUM, PERFUMES, AND TOILET WATERS.
Claims use since Aug. 20, 1945.

Ser. No. 492,270. HANNAH KLEIN, doing business as Ervana Co., Brooklyn, N. Y. Filed Nov. 27, 1945.

No claim is made to the outline of the label apart from the mark. The drawing is lined to represent brown and green colors.
FOR BEAUTY PREPARATIONS—NAMELY, SCALP CLEANSING, SKIN LOTIONS, HAIR COLOR RESTORER, BRILLIANTINE, AND SHAMPOO.
Claims use since May 31, 1945.

Ser. No. 492,619. ELMO SALES CORPORATION, Philadelphia, Pa. Filed Dec. 4, 1945.

Dalliance

FOR PERFUME, COLOGNE, DUSTING POWDER, TALCUM POWDER AND SACHET POWDER.
Claims use since Nov. 15, 1945.

Ser. No. 492,688. KAY DAUMIT, Chicago, Ill., assignor to Kay Daumit, Inc., Chicago, Ill., a corporation of Illinois. Filed Dec. 5, 1945.

White Shirt

No claim is made to the word "White" alone.
FOR COLOGNE.
Claims use since Apr. 3, 1945.

Ser. No. 494,208. BLOOMINGDALE BROS., INC., New York, N. Y. Filed Jan. 3, 1946.

CERAPIN

FOR COUGH SYRUP.
Claims use since Nov. 29, 1945.

Ser. No. 495,416. SOCIÉTÉ À RESPONSABILITÉ LIMITÉ: CARVEN, Paris, France. Filed Jan. 25, 1946.

MA GRIFFE

FOR PERFUMES.
Claims use since Sept. 12, 1945.

Ser. No. 495,417. SOCIÉTÉ À RESPONSABILITÉ LIMITÉ: CARVEN, Paris, France. Filed Jan. 25, 1946.

SCORE

FOR PERFUMES.
Claims use since Dec. 12, 1945.

Ser. No. 495,418. SOCIÉTÉ À RESPONSABILITÉ LIMITÉ: CARVEN, Paris, France. Filed Jan. 25, 1946.

SMASH

FOR PERFUMES.
Claims use since Dec. 12, 1945.

Ser. No. 495,558. ARNOLD STOLTZ, New York, N. Y. Filed Jan. 28, 1946.

SUNKIST

FOR TOOTH PASTE, TOOTH POWDER, AND TOOTH CLEANSER.
Claims use since September 1938.

Ser. No. 496,948. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed Feb. 20, 1946. Under 10-year proviso.

B. W. & Co.

FOR STROPHANTHUS TINCTURE, BISMUTH SUBSALICYLATE WITH CHLOROBUTANOL IN OIL, SOLUTION OF DIGOXIN AND "HAZELINE" WITCH HAZEL.
Claims use since 1884.

Ser. No. 497,186. MERRIAM AND COMPANY, Washington, D. C. Filed Feb. 25, 1946.

Akticide

FOR GERMICIDES.
Claims use since Dec. 11, 1945.

Ser. No. 497,234. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Feb. 26, 1946.

POLYAC

FOR CHEMICAL COMPOUND EMPLOYED IN THE ACCELERATION AND VULCANIZATION OF RUBBER.
Claims use since Feb. 11, 1944.

Ser. No. 497,277. SYLVANIA INDUSTRIAL CORPORATION, Fredericksburg, Va., and New York, N. Y. Filed Feb. 26, 1946.

SYLVANIA

FOR CELLULOSE ETHERS.
Claims use since Dec. 20, 1945.

Ser. No. 497,282. VITAMINS & PHARMACEUTICALS, INC., Dover, Del. Filed Feb. 26, 1946.

DISENTRAL

FOR GERMICIDE FOR GENERAL DISINFECTION.
Claims use since Jan. 10, 1946.

Ser. No. 497,327. PARFUMS SCHIAPARELLI, INC., New York, N. Y. Filed Feb. 27, 1946.

Seraphique

FOR PERFUMES, COLOGNES, TOILET WATERS, SKIN DRESSINGS, LIPSTICKS, ROUGES, FACE CREAMS, COSMETIC AND BATH OILS, AND FACE AND BODY DUSTING POWDERS.
Claims use since Nov. 21, 1945.

Ser. No. 497,827. U. S. VITAMIN CORPORATION, New York, N. Y. Filed Mar. 7, 1946.

GANVINAL

FOR VITAMIN-MINERAL SUPPLEMENT FOR CATTLE, SHEEP, HOGS, AND OTHER DOMESTIC ANIMALS.
Claims use since Aug. 2, 1943.

216,131. **SATIN.** DRY EARTH PIGMENTS. Registered Aug. 3, 1926. REICHARD-COULSTON, INC., New York, N. Y., a corporation of New York. Renewed Aug. 3, 1946. Class 16.

216,192. **REPRESENTATION OF A "CLOVER" DESIGN.** BUTTER, EGGS, AND CHEESE. Registered Aug. 3, 1926. SWIFT & COMPANY, Chicago, Ill., a corporation of Illinois. Renewed Aug. 3, 1946. Class 46.

216,263. **ELLERTON.** COTTON PIECE GOODS. Registered Aug. 10, 1926. MINOT, HOOPER & CO., New York, N. Y., a firm. Renewed Aug. 10, 1946. Class 42.

216,265. **"CREAM OF KENTUCKY" ETC. AND DESIGN.** GRAIN ALCOHOL (NONBEVERAGE). Registered Aug. 10, 1926. SCHENLEY PRODUCTS COMPANY, Jersey City, N. J., and Louisville, Ky. Renewed Aug. 10, 1946, to Schenley Distillers Corporation, New York, N. Y., a corporation of Delaware. Class 49.

216,268. **WIZARD.** SAFETY RAZORS. Registered Aug. 10, 1926. GEM SAFETY RAZOR CORPORATION. Renewed Aug. 10, 1946, to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia. Class 23.

216,279. **"Z" PIERCED BY AN ARROW.** CERTAIN KINDS OF PAPER. Registered Aug. 10, 1926. ZÜRCHER PAPIERFABRIK AN DER SIHL, Zurich, Switzerland, a Swiss corporation. Renewed Aug. 10, 1946. Class 37.

216,288. **BUCKEYE CORD.** SOLID AND PNEUMATIC TIRES AND INFLATABLE INNER TUBES OF RUBBER USED ON AUTOMOBILES AND OTHER VEHICLES. Registered Aug. 10, 1926. KELLY-SPRINGFIELD TIRE COMPANY, New York, N. Y. Renewed Aug. 10, 1946, to The Kelly-Springfield Tire Company, Cumberland, Md., a corporation of Maryland. Class 35.

216,300. **"I C M" IN MONOGRAM.** CIGAR-MAKING MACHINERY AND PARTS THEREOF. Registered Aug. 10, 1926. INTERNATIONAL CIGAR MACHINERY COMPANY, New York, N. Y. Renewed Aug. 10, 1946, to International Cigar Machinery Company, Flemington, N. J., a corporation of New Jersey. Class 23.

216,410. **HELICOIL.** CERTAIN ELECTRIC HEATERS; AND ELECTRIC SOLDERING IRONS AND SHEATHED ELECTRIC HEATING UNITS. Registered Aug. 10, 1926. GENERAL ELECTRIC COMPANY, Schenectady, N. Y., a corporation of New York. Renewed Aug. 10, 1946. Class 21.

216,432. **PARCO.** SKYLIGHTS, SKYLIGHT LIFTS, AND BUILT-IN ROOF VENTILATORS. Registered Aug. 10, 1926. PARK CITY CORNICE WORKS, INCORPORATED, Bridgeport, Conn., a corporation of Connecticut. Renewed Aug. 10, 1946. Class 12.

216,569. **REPRESENTATION OF A RHOMB.** SAFETY-RAZOR BLADES. Registered Aug. 17, 1926. GILLETTE SAFETY RAZOR COMPANY, Boston, Mass., a corporation of Delaware. Renewed Aug. 17, 1946. Class 23.

216,783. **COOKLITE.** COTTONSEED OIL SHORTENING. Registered Aug. 17, 1926. ARMSTRONG PACKING COMPANY, Dallas, Tex. Renewed Aug. 17, 1946, to Swift & Company, Chicago, Ill., a corporation of Illinois. Class 46.

216,872. **"ROYAL DOULTON" AND DRAWING.** POTTERY, EARTHENWARE, AND CHINA. Registered Aug. 24, 1926. DOULTON & COMPANY LIMITED, Lambeth, London, England, an organized company of Great Britain. Renewed Aug. 24, 1946. Class 30.

216,912. **MINERASAL.** EFFERVESCENT SALT FOR REMINERALIZATION OF THE BLOOD. Registered Aug. 24, 1926. G. D. SEARLE & CO., Chicago, Ill., a corporation of Illinois. Renewed Aug. 24, 1946. Class 6.

216,956. **HAPPY BUNNY.** DYES. Registered Aug. 24, 1926. IRVING HALPERN, doing business as Hal Pern M'f'g Co., Brooklyn, N. Y. Renewed Aug. 24, 1946, to Henry F. Pupke, Valley Stream, N. Y. Class 6.

216,972. **REPRESENTATION OF A PILGRIM'S HEAD.** HYDRATED LIME. Registered Aug. 24, 1926. ROCKLAND & ROCKPORT LIME CORPORATION. Renewed Aug. 24, 1946, to Rockland-Rockport Lime Co. Inc., Rockland, Maine, a corporation of Maine. Class 12.

217,122. **BULLDOG.** CERTAIN METALLIC PARTS USED IN BUILDING CONSTRUCTION. Registered Aug. 24, 1926. OLAV TRYGVE THEODORSEN, Olso, Norway. Renewed Aug. 24, 1946. Class 12.

217,179. **POPULAR CLUB.** CARBONATED, NONALCOHOLIC, NONCEREAL, MALTLESS BEVERAGES SOLD AS SOFT DRINKS—VIZ, GINGER ALE, SARSAPARILLA, ROOT BEER, AND FRUIT FLAVORS. Registered Aug. 24, 1926. MIDDLE RIVER BOTTLING CO., Middle River, Md. Renewed Aug. 24, 1946, to William L. Bartels, doing business as Middle River Bottling Company, Baltimore, Md. Class 45.

217,333. **ROYAL FEAST.** FRESH CITROUS FRUIT. Registered Aug. 31, 1926. MAGNOLIA CITRUS ASSOCIATION, Porterville, Calif., a corporation of California. Renewed Aug. 31, 1946. Class 46.

217,377. **TRIBUNE.** LEAD PENCILS. Registered Aug. 31, 1926. J. S. STAEDTLER, INC., New York, N. Y., a corporation of New York. Renewed Aug. 31, 1946. Class 37.

217,568. **STORM KING.** LIGHTNING ARRESTERS AND PARTS THEREOF. Registered Sept. 7, 1926. L. S. BRACH MANUFACTURING CO. Renewed Sept. 7, 1946, to L. S. Brach Manufacturing Corporation, Newark, N. J., a corporation of New Jersey. Class 21.

217,580. **LIBERTY.** BAND INSTRUMENTS, PARTICULARLY HORNS. Registered Sept. 7, 1926. THE H. N. WHITE COMPANY, Cleveland, Ohio, a corporation of Ohio. Renewed Sept. 7, 1946. Class 36.

217,647. **HOLLCRAFT.** CERTAIN NAMED CLOTHING FOR WOMEN, GIRLS, AND MISSES. Registered Sept. 7, 1926. C. CRAWFORD HOLLIDGE. Renewed Sept. 7, 1946, to C. Crawford Hollidge, Ltd., Boston, Mass., a corporation of Massachusetts. Class 39.

217,736. **FOUNTAIN PEN VELLUM.** WRITING PAPER AND MAILING ENVELOPES. Registered Sept. 7, 1926. WESLEY & WINTER, INC., Newark, N. J. Renewed Sept. 7, 1946, to Wesley & Winter, Inc., Linden, N. J., a corporation of New Jersey. Class 37.

217,769. **CRAGMOOR.** TOPCOATS, OVERCOATS, COATS, VESTS, AND TROUSERS FOR MEN, YOUTHS, AND BOYS. Registered Sept. 7, 1926. L. GREIF & BRO., INCORPORATED, Baltimore, Md., a corporation of Maryland. Renewed Sept. 7, 1946. Class 39.

217,907. **DURAX.** NONMETALLIC SHEATHED CABLES FOR ELECTRIC CIRCUITS. Registered Sept. 14, 1926. TUBULAR WOVEN FABRIC COMPANY, Pawtucket, R. I. Renewed Sept. 14, 1946, to Anaconda Wire & Cable Company, New York, N. Y., a corporation of Delaware. Class 21.

217,946. **LUXURY.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT. Registered Sept. 14, 1926. REDLANDS CO-OPERATIVE FRUIT ASSOCIATION. Renewed Sept. 14, 1946, to Redlands Cooperative Fruit Association, Redlands, Calif., a corporation of California. Class 46.

218,007. **IDEAL.** HAIR TONIC. Registered Sept. 14, 1926. THE F. W. FITCH COMPANY, Des Moines, Iowa, a corporation of Iowa. Renewed Sept. 14, 1946. Class 6.

218,064. **KAMPUS-KICKS.** LEATHER BOOTS AND SHOES. Registered Sept. 21, 1926. THE L. D. STICKLES SHOE COMPANY. Renewed Sept. 21, 1946, to La Grange Shoe Corporation, Red Wing, Minn., a corporation of Minnesota. Class 39.

218,070. **PARK LANE.** MEN'S AND BOYS' SUITS, RAINCOATS, AND OVERCOATS. Registered Sept. 21, 1926. GOODLOW CORPORATION. Renewed Sept. 21, 1946. to Bond Stores, Incorporated, New York, N. Y., a corporation of Maryland. Class 39.

218,124. **CORALIE.** LADIES', MISSES', AND JUNIORS' HATS. Registered Sept. 21, 1926. CONSOLIDATED MILLINERY COMPANY, Chicago, Ill., a corporation of Illinois. Renewed Sept. 21, 1946. Class 39.

218,156. **HERCULES.** LEATHER BOOTS AND SHOES. Registered Sept. 21, 1926. THE L. D. STICKLES SHOE COMPANY. Renewed Sept. 21, 1946, to La Grange Shoe Corporation, Red Wing, Minn., a corporation of Minnesota. Class 39.

218,252. **"LIBERTY" AND DESIGN.** BED SPRINGS. Registered Sept. 21, 1926. KINNEY-ROME COMPANY. Renewed Sept. 21, 1946, to Burton-Dixie Corporation, Chicago, Ill., a corporation of Delaware. Class 32.

218,293. **"CARON" IN MONOGRAM.** PERFUME, TOILET WATER, BRILLIANTINE, SACHET POWDER, AND DENTIFRICES. Registered Sept. 21, 1926. CARON CORPORATION, New York, N. Y., a corporation of New York. Renewed Sept. 21, 1946. Class 6.

218,363. **PROTECTOR.** LIQUID OR LIQUEFIABLE BITUMINOUS COATINGS FOR CONCRETE AND SIMILAR MATERIALS. Registered Sept. 28, 1926. THE BARRETT COMPANY. Renewed Sept. 28, 1946, to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York. Class 12.

218,424. **BROAD RAY.** CERTAIN PIECE GOODS. Registered Sept. 28, 1926. ELDER MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Renewed Sept. 28, 1946. Class 42.

218,717. **RAY-DE-SOIE.** CERTAIN PIECE GOODS. Registered Oct. 5, 1926. ELDER MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Renewed Oct. 5, 1946. Class 42.

218,729. **SOVEREIGN.** BED SPRINGS. Registered Oct. 5, 1926. KINNEY ROME COMPANY. Renewed Oct. 5, 1946, to Burton-Dixie Corporation, Chicago, Ill., a corporation of Delaware. Class 32.

218,744. **LUNA.** LEAD PENCILS. Registered Oct. 5, 1926. J. S. STAEDTLER, INC., New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 37.

218,745. **"LINA" ETC. AND DRAWING.** OLIVE OIL. Registered Oct. 5, 1926. GIUSEPPE MONTAPERTO, Brooklyn, N. Y. Renewed Oct. 5, 1946, to Gus Sclafani, Stamford, Conn. Class 46.

218,767. **REPRESENTATION OF A PEBBLED SURFACE IN A DESIGN.** SCISSORS AND SHEARS. Registered Oct. 5, 1926. THE ACME SHEAR COMPANY, Bridgeport, Conn., a corporation of Connecticut. Renewed Oct. 5, 1946. Class 23.

218,778. **CLEMHORST.** CANNED FRUITS, CANNED VEGETABLES, DRIED FRUITS, FRESH DECIDUOUS FRUITS. Registered Oct. 5, 1926. E. CLEMENS HORST CO., San Francisco, Calif., a corporation of New Jersey. Renewed Oct. 5, 1946. Class 46.

218,842. **BESMO STEEL.** CEDAR PENCILS. Registered Oct. 5, 1926. UNION PENCIL CO., INC., New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 37.

218,843. **"UNIPECO" AND DESIGN.** CEDAR PENCILS. Registered Oct. 5, 1926. UNION PENCIL CO., INC., New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 37.

218,856. **TROMBONE.** PORTABLE AND HAND-OPERATED SPRAYERS AND PARTS THEREOF. Registered Oct. 5, 1926. HUDSON MFG. COMPANY, Minneapolis, Minn. Renewed Oct. 5, 1946, to H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota. Class 23.

218,857. **MOHAWK.** PORTABLE AND HAND-OPERATED SPRAYERS AND PARTS THEREOF. Registered Oct. 5, 1926. HUDSON MFG. COMPANY, Minneapolis, Minn. Renewed Oct. 5, 1946, to H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota. Class 23.

218,858. **CADET.** PORTABLE AND HAND-OPERATED SPRAYERS AND PARTS THEREOF. Registered Oct. 5, 1926. HUDSON MFG. COMPANY, Minneapolis, Minn. Renewed Oct. 5, 1946, to H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota. Class 23.

218,941. **"THE VARNISH THAT LASTS LONGEST" AND DRAWING.** CERTAIN PAINTS AND PAINTERS' MATERIALS. Registered Oct. 5, 1926. MURPHY VARNISH COMPANY, Newark, N. J. Renewed Oct. 5, 1946, to Interchemical Corporation, New York, N. Y., a corporation of Ohio. Class 16.

218,966. **MAJOR.** PORTABLE AND HAND-OPERATED SPRAYERS AND PARTS THEREOF. Registered Oct. 5, 1926. HUDSON MFG. COMPANY, Minneapolis, Minn. Renewed Oct. 5, 1946, to H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota. Class 23.

219,041. **JUNIPERO.** BRICK AND TILE. Registered Oct. 12, 1926. LOS ANGELES PRESSED BRICK CO. Renewed Oct. 12, 1946, to Gladding McBean & Co., Los Angeles, Calif., a corporation of California. Class 12.

219,116. **RECOLAC.** SPECIALLY-PREPARED FOOD IN POWDERED FORM FOR INFANTS. Registered Oct. 12, 1926. MEAD JOHNSON & COMPANY, Evansville, Ind., a corporation of Indiana. Renewed Oct. 12, 1946. Class 46.

219,185. **"SUNLIGHT" ETC. AND DESIGN.** SOAP. Registered Oct. 12, 1926. LEVER BROTHERS COMPANY, Cambridge, Mass., a corporation of Maine. Renewed Oct. 12, 1946. Class 4.

219,199. **TIMKEN LIQUAD.** BRAKES, BRAKING SYSTEMS, AND PARTS THEREOF FOR MOTOR VEHICLES. Registered Oct. 12, 1926. TIMKEN-DETROIT AXLE COMPANY, Detroit, Mich., a corporation of Ohio. Renewed Oct. 12, 1946. Class 19.

219,230. **FAR.** EARTH PIGMENTS FOR COLORING INK, COLORING RUBBER, WALL PAPER, AND STUCCO. Registered Oct. 12, 1926. REICHARD-COULSTON, INC., New York, N. Y., a corporation of New York. Renewed Oct. 12, 1946. Class 6.

219,233. **SOFTEX.** EARTH PIGMENTS FOR COLORING INK, COLORING RUBBER, WALL PAPER, AND STUCCO. Registered Oct. 12, 1926. REICHARD-COULSTON, INC., New York, N. Y., a corporation of New York. Renewed Oct. 12, 1946. Class 6.

219,234. **AETNA.** EARTH PIGMENTS FOR COLORING INK, COLORING RUBBER, WALL PAPER, AND STUCCO. Registered Oct. 12, 1926. REICHARD-COULSTON, INC., New York, N. Y., a corporation of New York. Renewed Oct. 12, 1946. Class 6.

219,295. **"DIAMOND HEART" ETC.** FINGER RINGS. Registered Oct. 12, 1926. JACOB BERLINGER, New York, N. Y. Renewed Oct. 12, 1946. Class 28.

219,378. **DOT.** TABLE SALT AND BAKING POWDER. Registered Oct. 19, 1926. THE JANSZEN GROCERY COMPANY. Renewed Oct. 19, 1946, to The Janszen Company, Cincinnati, Ohio, a corporation of Ohio. Class 46.

219,424. **IMPERVE.** COTTON PIECE GOODS. Registered Oct. 19, 1926. NASHUA MANUFG. COMPANY, Nashua, N. H. Renewed Oct. 19, 1946, to Nashua Manufacturing Company, Boston, Mass., a corporation of New Hampshire. Class 42.

219,429. **HEART OF GOLD.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT. Registered Oct. 19, 1926. HIGHGROVE FRUIT ASSOCIATION, Highgrove, Calif., a corporation of California. Renewed Oct. 19, 1946. Class 46.

219,494. **"LA PERLA" AND DRAWING.** MACARONI, CANNED PEAS AND TOMATOES. Registered Oct. 19, 1926. B. FILIPPONE & CO. Renewed Oct. 19, 1946, to B. Filippone & Co., Passaic, N. J., a corporation of New Jersey. Class 46.

219,508. **"UNGUENT SPECIAL" AND DESIGN.** MASSAGE CREAM. Registered Oct. 19, 1926. LEIGH CHEMIST, INC., New York, N. Y. Renewed Oct. 19, 1946, to Shulton, Inc., Hoboken, N. J., and New York, N. Y., a corporation of New Jersey. Class 6.

219,543. **GOLDEN CROSS.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT. Registered Oct. 19, 1926. UPLAND HEIGHTS ORANGE ASSOCIATION, Upland, Calif., a corporation of California. Renewed Oct. 19, 1946. Class 46.

219,611. **DETROIT TIMES.** DAILY NEWSPAPER. Registered Oct. 19, 1926. THE TIMES PUBLISHING COMPANY, Detroit, Mich., a corporation of Michigan. Renewed Oct. 19, 1946. Class 38.

219,620. **SER-VAL.** HOSIERY. Registered Oct. 19, 1926. NATIONAL TEXTILE DISTRIBUTERS CORPORATION, New York, N. Y. Renewed Oct. 19, 1946, to The Krolik Corporation, Detroit, Mich., a corporation of Michigan. Class 39.

219,655. **"THE BOOK HOUSE FOR CHILDREN" ETC. AND DESIGN.** PRINTED BOOKS PUBLISHED FROM TIME TO TIME. Registered Oct. 19, 1926. THE BOOK HOUSE FOR CHILDREN, Chicago, Ill., a corporation of Illinois. Renewed Oct. 19, 1946. Class 38.

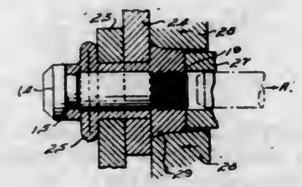
219,664. **CHAPPIES.** BOYS' TROUSERS. Registered Oct. 19, 1926. SAM ROSENBAUM & SONS COMPANY, doing business as Kalamazoo Pant Company. Renewed Oct. 19, 1946, to Kalamazoo Pant Company, Kalamazoo, Mich., a corporation of Michigan. Class 39.

219,671. **"BLEACH PROTECTIVE AND FINISHING CREAM" AND DESIGN.** FACE CREAMS. Registered Oct. 19, 1926. LEIGH CHEMIST, INC., New York, N. Y. Renewed Oct. 19, 1946, to Shulton, Inc., Hoboken, N. J., and New York, N. Y., a corporation of New Jersey. Class 6.

219,696. **CIROBAIN.** PERFUME PREPARATION FOR THE BATH. Registered Oct. 19, 1926. GUY T. GIBSON, INCORPORATED. Renewed Oct. 19, 1946, to Parfums Ciro, Inc., New York, N. Y., a corporation of Delaware. Class 6.

219,741. **GOLDEN CIRCLE.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, AND GRAPEFRUIT. Registered Oct. 26, 1926. REDLANDS CO-OPERATIVE FRUIT ASSOCIATION. Renewed Oct. 26, 1946, to Redlands Cooperative Fruit Association, Redlands, Calif., a corporation of California. Class 46.

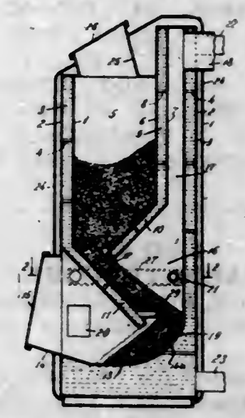
219,750. **MASTER.** FRESH CITROUS FRUIT. Registered Oct. 27, 1926. MAGNOLIA CITRUS ASSOCIATION, Porterville, Calif., a corporation of California. Renewed Oct. 26, 1946. Class 46.



219,852. **YVONNE.** HOSIERY. Registered Oct. 26, 1926. THE J. L. HUDSON COMPANY, Detroit, Mich., a corporation of Michigan. Renewed Oct. 26, 1946. Class 39.

219,899. **NU-TRI-CA.** BIRD FOOD. Registered Oct. 26, 1926. RUDOLF KRIETE, doing business as Old Bird Co. Renewed Oct. 26, 1946, to Ellie Polte, Kansas City, Mo. Class 46.

REISSUES



SEPTEMBER 17, 1946

22,792
RIVETED STRUCTURE AND METHOD OF MAKING THE SAME
Louis C. Huck, Grosse Pointe, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Original No. 2,061,628, dated November 24, 1936, Serial No. 627,343, August 3, 1932. Application for reissue April 2, 1945, Serial No. 586,243
43 Claims. (Cl. 218—19)

1. The method of riveting which comprises providing a tubular member for insertion through openings in a structure and projection beyond a side thereof, providing a pin for engaging the projected end of the tubular member and which is adapted to pass through the tubular member and beyond its other end, assembling the parts and inserting them in the structural openings, pulling the projecting end of the pin to form a head from the projecting part of the tubular member, and then continuing the pull to break the pin intermediate its ends, and locking the remainder of the pin and the tubular member adjacent the breaking point, prior to occurrence of the break.

22,793
BOILER
Leonard Satchwell, Slough, England
Original No. 2,340,431, dated February 1, 1944, Serial No. 463,735, October 29, 1942. Application for reissue January 17, 1946, Serial No. 641,851
7 Claims. (Cl. 122—30)

1. A grateless boiler for burning solid fuel under natural draught conditions, said boiler having an imperforate water floor, a plurality of water walls forming the sides of a fuel hopper within said boiler from which fuel gravitates to said floor to form a pile presenting two fuel faces, means for supplying primary air to one of said fuel faces, a secondary combustion space within said sides and above the other of said fuel faces and means for supplying secondary air thereto, means providing a path of limited area and of low resistance to the passage of primary air through the pile of fuel, and means for controlling the supply of secondary air in dependence on the supply of primary air.

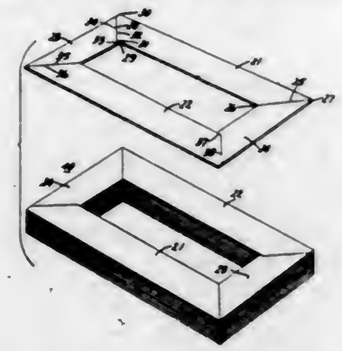
PLANT PATENTS

GRANTED SEPTEMBER 17, 1946

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

710
APPLE TREE
Albert F. Etter, Ettersburg, Calif., assignor to George C. Roeding, Jr., Niles, Calif.
Application June 23, 1944, Serial No. 541,690
1 Claim. (Cl. 47—62)

A new variety of apple tree substantially as herein disclosed characterized by the size and shape of its fruit, which is comparable with the Baldwin, with flesh almost white and unusually tender, juicy and crisp.

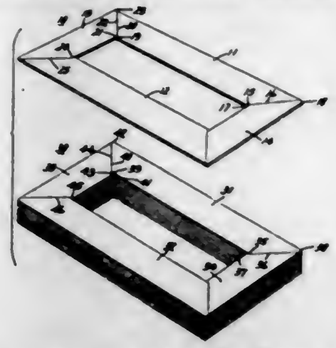


PATENTS

GRANTED SEPTEMBER 17, 1946

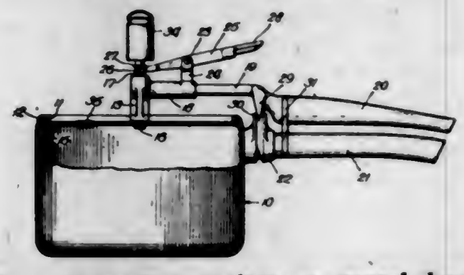
2,407,624
AQUEOUS SOLUTION OF RIBOFLAVIN
John Cecil Bird, Pleasantville, and Andrew Kuna, Douglaston, N. Y., assignors, by mesne assignments, to The William S. Merrell Company, Cincinnati, Ohio, a corporation of Delaware
No Drawing. Application May 9, 1944, Serial No. 534,826
2 Claims. (Cl. 167—81)

1. An aqueous solution of riboflavin having a concentration of riboflavin higher than that obtainable in water alone and containing a water-soluble alkali metal salt of gallic acid in an amount sufficient to substantially increase the solubility of the riboflavin in said aqueous solution.



2,407,625
MAGNETIC CORE
Frederick F. Brand, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 30, 1942, Serial No. 470,578
12 Claims. (Cl. 175—356)

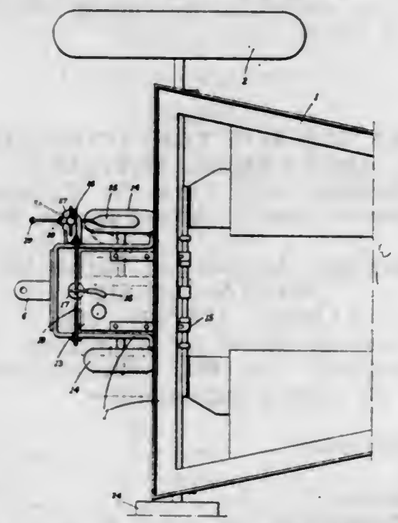
1. A magnetic core comprising a plurality of layers of assembled laminations formed lengthwise from strip material having the most favorable magnetic direction lengthwise of the strip, adjacent laminations of each layer having substantially mitered butt joints between ends so that a minimum of flux at the joints will pass crosswise of the most favorable magnetic direction, said mitered butt joints being displaced from diagonals running from inside corners to the outside corners of the assembled laminations at at least two corners of the assembled laminations, the remaining butt joints being substantially coincident with said diagonals, said layers of laminations being oppositely arranged so that a displaced joint of one layer will be staggered from an adjacent joint coincident with said diagonals of a contiguous layer so as to provide overlapping at said joints of adjacent laminations of contiguous layers.



2,407,626
MAGNETIC CORE
Alanson U. Welch, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 30, 1942, Serial No. 470,580
16 Claims. (Cl. 175—356)

1. A magnetic core comprising a plurality of layers of assembled laminations formed lengthwise from strip material having the most favorable magnetic direction lengthwise of the strip, said layers including at least four assembled laminations with diagonal butt joints at adjacent

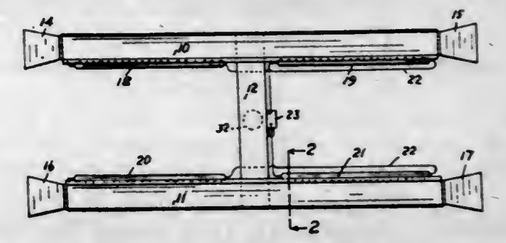
ends, said layers having at least two dissimilar symmetrical laminations with each of said laminations having edge surfaces in six planes, edge surfaces in four of said planes forming the edges for said butt joints of said laminations.



2,407,627
PRESSURE COOKER
James Harvey Chandler, Oak Park, Ill., assignor to Ekco Products Company, a corporation of Illinois
Application August 12, 1943, Serial No. 498,347
3 Claims. (Cl. 220—25)

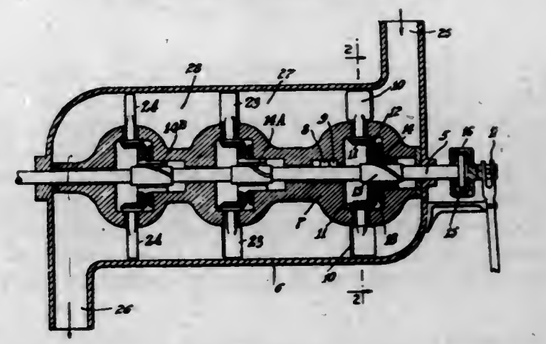
1. In a pressure cooker, a vessel having an opening through which contents of the vessel may be admitted or discharged, a downwardly facing seat within the vessel surrounding said opening, means engageable with said seat to seal said opening including a flexible closure member having an annular portion extending peripherally beyond the area thereof corresponding to the area of said opening and adapted to be temporarily flexed into a shape enabling its passage through said opening toward and away from a position wherein said closure engages said seat, a rigid yoke member having contact faces presentable toward upper surface portions of the closure in downwardly advanced position relative to the central portion of the yoke against which diametrically opposite upper surface portions of the closure located inwardly from its annular portion may be drawn upwardly to flex the closure into a shape enabling its passage through said vessel opening when the central portions of said yoke and closure are in vertical alignment, means for maintaining said central portion of the yoke and said central portion of the closure in vertical alignment including a stem fixed to and projecting upwardly from the central portion of the closure, said yoke and stem being connected for relative movement axially of said stem between

an advanced position wherein said closure is placed under strain by said contact faces of the yoke to flex the closure into a shape enabling its passage through the vessel opening and an initial position wherein said closure is freed from strain to resume its normal unflexed shape, a handle having a forward portion fixed to said yoke and a rearward portion which projects laterally beyond the edge of the closure and about which a hand may be flexed into operative position to support the closure, a lever movable about an axis in fixed relation to said yoke and operatively engaging said stem for moving said stem from initial position to advanced position relative to said yoke, said lever having a free end operable in such proximity to the handle throughout the travel of the lever between initial and advanced positions of the stem relative to said yoke as to be within range of normal movement of the thumb of the hand operatively flexed about said handle whereby the lever may be operated to move said stem from initial position to advanced position relative to said yoke through the agency of pressure applied on said free end of the lever by said thumb.



2,407,628
BEAD DISPENSER CONTROL
Donald H. Clark, Stockton, Calif.
Original application July 24, 1942, Serial No. 452,162. Divided and this application June 30, 1944, Serial No. 543,039
4 Claims. (Cl. 275—2)

1. In a road striping machine, a bead dispenser including road engaging wheels, the rotation of one of which controls the bead dispensing operation, means mounting the dispenser for lateral adjustment and independent lifting movement to raise the wheels clear of the ground, means to thus lift the dispenser, and a brake element adapted to be maintained in relatively fixed position above said one wheel to engage the same upon lifting of the dispenser irrespective of the laterally adjusted position of the dispenser.

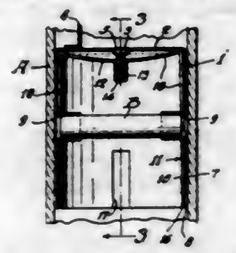


2,407,629
VEHICLE HOIST
William A. Courtenay, Jr., Chester, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application May 2, 1944, Serial No. 533,686
2 Claims. (Cl. 240—2)

1. A hoist for vehicles which comprises a pair of spaced runways normally supported on the ground floor for receiving a vehicle, means for elevating said runways, an electrical circuit including a power source and tubular lighting means, said lighting means being positioned in a confined space adjacent said runways and extending substantially the full length thereof, an explosion proof chamber, switch means in the circuit between said power source and said lighting means, said switch means being disposed beneath the ground floor and within said explosion

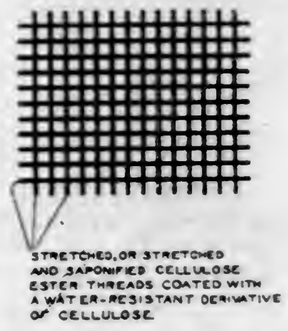
proof chamber, means between said switch means and said hoist operable to actuate the switch and close the circuit from the power source to the lighting means when the hoist has been elevated to a predetermined height.

2,407,630
SUPERCHARGER
Leon Dewan, Arverne, N. Y.
Application November 19, 1942, Serial No. 466,121
2 Claims. (Cl. 230—114)



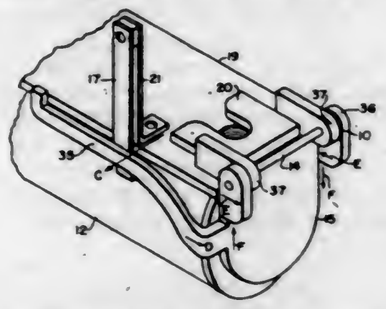
1. A supercharger for an aeroplane engine comprising a casing having an air inlet and an outlet member adapted to be connected to the engine air inlet, a series of air compressors in said casing, said compressors being spaced from each other to form air pressure chambers and each compressor having a plurality of radial blades, the blades of the compressor nearest the air inlet of the casing having the highest pitch and the blades of the compressors behind having a successively decreasing pitch, and mechanism including a control member and a blade turning means actuated thereby for adjusting the pitch of said blades, the action of said mechanism being such that the pitch adjustment of the compressor blades is greater for the blades of greater pitch.

2,407,631
PISTON
Roger W. Dexter and Peter L. Loewe, Chicago, Ill.
Application March 12, 1945, Serial No. 582,200
14 Claims. (Cl. 309—10)



1. In a piston structure, a piston shell having a closed end wall and an open end, and means for varying the effective outside diameter of the piston shell, including an inner cylindrical shell having an end wall adjacent to the end wall of the piston, at least one of said end walls being

concavo-convex, and means for variably urging said end walls together, and for thereby varying



the effective diameter of said concavo-convex end wall.

2,407,632
SCREENING MATERIAL
Camille Dreyfus, New York, N. Y.
Application November 11, 1944, Serial No. 563,092
17 Claims. (Cl. 28—80)

1. A window screen comprising an open mesh fabric woven of threads of heavy denier, said threads being selected from the group consisting of stretched organic acid ester of cellulose yarns and stretched and saponified organic acid ester of cellulose yarns and carrying a coating comprising a water-resistant derivative of cellulose in an amount of at least 100% on the weight of the stretched organic acid ester of cellulose yarns.

2,407,633
RETARDED RELAY
Louis W. Droel, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application July 15, 1943, Serial No. 494,769
5 Claims. (Cl. 175—372)

1. In a non-locking relay, an L-shaped heel-piece, a magnet mounted on said heel-piece, an L-shaped armature comprising an operating arm and a pivot pin, a yoke having bearing holes thru which said pivot pin extends, means for securing said yoke to said heel-piece thereby pivotally securing said armature to said heel-piece to complete the magnetic circuit including the core of said magnet, said heel-piece and said armature, a spring mounted on said heel-piece and normally tensioned against said operating arm to create a torque or twisting action between said armature bearing pin and the bearing holes in said yoke thereby preventing vibration of said armature from external causes while in normal position, and said spring also frictionally retarding the operating and releasing movements of said armature without maintaining or locking said armature in any operated position to make said armature somewhat slower to operate and to release.

2,407,634
SHOCK ABSORBING AERIAL TOWLINE
Richard C. du Pont, Granogue, Del., assignor, to All American Aviation, Inc., Wilmington, Del., a corporation of Delaware
Application April 5, 1943, Serial No. 481,824
14 Claims. (Cl. 244—3)

1. In a system for changing the velocity of an object, an object subject to motion, a body with respect to which said object has relative motion, a tapered synthetic plastic line gradually increasing in diameter from one part to another part, said line having the characteristics of high tensile strength, relatively great percentage elongation with long elastic memory, whereby the different parts of said line throughout its length act along different parts of the loading-unloading curves when the line is subjected to sudden pull, thereby obtaining maximum energy dissipation over a wide loading range.

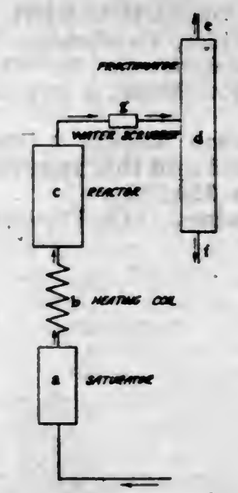
2,407,635
PREPARATION FOR TREATING LAUNDERABLE FABRIC ARTICLES
Herman Engler, New York, N. Y., assignor to Paul Koletzko and C. Alfred Hands, New York, N. Y.
No Drawing. Application August 16, 1944, Serial No. 549,812
1 Claim. (Cl. 106—208)

A preparation useful in laundering, comprising substantially the following proportions by weight of the named ingredients:

	Pounds
Gum tragacanth	¼
Glycerine	3
Sodium borate	½
Emulsified solution	1

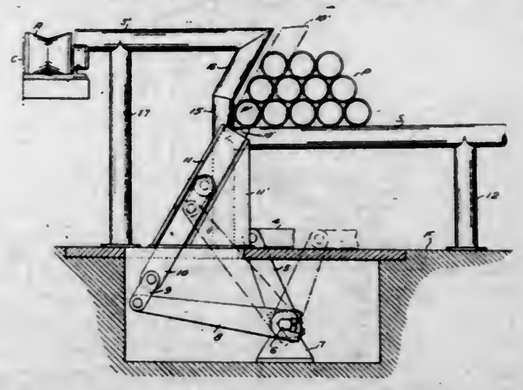
said emulsified solution being composed of:

	Pounds
Gum tragacanth	⅛
Pectin	⅛
Glycerine	1
Total water in excess of about	20



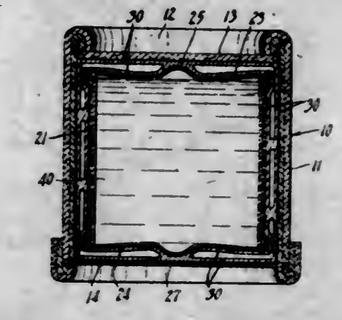
2,407,636
DRIER
Kyle Engler, Fayetteville, Ark., Edgar L. Barger, Ames, Iowa, and Arthur H. Thompson, deceased, late of Fayetteville, Ark., by Rebecca George Thompson, administratrix, Fayetteville, Ark., assignors to board of trustees of the University of Arkansas, Fayetteville, Ark.
Application May 12, 1944, Serial No. 535,240
5 Claims. (Cl. 259—180)

1. In a drier, a tower, a series of vertically spaced inclined trays therein one of which has its lower end adjacent the tower wall, another having its lower end adjacent the next lower tray bottom, a grain-engaging member adjacent the lower end of a third tray, means for slidably adjusting the trays toward and from the elements



against which they discharge for regulating the depth of material therein, and means for adjusting the trays to vary their angle of inclination for maintaining uniformity of depth of the material on each tray.

2,407,637
PRODUCTION OF BRANCHED CHAIN ALKANES
Eric William Musther Fawcett, Sunbury-on-Thames, England, assignor to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
Application October 30, 1941, Serial No. 417,097
In Great Britain October 2, 1940
6 Claims. (Cl. 260—683.5)



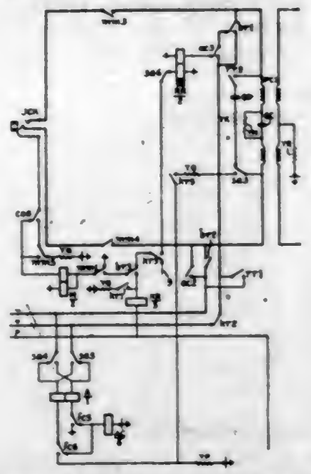
1. A continuous process for the production in the vapour phase of branched chain alkanes from a normal alkane feedstock by isomerization at a moderate reaction temperature and at a pressure in the range of atmospheric pressure to 50 atmospheres, consisting in contacting a stream of said normal alkane feedstock in the condition of vapour and at a selected vapourising temperature not substantially exceeding 132° C. with a solid unsupported aluminium halide to effect a continuous evolution and transfer of aluminium halide vapour from said solid unsupported aluminium halide to said stream, maintaining a flow rate of said stream at said selected vapourising temperature at which the concentration in said stream of aluminium halide transferred as vapour thereto does not exceed a concentration equivalent to the saturation pressure of said aluminium halide at said moderate isomerisation reaction temperature, contacting said stream with its content of aluminium halide vapour at said moderate isomerisation reaction temperature below 200° C., and in the presence of a small proportion of a hydrogen halide promoter, with a solid porous adsorbent contact material essentially free of aluminum halide in condensed form, and recovering the branched chain alkane product.

2,407,638
APPARATUS FOR DELIVERING ELONGATED CYLINDRICAL ARTICLES
Martin S. Gettig, Poland, and Harold E. Engelbaugh, Youngstown, Ohio, assignors to The Youngstown Sheet and Tube Company, Youngstown, Ohio, a corporation of Ohio
Application August 14, 1945, Serial No. 610,802
7 Claims. (Cl. 214—8.5)

1. Apparatus for consecutively delivering elongated cylindrical articles from a bundle thereof comprising horizontally inclined article supporting means, horizontally inclined delivery means extending forwardly therefrom but at a higher level with their rear ends overhanging the supporting means, stops adjacent the forward ends of the supporting means for arresting movement of the articles as they roll down the latter, rearwardly inclined guides depending from proximate the rear ends of the delivery means, laterally spaced lifters reciprocal in paths parallel to the guides, and means for reciprocating the lifters from a position in which their upper ends are below the level of the supporting means to one in which they are above the level of the rear ends of the delivery means to thereby lift an article to the level thereof from the supporting means.

2,407,639
CONTAINER AND METHOD OF MAKING SAME
Frank Gilbert, Jr., Olmsted Falls, Ohio
Application May 4, 1942, Serial No. 441,649
8 Claims. (Cl. 93—36)

1. A method of rendering a container of fibrous material substantially impervious and of increas-



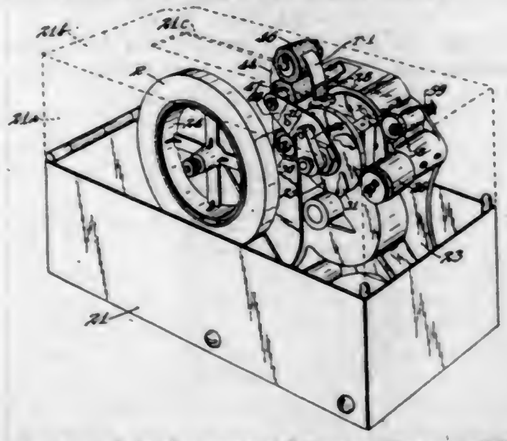
ing the rigidity of said container comprising the steps of placing in an outer shell of fibrous stock a quantity of liquid filler which is normally substantially solid, inserting an inner shell of fibrous stock in said outer shell while said filler is liquid to extrude said filler between the walls of said shells, and then allowing said filler to solidify.

2,407,640

TELEPHONE OR LIKE SIGNALING SYSTEM

Charles Gillings and Charles Edmund Beale, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc., a corporation of Delaware

Application September 18, 1943, Serial No. 502,885
In Great Britain October 30, 1942
11 Claims. (Cl. 179—18)



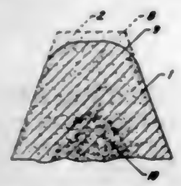
1. In a telephone system having two offices connected by a trunk line, a plurality of sources of alternating current of different frequences at one of said offices, means at said one office for successively transmitting over the trunk line a plurality of alternating current impulses, each composed of one or more of said frequencies, to transmit a digit, each impulse having a part in determining the digit value, and means at the other office responsive to said impulses for effecting a numerical switching operation in accordance with the digit value of said impulses.

2,407,641

ADHESIVE TAPE DISPENSER AND APPLIER

Arthur A. Anderson, Rose Township, Ramsey County, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

Application January 10, 1945, Serial No. 572,223
10 Claims. (Cl. 216—29)



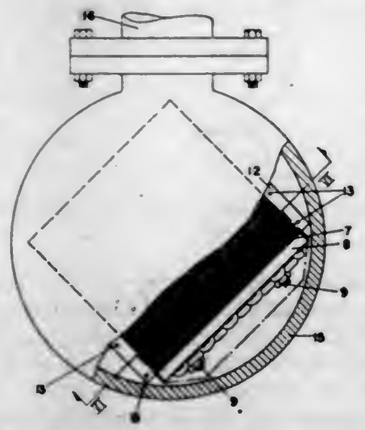
1. In an object-powered pressure-sensitive adhesive tape dispenser and applier, means for withdrawing tape from a roll and advancing it towards the applying position, means for severing the tape prior to application, and means responsive to motion of an object to which tape is being applied for directly transmitting power furnished by the moving object to the said tape withdrawing and advancing means while such object is in motion.

2,407,642

METHOD OF TREATING CUTTER TEETH

Robert W. Ashworth, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware

Application November 23, 1945, Serial No. 630,251
6 Claims. (Cl. 76—108)



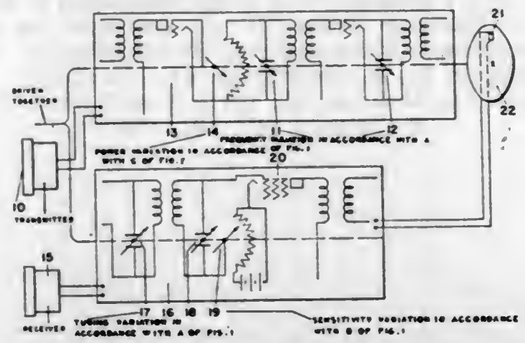
1. In the forming of teeth upon a drill cutter the steps of machining the teeth to produce narrow crests thereon, carburizing said teeth whereby massive carbides are concentrated along the sharp corners thereon, rounding off the crests and corners of said teeth to remove some of said massive carbides from said corners and resist the development of strains in heat treatment, and heat treating to harden said cutter in the usual manner.

2,407,643

APPARATUS FOR SUBMARINE SIGNALING

Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Original application August 2, 1939, Serial No. 287,974. Divided and this application August 3, 1940, Serial No. 350,326
10 Claims. (Cl. 177—386)



1. In a system for collision prevention for ships of the type wherein compressional wave signals are transmitted and signals reflected from a distant object are received, the combination with the hull of a vessel of a compressional wave device having a continuous, plane, active surface area having a horizontal dimension greater than the wave length of the waves at the signaling medium and whose vertical height decreases substantially linearly from a finite value at a center line to zero at both sides thereof, means for vibrating said surface with a uniform amplitude and for uniformly responding to vibrations of said surface and means for mounting said device on said vessel with said center line and said surface vertical and orthogonal to the fore and aft line of the vessel.

2,407,644

RANGING SYSTEM

Hugo Benioff, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application July 29, 1940, Serial No. 348,127
9 Claims. (Cl. 177—352)

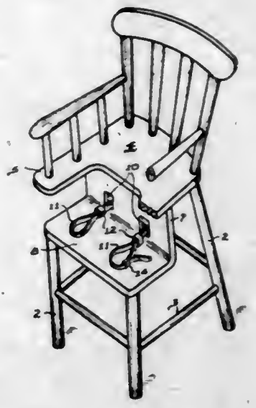
9. A method for obstacle detection and distance measurement comprising sending out periodically signals linearly modulated in frequency and decreasing in amplitude from an initial maximum value to zero according to a determinable curve, receiving said signals sent out at a time interval later than the end of the transmitted signal, increasing the sensitivity of reception and varying the tuning thereof linearly according to said curve but in reverse progression from that employed in the transmission of the signal whereby the listening area is progressively swept away from the listening point, and indicating by the frequency of the received signal the distance being measured.

2,407,645

ALIPHATIC POLYCARBOXYLIC AMINO ACIDS AND PROCESS OF MAKING THEM

Frederick C. Bersworth, Verona, N. J., assignor to The Martin Dennis Company, Newark, N. J., a corporation of New Jersey

No Drawing. Application June 21, 1943, Serial No. 491,669
10 Claims. (Cl. 260—534)



1. The process of preparing aliphatic polycarboxylic amino acids which comprises reacting an aliphatic amine having at least one replaceable hydrogen atom attached directly to an amino nitrogen atom, with an alkali metal cyanide and a formaldehyde-yielding substance under conditions sufficiently alkaline that there is substantially no hydrolysis of the said cyanide and in total amounts such that for each such replaceable hydrogen atom one molecule of said cyanide and one molecule of said formaldehyde-yielding substance are added during the reaction, while maintaining the amount of said free cyanide present in the reaction mixture at any one time at not more than about one quarter of the amount necessary to react completely with the original amine, and maintaining the amount of free formaldehyde-yielding substance present at any one time at less than one mol thereof per mol of said free cyanide present until substantial completion of the reaction of said amine has been effected, and removing ammonia from the reaction mixture so that substantially no free ammonia is present therein at any time during the reaction, and finally, after all the cyanide has been added, adding at least sufficient formaldehyde-yielding substance to react with any unreacted cyanide.

2,407,646

HIGH CHAIR

John W. Best, Arlington, Calif.

Application October 18, 1944, Serial No. 559,294
7 Claims. (Cl. 155—189)

7. In combination with a high chair as described having a depending frame below the front edge of its seat provided with clearance openings, and a lower forwardly extending foot rest; a continuous doubled adjustable strap or the like having looped limb-engaging portions extending forwardly through said openings above the foot rest, the middle portions of the double strap passing across the rear side of the frame between the openings, one of said portions being secured to the frame and the other portion being free for relative adjustment.

2,407,647

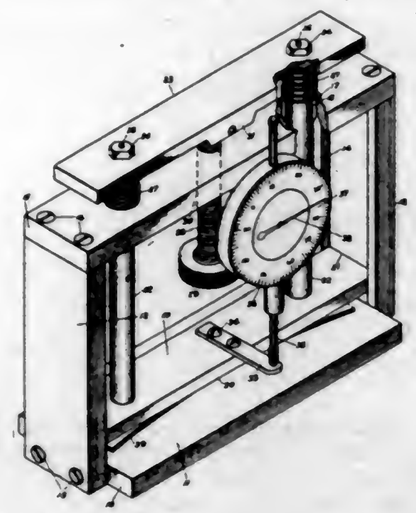
SYNTHETIC ORGANIC NONSOAP DETERGENT IN BAR FORM AND PROCESS OF MAKING SAME

John W. Bodman, Winchester, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine

No Drawing. Application August 14, 1940, Serial No. 352,519
8 Claims. (Cl. 252—121)

1. A process for making a coherent and coalescent bar of a normally non-liquid synthetic organic non-soap detergent compound having surface active properties, said bar having an aerated continuous mass of fine texture and firmness comprising subjecting a mass of a normally non-liquid synthetic organic non-soap detergent compound having surface active properties having a moisture content of less than about 35% to a temperature of the order of 100 to 200° F., working the mass in the presence of a compatible gas under pressure, and thereafter forming the mass into bars or cakes.

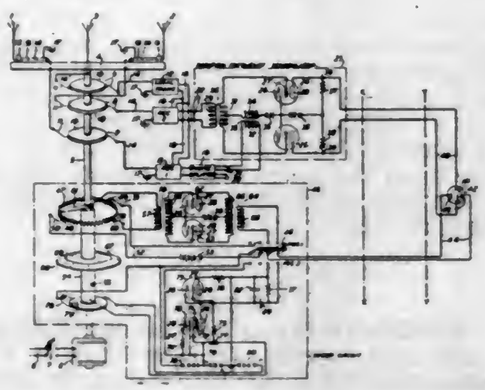
2,407,648



WARPAGE MEASURING MACHINE

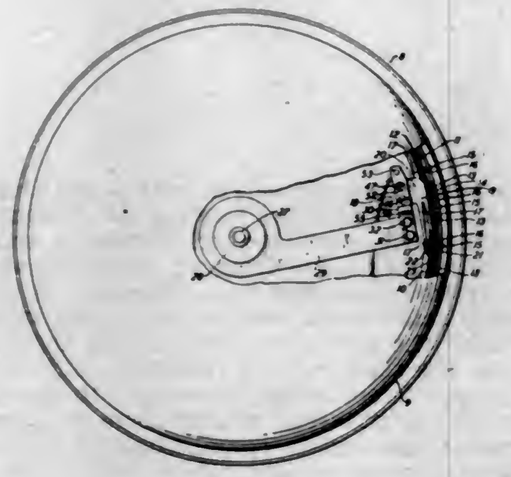
Alfred A. Boehm, Jr., New York, N. Y.

Application March 16, 1945, Serial No. 583,142
1 Claim. (Cl. 33—147)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A machine for measuring warpage in a piece of warped semi-rigid material comprising a rigid

framework having a flat bedplate, a pair of spaced standards extending perpendicularly from the bedplate and a crossbeam extending between said standards and parallel to said bedplate and having guide portions therein, a crosshead parallel to said bedplate and extending between said standards, said crosshead being adapted for reciprocating movement between said crossbeam and bedplate, tongues on said crosshead for sliding within guide grooves cut in said standards to guide the crosshead during reciprocation, guide columns attached to said crosshead and extend-

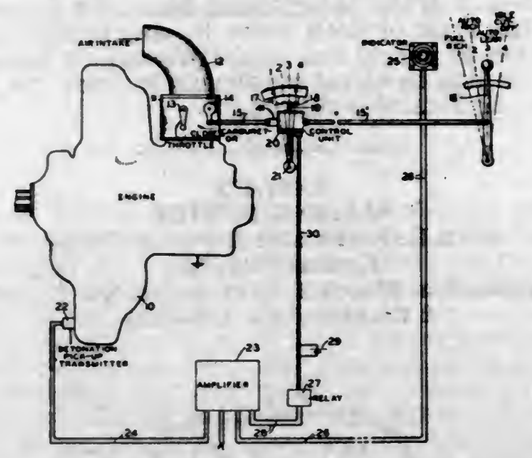


ing perpendicularly from said crosshead for reciprocating movement relatively to said guide portions within said crossbeam whereby said crosshead is further guided during reciprocation, said bedplate and said crosshead having opposed faces which are parallel at all times and adapted to contact opposite surfaces of the piece of material, and an indicator positioned to indicate the distance between the opposed faces of said bedplate and said crosshead whereby to indicate a measure of the warpage of the piece of warped material.

2,407,649
DIRECTION FINDING SYSTEM
Horace T. Budenbom, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 23, 1941, Serial No. 403,693
9 Claims. (Cl. 250—11)

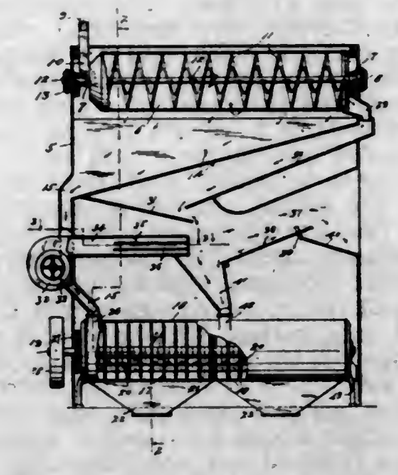
1. A direction finder comprising a pair of electrically independent spaced antennas for obtaining separate radio frequency energies from an incoming wave, said antennas being positioned on a turntable, means for rotating the turntable, and producing a cyclically varying phase difference between the absorbed antenna energies, means connected to said antennas for obtaining a current representing the amount and sense of said phase difference, and means for comparing the phase angle of said current with that of a current representing a predetermined reference direction.

2,407,650
WIPER CONTACT FOR ELECTRICAL DEVICES
Joseph T. Butterfield, Summit, N. J., Harry M. Knapp, Flushing, N. Y., and Benjamin F. Runyon, Basking Ridge, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 21, 1943, Serial No. 507,140
3 Claims. (Cl. 201—56)



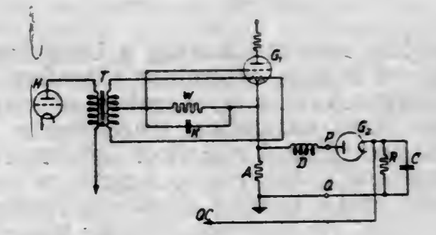
1. A wiper contact to frictionally traverse an electrical element, said wiper contact comprising an arm, a bendable bracket supported at one end on said arm, a reed-type conducting member secured at one end on the unsecured end of said bracket and having an unsecured end portion extending into contact with the electrical element, and said bracket having an aperture formed therein between the secured end of said bracket and said conducting member to provide a hold for means to be applied to said bracket to bend said bracket to change the pressure of said reed-type conducting member on the electrical element.

2,407,651
CONCENTRATING FLUORSPAR BY FROTH FLOTATION
Julius Bruce Clemmer and Ballard H. Clemmons, Tuscaloosa, Ala., assignors to the United States of America, as represented by the Secretary of Interior
No Drawing. Application November 1, 1944, Serial No. 561,458
18 Claims. (Cl. 209—166)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The process of concentrating fluorspar by froth flotation of pulps containing fluorspar values, comprising adding to such a pulp sodium fluoride, a lignin sulphonate, and a fluorspar collecting agent selected from the class consisting of fatty acids and soaps, and subjecting said pulp to froth flotation to recover the fluorspar.

2,407,652
DETONATION RESPONSIVE MEANS FOR CONTROLLING INTERNAL-COMBUSTION ENGINES
Philip J. Costa, Franklin Square, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Continuation of application Serial No. 446,070, June 6, 1942. This application February 28, 1944, Serial No. 524,170
20 Claims. (Cl. 123—119)

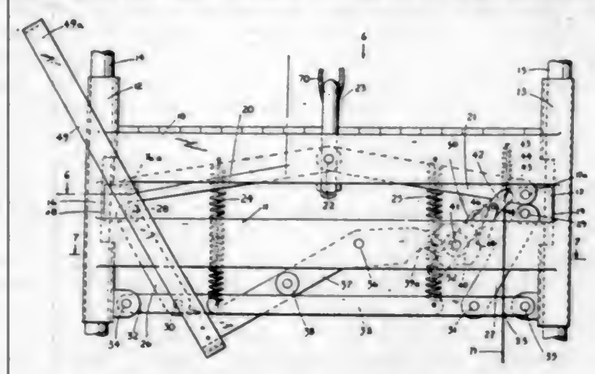


1. The combination of an internal combustion engine having means for controlling its working conditions of operation, a linkage system by which said controlling means is positioned, means for detecting detonation in the cylinders of said engine, and cyclic actuating means included in said linkage system for automatically operating the controlling means for the engine responsive to said detonation detecting means.

2,407,653
GRAIN CLEANER
Walter Earl Dempsey, Moose Jaw, Saskatchewan, Canada
Application February 12, 1944, Serial No. 522,165
1 Claim. (Cl. 209—12)

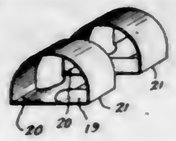
A grain cleaner for removing weed seeds from cereal grains comprising a plurality of duplicate rotatable screens with longitudinal openings of a width at least substantially as great as the diameter of the smallest normal grain to be recovered, means for feeding a mixture of grains and weed seeds into each screen to divide the same in each screen into two fractions, by transverse-diameter division, one of which, the "overs," is composed of grains and weed seeds of larger diameter and the other of which, the "thrus," is composed of grains and weed seeds of smaller diameter, a rotatable spiral conveyor in each screen, means for rotating each conveyor in the opposite direction from the direction of rotation of the screen to pass the mixture therein over the screen, a winnower, means for uniting the "overs" from the several screens and feeding the same through the winnower, a baffle board constructed and arranged to control the specific gravity division made in the winnower and reunite the material coming off the baffle board with the parent stream of "overs" gravitated through the winnower, a disc-separator, means for feeding the main stream "overs" from the winnower through the disc-separator, means for uniting the "thrus" from the several screens and feeding the same through the disc-separator, and means for reuniting the "thrus" and "overs" containing the desired grains after their separate treatment.

2,407,654
TELEVISION RECEIVER
Peter Deserno, Berlin, Germany; vested in the Alien Property Custodian
Application March 29, 1940, Serial No. 326,565
In Germany March 17, 1939
3 Claims. (Cl. 178—7.3)



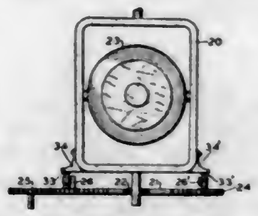
1. A device for regulating the amplitudes in television receivers by a voltage equivalent to the black value of the incoming signal voltage, which comprises means for rectifying a frequency mixture containing picture and synchronizing signals, said means including an output resistor having a positive and a negative terminal, a rectifier having an anode connected to said positive terminal and a cathode, a storage circuit combination comprising a resistance and a condenser connected in parallel, connections from one end of said combination to said cathode and from the other end of said combination to said negative terminal, and a choke device for removing the synchronizing signals from said frequency mixture, whereby the condenser is charged to a potential corresponding to said black value.

2,407,655
SCAFFOLD
Thomas G. Di Santi, Newark, N. J.
Application May 3, 1945, Serial No. 591,686
5 Claims. (Cl. 304—18)



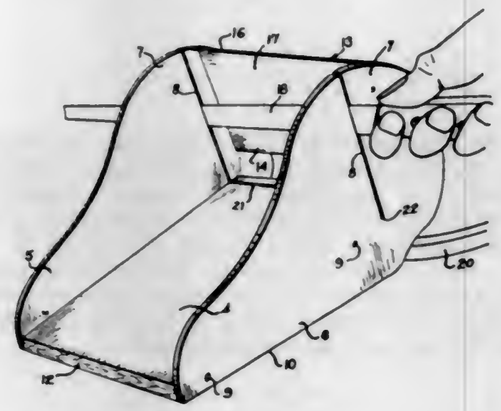
1. In a scaffold, in combination with a post, a sleeve slidable upon said post, a brake adapted to engage said post, a link having an end pivoted to said brake, an arm pivoted to said sleeve, said link having another end pivoted to said arm intermediate the ends of the arm, a frame element carried by said sleeve, a spring carried by said frame element and connected with said arm for

maintaining said brake in engagement with said post, a lever, and means connected with said lever



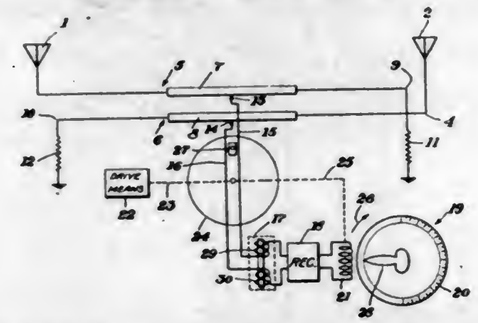
and engaging said arm for releasing pressure upon said brake when said lever is actuated.

2,407,656
BINDING ELEMENT
Charles Edward Emmer, Chicago, Ill., assignor to General Binding Corporation, Chicago, Ill., a corporation of Illinois
Application October 9, 1943, Serial No. 505,617
6 Claims. (Cl. 281—21)



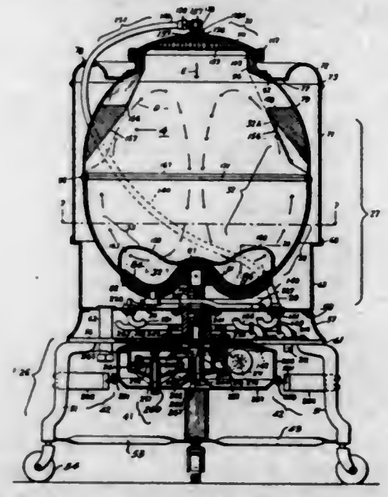
1. A binding element having a backbone, and a plurality of fingers extending therefrom, each of said fingers having a plurality of relatively light score lines extending transversely thereacross and providing a region of light score lines over substantially the entire length of each of said fingers, and a pair of relatively heavy score lines on said fingers extending transversely thereacross, one of said heavy score lines being substantially at the base of each of said fingers where it extends from said backbone and the other of said heavy score lines on each of said fingers being located in proximity of the tip of said finger, said fingers being arcuately curved throughout said region of light score lines and being sharply bent at each of said heavy score lines, and means for holding the tips of said fingers in close proximity to said backbone.

2,407,657
TRANSFORMER PICK-OFF
Orland E. Esval, Huntington, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application October 24, 1942, Serial No. 463,286
3 Claims. (Cl. 177—380)



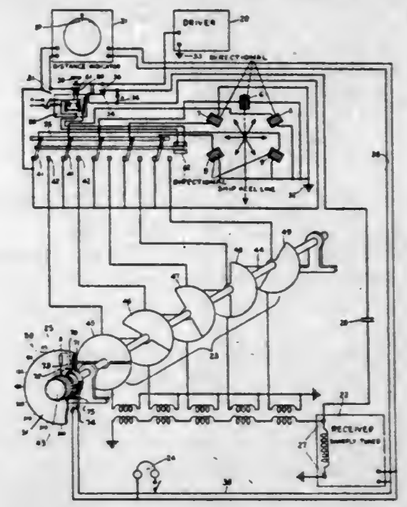
1. A transformer pick off producing a signal substantially proportional to the angular displacement of two relatively rotatable objects comprising a pair of magnetic cores mounted in diametrically spaced relation for movement with one of the objects each of which provides two separate open magnetic circuits, means for supplying an alternating m. m. f. to each of said circuits, a pair of permeable armatures having portions radially overlapping portions of said cores and mounted for movement with the other of the rotatable objects to differentially change the openings in the provided separate magnetic circuits, an output coil linking each of the magnetic circuits, means for connecting the coils of each core in opposition to produce an output signal that is phase sensitive to the sense of relative displacement of the objects, and means for connecting the coils of both cores in counterbalancing relation to cancel the respective signals induced therein due to radial movement between the two relatively rotatable objects.

2,407,658
SLICING DEVICE
John R. Fuchs and Alfred R. Fuchs, Kansas City, Mo.
Application March 1, 1943, Serial No. 477,590
2 Claims. (Cl. 146—150)



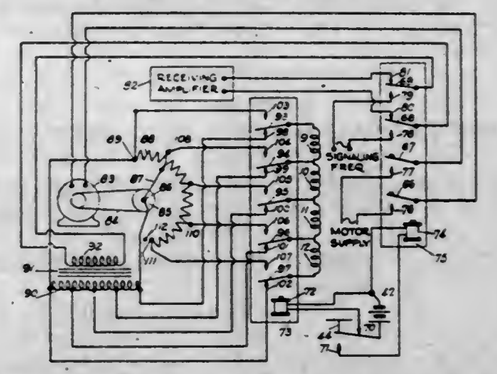
1. In a slicing device, an elongated bottom wall having a flat top face for supporting an object to be sliced, a pair of parallel side walls extending perpendicularly to said bottom wall and elongated lengthwise of said bottom wall and a flat faced stop wall mounted in fixed position relative to said bottom and side walls and extending perpendicularly thereto, said stop wall connecting and bracing said side walls, said side walls having a single slot therein parallel to and spaced from said stop wall the thickness of a slice to be cut from said object for guiding a cutting blade parallel to the flat face thereof, said stop wall extending between said side walls over the major portion of the height thereof to provide a flat supporting face for the major portion of the end of an object being sliced, said bottom wall extending under said stop wall and the bottom edge of said stop wall being spaced sufficiently from the top face of said bottom wall to permit passage of a slice edgewise through the discharge slot thus provided, said stop wall having its flat face inclined to the vertical to locate the upper end thereof vertically above a portion of said bottom wall lying in front of said discharge slot so that a slice engaging said stop wall will have a tendency to drop away from said stop wall toward said bottom wall, said side walls and bottom wall providing a slide way for said object and cut off slice, whereby a cut off slice deposited on said bottom wall upon moving said object away from said stop wall is directed through said discharge slot longitudinally of said device by return movement of said loaf toward said stop wall.

2,407,659
PHASE COMPARISON SYSTEM
Morton Fuchs, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 17, 1945, Serial No. 578,491
12 Claims. (Cl. 250—11)



1. A system for comparing the varying phase of voltages present on respective transmission lines said lines terminating in their characteristic impedances, comprising, a translating device, circuit means coupling said transmission lines to said device, said circuit means having an input impedance relatively large compared to the transmission line impedance to voltages having a predetermined amplitude and phase relationship at the points at which said circuit means is coupled to the transmission lines and having a lesser input impedance to voltages at said points differing from said predetermined phase relationship, and means for variably controlling the phase of energy transferred between said lines and said circuit means.

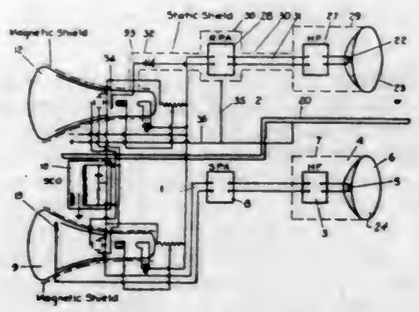
2,407,660
WASHING MACHINE
George C. Graham, Ridgewood, N. J., assignor, by mesne assignments, to Graham & Allen, Ridgewood, N. J., a partnership composed of George C. Graham and Francis G. Allen
Application November 30, 1939, Serial No. 306,797
10 Claims. (Cl. 68—12)



3. In a clothes washing machine, a plurality of operating means including means for washing the clothes, means for flushing the wash water from the clothes, means for rinsing the clothes, and means including said flushing means for drying the clothes, control means to cause said washing, flushing, rinsing and drying to occur in succession automatically, and means for manually operating one of said plurality of operating means independently of the automatic control means.

2,407,661
SUBMARINE SIGNALING DEVICE
Bertram M. Harrison, Newton Highlands, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application April 26, 1940, Serial No. 331,804
8 Claims. (Cl. 177—386)

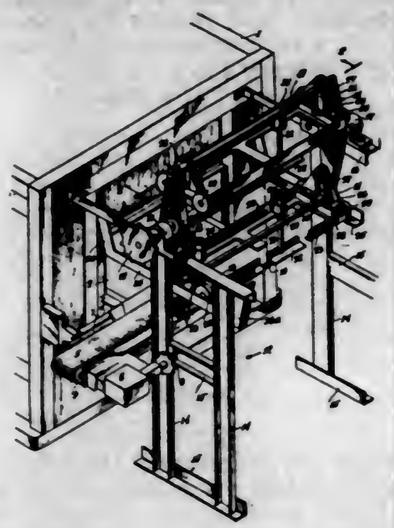
1. A system for sound detection comprising, in combination, a sound pickup device composed of units each having individual similar directive beam patterns with the axes thereof in spaced selected directions, and together having a substantially uniform pattern in the whole desired listening sector, a plurality of electrical circuits, one for each of said units having means for tuning the circuits substantially in accordance with said beam pattern at a chosen listening frequency, said last means for each unit being displaced in tuning phases one from the other by amounts corresponding to the spacing of the beam axes, control means for the common operator for the tuning, and means operatively connected to said electrical circuits for producing an indication of the sound picked up by said units corresponding to the direction from which it is received.



2,407,662
METHOD AND APPARATUS FOR SUBMARINE SIGNALING
Harold M. Hart, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application July 22, 1939, Serial No. 285,902. Divided and this application July 8, 1940, Serial No. 344,345
13 Claims. (Cl. 177—386)

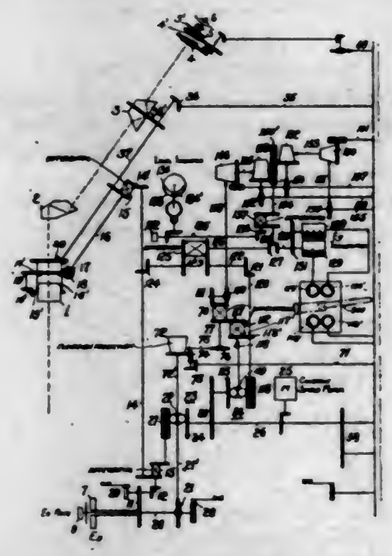
1. Apparatus for echo ranging with compressional waves including means for transmitting a

compressional wave signal to produce a beam pattern having a maximum energy concentration in one direction and a plurality of subsidiary maximum energy concentrations in angular directions different from that of said main maximum and means for receiving reflected wave energy including a device having a beam pattern having greatest response in the direction of the main transmitted maximum and having subsidiary maximum response sensitivities in directions substantially different from the directions of the subsidiary maxima in the beam pattern of the transmitted impulse.



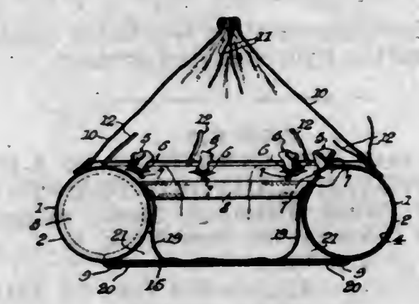
2,407,663
METHOD AND MEANS FOR DISTANCE AND DIRECTION FINDING
Robert Winfield Hart, Lynn, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application January 24, 1939, Serial No. 252,598
6 Claims. (Cl. 250—1)

1. A system for measuring distance by the use of electromagnetic waves in which the distance is measured by the time interval elapsing between the instant of transmission of the wave and its receipt after reflection from the object whose distance is to be measured comprising sending and receiving systems electrically shielded from one another, said systems each including a cathode ray tube and means operatively connecting the same to transmitter and receiver elements respectively, a sweep circuit operatively connected to said tubes for synchronizing the rotation of the cathode ray beam in both tubes, means positioned in the sending tube and operatively associated with the cathode ray beam thereof for controlling the instant of emission of a wave impulse by said sending system and means positioned in the receiving cathode ray tube and operatively associated with the cathode ray beam thereof for indicating the instant of receipt of a wave impulse by said receiving system.



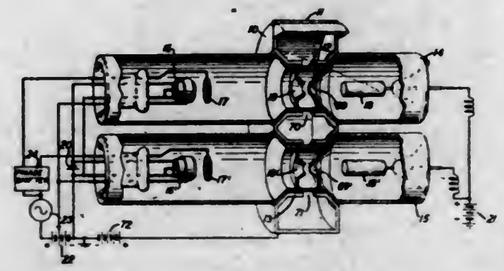
2,407,664
TRANSFERRING DEVICE FOR ANNEALING LEERS
Gordon W. Herrold, Connellsville, Pa., assignor to Anchor Hocking Glass Corporation, Lancaster, Ohio, a corporation of Delaware
Application June 15, 1944, Serial No. 540,507
25 Claims. (Cl. 198—31)

1. In a device of the class described, the combination of a truck including a member for engaging and moving an article, means for rotating said truck with said member in an orbit about an axis, a track above the member on which the truck runs, and means forming part of the track for moving said member away from said article



while continuing the movement of said rotating means.

2,407,665
AIRCRAFT FIRE CONTROL COMPUTER
Carl G. Holschuh, Wood-Ridge, N. J., and David Fram, Brooklyn, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application August 1, 1940, Serial No. 349,336
6 Claims. (Cl. 235—61.5)

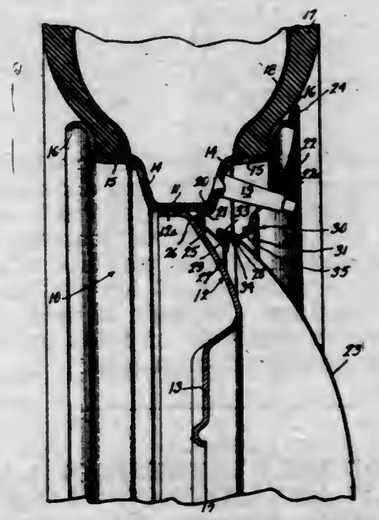


1. Apparatus for compensating for the effect of wind on a shell fired from an airplane mounted gun comprising sighting and computing means for determining a line of fire to a target which consists of gun elevation and gun azimuth angles, means positioned according to indicated air speed, resolving means actuated thereby and according to the indicated gun azimuth angle for obtaining a measure of component airspeed in a direction perpendicular to the vertical plane of the gun axis, means providing a measure of target range, a mechanism actuated in acordance with the elevation angle of the gun in said plane and said measures of component wind and range for computing a windage correction to the azimuth aiming angle of the gun, means for regulating the windage correction in proportion to deviation of the airplane from a level course, and means automatically correcting the azimuth angle for the gun relative to the line of sight in accordance with said regulated windage correction.

2,407,666
BOAT
Cresson H. Kearny, United States Army, Fort Clayton, C. Z.
Application March 27, 1943, Serial No. 480,880
2 Claims. (Cl. 9—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

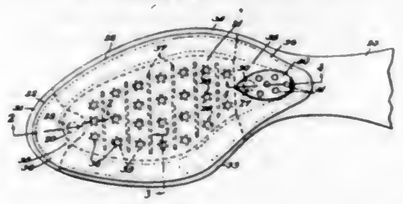
1. A boat comprising a body member including a central opening and adapted to be inflated, an outer flexible bottom member attached to a lower portion of said body member and arranged to become taut upon the inflation of said body member and an inner member adapted to carry a load and attached to an upper inner side of said body member, said inner member extending into said central opening in said body member and engaging said bottom member whereby the torque produced by a load on said outer bottom member tending to twist the body member in one direction is balanced by the torque produced by the load upon the inner member tending to twist the body member in an opposite direction.

2,407,667
HARMONIC GENERATOR
Reymond J. Kircher, Neptune, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 30, 1941, Serial No. 412,927
10 Claims. (Cl. 250—36)



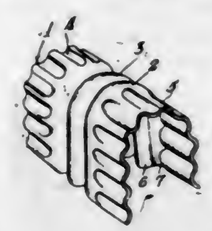
1. In a frequency changer, a source of waves of a given fundamental frequency, means to initiate and maintain a plurality of beams of charged particles, means for impressing density variations upon each of said beams in accordance with the fundamental waves in unlike phases, a resonator tuned to a multiple of the fundamental frequency, and means actuated in common by said beams to energize said resonator at the resonant frequency thereof.

2,407,668
FIRE RESISTANT COATING COMPOSITION
Martin Leatherman, Hyattsville, Md.
No Drawing. Application June 20, 1942, Serial No. 447,871
10 Claims. (Cl. 260—32)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



9. A composition of matter as described, comprising polymeric material from the group consisting of n-butyl methacrylate polymers and the ethyl, methyl, and propyl ester polymers of acrylic and methacrylic acids; plasticizing material from the group consisting of tricresyl phosphate, triphenyl phosphate, dibutyl phthalate and chlorinated diphenyls; polymeric material from the group consisting of polyvinyl chloride polymer and vinyl chloride-vinyl acetate copolymer the quantity of material from this group being at least equal to that of the first mentioned group; at least one solvent from the group consisting of acetone, mineral spirits, xylol, butanol, ethanol, isobutanol, toluol, naphtha, and Stoddard solvent; zinc carbonate in proportion roughly equal to about 40% by weight of the vinyl polymeric material; inert pigment; and a small quantity of fungicidal material, said plasticizing and solvent materials being in quantity to produce the desired consistency.

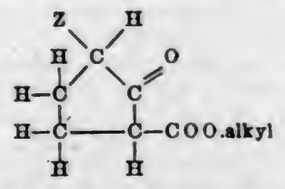
2,407,669
WHEEL STRUCTURE
George Albert Lyon, Allenhurst, N. J.
Application November 1, 1943, Serial No. 508,462
7 Claims. (Cl. 301—37)



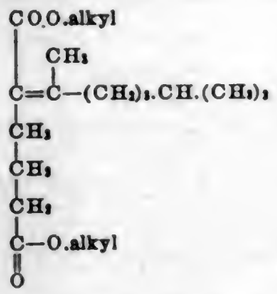
1. As an article of manufacture, a multi-part, unitary cover assembly including an outer annular cover portion, a central circular hub cap simulating cover portion and a retaining annulus disposed therebetween and arranged for retaining engagement with said cover portions to maintain the same as a unitary circular structure, said retaining annulus including a portion arranged to overlie the radially inner margin of said annular cover portion and a portion arranged to retainingly engage an intermediate part of said central circular hub cap simulating cover portion to maintain the parts together, said central circular hub cap simulating cover portion including a generally axially inwardly extending, resilient, portion arranged for detachable engagement with a part of the wheel structure with which it is associated.

2,407,670
RESILIENT INSOLE
Meyer Margolin, Elgin, Ill.
Application July 8, 1940, Serial No. 344,414, which is a division of application Serial No. 272,364, May 8, 1939, now Patent No. 2,319,818, dated May 25, 1943. Divided and this application May 22, 1943, Serial No. 487,986
4 Claims. (Cl. 36—3)

1. A resilient insole comprising a resilient central forepart area, a flap formed integrally with said resilient central forepart area, independent edge stiffening means carried by said flap.



2,407,671
GUIDEWAY FOR SLIDING WINDOWS
Pierre Mesnel, Colombes, France; vested in the Alien Property Custodian
Application August 2, 1939, Serial No. 287,893
In France August 5, 1938
3 Claims. (Cl. 296—44.5)

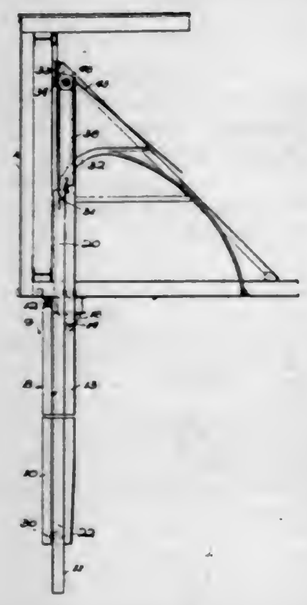


1. A contour guideway for sliding windows and the like, comprising an elongated channel shaped sheet metal strip formed at intervals along its length with sets of contiguous transversely extending folds and on at least one side of each set of folds with a plurality of longitudinally extending corrugations, the ends of said corrugations adjacent to said sets of folds terminating contiguous to the related outer fold.

2,407,672
PROCESS FOR THE SYNTHESIS OF 1-ALKYL-8-METHYL HEXAHYDROINDANONE-4
Nicholas A. Milas, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application June 20, 1941, Serial No. 399,040
10 Claims. (Cl. 260—468)

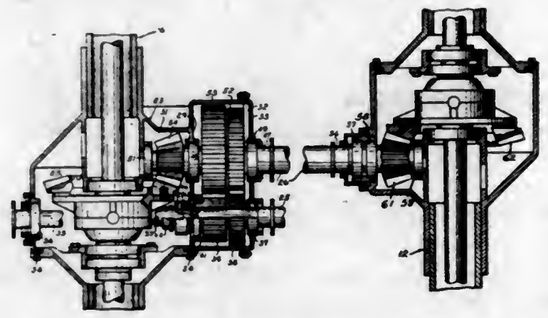
10. Process of producing a compound of the formula

wherein Z represents a substituent of the group consisting of hydrogen and a monovalent aliphatic hydrocarbon radical, which comprises reacting an alpha-bromoadipic acid alkyl ester with methyl isohexylketone under conditions to yield a compound of the formula



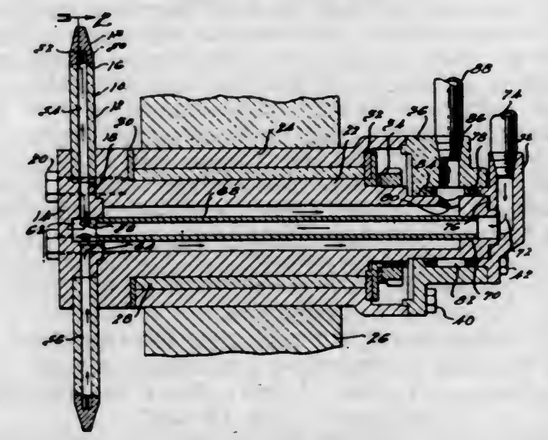
catalytically hydrogenating the latter compound, and cyclizing the hydrogenated product.

2,407,673
PROCESS FOR THE SYNTHESIS OF 1-KETO-8-METHYLHEXAHYDROINDANOL-1
Nicholas A. Milas, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application June 20, 1941, Serial No. 399,041
8 Claims. (Cl. 260—468)



1. Process which comprises the step of halogenating 2 - methyl - 2 - carboethoxy-cyclohexanone-1 to the corresponding 6-halogen derivative and replacing the 6-halogen of said derivative by a group having the formula —O—R, in which R is a member of the group consisting of alkyl and aryl.

2,407,674
DOOR AND OPERATING MEANS THEREFOR
David H. Morgan, Youngstown, Ohio
Application January 22, 1945, Serial No. 573,912
14 Claims. (Cl. 160—184)

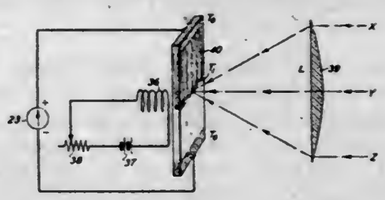


2. A door comprising an upper leaf pivoted for swinging movements between substantially vertical and substantially horizontal positions, a lower leaf coupled to said upper leaf for vertical sliding movements with respect thereto and for swinging movements therewith, and pivot means for said lower leaf disposed in offset relationship to the pivot of said upper leaf.

2,407,675
VEHICLE DRIVE AXLE GEARING
Mathew B. Morgan, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application September 8, 1942, Serial No. 457,654
3 Claims. (Cl. 74—326)

1. In a vehicle, a drive axle, a motor driven propeller shaft section disposed substantially at right angles to said axle and extending forwardly and rearwardly thereof, axle drive mechanism including a drive shaft at one side of the axle in substantially parallel relation with one end of said propeller shaft section, housing structure for said axle drive mechanism supported on the axle and journalling the other end of said propeller shaft section at the opposite side of the axle, said housing structure having a lateral extension providing a gear chamber, in opposite side walls of which chamber said drive shaft and propeller shaft section are journalled, gearing within said chamber for transmitting power at reduced speed from said propeller shaft section to the drive shaft including change speed gears loosely mounted on said propeller shaft section, and a manually shiftable member keyed to said propeller shaft section within the housing to selectively connect said gears in driving relation with said propeller shaft section.

2,407,676
WELDING MECHANISM
Alexander L. Munson, Detroit, Mich.
Application January 3, 1944, Serial No. 516,749
1 Claim. (Cl. 219—4)

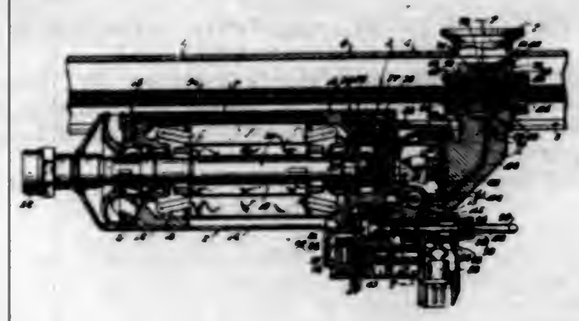


In a seam welder wheel, a body, a work engaging rim secured to the periphery of said body, said wheel having an annular coolant passage therein which is located adjacent the work engaging surface of the rim, and means for circulating coolant through said passage including a plurality of radially extending circumferentially distributed inflow passages and a corresponding plurality of radially extending circumferentially distributed outflow passages, said inflow and outflow passages opening into said annular passage in circumferentially alternate relation to each other.

2,407,677
PROCESS OF SEPARATING CARBAZOLE FROM CRUDES THEREOF
John O'Brochta and Hugh Rodman, Jr., Pittsburgh, Pa., assignors, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
No Drawing. Application September 4, 1943, Serial No. 501,310
1 Claim. (Cl. 260—318)

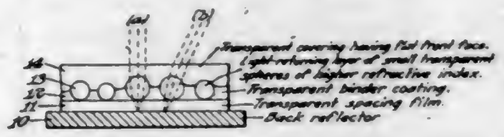
In a process of separating carbazole from anthracene cake in the "fusion" method, the improvement comprising: mixing and agitating the anthracene cake, in the absence of a solvent-diluent, with solid potassium hydroxide while heating the mixture to a temperature sufficiently high to fuse the anthracene cake but preventing the temperature from rising above 235° C., whereby, the carbazole in the fused cake reacts with the potassium hydroxide to form potassium carbazolate in solid crystalline form, formation of pitchy decomposition products is prevented, and water formed by the reaction is evaporated; and thereafter separating by filtration the potassium carbazolate crystals from the resulting liquid mass.

2,407,678
THERMOELECTRIC SYSTEM
Russell S. Ohl, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application April 11, 1942, Serial No. 438,645. Divided and this application March 25, 1943, Serial No. 480,460
9 Claims. (Cl. 73—359)



3. A thermoelectric system comprising a thermoelectric device including a piece of P-type silicon, a piece of N-type silicon, means intimately joining said two pieces of silicon and electrical terminals connected to said pieces of silicon respectively at surface areas removed from said junction between the two pieces, means to produce a heat bias at the junction between the two pieces, means to direct radiation to be detected on said junction, and means connected to said electrical terminals for indicating the thermoelectric power developed by said device.

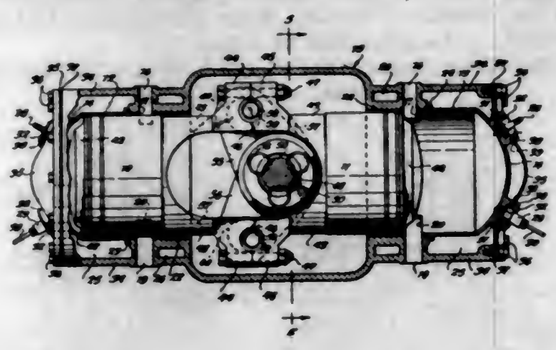
2,407,679
DRILLING APPARATUS
Win W. Paget, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application December 21, 1942, Serial No. 469,646
6 Claims. (Cl. 255—45)



1. In a drilling apparatus, a drilling motor of the rotary type, means for supporting and guiding said drilling motor for movement relative to its work, and means for feeding said drilling motor along said supporting and guiding means, said

feeding means including a feed screw extending longitudinally of said supporting and guiding means, a fluid actuated feeding motor fixed with respect to said drilling motor as regards relative longitudinal movement and having a rotatable

member directly subjected to the action of an operating fluid and threadedly engaging said feed screw, means for supplying operating fluid to said feeding motor, and means responsive to the torque load on said drilling motor for controlling the supply of operating fluid to said feeding motor.



2,407,680
REFLEX LIGHT REFLECTOR
Philip V. Palmquist, New Canada Township, Ramsey County, and Bert S. Cross and George P. Netherly, St. Paul, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application March 2, 1945, Serial No. 580,590
24 Claims. (Cl. 88—82)

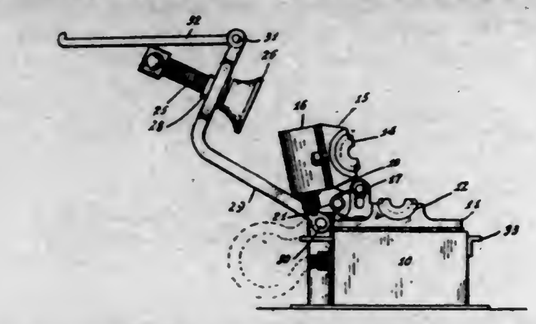
1. A reflex light reflector comprising a light-returning layer of small transparent spheres, internal light-reflecting means underlying said spheres and positioned in optical connection with the back extremities thereof so as to produce reflex reflection, and a continuous overlying transparent solid covering united and conforming to the front extremities of said spheres and having a flat front face; said spheres having a refractive index at least 1.15 times that of said transparent covering.

2,407,681
INTERNAL-COMBUSTION ENGINE
Joseph S. Parenti, Buffalo, N. Y.
Application November 16, 1942, Serial No. 465,644
17 Claims. (Cl. 123—56)

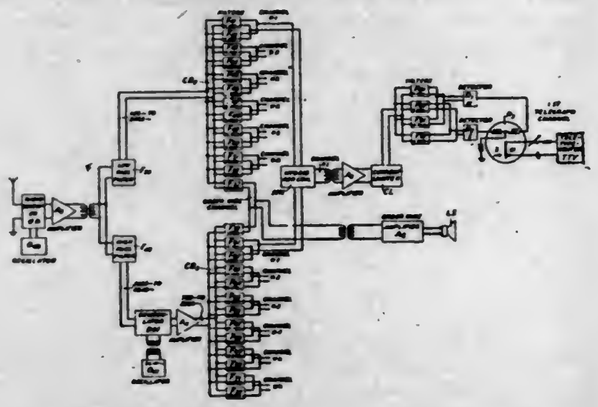
5. An engine having oppositely disposed pistons and provided at their adjacent portions with oppositely spaced legs, means for securing the legs of one piston to the legs of the other piston for rigidly securing said pistons to each other, a shaft extending between the legs of said pistons, rocker arms arranged about said shaft, one of said rocker arms being connected with said piston at one side of said shaft and the other rocker arm being connected with said piston at the other side of said shaft, to cause reciprocation of said pistons to swing said arms about said shaft, and means for operatively connecting one of said arms to said shaft during the power stroke of one piston and for operatively connecting the other arm to said shaft during the power stroke of the other piston, said means disconnecting

said arms from said shaft when their pistons move in their compression strokes.

2,407,682
TERMINAL WEIGHT
William M. Poz, United States Navy, Park Ridge, N. J.
Application May 15, 1945, Serial No. 593,899
2 Claims. (Cl. 294—82)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



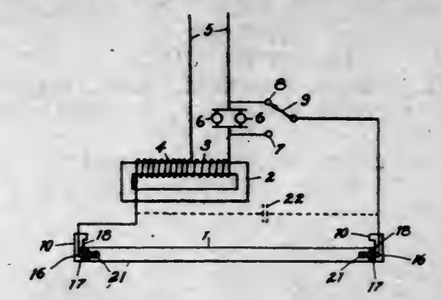
1. A terminal weight for cargo handling equipment comprising an integral tension carrying bar, a substantially cylindrical pipe surrounding said bar, and substantially flat caps fitted into the ends of said pipe and having slots through which said bar extends, the portions of said bar extending beyond said caps being apertured to enable cargo whips and cargo hooks to be secured to said bar, the space in said pipe between the inner wall thereof and said bar being filled with heavy material.



2,407,683
CABLE SPLICE VULCANIZING MOLD
William G. Prentice, Indianapolis, Ind.
Application August 14, 1944, Serial No. 549,398
2 Claims. (Cl. 18—18)

1. A splice vulcanizing mechanism comprising two elongated mating jaws each formed to provide an elongated splice-receiving cavity, an elongated trunnion movable in a plane normal to the mating plane of said jaws and disposed parallel to said cavities, one of said jaws being mounted for swinging movement on said trunnion, means for guiding and limiting the movement of said trunnion, spring means disposed to urge said trunnion away from the other of said

jaws and permitting tilting movement of said trunnion, and means for applying pressure substantially to the center of said one jaw to urge said one jaw toward said other jaw.

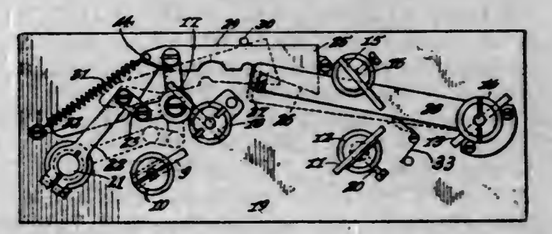


2,407,684
RADIO COMMUNICATION SYSTEM
Leland C. Roberts, Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 1, 1944, Serial No. 566,079
7 Claims. (Cl. 250—9)

1. A radio communication system comprising in combination means for producing and transmitting frequency diversity signals having frequency separations between corresponding diversity signals, a receiving station having a single antenna for receiving said signals, common demodulating means for demodulating all of the received signals, means for preparing said demodulated signals for selection on the basis of their amplitudes, said means including first filtering means for separating one group of the frequency diversity signals, second filtering means for separating another group of the frequency diversity signals, and means for reducing the frequency separations between corresponding diversity signals, said last-mentioned means comprising special demodulating means for shifting the frequencies of the signals in one of said groups to positions in the frequency spectrum nearer to but different from the frequencies of the corresponding signals in the other of said groups.

2,407,685
FLUORESCENT LIGHT CONTROL
Corrie F. Rudolph, Washington, D. C.
Application August 3, 1943, Serial No. 497,275
8 Claims. (Cl. 315—62)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

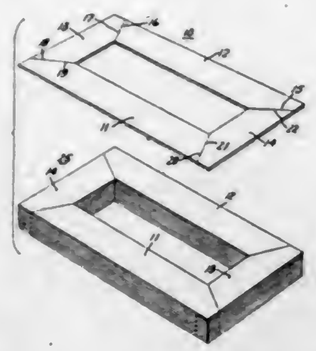
1. A voltage control for a gaseous discharge tube having a negative resistance temperature coefficient, comprising in combination with a gaseous discharge tube having a negative resistance temperature coefficient, an inductive device and an incandescent lamp having a positive resistance temperature coefficient for the purpose of providing starting and running voltages for said tube, said inductive device being provided with primary and secondary windings arranged so that the primary winding will react upon the



secondary winding during starting to produce necessary starting voltages and the secondary winding to react upon the primary winding during running to counteract the inductance of the primary winding plus D. C. resistance of the primary winding and thereby produce full line voltage on the incandescent lamp for the purpose of obtaining full illumination from the incandescent lamp and consequent reduction in overall stroboscopic effect.

2,407,686
SULPHANILAMIDE DERIVATIVES AND METHOD OF PREPARING SAME
Simon L. Ruskin, New York, N. Y., assignor to Frances R. Ruskin
No Drawing. Application April 21, 1943, Serial No. 483,946
9 Claims. (Cl. 260—209)

1. Sulphanilyl adenylic acid.

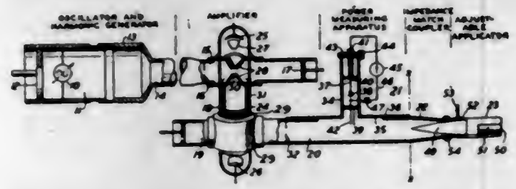


2,407,687
RANGE FINDER
Morris Schwartz and William Castedello, Stamford, Conn., assignors to The Kalart Company, Inc., Stamford, Conn.
Application December 28, 1943, Serial No. 515,882
8 Claims. (Cl. 88—2.7)

1. Range finder of the type described comprising a stationary reflector, an adjustable reflector arranged to project an image of an object exterior to the range finder upon said stationary reflector, means for adjusting said adjustable reflector, and a reflector arrangement for projecting a second image of said object upon said stationary reflector, said reflector arrangement including three reflectors, the first one being placed in the direct path of the light travelling from the object toward the stationary reflector, the second and third reflectors being placed outside of the direct path of light travelling from the object toward the stationary reflector, the first reflector projecting the second image upon the second one, the second reflector projecting

the second image upon the third one and the third reflector projecting the second image upon the stationary reflector, the reflectors of said reflector arrangement being arranged to equalize the lengths of the optical paths between the adjustable reflector and the stationary reflector and between said first reflector of the reflector arrangement and the stationary reflector.

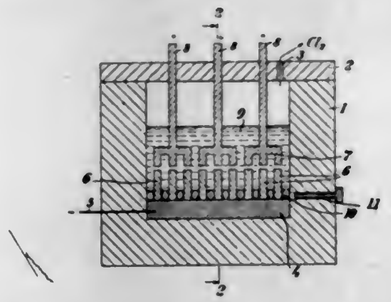
2,407,688
MAGNETIC CORE
Ivanhoe H. Sclater, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 30, 1942, Serial No. 470,579
7 Claims. (Cl. 175—356)



1. A magnetic core including a plurality of layers of assembled laminations formed lengthwise from strip material having the most favorable magnetic direction lengthwise of the strip, adjacent laminations having a diagonal butt joint at adjacent ends, with at least a major portion thereof being a straight line and running from the vicinity of the inner corner to the vicinity of the outer corner of the assembled laminations each of said laminations having a first joint edge surface at an angle of less than 45 degrees with a lateral axis of the assembled laminations and a second joint edge surface at the opposite end at an angle of less than 45 degrees with the longitudinal axis of the assembled laminations.

2,407,689
CHEMICAL PROCESS AND PRODUCT
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application February 12, 1944, Serial No. 522,093
10 Claims. (Cl. 106—178)

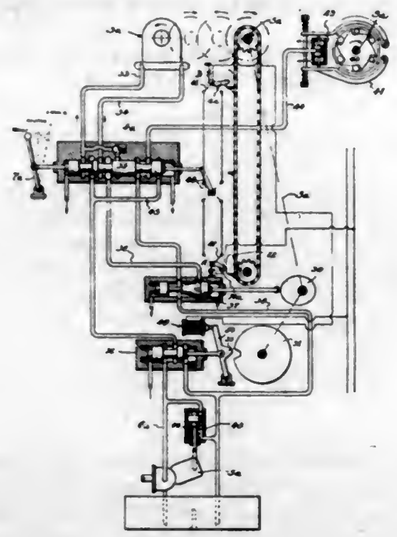
1. A plasticized composition comprising a plasticizable organic substance and as a plasticizer therefor a carboxylic acid ester of a compound selected from the group consisting of indene halohydrines and alkyl indene halohydrines.



2,407,690
WAVE GUIDE ELECTROTHERAPEUTIC SYSTEM
George C. Southworth, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 16, 1941, Serial No. 393,756
14 Claims. (Cl. 128—422)

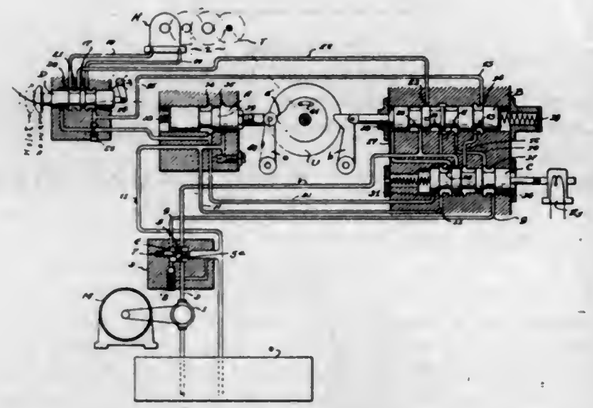
2. A system for transfer of electric oscillation energy comprising a source of electrical oscillations, a wave guide having an input portion connected to the source, an energy transfer element connected to another portion of the guide, the transfer element having a terminating dielectric core which may be projected within a zone to which oscillation energy is to be transferred, a

slidable electrically conducting sheath thereover to substantially enclose the core, and means whereby the sheath may be slid longitudinally to expose more or less of the core to control the amount of energy transferred from the dielectric to the surrounding zone.



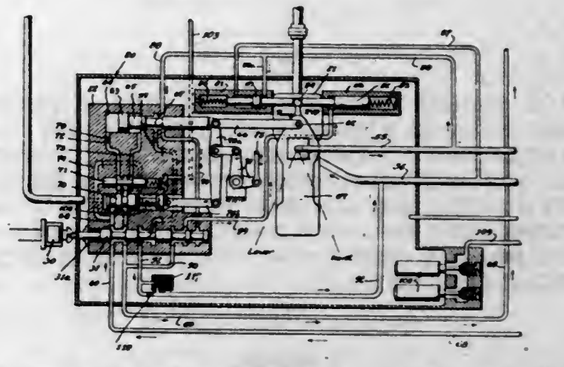
2,407,691
CELL FOR THE PRODUCTION OF METALS BY ELECTROLYSIS OF FUSED ELECTROLYTES
Robert Suchy and Georg Messner, Bitterfeld, Germany; vested in the Alien Property Custodian
Application March 24, 1939, Serial No. 263,878
In Germany April 8, 1938
3 Claims. (Cl. 204—247)

1. In a cell for the recovery of metals by the electrolysis of fused metal compounds, the arrangement of electrodes comprising a conductive substantially plane bottom, conductive separately movable cathode bars spacedly disposed on and in contact with said bottom so as to form trough-like spaces adapted to collect deposited metal between each other, above said cathode bars being disposed anode bars of the same cross section, and means for cathodically polarizing said conductive bottom.



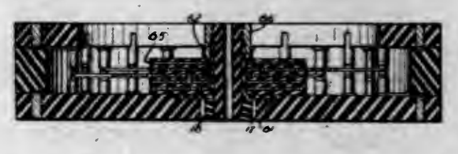
2,407,692
SAFETY CONTROL FOR HOISTS
Harry F. Vickers, Washington, D. C., assignor, by mesne assignments, to Vickers, Incorporated, Detroit, Mich., a corporation of Michigan
Application August 10, 1935, Serial No. 35,607
13 Claims. (Cl. 198—37)

1. In a conveyor system of the type adapted to move articles from a loading station to a delivery station, a conveyor for moving the articles, power actuating means for the conveyor, means associated with said power actuating means for controlling the direction of movement thereof, spaced article-sensitive means positioned adjacent said stations and operatively associated with said control means, and means operatively associated with said control means and said article sensitive means for normally effecting step by step movement of the power means and the conveyor dependent upon the respective loaded and unloaded condition of the article sensitive means



and also operative to normally stop the conveyor at the end of each cycle.

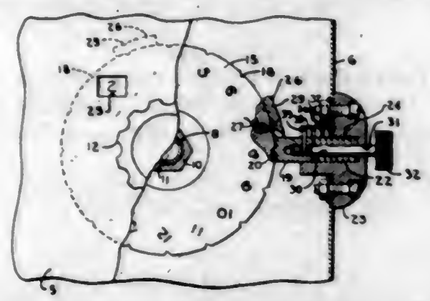
2,407,693
SAFETY CONTROL FOR HOISTS AND CIRCUIT THEREFOR
Harry F. Vickers, Detroit, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application December 3, 1936, Serial No. 114,008
15 Claims. (Cl. 198—37)



1. In a hydraulic actuating and control system for controlling the movements of an endless conveyor extending between spaced loading and delivery stations, a conveyer, a pressure source, a reversible conveyor motor having two ports interchangeable as pressure-exhaust ports, directional valve means for selectively directing liquid under pressure to said motor parts, a series of hydraulic conduits connecting said pressure source and said directional valve means, means for limiting the pressure in said conduits, a starting valve in said conduits adapted in one position to block flow of pressure liquid from said source and in another position to pass liquid from said source to said directional valve means, an actuating means for said starting valve, article responsive means at each of said stations to be influenced by the presence of an article at said stations and means operatively connecting said article responsive means and said directional valve means with said starting valve actuating means whereby said starting valve may be moved from its pressure blocking position only when the station toward which the conveyor will move is empty and the station from which the conveyor will move is loaded, a locking wheel operatively connected to said motor, a latch for engaging said wheel to lock said motor, and means connected to said latch and operated by pressure directed from said starting valve for disengaging said latch from said wheel to permit operation of said motor, said starting valve being arranged to direct liquid under pressure to operate said latch means only when said starting valve is shifted from its blocking position.

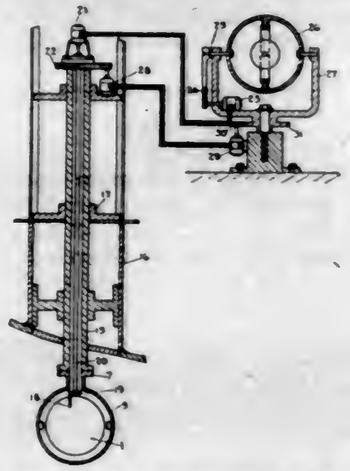
2,407,694
HOIST CONTROL AND DRIVE
Harry F. Vickers, Detroit, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application August 3, 1940, Serial No. 350,619
19 Claims. (Cl. 187—28)

1. In a hoisting mechanism and control, an elevating mechanism, a hydraulic motor for driving said mechanism, and a pumping circuit for furnishing liquid under pressure to drive said motor including a variable displacement pump, means on said pump shiftable to "hoist" or "lower" positions for controlling the direction and volume of flow, and means acting on said shiftable means to maintain it slightly toward a hoist position when the motor is not being operated.



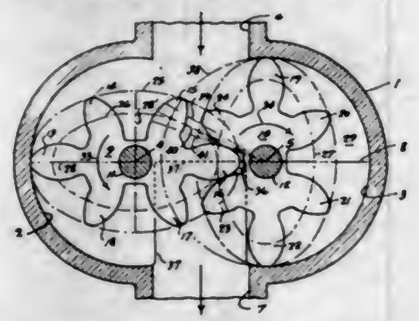
2,407,695
ROTOR
Wilfred C. Washcoe, Arlington County, Va.
Application August 24, 1944, Serial No. 551,053
6 Claims. (Cl. 173—328)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device of the character described, a body member comprising a substantially continuous plate member with a recess in one face thereof having openings therein through said plate member and an axial extension from said recess, a peripheral wall for said plate member extending in the same direction as said axial extension, a plurality of input contacts having portions extending interiorly of said wall, a plurality of output contacts having portions extending interiorly of said wall, a bushing or the like having a disc like portion normally fitted within said recess in the plate member and a bushing proper nor-



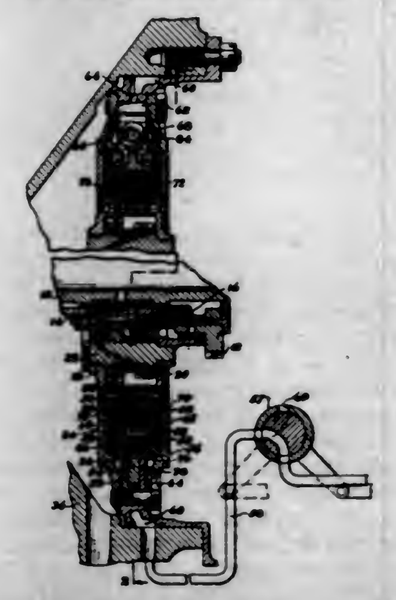
mally fitted over said axial extension, a connecting member comprising a ring positioned over the axial extension and two radial arms spring pressed into engagement with two of said interiorly extending contact portions.

2,407,696
DETENT MECHANISM
George C. Webster, United States Navy
Application June 7, 1945, Serial No. 598,190
9 Claims. (Cl. 74—527)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



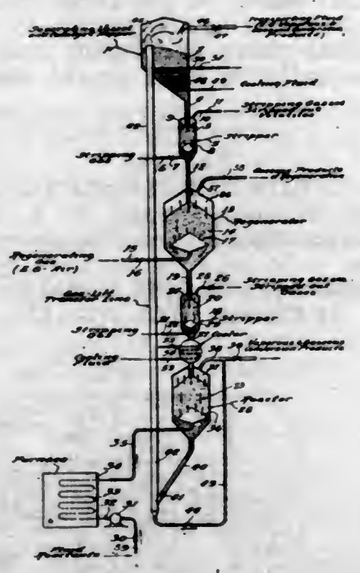
1. A detent mechanism including a peripherally notched disc, a shaft for rotatably supporting said disc, a stop member mounted on said disc, and a plunger engageable in one position with a notch and said stop member, in a second position with said stop member alone, and in a third position engageable with neither said stop member nor said notch.

2,407,697
APPARATUS FOR SUBMARINE SIGNALING
Robert Longfellow Williams, Newton, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application September 14, 1935, Serial No. 40,587
9 Claims. (Cl. 181—0.5)



1. In a submarine signaling system, a submarine oscillator adapted to send and receive compressional waves in a direction substantially perpendicular to its radiating surface, means for mounting the oscillator on the vessel in a signaling position including a pivotal suspension along an axis perpendicular to said signaling direction and normally horizontal, the weight of the oscillator being distributed so as to bring its center of gravity sufficiently below said axis of suspension to form a compound pendulum, and means for immersing the entire oscillator in a liquid medium.

2,407,698
FLUID PRESSURE DEVICE
Francis W. Guibert, Beverly Hills, and Frederic B. Fuller, Whittier, Calif.; said Fuller assignor to said Guibert
Application May 8, 1944, Serial No. 534,578
5 Claims. (Cl. 121—70)

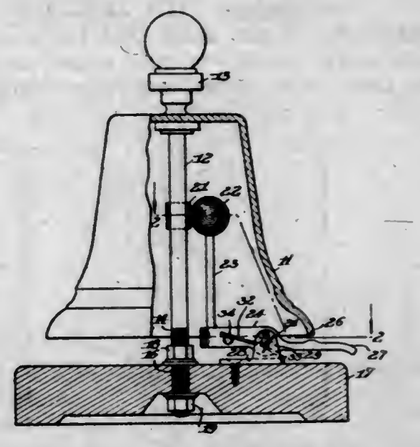


1. A toothed rotor structure for a fluid pressure device, having the following characteristics: two mutually perpendicular axes of symmetry intersecting at the center of rotation; there being six substantially uniformly spaced teeth on the rotor; there being a pitch line uniformly spaced from the ends of the teeth; the spaces between the teeth as measured along the pitch line having substantially the same width as the teeth; the curve enveloping the ends of the teeth being such that one axis of symmetry measured at the intersections with said curve is longer than the other axis of symmetry; the ratio of the lengths of the axes having a value with an upper limit of substantially two; the longer axis passing through the centers of two of the teeth; and the shorter axis passing through the center of the spaces between other teeth.

2,407,699
HYDRAULIC BRAKE
Henry C. Hill, Montclair, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application September 20, 1943, Serial No. 503,144
11 Claims. (Cl. 188—152)

1. In combination, relatively rotatable members having frictionally engageable surfaces, a piston-cylinder assembly for effecting clamping engagement of said surfaces upon the application of oil pressure thereto, and oil passage means from said assembly communicating with the space between said surfaces to provide for flow of said oil over said surfaces upon the application of oil pressure to said assembly such that clamping engagement of said surfaces is operative to shut off said flow of oil.

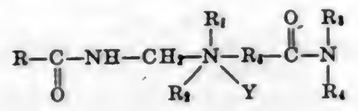
2,407,700
PROCESS FOR THE CONVERSION OF FLUID REACTANTS
Lyman C. Huff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 26, 1944, Serial No. 542,210
5 Claims. (Cl. 196—52)



1. The process of converting fluid reactants in the presence of a mass of subdivided solid contact material which comprises directing the solid contact material downwardly in series from an uppermost separating zone through separate confined reaction and regenerating zones, maintaining a relatively compact bed of the solid particles in each of said zones and maintaining the downwardly moving solid particles in the form of a continuous relatively compact column extending uninterruptedly through and between said zones, the static pressure at the bottom of said column being substantially greater than the pressure in said uppermost separating zone, contacting the bed of solid particles in the regenerating zone with regenerating gas to remove therefrom deleterious contaminants accumulated in the reaction zone, contacting the bed of solid particles in the reaction zone with the fluid reactants to be converted and effecting their conversion therein, maintaining the pressure of the vaporous conversion products in said reaction zone greater than the pressure in said separating zone, separately removing fluid products of regeneration and fluid products of the conversion reaction from the respective regenerating and reaction zones and preventing any substantial commingling thereof, discharging the subdivided solid particles at said static pressure from the bottom of said continuous column into and suspending the same in a stream of transporting fluid comprising a portion of said vaporous conversion products, directing the suspended particles solely by the gas-lift action of said transporting fluid upwardly into said separating zone, the pressure of said vaporous conversion products in said reaction zone being sufficiently greater than the pressure in said separating zone to overcome the pressure drop of said transporting fluid during its flow from said reaction zone to said separating zone, separating said transporting fluid from at least a major portion of the subdivided solid particles and directing the latter downwardly as aforesaid through the contacting zones.

2,407,701
MANUFACTURE OF HALOGENATED HYDROCARBONS
David Gwyn Jones and Maddison Phillipson, Norton-on-Tees, England, assignors to Imperial Chemicals Industries Limited, a corporation of Great Britain
No Drawing. Application November 29, 1943, Serial No. 512,256. In Great Britain December 7, 1942
6 Claims. (Cl. 260—656)

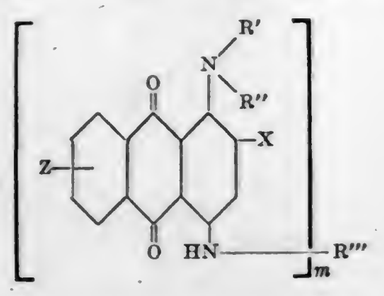
3. A process for the production of a halogenated hydrocarbon by passing over a supported mercuric chloride catalyst at reaction temperature a gaseous mixture of a hydrogen halide and acetylene, said process being subject to diminished catalyst activity as a result of continued operation, which process includes the steps of interrupting the passage of the reaction mixture when substantial diminution of the activity of the catalyst has occurred, treating the catalyst to restore its activity by passing chlorine over it at an elevated temperature, and subsequently renewing the passage of the reaction mixture over the catalyst at reaction temperature.



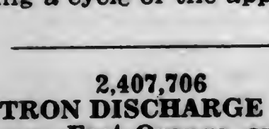
2,407,702
SOUNDING DEVICE
John A. Jowett, Scottsville, N. Y.
Application August 11, 1943, Serial No. 498,437
2 Claims. (Cl. 116—149)

1. A device of the character described comprising, in combination, a base, a bell having a lower lip, an element for supporting the bell from the base, a lever having a fulcrum on the base and having a manually actuated end extending beneath the lip, a striker attached to the opposite end of the lever, a spring normally urging said striker out of engagement with the bell, said bell being shiftable toward and from the base so that when shifted toward the base the manually actuated end of the lever will engage the lip of the bell under the influence of said spring to cut off the sounding of the bell after being struck.

2,407,703
AMINO AMIDE COMPOUNDS
Saul Kaplan, Rutherford, N. J., assignor to Onyx Oil & Chemical Company, a corporation of Delaware
No Drawing. Application April 10, 1942, Serial No. 438,433
6 Claims. (Cl. 260—404.5)



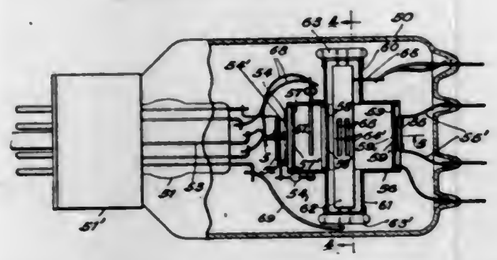
1. New amino amide compounds of the following general formula



in which R is a hydrocarbon group containing more than 10 carbon atoms; R_1 is of the class consisting of (1) lower alkyl radicals, (2) alkylene radicals linked to R_2 by a carbon to carbon linkage and (3) alkylene radicals linked to R_2 through an oxygen atom; R_2 is of the class consisting of (1) lower alkyl radicals, (2) alkylene radicals linked to R_1 by a carbon to carbon linkage and (3) alkylene radicals linked to R_1 through an oxygen atom; R_3 is of the class consisting of (1) hydrogen, (2) lower alkyl radicals, (3) alkylene radicals linked to R_4 by a carbon to carbon linkage and (4) alkylene radicals linked to R_4 through an oxygen atom; R_4 is of the class consisting of (1) hydrogen, (2) lower alkyl radicals, (3) alkylene radicals linked to R_3 by a carbon to carbon linkage, and (4) alkylene radicals linked to R_3 through an oxygen atom; R_5 is an alkylene group and Y is a salt-forming anion.

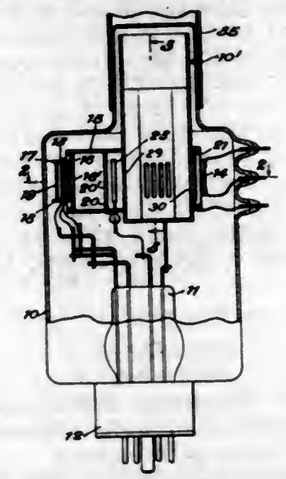
2,407,704
ANTHRAQUINONE ACID DYESTUFF
Jean G. Kern, Orchard Park, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application January 1, 1944, Serial No. 516,728
16 Claims. (Cl. 260—346)

2. Anthraquinone acid dyestuffs of the 1,4-diamino-anthraquinone acid class, said dyestuffs, in the free acid form, corresponding with the formula:



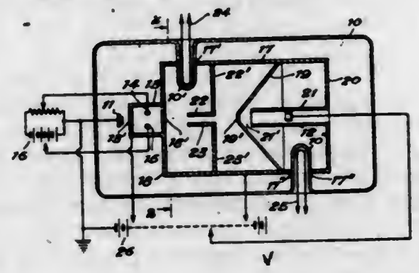
wherein R′ is a member selected from the class consisting of hydrogen and alkyl, aralkyl, cycloalkyl, aryl, hydroaryl, and heterocyclic radicals,
R″ is a member selected from the class consisting of hydrogen and alkyl, aralkyl, cycloalkyl, aryl, hydroaryl, and heterocyclic radicals,
X is a member selected from the class consisting of halogen, the carboxyl group and the sulfonic acid group,
Z is a member selected from the class consisting of hydrogen, the carboxyl group and the sulfonic acid group, at least one of X and Z being a carboxyl group or a sulfonic acid group,
m is one of the integers 1 and 2, and
R‴ is a member selected from the class consisting of heterocyclic o-biphenylene radicals corresponding with the following formula and their alkyl, alkoxy, aryl, halogen, and sulfo derivatives, attached through a nuclear carbon atom of the heterocyclic o-biphenylene radical to the nitrogen atom of the amino group represented by HN—:

wherein Y is a member of the class consisting of O, S, NH, N-alkyl, SO_2 and SO,
said dyestuffs being, in the form of the sodium salts, blue to green solids, soluble in water, and dyeing animal fibers and nylon from acid and neutral dye baths in level, bright blue to green shades.



2,407,705
ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 24, 1942, Serial No. 440,298
19 Claims. (Cl. 315—12)

1. An electron discharge device having cathode means for providing a directed beam of electrons and an output electrode system for receiving said electrons, and means positioned between the cathode means and the output electrode system through which said electron beam is directed, and including a plurality of successive pairs of oppositely disposed deflecting elements between which the beam is directed, said elements being adapted to have an alternating control voltage of high frequency applied thereto, the spacing between the centers of the elements of different pairs being equal to the distance travelled by an electron during a cycle of the applied controlling voltage.

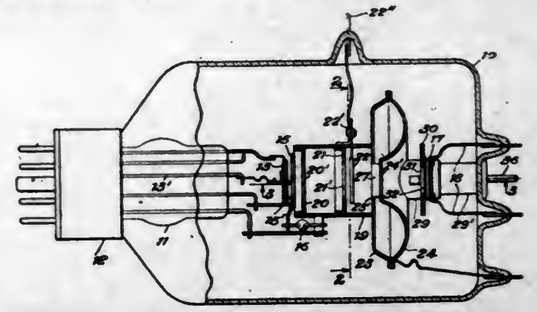


2,407,706
ELECTRON DISCHARGE DEVICE
Carl I. Shulman, East Orange, and George Ross Kilgore, Verona, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application May 30, 1942, Serial No. 445,118
16 Claims. (Cl. 250—27.5)

1. An electron discharge device having a cathode for supplying a beam of electrons and means for receiving said beam of electrons, a beam deflecting electrode system positioned between said cathode and beam receiving means and including an elongated hollow member having oppositely disposed apertures, through which the beam is to be directed, said apertures being aligned along an axis transverse to the longitudinal axis of said elongated hollow member, one end of said elongated hollow member being closed and the other end open, said open end being adapted to be coupled to a hollow wave guide, said elongated hollow member having deflecting

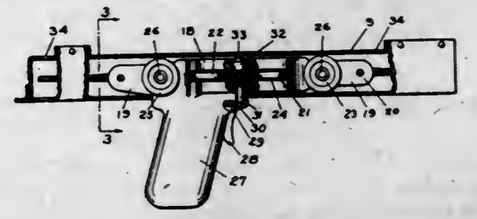
means positioned between said apertures on opposite sides of the beam path.

2,407,707
ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 24, 1942, Serial No. 440,299
19 Claims. (Cl. 250—27.5)



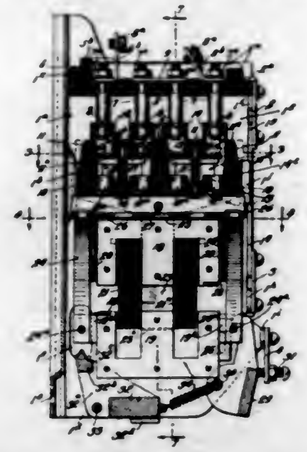
1. An electron discharge device having a cathode for supplying a beam of electrons, a collector for said electrons, a cavity resonator for containing an electromagnetic field having a resonant frequency and positioned between said cathode and said collector, said cavity resonator having an opening in the wall thereof through which said beam of electrons is to be directed, oppositely disposed deflecting electrodes positioned within said cavity resonator to lie within said electromagnetic field and between which said beam of electrons passes during operation of said electron discharge device, each of said deflecting electrodes being separate from and supported by and electrically connected to a different portion of the inside wall of said resonator, said resonator having a second opening in another part of its wall aligned with said first opening and across which said beam of electrons is deflected by said deflecting electrodes during operation of said electron discharge device.

2,407,708
ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Verona, and Louis Malter, Newark, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application April 24, 1942, Serial No. 440,300
19 Claims. (Cl. 250—27.5)



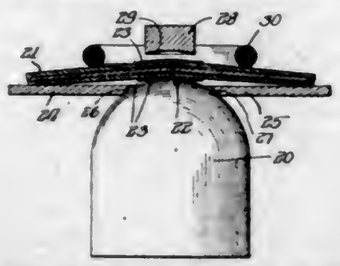
1. An electron discharge device having a cathode means for providing a beam of electrons and a collector for receiving said beam of electrons,

and means positioned between the cathode means and collector and including a hollow resonant conducting member extending transversely of the path of the beam between the cathode means and the collector and having opposed apertures in opposite walls thereof through which the beam is directed during operation of said electron discharge device, and a pair of deflecting elements within said hollow resonant conducting member each of which is separate from and extending transversely of the wall of said hollow resonant conducting member and is electrically connected



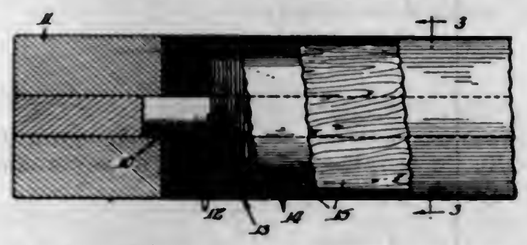
to an opposite wall of the hollow resonant conducting member next adjacent an aperture for deflecting the beam of electrons in its passage through the hollow conducting member, another portion of the wall of the hollow resonant conducting member having an aperture adapted to receive means for coupling the hollow resonant conducting member to an input circuit, and another portion of the wall of the hollow resonant conducting member having another aperture adapted to receive a tuning plunger for controlling the resonant frequency of the hollow resonant conducting member.

2,407,709
MANUALLY OPERATED ARRESTING HOOK
George W. Lescher, Garden City, and Walter H. Steet, Roosevelt, N. Y., assignors to Republic Aviation Corporation, a corporation of Delaware
Application August 10, 1937, Serial No. 158,274
6 Claims. (Cl. 244—110)



6. An airplane arresting gear comprising an arresting hook pivotally mounted upon the fuselage of the airplane and having an extension located on the opposite side of the pivotal mounting from the shank of said hook, a cable having its ends connected to said extension so as to rotate the hook in opposite directions about its pivotal mounting according to the direction of pull upon the cable, guides supporting said cable in the form of a loop, and a control member in circuit with said cable, said control member comprising a member adapted to reciprocate within a casing and having a hand grip extending beyond said casing the arrangement being such that movement of the reciprocable member in a direction forwardly of the airplane lowers the hook, means for locking said reciprocable member against movement in the casing and a trigger associated with the reciprocable member for actuating said locking means.

2,407,710
ELECTRIC SWITCH
Frank G. Logan, Mount Vernon, N. Y., assignor to Ward Leonard Electric Company, a corporation of New York
Original application November 6, 1941, Serial No. 417,990, now Patent No. 2,378,022, dated June 12, 1945. Divided and this application March 27, 1943, Serial No. 480,767
4 Claims. (Cl. 200—144)

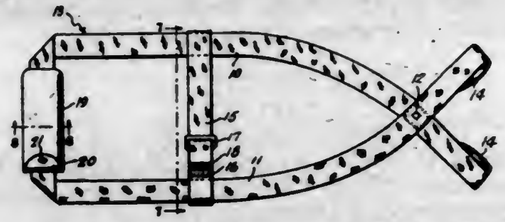


1. An electric switch comprising a fixed insulating support, a contact carried thereby and extending downwardly therefrom, a vertically movable insulating support below said fixed contact, a contact carried by said movable insulating support and adapted to engage said first named contact upon the upward movement of said movable insulating support, a vertically extending arc shield surrounding and spaced from said contacts throughout the length of the shield and fixed at its lower end to said movable insulating support and having openings at both of its ends, said movable support having an opening opposite the lower end of said arc shield for the free passage of gases therethrough and upward through the space between the arc shield and the contacts for extinguishing the arc upon the opening of the switch, and the downward movement of said insulating support and of said arc shield exposing fresh surfaces of the interior of said arc shield to the effects of the arc during the separation of the contacts in the opening movement.

2,407,711
METHOD OF BUILDING AND FORMING PLYWOOD PARTS
Harold J. Luth, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application May 20, 1943, Serial No. 487,704
5 Claims. (Cl. 154—110)

1. A method of constructing a plywood article on a convex form comprising cutting a plurality of parts of plywood in shapes necessary to form the article when fitted together, applying an adhesive to said parts, assembling a plurality of layers of said parts in a substantially flat arrangement with the parts extending radially from a point on said convex form, the edges of the parts of each layer being disposed in abutting relation adjacent said point, with said edges of the parts of one layer overlying the areas intermediate the edges of the parts composing an adjacent layer, clamping the adjoining ends of the plywood parts to the form at said point, moving the free portions of the parts transversely of the plane of their flat arrangement until they assume their proper positions composing the desired article, securing the parts together adjacent their clamped ends and compressing said parts compactly together during the setting of the adhesive.

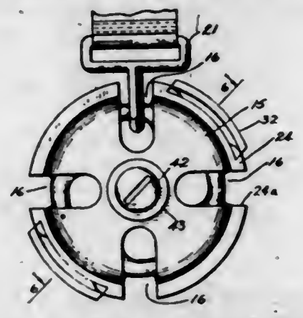
2,407,712
SOLENOID
Harold J. Luth, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application June 11, 1943, Serial No. 490,421
5 Claims. (Cl. 175—21)



1. A solenoid comprising a core, an insulated winding thereon, means outside of said winding and surrounding it comprising a sheet of material impregnated with a heat-setting resin wound around the winding in layers, and a thin sheet of wood wound intermediate certain layers of said impregnated material and with its grain running parallel to the axis of the solenoid to reinforce the solenoid and operating to stiffen the solenoid and prevent bending thereof when said means has been subjected to heat to cause the resin to set.

2,407,713
ERYTHRINA ALKALOID AND ITS PRODUCTION
Randolph T. Major, Mountainside, and Karl Folkers, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application April 30, 1941, Serial No. 391,096
14 Claims. (Cl. 260—236)

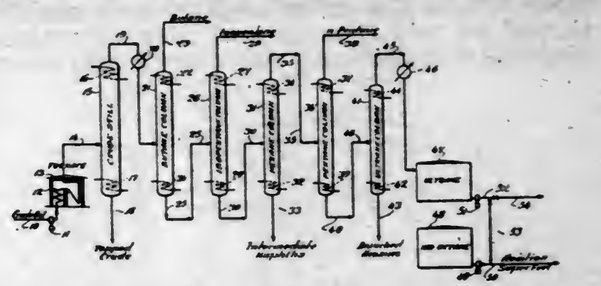
1. In a process for the production of erythroidine from seeds and dried flowers of *Erythrina americana*, the steps comprising treating such plant parts with a solvent which removes the fatty oils inherent therein, extracting the treated material with alcohol, concentrating the alcohol extract, dissolving the residue thus obtained in acidulated water, weakly alkalinizing the resulting solution, and extracting erythroidine from the weakly alkaline solution with chloroform.



2,407,714
HUMAN CARRIER
William J. Maloney, Ansonia, Conn.
Application October 15, 1943, Serial No. 506,353
6 Claims. (Cl. 224—6)

1. A carrier of the character described comprising a flexible strap forming a loop of sufficient length to be passed across the shoulders of a person to be carried and side members passing under the arms of said person and secured together at the front to form another portion to pass over the shoulders of a second person, hand grips formed forwardly of the point the side members are secured together in position to be gripped by the second person when the loop is

in the carrying position over his shoulders, and an adjustable strap looped over the side members and shiftable along these members toward the person to be carried to retain him in the loop and in the opposite direction to permit his removal.

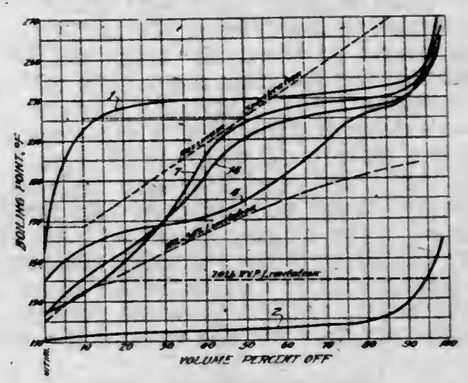


2,407,715
QUICK-RELEASE CONNECTOR
Frank G. Manson, Chicago, Ill.
Application October 11, 1944, Serial No. 558,264
12 Claims. (Cl. 24—205)

1. In a quick-release connector of the type having a hollow casing and a connector member therein rotatable relative to said casing between connecting and releasing positions, the combination of a shaft for said connector member extending through a wall of said casing, an operating member on said shaft extending transversely thereof, a pair of transversely movable locking members carried by said operating member and disposed on opposite sides of said shaft in diametric relation, spring means urging said locking members radially outward to positions wherein the respective outer ends of said locking members project beyond opposed gripping surfaces of said operating member, the distance between said projecting ends being such as to permit simultaneous inward pressure thereon by opposed gripping surfaces of a human hand when said operating member is gripped for manual rotation, means effective when either of said locking members is in its projecting position to lock said shaft against rotation relative to said casing, said means being rendered ineffective upon inward movement of both of said locking members to predetermined inner positions thereby to permit rotation of said shaft and connector member relative to said casing.

2,407,716
SUPERFUEL
Robert F. Marschner, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 29, 1940, Serial No. 343,179
4 Claims. (Cl. 44—69)

1. A composition of matter consisting essentially of cyclopentane and neohexane and containing about 30 to 90% by volume of cyclopentane which composition is substantially free from normal pentane and which is characterized

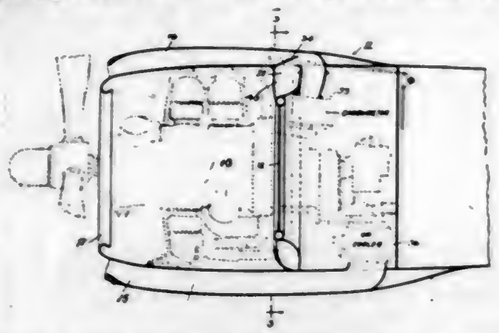


by a boiling range of about 120 to 124° F., a refractive index above 1.38, A. P. I. gravity below 75° and an octane number above 95 C. F. R.-R.

2,407,717
AVIATION SUPERFUEL
Robert F. Marschner, Homewood, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application July 1, 1942, Serial No. 449,319
1 Claim. (Cl. 44—80)

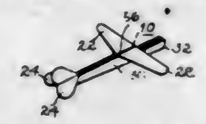
An aviation combat fuel showing both a high supercharge octane number and a high rich mixture response comprising a blend of between about 40% and 80% commercial isooctane and between about 20% and 60% of 1,1,2-trimethylcyclopropane.

2,407,718
AVIATION SUPERFUEL
Robert F. Marschner, Homewood, Ill., and Don R. Carmody, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application August 31, 1942, Serial No. 456,786
11 Claims. (Cl. 44—77)



1. A super aviation fuel comprising between about 85 and about 60 volume percent isooctane and between about 15 and about 40 volume percent of an azeotropic mixture comprising between about 40 and 60 volume percent of diisopropyl and between about 60 and 40 volume percent of acetone.

2,407,719
CARBURETOR PREHEAT SYSTEM
Frederick C. Melchior, New York, N. Y.
Application February 1, 1944, Serial No. 520,629
3 Claims. (Cl. 123—171)

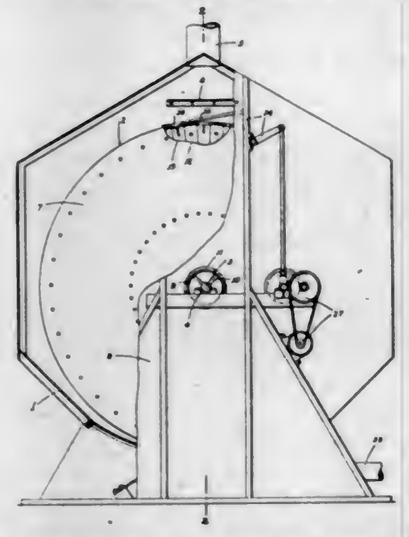


1. In combination with an engine installation including a nacelle having a nose cowl and an air intake scoop leading to the carburetor of said engine and an exhaust collector ring, of a car-

buretor pre-heat system including a slidable cowl member extending from either side of said air scoop, a diaphragm extending from said engine mounting to the outer edge of said nacelle, a shroud on said slidable cowl forming with said diaphragm a collector well around said exhaust

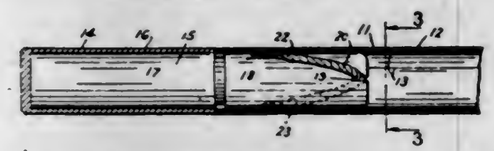
collector ring, a valve leading from said collector well to said air intake scoop, means for selectively operating said valve and said slidable cowl to determine the amount of air passing through said collector well and the amount of air passing from said collector well into said air scoop.

2,407,720
TOY AIRPLANE
Arthur B. Mull, Hollywood, Calif., assignor to Spotswood Specialty Co. Inc., Lexington, Ky., a corporation of Kentucky
Application November 2, 1944, Serial No. 561,582
1 Claim. (Cl. 46—81)



A toy airplane assembly including a cardboard stiffening member provided with an extension functioning as a rudder, a cardboard main body member folded along the bottom of the stiffening member so as to have the sides thereof overlying and cemented to the sides of the stiffening member, the length of the main body member being substantially the same as the length of the stiffening member said main body member having a pair of extensions folded at right angles to the sides of the main body member so as to function as coplanar wings, and a second pair of extensions folded along the sides of the main body member at right angles thereto functioning as coplanar elevators, and a cardboard ballast scored in the center and folded over the front end of the main body member so as to function as a reenforcing member for the nose of the airplane.

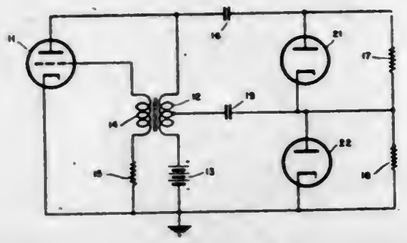
2,407,721
REFRIGERATING APPARATUS
Carl H. Nauert, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application March 23, 1944, Serial No. 527,685
10 Claims. (Cl. 211—153)



2. A food supporting shelf for use in domestic refrigerators comprising a rectangular outer frame constructed of an inwardly-facing channel member with inwardly extending flanges on one face thereof, a plurality of thin strips spanning the space between two sides of said frame and having end portions bearing against said flanges and extending into said channel member, individual spacing blocks mounted in said channel member and supported on the flanges and located between the ends of each pair of said strips, and a reinforcing member connected between two other sides of said frame.

2,407,722
DUST COLLECTOR
Clarence J. Peterson, Kingsburg, Calif., assignor to Kingsburg Cotton Oil Co., Kingsburg, Calif., a corporation of California
Application September 18, 1944, Serial No. 554,615
7 Claims. (Cl. 183—57)

1. A dust collector comprising a housing into which dust laden air is adapted to be fed under pressure, a driven rotor turnably mounted in the housing, means forming an air vent duct from the center of the rotor to atmosphere outside the housing, a plurality of alternately fixed and removable, radial frames included in the rotor in adjacent side by side relation, the fixed frames forming pockets open only to the duct, the removable frames forming pockets open only to the housing, a wall pervious to air but impervious to dust mounted between and separating adjacent pockets, and means cooperating at one point with the rotor at the periphery thereof to withdraw accumulated dust from the pockets open to the housing.



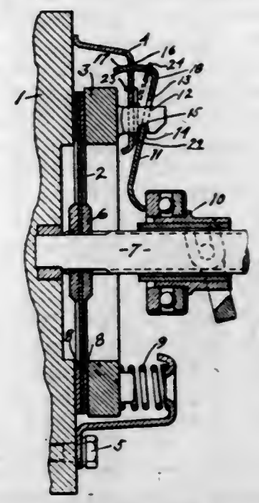
2,407,723
WAND
John W. Petrie, New Haven, Conn., assignor to Petrie-Lewis Manufacturing Co., Inc., New Haven, Conn., a corporation of Connecticut
Application April 10, 1945, Serial No. 587,640
6 Claims. (Cl. 287—126)

1. In an article of manufacture, the combination of a tubular member constructed by tightly rolling a sheet of material into a tube, the outer layers being bound together by an adhesive and the inner layers being left loose as rolled, a cylindrical member having an end thereof adapted to be inserted into an end of said tubular member, and friction imposing means between

said members connected to one and adapted to frictionally engage the other to tightly wrap the inner layers of the material constituting the tubular member onto the cylindrical member when one of the members is rotated relatively to the other.

2,407,724
VOLTAGE RECTIFIER
Donald R. Rasley, Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application May 29, 1944, Serial No. 537,917
11 Claims. (Cl. 171—97)

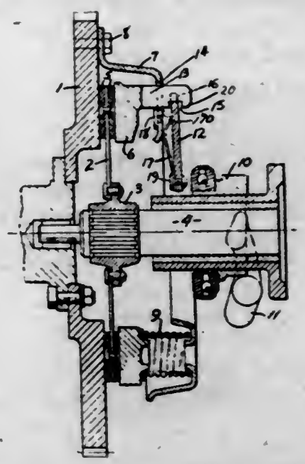
1. A unidirectional power supply comprising, a source of impulses, a plurality of energy storage devices, one of said storage devices being connected to a relatively high voltage point of said impulse source and another of said storage devices being connected to a relatively low voltage point of said impulse source, means controlled by said impulses for storing energy in said storage devices, and a plurality of dissipation circuits connected respectively to said energy storage devices.



2,407,725
REFRACTORY LINING OF METALLURGICAL STRUCTURES
Robert A. Schoenlaub, Tiffin, Ohio, assignor to Basic Refractories, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application February 27, 1943, Serial No. 477,472
9 Claims. (Cl. 117—27)

1. A process of lining furnaces, which comprises dry mixing about 67 per cent of —16 mesh calcined dolomite and about 31 per cent of —100 mesh magnesite clinker and about 2 per cent of —200 mesh material capable of swelling to a gel when mixed with water, in the form of the hydrous magnesium silicate composition of hectorite from San Bernardino County, California, and swelling said hectorite by blowing such dry particles into admixture with sodium silicate solution to give about 3–4 per cent sodium silicate on the water-free basis and blowing the particles into position on a furnace surface.

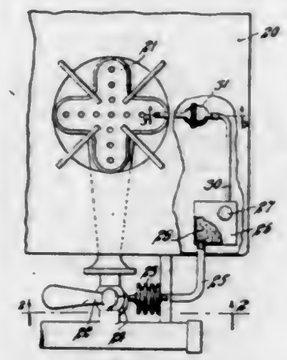
2,407,726
METHODS OF PREPARING CHEMICAL PRODUCTS
Lee Irvin Smith, Minneapolis, Minn., and William B. Renfrow, Jr., Charlotte, N. C., assignors to Regents of the University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application August 7, 1941, Serial No. 405,796
7 Claims. (Cl. 260—333)



1. The process comprising reacting a compound selected from the group consisting of hydroxy chromans and hydroxy coumarans with a Grignard reagent, reacting the resultant mixture with a polybasic acid anhydride, and acidifying the reaction mixture.

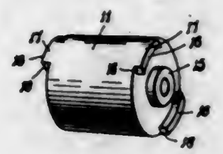
2,407,727
CLUTCH
Charles B. Spase, Nedrow, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York
Application January 8, 1944, Serial No. 517,556
7 Claims. (Cl. 192—99)

1. In a friction clutch including driving and driven members, a pressure ring rotatable with the driving member and thrusting toward the same to clutch the driving and driven members together, a back plate, spring means acting on the pressure ring to engage the clutch, a throw-out collar, and radially extending levers between the throw-out collar and the pressure ring operable to disengage the clutch; the combination of said pressure ring having rearwardly extending arms and the levers interlocking with the arms against displacement in a direction parallel to the axis of the clutch and placeable into such interlocking engagement by a radial endwise movement of the levers, the levers also having means slidably interlocking with the back plate for holding the levers in interlocking engagement with said arms against radial displacement during the normal operation of the levers.



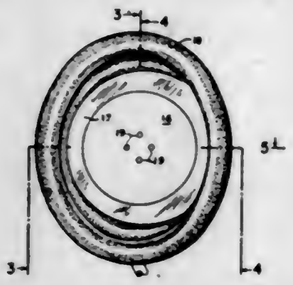
2,407,728
FRICTION CLUTCH
Charles B. Spase, Nedrow, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York
Application January 8, 1944, Serial No. 517,557
5 Claims. (Cl. 192—68)

1. In a clutch construction, driving and driven members, a back plate mounted on and rotatable



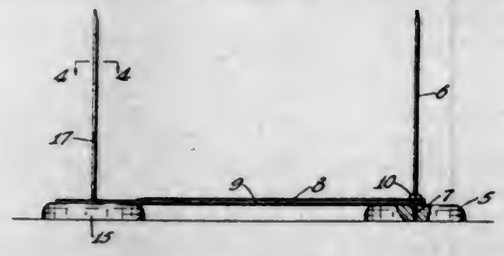
with the driving member and having openings therein, a pressure ring rotatable with the driving member and operable to engage and disengage the clutch, the pressure ring having arms slidable through the openings in the back plate, said arms being formed with notches in their inner sides toward the axis of the clutch and located outside of the back plate and also having ratcheting surfaces at their outer ends, a throw-out collar, spring means for thrusting the pressure ring against the driven member to engage the clutch, clutch levers between the throw-out collar and the pressure ring, the levers interlocking in the notches of said arms, and means for resiliently supporting the levers from the back plate and holding the levers interlocked in the notches and also providing fulcrums for the levers to the inward of said arms with respect to the axis of the clutch, the levers being arranged to coact with said ratcheting surfaces at the outer ends of said arms during the assembling movement of the arms into said notches, said lever supporting means biasing the levers radially outward during ratcheting action and pivotal movements of the levers into and out of said notches.

2,407,729
CATALYTIC IGNITER FOR GASEOUS FUELS
Robert S. Taylor, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application April 12, 1944, Serial No. 530,673
9 Claims. (Cl. 158—115)



1. An ignition device for fuel gas comprising a gas burner, a gas cock for supplying gas to said burner, a reservoir for an auxiliary fuel, means for delivering air to said reservoir, a catalytic igniter, and mechanism operated by movement of said gas cock for operating said air supply means for delivering air and entrained auxiliary fuel from said reservoir to said catalytic igniter to ignite the fuel gas supplied to said burner.

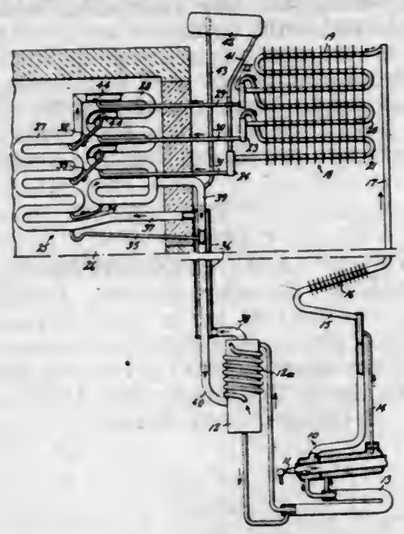
2,407,730
ROLLER FOR TWISTER MACHINES
Clifford H. Wethers, Detroit, Mich.
Application June 15, 1945, Serial No. 599,583
4 Claims. (Cl. 57—90)



1. In a twister roll of the type described, projections extending endwise beyond the normal length of the roll, part of the surface of such projections being a continuity of the peripheral surface of the roll, and the spacing between said projections being uninterrupted by the roll proper.

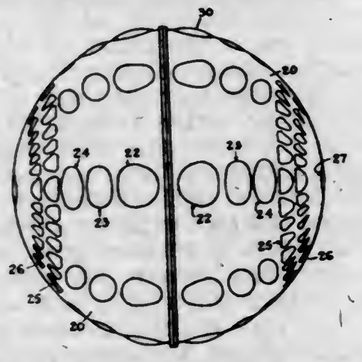
2,407,731
RECEIVER EAR PIECE
Albert E. Woodruff, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application November 29, 1944, Serial No. 565,640
4 Claims. (Cl. 179—182)

1. In an earpiece for receivers of the class described, a body of flexible material including a hollow bead encircling the ear of the wearer so that one face of said bead engages the wearer's head, and an annular slot in the outer peripheral wall of said bead whereby the head-engaging face of said bead is supported solely by the inner peripheral wall of said bead.



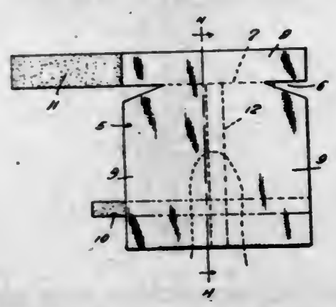
2,407,732
MULTIPLE FILING SPINDLE
Axel H. Youngstrom, Minneapolis, Minn.
Application March 3, 1944, Serial No. 524,869
1 Claim. (Cl. 129—21)

In a filing spindle, a first base element having a spindle extending upwardly therefrom, a pair of complementary base elements each having a spindle extending upwardly therefrom, and laterally interfitting bars pivotally connecting said first base element respectively with said complementary base elements.



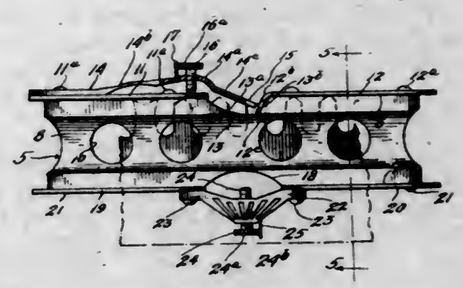
2,407,733
TWO TEMPERATURE EVAPORATOR FOR INERT GAS TYPE ABSORPTION REFRIGERATORS
Carl T. Ashby, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application May 15, 1941, Serial No. 393,558
18 Claims. (Cl. 62—119.5)

1. A refrigeration system having a plurality of parts in which evaporation of refrigerant liquid occurs to produce refrigeration, means for flowing inert gas through said parts in series, means providing thermal insulation between a first of said parts on one hand and others of said parts on the other, and means for simultaneously introducing liquid refrigerant individually into said



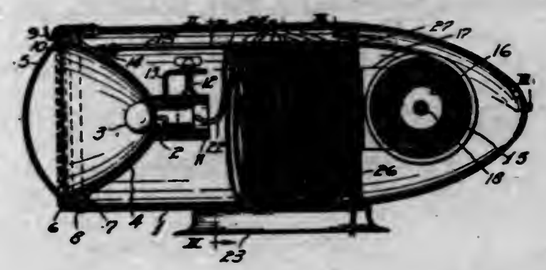
other parts, said first part being connected and arranged to receive liquid from said other parts.

2,407,734
TOY AND BALL CASING
Edna C. Bailliere, Warren, Ohio
Application January 10, 1942, Serial No. 426,265
5 Claims. (Cl. 273—58)



2. A casing adapted to receive an inflatable bladder comprising a pair of flat members of flexible material and having a desired form, means securing the flat members together at their outer edges, and the flat members having holes therein of a desired pattern to increase the lateral distendability of the casing.

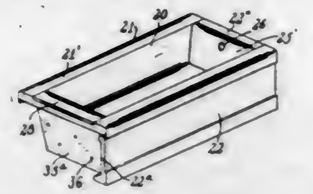
2,407,735
FINGER BANDAGE
Raymond Beckerman, Danbury, Conn.
Application August 25, 1944, Serial No. 551,175
1 Claim. (Cl. 128—157)



A finger tip bandage comprising a pad having its opposite side portions notched to define a main pad portion and a head portion, a strip of adhesive material projecting beyond one end of the head portion, the side portions of the main portion of the pad defining flaps adapted to be folded over a finger, said head portion being adapted to fold over the folded flap portions and secured in place by the said adhesive strip, and a second adhesive strip projecting laterally from the main pad portion and adapted to hold the flap portions in folded position preparatory to folding the head portion in place, and an adhesive strip applied to the pad at the back side thereof for reinforcing and substantially protecting the extremity of the enclosed finger.

2,407,736
SAW FILING GAUGE
Richard H. Deurmyer, Eugene, and Cleo G. Yocum, Cheshire, Oreg.
Application May 8, 1945, Serial No. 592,634
3 Claims. (Cl. 76—46)

1. A saw gauge, comprising a bar having a straight edge with a recess between its ends, saw blade guides secured to said edge on opposite sides of the recess, one of said guides having an angular finger projecting into said recess and relieved to provide a clearance for the saw blade, an outwardly arched spring arm secured to the bar, a terminal finger on said arm projecting into said recess, a screw threaded through the spring arm to engage the bar and adjust the angle of the terminal finger in said recess to establish the profile of the saw tooth to be filed and said terminal finger having a notch to allow the saw teeth to move through the finger.

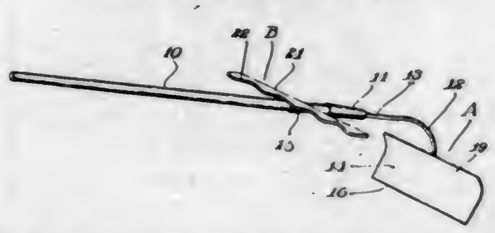


2,407,737
INSPECTION LAMP FOR MOTOR VEHICLES AND THE LIKE
Martha Catherina Erasmus, Krugersdorp, Transvaal, Union of South Africa
Application November 6, 1944, Serial No. 562,194
4 Claims. (Cl. 240—8.18)

1. In combination, a casing, a lamp removably mounted in one end of the casing, a spring motor driven drum in the casing, a carrier cable wound on the drum and connected with the lamp, a flexible electric current-conducting wire housed within the casing in the form of a substantially uniform helical coil, and eyelets secured to each

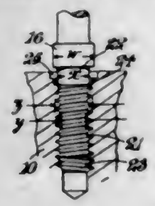
convolution of the wire, such eyelets being suspended on the carrier cable between the drum and lamp and being slidable along such cable, one end of the wire being connected with the lamp.

2,407,738
BATHTUB
Louis A. Falco, New Haven, Conn., assignor to The Dextone Company, New Haven, Conn., a corporation of Connecticut
Application June 24, 1944, Serial No. 541,857
6 Claims. (Cl. 4—173)



1. A composite bathtub structure of generally elongated shape provided with a main receptacle portion and with an outstanding rim portion, said tub having in the receptacle portion and also in the rim portion a thin metallic lining and a backing layer of cementitious material anchored thereto, the metallic lining comprising a number of sections joined together at their adjacent edges, said sections including a main section of channeled shape providing the main or body portion of the tub and upwardly sloping end sections, said end sections being set in said channeled section and welded thereto, the cementitious backing being anchored to the metallic lining by anchoring members having portions of extended area applied to the surface of the metallic lining by an adhesive cement and arranged in staggered rows.

2,407,739
PLASTIC CEMENTITIOUS MATERIAL
Gaspare Ferrante, Brooklyn, N. Y., assignor to Grasoph Building Corp., Brooklyn, N. Y., a corporation of New York
No Drawing. Application December 2, 1943, Serial No. 512,599
1 Claim. (Cl. 106—98)

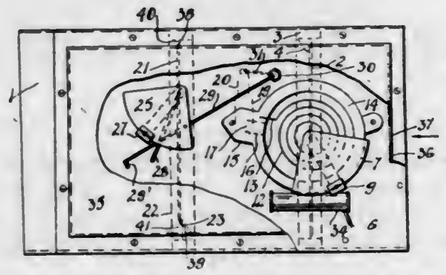


An interior wall plaster, consisting of a mixture of a Portland cement base, 100 lbs.; hydrated lime, 10 lbs.; brick dust, 20 lbs.; sand and marble dust, 10 lbs.; and water, 10 to 15 gals.

2,407,740
HOE
George Gailus, Stillwater, Minn.
Application November 9, 1944, Serial No. 562,616
2 Claims. (Cl. 97—65)

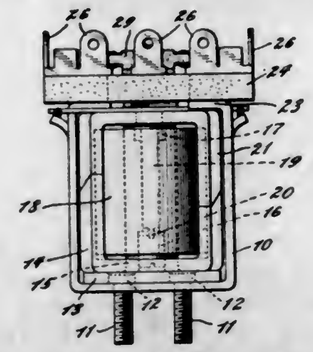
1. A hoe comprising a blade having a substantially flat lower portion and a forwardly curved integral upper portion, a handle secured to the rear convex surface of the blade and extending forwardly over the upper edge of the blade, said handle extending forwardly and upwardly at a slant when the flat lower portion of said blade is inclined upwardly and rearwardly, a bar secured to said handle at a point spaced forwardly from said blade, said bar extending transversely from said handle and being secured intermediate its ends thereto, said bar being substantially parallel to the lower edge of said flat blade portion, said bar acting to bend weeds and the like forwardly to hold the same at a forwardly inclined angle as they are cut off by the lower edge of said blade.

2,407,741
SCREW-THREADED MEMBER
William Thomas Goodby, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application April 6, 1944, Serial No. 529,812
In Great Britain April 2, 1943
7 Claims. (Cl. 151—22)



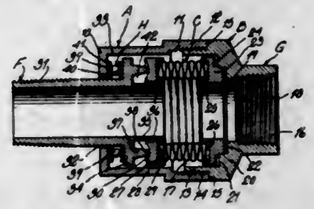
1. A threaded coupling comprising a threaded male member or bolt, and a complementarily threaded socket or female member providing an anchorage for said bolt, said bolt comprising a threaded shank at the leading end of the bolt, a plain portion adjoining said threaded shank, a locating collar above the plain portion and an attaching portion above the collar, the diameter of said plain portion being approximately equal to the effective diameter of the threads of the shank portion, said socket having a threaded portion of greater length than the threaded shank of the bolt and being substantially of a length equal to the combined lengths of the threaded shank and plain portion of the bolt whereby when the leading end of the bolt is screwed into said socket throughout the full length of said threaded shank, such leading end of the bolt will still be above the lower end of the threaded socket and further rotation of the threaded bolt will cause the plain portion of the bolt to squeeze the crests of the socket threads lying above their effective diameter into their troughs.

2,407,742
CONSTRUCTION AND ASSEMBLY OF ELECTRON DISCHARGE TUBES
John Henry Owen Harries, Clapham Park, London S. W. 4, England
Application September 4, 1941, Serial No. 409,589
In Great Britain September 23, 1940
14 Claims. (Cl. 250—27.5)



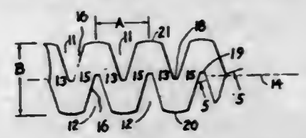
1. A method of assembling and alining electrodes in an electron discharge tube having an envelope formed at least in part of vitreous material which consists in detachably attaching a plurality of alining members to an assembly platform for supporting the envelope of the tube, said members being shaped to co-act with parts of the electrodes to effect alinement of the latter, assembling said electrodes with said alining members in sequence while maintaining said electrodes spaced by distance pieces also shaped to co-act with said alining members, sealing said electrodes by means of stiff supports to said envelope and subsequently detaching said alining members from said platform and withdrawing said alining members and said distance pieces from the assembly.

2,407,743
AIR DRAFT TIMING AND VOLUME CONTROL
Charles M. Helyar, Saint Vital, Manitoba, Canada
Application April 30, 1942, Serial No. 441,248
12 Claims. (Cl. 110—72)



2. An air draft timing and volume control comprising in combination with an air duct, a volume regulating damper, a flow responsive vane normally biassed to one position and being movable from such position by an amount dependent on the flow therepast, said vane being positioned in spaced relation with respect to said volume regulating damper, within said air duct, a heat motor connected to said regulating damper and governing the movement thereof so as to permit an increased flow therepast as the temperature of said motor increases, means for periodically heating said motor, and automatically operable means for cooling said motor upon the movement of said vane from its normal position a predetermined extent.

2,407,744
ELECTROMAGNETIC RELAY
John H. Horman, Tuckahoe, N. Y., assignor, by mesne assignments, to Allied Control Company, Inc., New York, N. Y., a corporation of New York
Application April 21, 1944, Serial No. 532,081
4 Claims. (Cl. 175—336)

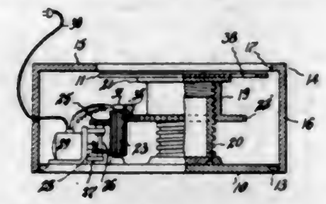


1. A device of the character described comprising two U-shaped magnetic metal members supported for relative rotation about an axis central of each member with the legs of each member extending toward the other member and each leg terminating in a face oblique to said axis at the same angularity, a central axial magnetic metal member providing a flux path between said two U-shaped members, and a coil surrounding said axial member with the coil being partially received by each U-shaped member and fixed to one U-shaped member.

2,407,745
ROTARY JOINT
Franz Jacobson, New York, N. Y.
Application August 9, 1944, Serial No. 548,683
9 Claims. (Cl. 285—97.3)

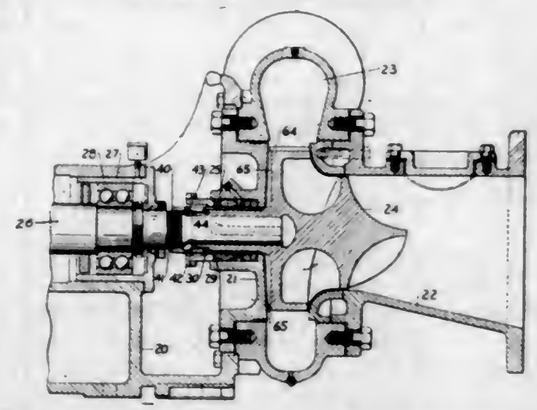
1. A rotary joint of the character described comprising metallic housing members adapted to be assembled together, a metallic member supported in rotary manner wtih respect to said housing members, and projecting outwardly of one thereof, an elastic metallic tubular element fixedly supported within and with respect to the other of said housing members, means secured to said element and providing a metallic anti-friction surface, metallic means projecting from said rotary member for engaging said surface with a line contact leakproof seal, said two last-named means and a portion of said rotary member defining a chamber, means to communicate pressure within the tubular element to said chamber, and metallic anti-friction means between said rotary member and said first of said housing members to permit free rotation of the rotary member.

2,407,746
OSCILLATING WELDING ROD
Jesse E. Johnson, Colbert, Wash.
Application December 2, 1944, Serial No. 566,293
8 Claims. (Cl. 219—8)



8. As an article of manufacture, a fusible rod having a generally long slender shape, said rod comprising a multiplicity of reverse bends including end loops and intermediate portions connecting the bends and extending in a direction at an angle to the axis of the rod, the intermediate portions being alternately disposed to form notches on the opposite sides of the rod, the notches having a substantially greater depth than the distance between their opposite faces and the reverse bends having a thickness substantially greater than their maximum width.

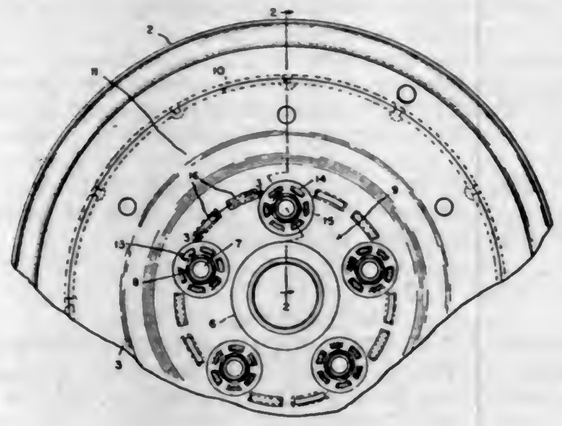
2,407,747
MOTION DISPLAY STAND
Leonard W. Sanderson, Toronto, Ontario, Canada
Application September 12, 1945, Serial No. 615,802
10 Claims. (Cl. 211—1.6)



7. A display stand comprising a platform including a chamber and a top wall having an

aperture leading into the chamber, a turntable operable within said aperture for supporting an object to be displayed, and electro-mechanical means for rotating said turntable with an accompanying axial reciprocation, said means, consisting of a stationary feed screw upstanding from the bottom of said chamber, an internally threaded sleeve centrally depending from said turntable and threadedly mounted on said feed

screw, a ring gear on the lower end of said sleeve, an idler gear in mesh therewith and of a length such that it remains in mesh during screw action of the sleeve, a reversible electric motor, gearing connecting the motor to said idler, and an electric switch in the motor circuit having an actuator adapted to be tripped in the axial travel of the turntable and the ring gear on the sleeve, for reversal of the motor.

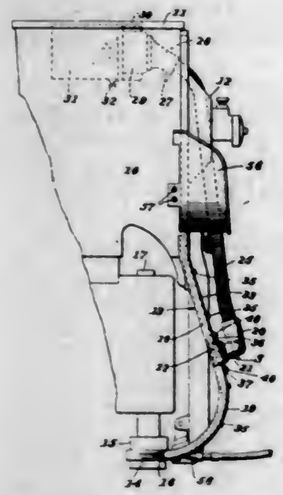


2,407,748
ROTARY PUMP
Edward Schmidt, Andover, Mass., assignor to Lombard Governor Corporation, Ashland, Mass., a corporation of Massachusetts
Application December 28, 1943, Serial No. 515,909
3 Claims. (Cl. 103—88)

1. A rotary pump, comprising a housing having a suction inlet and an impeller mounted for rotation therein, said impeller consisting of a body tapering toward the forward end thereof and having on its periphery a vane progressively increasing in radius of curvature from its forward to its rearward end, said vane at its forward end being substantially coincident with the axis of said body and extending a substantial distance into said suction inlet, the forward portion of said impeller throughout its entire length being spaced away from the walls of the suction inlet by a distance which is progressively increasing forwardly.

2,407,749
VEHICLE WHEEL
Charles W. Sinclair, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application October 23, 1944, Serial No. 559,932
5 Claims. (Cl. 301—9)

1. A reversible wheel comprising a wheel body having a mounting portion provided with an annular series of holes and projections substantially surrounding and spaced from and substantially concentric with each of said holes and extending

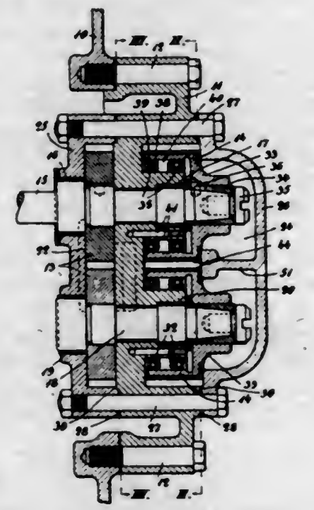


alternately in opposite generally axial directions and forming bearings for engagement with a wheel hub.

2,407,750
TEMPERATURE SENSITIVE RESISTOR
Frederick Gordon Smith, Toronto, Ontario, Canada, assignor to Research Consultants Limited, Toronto, Ontario, Canada, a corporation of Ontario
No Drawing. Application February 23, 1944, Serial No. 523,571
14 Claims. (Cl. 201—76)

5. The method of making a negative resistance-temperature coefficient resistance material comprising mixing finely divided titanium dioxide in molecular proportions with a finely divided monoxide of a metal selected from the group containing magnesium, zinc and cadmium, and combining the oxides into a true titanate by heating the mixture to a melting temperature.

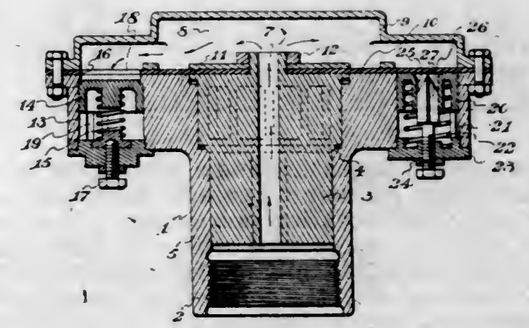
2,407,751
DUST COLLECTOR
Robert J. Stewart, Baltimore, Md., assignor to Crown Cork & Seal Company, Baltimore, Md., a corporation of New York
Application October 7, 1943, Serial No. 505,375
9 Claims. (Cl. 226—129)



1. In combination with a capping machine having a closure hopper and a capping head, a feed chute for conducting the closures from the hopper to the capping head, suction means communicating with said chute for removing dust and foreign particles from the chute and closures, and means for providing a balanced pressure around the closures as the latter pass the suction means, so as to withdraw the dust from the chute and closures without interfering with the travel of the closures through the chute.

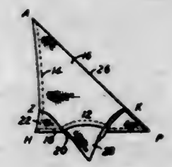
2,407,752
PROCESS OF SEPARATING HARD CONSTITUENTS FROM SINTERED HARD METALS
Edward Moor Trent, Coventry, England, assignor to Powderloys Limited, Coventry, England, a British company
No Drawing. Application September 5, 1945, Serial No. 614,601. In Great Britain October 4, 1944
6 Claims. (Cl. 23—208)

1. A process of recovering hard metal carbides from scrap material comprising hard metal carbides and an auxiliary metal of the iron group, in which process coarsely crushed scrap material is fused with zinc to form alloy of zinc with the said auxiliary metal, the product being cooled and the alloy removed by a solvent therefor, followed by washing leaving behind the hard carbide particles.



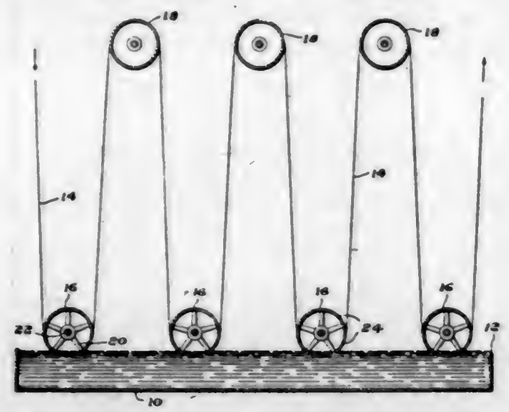
6. A process of recovering hard metal carbides from scrap material in accordance with claim 1, wherein the auxiliary metal consists particularly of cobalt, and the amount of zinc added is sufficient to form with the cobalt an alloy containing not more than 10% of cobalt.

2,407,753
GEAR-WHEEL PUMP
August Gunnar Ferdinand Wallgren, Eskilstuna, Sweden, assignor to Aktiebolaget Bolinder-Munktell, Eskilstuna, Sweden, a corporation of the Kingdom of Sweden
Application October 27, 1941, Serial No. 416,777
In Sweden August 15, 1940
4 Claims. (Cl. 103—126)



1. In a gear wheel pump for pumping liquid containing entrained solid particles, a housing having end walls and partition means for dividing the housing into two compartments, a pair of parallel shafts, bearing means for journalling said shafts in said partition and in one of said end walls, a pair of accurately meshing gears mounted on said shafts in the compartment between said partition means and said one of said end walls, a pair of toothed circular gears mounted on said shafts in the other compartment and in overhung relation with respect to the bearings in said partition means, the last-mentioned gears having sufficient play between them to accommodate the entrained solid particles, said other compartment being formed with inlet and outlet openings, and packing means between said partition means and said last-mentioned gears for preventing leakage of fluid between said other compartment and the bearing in said partition means.

2,407,754
PRESSURE RELIEF VALVE
Elmer R. Williams, Tulsa, Okla.
Application February 2, 1945, Serial No. 575,788
2 Claims. (Cl. 137—53)



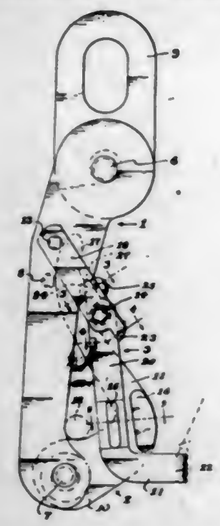
1. A pressure relief valve comprising a casing having a chamber therein, a diaphragm in said chamber and dividing said chamber into a pressure chamber and a pressure exhaust chamber, a member slidably mounted in the pressure exhaust chamber and engaging one side of the diaphragm, an expansion spring in the pressure exhaust chamber and normally forcing the slide member against the diaphragm, a piercing member extending into the pressure exhaust chamber and through the slide member and terminating adjacent the diaphragm, the portion of the piercing member extending through the slide member having guide wings thereby providing for the passage of pressure fluid downwardly into the exhaust chamber when the diaphragm is pierced.

2,407,755
SHOULDER PAD
Marion R. Witham, Westfield, N. J.
Application March 8, 1946, Serial No. 652,871
3 Claims. (Cl. 2—268)

1. A triangular shoulder pad for garments comprising an outer cover of woven fabric, folded on the bias and stitched along one side to form a triangular pocket, said pocket being opened along an adjacent side of the triangle on the straight of the fabric, a flap for said opening folded over said opening on the straight of the fabric having its ends stitched along the sides of said triangular pocket, and a triangular removable filler located in said pocket.

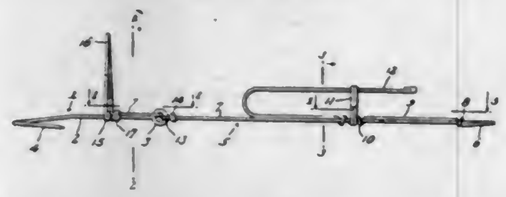
2,407,756
METHOD FOR SATURATING FIBROUS SHEET MATERIAL
James G. Young, Shreveport, La., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
Application March 24, 1943, Serial No. 480,352
5 Claims. (Cl. 117—115)

1. A method for saturating a fibrous sheet material with hot bituminous compound which comprises completely coating one surface of the material with the compound while simultaneously coating spaced areas only of the opposite surface of the material with the compound, exposing said last named surface of the material to atmosphere to permit escape of vapors from the uncoated areas thereof, and thereafter applying the compound to said uncoated areas.



2,407,757
MAGNETIC CLUTCH
Alan M. MacCallum, Maywood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 8, 1943, Serial No. 513,421
3 Claims. (Cl. 192—84)

1. In a magnetic clutch having a pair of opposed clutch members adapted to be arranged within a surrounding coil, a driven shaft connected at one end to one clutch member, a drive shaft, the other clutch member being in the form of a ring having a side recess at its inner periphery, and a resilient drive coupling comprising a corrugated plate secured at its central portion to an end of the drive shaft and to one side face of said ring adjacent its perimeter to thereby normally hold said ring clutch member spaced from the other clutch member and through flexing of the plate to permit the clutch members to move together.

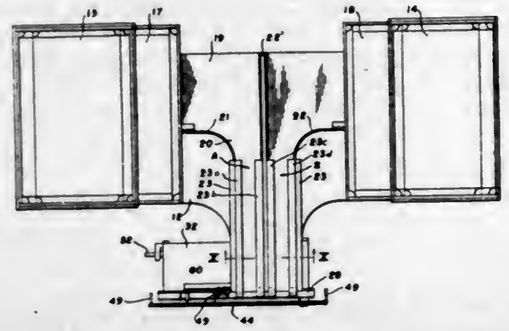


2,407,758
FASTENING DEVICE
William Robert MacCluney, Dearborn, Mich.
Application July 19, 1945, Serial No. 605,871
5 Claims. (Cl. 294—83)

1. A fastening device comprising a frame having attaching means at one end, a member cooperating with said frame in the closed position of said member to form an eye for receiving an attachment member and retaining means for holding said first mentioned member in closed position, said retaining means comprising a lever pivoted to said frame and a second lever pivoted to said first mentioned lever and having an actu-

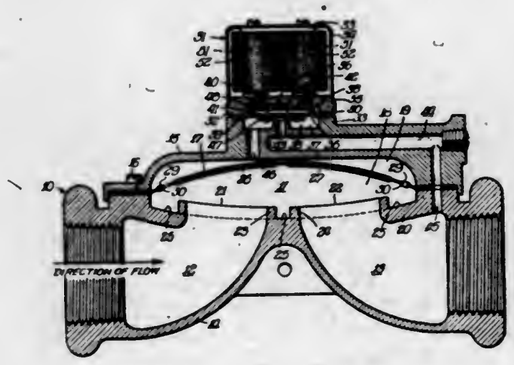
ating part and a second part for fulcruming on said frame intermediate the pivot between said frame and first mentioned lever and the pivot between said levers.

2,407,759
FISHHOOK
Royden K. McDougal, San Pedro, Calif.
Application January 25, 1944, Serial No. 519,629
1 Claim. (Cl. 43—40)



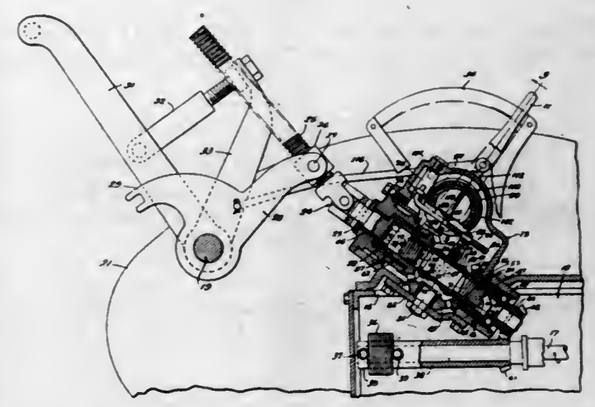
A fish hook of the character described comprising a live bait holder formed from a single length of resilient wire and including a loop for connection with a fishing line, a shaft extending from one end of the loop, a rod on the other end of the loop extending longitudinally on the shaft to an intermediate point, said rod being wrapped around the shaft at an intermediate point and formed to provide a keeper, said rod terminating in a reversed free end portion insertable through a gill and the mouth of a bait and engageable in the keeper, a hook on one end of the shaft and projecting longitudinally therefrom, and a loop on said one end of the shaft projecting at substantially right angles to the hook, the last-named loop being for the reception of the bait and constituting means for retaining the hook adjacent one side of the tail portion thereof.

2,407,760
METHOD OF AND APPARATUS FOR FITTING TELESCOPIC TUBES AND THE LIKE
John R. McLaughlin, Palmer, Mass., assignor, by mesne assignments, to Tampax, Inc., New York, N. Y., a corporation of Delaware
Original application October 23, 1942, Serial No. 463,091. Divided and this application January 25, 1945, Serial No. 576,205
16 Claims. (Cl. 93—77)



1. An apparatus for deforming telescopically fitting tubes embodying means for supporting

tubes in aligned endwise pairs, means for deforming ends of one of said tubes, means for bodily moving one of the tubes longitudinally and independently of the other tube to telescope said tubes, and means whereby the telescoped tubes are released from and moved away from the telescoping means.

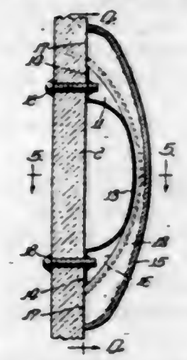


11. A method of interfitting telescoping tubes which consists in advancing a pair of tubes tandem-wise in a guide in non-axial alinement, deforming the end of one of each pair of tubes, displacing the leading tube into axial alinement with the trailing tube, bodily moving the trailing tube independent of the leading tube whereby to enter the former tube into the proximate end of the latter tube, and continuing the advance of the telescoped tubes to discharge them from the guide.

2,407,761
VALVE
Hal W. McPherson, Chicago, Ill., assignor to Allied Control Co., Inc., New York, N. Y., a corporation of New York
Application January 14, 1944, Serial No. 518,233
7 Claims. (Cl. 137—139)

1. In a shut-off valve for handling a fluid under pressure, a chamber, a movable diaphragm dividing the chamber into a front portion and a rear portion, two ports opening into the front portion of the chamber, one of said ports constituting an inlet for the fluid and the other constituting an outlet for the fluid, said diaphragm being movable forwardly to seat a portion of the area thereof against said ports and close off the outlet port and being movable rearwardly to place the outlet port in communication with the inlet port by way of the front portion of the chamber, means disposed downstream from said inlet port, between the inlet and outlet ports and outside of said portion of the diaphragm area for conducting some of the fluid from the inlet port into the rear portion of the chamber, whereby to pocket such fluid under pressure in the rear portion of the chamber behind the diaphragm to flood the rear portion and cause the diaphragm to move forwardly into sealed engagement with the outlet port, and means for controlling the operation of said last mentioned means.

2,407,762
MECHANICAL POWER LIFT
James Morkoski, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application November 15, 1944, Serial No. 563,597
8 Claims. (Cl. 74—388)



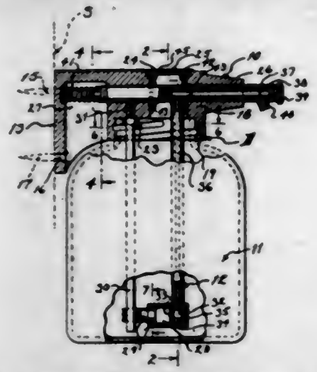
1. In a mechanical power lift utilizable upon a tractor having a horizontal power supplying shaft, a rock-shaft disposed transversely of the power supplying shaft, and a rock-shaft rocking arm having a power receiving portion disposed above the power supplying shaft; a rotatable structure driven from the power supplying shaft and inclined upwardly therefrom generally toward the power receiving portion of the rock-shaft rocking arm, a rotatable driven member coaxial with said rotatable structure, worm and running nut means associated with said rotatable driven member for connecting the same with the power receiving portion of the rock-shaft rocking arm to cause rocking of said arm and of the rock-shaft in either direction depending upon the direction the driven member is rotated, gears rotatable coaxially about and spaced axially of said structure, a clutch actuatable to drivingly connect one of said gears with said structure, the other gear being constrained for rotation with the driven member, a reversing power train for driving said other gear and hence the driven member from the one gear oppositely to the direction the structure rotates when said clutch is actuated, a second clutch actuatable to drive the driven member from and in the same direction as said structure, and means for selectively actuating said clutches.

2,407,763
FURNITURE HANDLE
Edwin W. North and Roy A. Stone, Rockford, Ill., assignors to National Lock Co., Rockford, Ill., a corporation of Delaware
Application April 10, 1944, Serial No. 530,270
3 Claims. (Cl. 16—125)

1. A handle, comprising a channel-shaped outwardly bowed metal body having flat co-planar end walls for the reception of fastening means and in-turned opposed flanges extending along the outer margins of the channel walls, and an outwardly bowed fillet having an inner face con-

forming to the curvature of the outer face of the body and laterally projecting flanges adapted for

sliding inter-engagement with said flanges of the body to secure said fillet and body together.

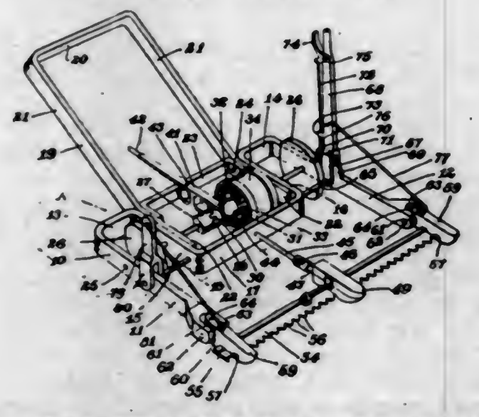


2,407,764
THERMOSTATIC SWITCH PLUG
Bernard F. Oebbecke, Pittsburgh, Pa.
Application April 23, 1943, Serial No. 484,307
4 Claims. (Cl. 200—136.5)

1. A thermostatic switch plug comprising first and second terminal means for connection with an electrical appliance, said first terminal means being adapted for connection with a circuit wire, a stationary contact electrically connected with said second terminal means, a temperature responsive thermostat adapted for connection with a second circuit wire and having a second contact engageable with said stationary contact, adjustable resilient means bearing against said thermostat to yieldingly hold the second contact in engagement with the stationary contact to close the circuit through the appliance but yielding upon a predetermined temperature condition of the appliance to cause the second contact to move away from said stationary contact and break the circuit through the appliance means for adjusting said resilient means to vary its resisting pressure on said thermostat, means for holding the adjusting means in adjusted position, a visible indicating means on the adjusting means for displaying the extent of adjustment, said stationary and second contacts having meeting faces, and said thermostat being U-shaped and having one leg fixed to a support and comprising a bimetallic member having a first length flexing in one direction and a second length carrying the stationary contact flexing in a reverse direction to maintain said meeting faces in parallelism.

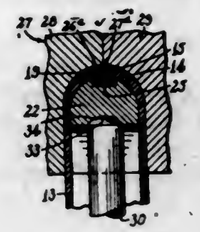
2,407,765
PUSH-BUTTON PUMP TYPE SOAP DISPENSER
John Frederick Palmer, Waukesha, Wis.
Application May 10, 1945, Serial No. 593,065
6 Claims. (Cl. 222—340)

1. A liquid dispenser comprising a bracket, an open mouthed bowl secured to and depending from said bracket, an operating plunger slidably mounted in said bracket for horizontal movement back and forth toward and away from the rear end of the bracket, a stationary pump piston carried by the bracket and disposed in the bowl adjacent to the lower end thereof, a pump cylinder slidably mounted on the piston, said cylinder and piston being arranged in parallel relation to the plunger, an inlet check valve for the cylinder, rigid pump tubing connecting the cylinder with the operating plunger whereby upon move-



ment of said plunger, the cylinder will be moved therewith, said plunger having a passageway communicating with the upper end of the tube, and an outlet nipple carried by the plunger and communicating with said passageway.

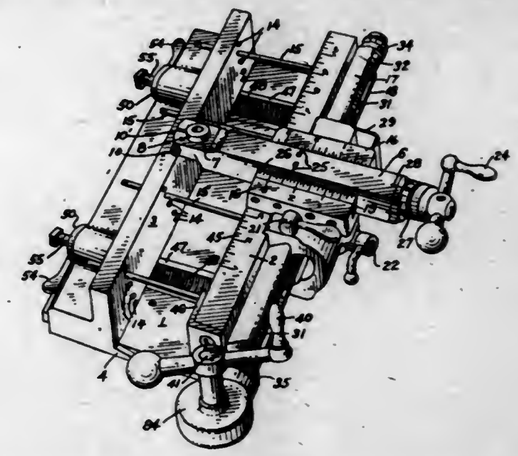
2,407,766
MODIFIED ALKYD RESINS
John Harold Perrine,, Prospect Park, and Herbert L. Johnson, Norwood, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application September 3, 1943, Serial No. 501,140
6 Claims. (Cl. 260—76)



1. An alkyd resin comprising the reaction products formed upon heating of four parts of a polycarboxylic acid, one–two parts of a polyhydric alcohol and one–four parts of a pentane-insoluble acidic material containing an hydroxyl group, a carboxyl group and a plurality of carbonyl groups in the molecule, said material having been formed by oxidizing a lubricating oil, containing an average of a naphthene ring per molecule, by means of a free-oxygen containing gas at a temperature of about 100° C.–160° C. and at a pressure of about atmospheric to 150 pounds per square inch until said oil has a saponification number of about 100 to 200 and recovering said material from said oxidized oil.

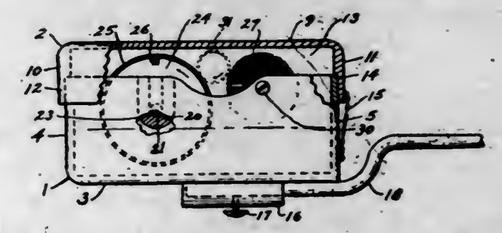
2,407,767
PUSH MOWER
Alfred T. Peterson, Minneapolis, Minn.
Application May 15, 1942, Serial No. 443,035
3 Claims. (Cl. 56—260)

1. A mower comprising a frame, a pair of arms extending forwardly from said frame, a pair of forwardly extending shoes pivotally mounted to said frame by universal pivots, an intermediate shoe positioned between said first named shoes, fixed cutter blades pivoted to said intermediate shoe along a longitudinal axis and connected to said first named shoes, relatively reciprocable cutter blades mounted adjacent said fixed cutter blades, means on said intermediate shoe for actuating said reciprocable cutter blades, a shaft extending from said actuating means, and a universal pivot in said shaft in substantial alignment with said first named universal pivots, said shoes being simultaneously pivotal about a transverse horizontal axis when said universal pivots are aligned.



2,407,768
METHOD OF MAKING RUBBER GOODS
Bert Predmore, New Haven, Conn., assignor to The Seamless Rubber Company, New Haven, Conn., a corporation of Connecticut
Application April 10, 1944, Serial No. 530,323
2 Claims. (Cl. 18—59)

1. The method of closing the slitted end of a substantially planar receptacle of vulcanizable material, which comprises inserting a piece of vulcanizable material into the slit in such a manner that a substantial part of the piece extends inwardly into the receptacle, heating the inserted piece and the adjacent parts of the receptacle to cause the material to flow more readily, and subjecting the article in the region of the slit to the pressure of inner and outer members which compress the piece generally lengthwise of the receptacle although permitting the material in the inner end portion of the piece to flow laterally away from the general plane of the piece, the inner member having a recess extending laterally of said receptacle into which such material flows for the purpose of creating shoulders of a prescribed contour overlying the edges of the slit.

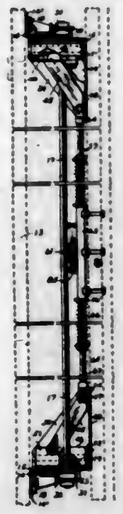


2,407,769
DRILLING VISE
John F. Anderson, Oakland, Calif.
Application November 16, 1943, Serial No. 510,519
11 Claims. (Cl. 77—62)

2. In a drilling vise of the character described, a base plate, a pair of cooperating elongated vise jaws carried by said base plate, one of said jaws fixed to said plate and the other mounted thereon to move transversely of the length of the jaws for clamping between them the work to be drilled, means for operating the movable jaws, a carriage mounted on and to slide along the fixed jaw, and the fixed jaw and carriage provided with interengaging guiding surfaces holding the carriage to the jaw, and the carriage provided with a drill socket carrying arm adapted to project across the work clamped between the jaws, screw means arranged for moving said carriage longitudinally of the fixed jaw, and screw means arranged for moving said arm to any desired degree

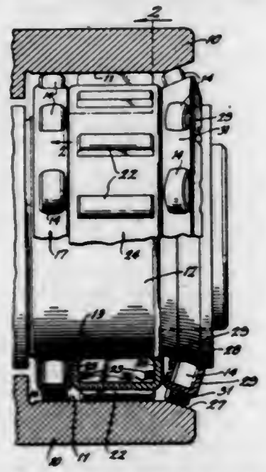
of projection over the work transversely of the carriage movement.

2,407,770
LIQUID APPLICATOR
Isabelle H. Daniel, Los Angeles, Calif.
Application March 18, 1943, Serial No. 479,611
2 Claims. (Cl. 91—27)



1. In a device for coating a liquid substance on the outer surfaces of pipe and the like, the device comprising a base having a bottom, opposed upstanding end walls, and upstanding side walls to form a reservoir for liquid, a roller with an absorbing covering having its ends removably journalled in the side walls and positioned so that top portions thereof extend above the tops of the side walls and its bottom portions dip into the reservoir, a cylindrical brush having long bristles and rotatably mounted for adjustment to a fixed operative position on an axis mounted in the side walls so that the longitudinal axis of both roller and brush are parallel, the roller and brush being so spaced apart that their near surfaces can conjointly support the pipe to be coated and so that when the pipe is rotated the roller is rotated.

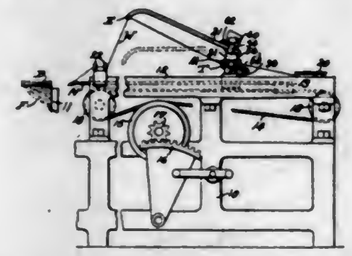
2,407,771
SEAT SUPPORT
John P. De Rose, Albany, Calif.
Application August 4, 1941, Serial No. 405,279
8 Claims. (Cl. 155—14)



8. In combination with a seat, a seat-supporting means comprising a pair of transversely spaced and relatively fixed base members disposed in opposed relation beneath the seat and extending in fore-and-aft relation thereto, a pair of complementary upwardly extending obliquely disposed laterally spaced toggle struts of equal length lying in the same vertical plane and each hinged to a different base member for pivotal movement toward and away from each other, said toggle struts having their upper ends supportingly and slidably engaging the seat, and means including a gear and racks spanning the

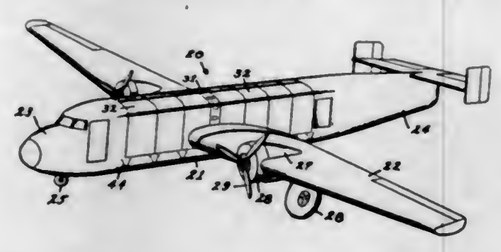
distance between and connecting the upper strut ends and adjustable to move the upper strut ends

toward or away from each other to change the obliquity of the struts and thereby adjust the spacing of the seat from the base members.



2,407,772
CLUTCH AND BEARING CONSTRUCTION
Adiel Y. Dodge, Rockford, Ill.
Application June 16, 1943, Serial No. 491,007
11 Claims. (Cl. 192—45.1)

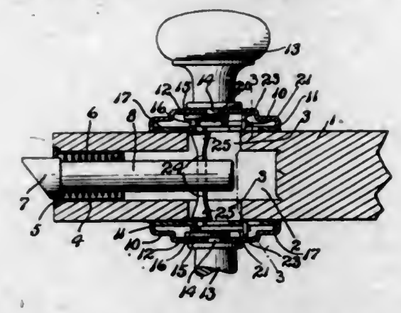
1. A combined clutch and bearing construction comprising inner and outer races having coaxial continuous facing surfaces, a series of anti-friction rollers between the surfaces connecting the races for free relative rotation, a cage for the rollers supporting them in spaced relation between the race surfaces, a series of tiltable grippers between the race surfaces tiltable in one direction to engage the surfaces and hold the races against relative rotation and in another direction to release the surfaces, and a cage for the grippers supporting them in spaced relation between the surfaces and mounted adjacent but rotatable relative to the bearing cage.



2,407,773
WEFT TENSION FOR AXMINSTER LOOMS
Norman Fletcher, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application February 3, 1945, Serial No. 575,991
8 Claims. (Cl. 139—123)

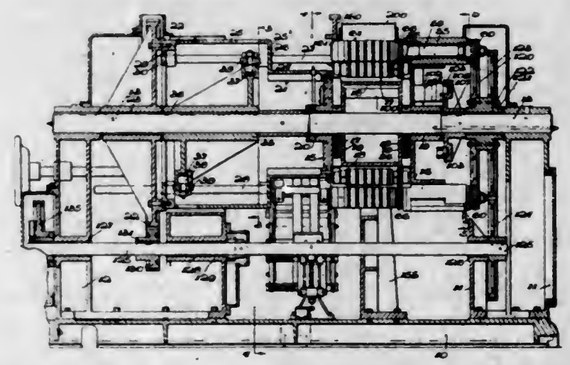
1. In conditional weft tensioning and releasing mechanism for an Axminster loom having a whip stick through the eye of which weft extends from a stationary weft package to a weft inserting needle, the whip stick being normally raised and moving downwardly during weft inserting movements of the needle, a weft tension between said stationary package and said eye of the whip stick normally operative to prevent pas-

sage of weft from said package to the whip stick eye, and operating connections between the whip stick and said tension effective when the whip stick moves downwardly to alter said tension by a force derived from said whip stick and cause the tension to permit passage of weft from said package to the whip stick eye.



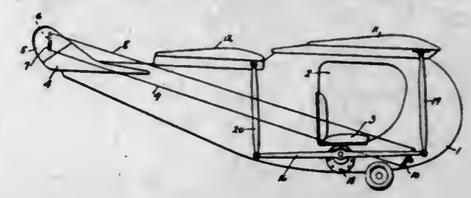
2,407,774
AIRPLANE CONSTRUCTION
Harlan D. Fowler, San Diego, Calif.
Application December 28, 1942, Serial No. 470,326
11 Claims. (Cl. 244—118)

1. An airplane construction comprising an elongated exposed fuselage platform, a nose compartment and a tail assembly permanently supported at opposite portions of said platform with a cargo space on said platform separating the nose compartment and tail assembly, a wing having sections including a leading spar extending laterally from both sides of the platform, the leading spar of the wing sections resting on and being supported by said platform, freight container positioning members disposed upon said platform, and a vantage and observation post for directing the positioning of freight containers relative to said members provided with a pivotally mounted guard member, said post being positioned upon and above said spar.



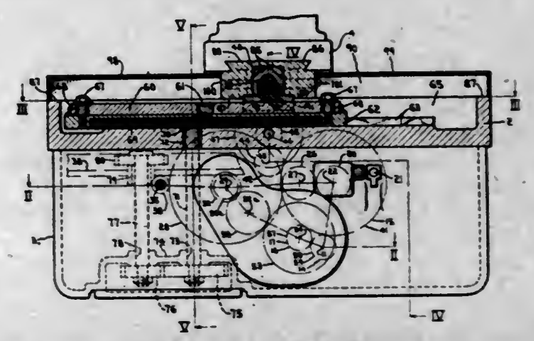
10. In an airplane an exposed freight platform having a flat deck, containers having bottoms and sockets in said bottoms, said bottoms comprising recessed peripheral edge portions, substantially U-shaped ribs at the edge portions each rib having one leg attached to the container within said respective recessed peripheral edge portion and the other leg in contact with the outer surface of said bottom, said ribs being adapted to rest upon said deck, and one or more reinforcing ribs in contact with the bottom and spaced from and of lesser depth than the first ribs, said sockets being located inwardly relative to said first ribs, and a plug for each socket located on the platform and adapted to project into the socket and to snugly engage the sides thereof.

2,407,775
INDOOR LATCH AND LOCK
Horace E. Frost, Grand Rapids, Mich.
Application December 11, 1944, Serial No. 567,541
5 Claims. (Cl. 292—169)



1. A latch construction including a housing adapted to be inserted in an opening made inwardly at the vertical edge of the door, a coiled spring within said housing, a latch bolt having a head normally projecting beyond the open end of the housing and a stem connected to said head passing through said spring and the bottom of the housing, said stem at its inner end portion having a transverse opening therethrough, an operating pin having a free end portion extending partly into said opening at each side of the latch bolt stem, means for mounting each of said pins for a longitudinal movement paralleling the axis of said bolt stem, said movement being in a direction to retract the bolt head and compress said spring, and manually rockable means connected with each of said pins for moving the same to retract the latch bolt on rocking either of said means in either direction of rocking movement.

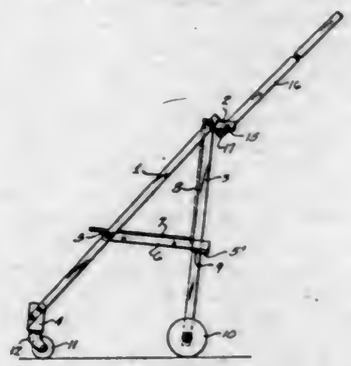
2,407,776
CAN-BEADING MACHINE
Wiltie I. Gladfelter, Philadelphia, Pa., and Walter A. Ehrlich, Bridgeport, Conn., assignors to Crown Can Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 22, 1943, Serial No. 491,836
12 Claims. (Cl. 153—73)



1. A can body beading machine comprising a rotatable turret, a plurality of pairs of parallel beading rolls carried by the turret and journalled for rotation on radially spaced axes, one roll of each pair being supported at one end only, for the reception of can bodies over its other end, a gear fixed upon the other end of each roll, a pair of offset intermeshing idler gears carried by the turret adjacent each pair of roll gears in mesh therewith and constituting a driving connection therebetween, means for forcefully moving the other roll of each pair substantially radially of the turret toward the first mentioned roll to apply beading pressure to the can bodies thereon while maintaining said driving connection, means for positively rotating the first mentioned roll of each pair, and means adjacent the path of movement of the free end of the first mentioned roll of each pair for preventing displacement thereof under the influence of said beading pressure.

2,407,777
GLIDER
Henry C. Grawunder, Bellville, Tex., assignor of one-half to J. B. Huff, Jr., Harris County, Tex.
Application September 4, 1942, Serial No. 457,244
2 Claims. (Cl. 244—16)

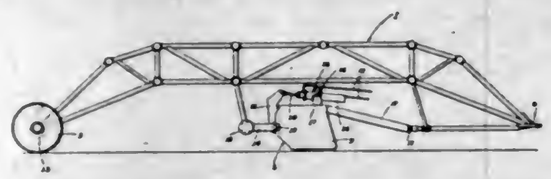
1. A glider comprising a fuselage, similar front wings extending out laterally from the fuselage and pivoted thereto on longitudinal axes, rear wings extending out laterally from the fuselage and whose inner ends are pivoted to the fuselage on longitudinal axes, means whereby the wings on one side of the glider may be moved independently of the movement of the wings on the other side of the glider, said means comprising levers, one on each side of the fuselage, mounted at points intermediate their ends for universal pivotal movement on the fuselage, front and rear rigid links pivotally connected to the front and rear ends of the levers respectively, the front links being pivoted at their other ends to the leading edges of the front wings and the rear links being pivoted at their other ends to the leading edges of the rear wings, whereby upon the rocking of a lever the corresponding wings will be moved one upperwardly and the other, simultaneously, downwardly.



2,407,778
TAPER TURNING APPARATUS
William F. Groene, Cincinnati, and Harry C. Kemper, Goshen Township, Clermont County, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application February 4, 1943, Serial No. 474,732
1 Claim. (Cl. 82—22)

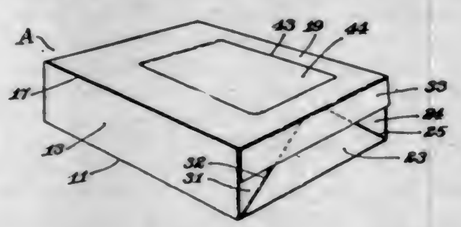
In a lathe tool feeding mechanism, a bed, a carriage on said bed, a cross slide on said carriage including a cross feed screw, an apron on said carriage, a feed reverse transmission in said apron actuable from a source of feed power of said lathe, a cross and longitudinal feed selector connected to said feed reverse transmission, and taper control mechanism in said apron includ-

ing the combination of a change gear transmission, means for connecting said transmission to rotate the actuating cross feed screw and move said cross slide, means for connecting said transmission to said cross and longitudinal feed selector when longitudinal feed of the carriage is being effected, a taper attachment mounted in the carriage having a taper bar, means operably connected to the cross feed screw and slidable along said taper bar for transmitting motion to said cross feed screw in accordance with the angle of said taper bar for axial reciprocation of said cross feed screw, and a change gear transmission in said apron adapted to be driven from a rack fixed on said bed by the movement of said carriage thereon and connected to said taper bar for actuation thereof to vary the effective motion transmitted thereby to the cross feed screw.



2,407,779
PERAMBULATOR
Edwin W. Grove, III, Ladue, Mo.
Application July 28, 1945, Serial No. 607,577
1 Claim. (Cl. 280—41)

A foldable perambulator comprising in its unfolded position a pair of parallel, diagonal side members and a pair of vertical supporting legs, a plurality of horizontal elements connecting said diagonal members and said supporting legs and a seat attached to said horizontal elements, certain of said connecting elements being in pivotal engagement with said side members and in sliding engagement with said legs, stop means for limiting the movement of said sliding elements, a backrest, a handle provided with a slot, and a rigid connecting element between said legs upon which said handle is swingably mounted, said rigid connecting element having a cut-out portion with an inclined wall, retaining means passing through said cut-out portion and through the slot of the handle whereby said handle is held in frictional engagement with said inclined wall, and rotatable propelling means, said side members, vertical legs, seat, backrest, and handle being adapted to be brought into substantially parallel positions with relation to each other through a single operation.

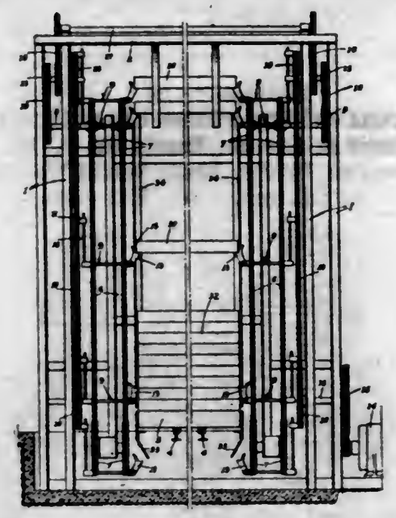


2,407,780
FINISHING LEVELER
Albert G. Gurries, Gilroy, Calif.
Application June 11, 1945, Serial No. 598,781
11 Claims. (Cl. 37—169)

1. A finishing lever comprising an elongated frame supported above and for movement along the ground, a scraper disposed transversely below the frame intermediate its ends, and means vertically adjustably suspending the scraper from the frame; said means including a forwardly projecting tongue on the scraper pivotally connected to the frame for vertical movement, a pair of transversely spaced, vertically swingable arms project-

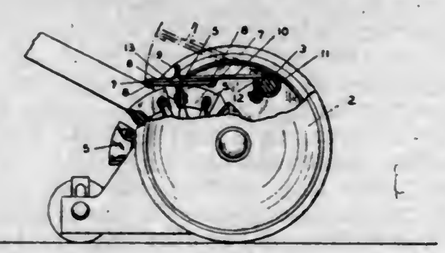
ing rearwardly from the scraper, longitudinally swingable legs depending from the frame to pivotal connection with said arms, and means operative to swing said arms up or down to raise or lower the scraper.

2,407,781
METHOD AND APPARATUS FOR SEALING CARTONS
Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota
Application August 30, 1943, Serial No. 500,497
6 Claims. (Cl. 229—37)



1. A container comprising four panels foldably connected together to form a top panel, a bottom panel and side wall panels; a fifth panel foldably secured to one of said side wall panels and adapted to overlap said top panel and be adhered thereto, end panels foldably secured to said bottom panel, connecting flaps secured between said end panels and said side wall panels, a heat-sealable coating on the inner surface of said container panels, said connecting flaps being diagonally folded and adhered together by said coating, and flanges foldably connected to the ends of said fifth panel, and to the upper edges of said end panels sealed together by said coating.

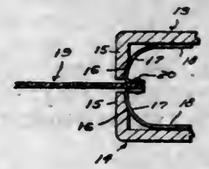
2,407,782
TRAY STACKER
John S. Hardy, Los Gatos, Calif.
Application May 19, 1944, Serial No. 536,337
1 Claim. (Cl. 214—6)



A tray stacked assembly including in combination: two parallel frame elements spaced apart, a track passing between said frame elements and from side to side thereof in a horizontal plane above the lower ends of the frame elements, trucks adapted to be moved along the track, a tray station at one side of the frame elements at a point above the top level of the trucks, an endless chain movable around each frame element, tray engaging elements on the chains yieldably projecting into the space between the frame elements and adapted to pick trays from said station and carry them over the frame elements and deliver them onto a truck standing on the side of the frame elements opposite that side on which the tray station is located, a pair of plates, such plates being spaced apart and one plate lying on each side of the track, such plates being

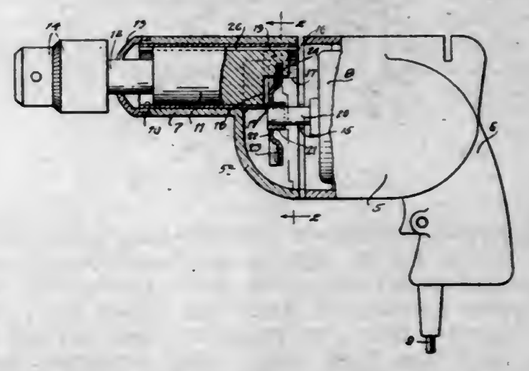
of a height not less than the height of a truck on the track, the tray engaging elements being adapted to engage the plates and to be thereby

deflected away from any truck standing on the track between the frame elements as such tray engaging elements move around the lower ends of the frame elements.



2,407,783
LAWN MOWER SHARPENER
Ole Herwick and Thomas M. Taylor, Portland, Oreg.
Application April 17, 1945, Serial No. 588,856
1 Claim. (Cl. 51—250)

A sharpening device for lawn mowers, comprising an elongated plate having return-bend longitudinal edges to form guides, an abrasive strip removably seated in said guides, arms projecting from one longitudinal edge of the plate, the ends of the arms being formed with means for pivotally connecting the plate on a fixture of the lawn mower to insure bodily swinging movement of the plate to and from the operating plane of the blades of the mower under a holding frictional grip, and a rigid rib extending lengthwise from that side of the plate opposite the abrading material, the rib being substantially in line with that portion of the abrasive strip cooperating with the mower blades when in sharpening position and resisting any bending of the blade during such cooperation.

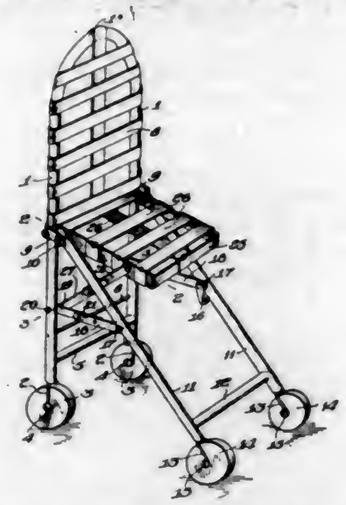


2,407,784
ROLLABLE TYPE WINDOW SCREEN
Ole J. Hoffstad, Rahway, N. J., assignor of one-half to August Bruns, Port Chester, N. Y.
Application September 14, 1944, Serial No. 554,014
2 Claims. (Cl. 160—273)

1. In a structure of the class described, a guideway for a screen of the class described made up of opposed parallel angle irons having flanges, the inner faces of said flanges being used to provide runways; a screen edge projecting between the flanges adjacent said runways, and spring clips

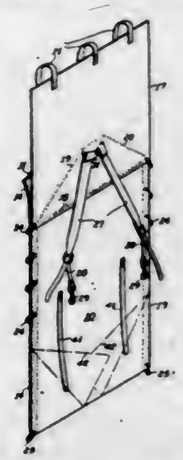
attached to said screen edge and having rounded portions workable in said runways.

2,407,785
RECIPROCATING TOOL
Edward M. Hoover, Anderson, Ind.
Application August 11, 1943, Serial No. 498,245
1 Claim. (Cl. 74—56)



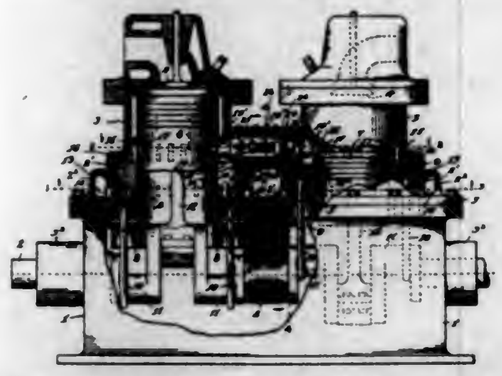
In a tool of the character described, a casing having a bearing at one end and an enlarged chamber at its other end, a hand grip carried by the chambered end of the casing, a tool-carrying plunger reciprocably mounted in the bearing end of the casing, a sleeve anchored in said bearing surrounding the plunger with one end projecting into the chambered end of the casing and having its lower portion cut-away, a motor in the enlarged chamber of the casing and a drive disk connection between the motor and plunger including a disk on the shaft of the motor, said disk having a sinuous peripheral edge, with the upper side thereof projecting into the cut-away portion of said sleeve, a block on the inner end of the plunger overlying the lower cut-away portion of said sleeve, the lower side of said block having a groove therein into which said sinuous peripheral edge of the disk extends and a splined key connection between said sleeve and said plunger whereby said plunger is free to reciprocate by driving connection with said motor and is restrained from rotation in said sleeve.

2,407,786
COMBINATION CHAIR AND COT
Frank Keest, Urbana, Ill.
Application June 18, 1945, Serial No. 600,139
4 Claims. (Cl. 155—45)



4. A combined chair and cot, comprising an inverted U-shaped frame adapted to form the rear legs and back of a chair; rear rollers journaled in the lower ends of the frame; a rod extending between the legs of the frame at the seat level; spaced back rest strips extending between the legs above said rod; an open seat frame of less width than the distance between legs of the frame, said seat frame being hinged on said rod and adapted to be swung from position substantially normal to the first frame into a position substantially aligned with the back rest strips; other spaced strips secured to opposite sides of

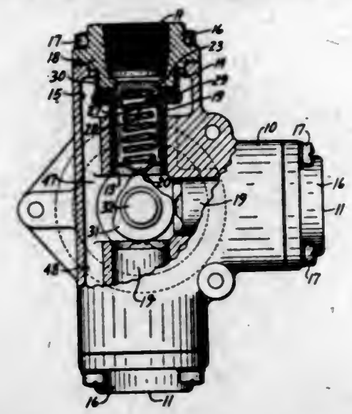
the seat frame; U-shaped clips on the legs of the U-frame transfixed by the ends of the rod and carrying pivot bolts; a U-shaped front leg frame of greater length than the distance between the rod and rear rollers having the upper ends of its legs pivoted on said bolts; front rollers journaled in the lower ends of the legs of the front leg frame; said front leg frame being adapted to be



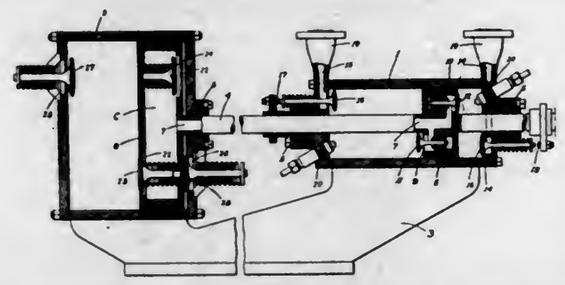
swung from a position substantially parallel with the first U-frame into a position inclined with respect thereto; means for maintaining said front leg frame in inclined position; means for locking the front leg frame in position substantially parallel with the first frame; and separate means for maintaining the seat frame substantially normal to the first frame.

2,407,787
PACKSACK
Ray Kernahan, Portland, Oreg.
Application October 18, 1943, Serial No. 506,665
3 Claims. (Cl. 224—8)

1. A pack-sack comprising an elongated sheet of material folded upon itself and sewed together along the opposite sides to form a sack open at the top, a cover flap sewed to the upper end of one side of said sack by a triangular stitching, the apex of the triangle being substantially centrally disposed adjacent the top of said side, the sides of said triangle sloping downwardly from said apex to the opposite side edges of said sack below said top, a draw string for drawing together the top of said sack, the lower end of said sack being adapted to be rolled up to a variable degree to provide a resultant sack of selective capacity, a pair of shoulder straps, means for securing the lower ends of said straps to the lower end corners of said sack in either the rolled or extended condition thereof, and means for securing the upper ends of said straps to the top of said side substantially at the apex of said triangle, in the rolled up condition of said sack.



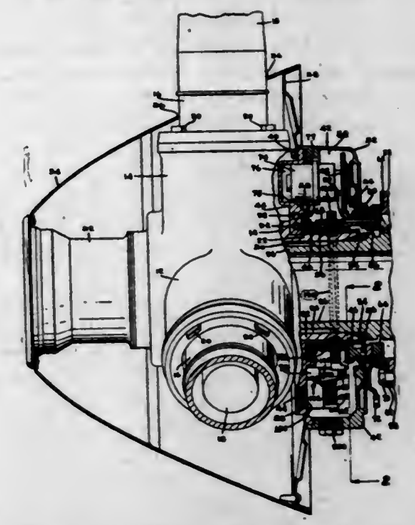
2,407,788
INTERNAL-COMBUSTION ENGINE
Richard H. Knauss, Peoria, Ill.
Application July 1, 1944, Serial No. 543,062
12 Claims. (Cl. 123—59)



1. In combination, a pair of companion engines of the two cycle type jointly forming power unit and each including power piston and power cylinder, and including also a pressure piston and a compression cylinder, the latter to confine pressures set up by the former, like pistons of each engine acting in opposite directions, there being a transfer port in a wall of the compression cylinder of each engine in communication with the bore of that cylinder when the pressure piston is begnining its compression stroke, said port having communication with a source of fuel mixture, there also being a port in a wall of the power cylinder to communicate with the bore of the latter at the end of the fuel intake stroke of said power piston, said port and the first named port being communicable with each other and with the fuel source, there being a single avenue of communication between the bores of the compression cylinders of the two engines with each other, the two named ports of each engine also communicable jointly with the named avenue, a valve case lying in said avenue comprising two separate passages, and an elastically controlled valve in each passage and normally seated to close communication through said avenue and adapted to be unseated separately in opposite directions by pressures set up alternately in said compression cylinders by the pistons therein for directing pressure from one of each cylinder of one engine into the power cylinder of the companion engine in alternate order.

2,407,789
FLUID VALVE
Gustave J. Koehler, Dayton, Ohio
Application June 30, 1943, Serial No. 492,882
4 Claims. (Cl. 251—27)

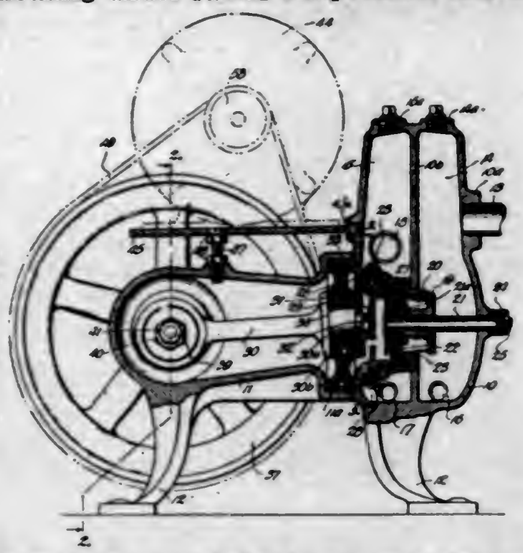
1. In a fluid valve having a body portion, the combination of an element removably connected to said body portion and having a valve seat therein; a valve member operatively mounted in said body portion in substantial axial alinement with the element and removable from said body portion when the element is removed, said member movable in valve opening and closing directions; a part having a tapered seat-engaging surface thereon; an annular groove in the part; a halved washer secured in the valve member and loosely engaging the annular groove to form a lost motion connection between said member and the part, whereupon movement of said member in valve-closing direction causes the tapered surface, in cooperation with the valve seat, to move the part into accurate axial alinement with said seat regardless of any out-of-alinement condition existing between the valve member and the element; and yieldable means between the part and the valve member to cause the tapered surface on said part to resiliently engage the seat to insure a leak-proof seal between said surface and said seat.



2,407,790
RECIPROCATING PRESSURE GENERATOR
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application February 3, 1944, Serial No. 520,973
4 Claims. (Cl. 123—46)

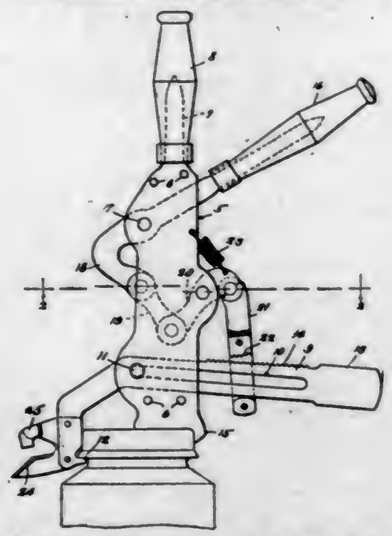
2. A power gas forming compressor comprising a power cylinder, a piston in said cylinder dividing the cylinder into two compression chambers, the cylinder being provided with an outlet passage leading from each compression chamber, a spring pressed valve normally closing each passageway, a piston rod on the piston and projecting through an end of the cylinder, means responsive to piston movement in the cylinder to alternately open said valves, a compression cylinder, said piston rod projecting into said compression cylinder, a piston on the rod within the compression cylinder and dividing the latter into two compression chambers, the compression cylinder being provided with a passageway leading from atmosphere into each such last named compression chambers, a spring pressed valve normally closing each of said last named passageways and adapted to alternately open and close in response to pressure differentials imposed in the compression cylinder in response to the movements of the piston therein whereby air will be alternatey drawn into each of the chambers in the compression cylinder and compressed therein, each of said pistons being hollow and the rod having a central passageway in open communication with the interior of each piston, each face of each piston being provided with an opening leading from the adjacent compression chamber into the interior of the piston, a spring pressed valve normally closing each opening, the valves in the piston in the compression chamber being operable to alternately open and close with the compression and suction strokes, respectively, of such piston whereby compressed air will flow with each such compression stroke from the adjacent compression chamber through the hollow rod and to the interior of the piston in the power cylinder and open that valve therein which is in communication with the compression chamber in the power cylinder which faces away from the direction of the then compression stroke of such latter piston, the valve in the passageway leading from such compression chamber being then open, means to admit fuel into the opposite compression chamber in the power cylinder, the valve in the passageway leading from such latter chamber being then closed, and outlet means to exhaust the compressed air and combustion gas mixture.

2,407,791
GOVERNOR VALVE
Thomas B. Martin and John F. Haines, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 1, 1942, Serial No. 445,366
18 Claims. (Cl. 170—163)



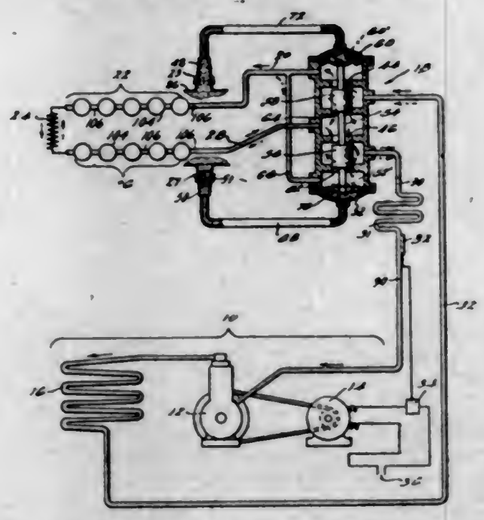
1. In an aircraft propeller, the combination of a cylindrical porting sleeve, a piston valve movable longitudinally relatively thereto, means mounting the sleeve and valve for rotation with the propeller, means including a balance of spring force and centrifugal force for maintaining the sleeve and valve in a relatively equilibrium position but adapted on domination by either spring force or centrifugal force to effect relative unidirectional movement of the valve and sleeve, and means operative upon rotation of the propeller effecting sustained vibratory reciprocating movement of the valve and along the same path as said unidirectional movement.

2,407,792
DIAPHRAGM PUMP
James O. McMillan, Wichita, Kans.
Application February 5, 1945, Serial No. 576,294
4 Claims. (Cl. 103—150)



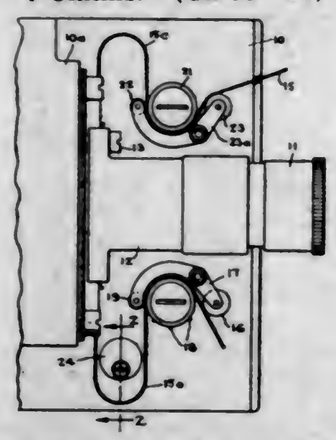
1. In a diaphragm pump the combination with a pump housing of a pressure chamber therein having inlet and outlet ports, valves for said ports,

an annular flexible diaphragm disk having circumferential exterior and interior grooves, seal rings in the grooves, said diaphragm mounted in the housing under radial compression and oscil-



lating means connected into its central aperture for pulsating the diaphragm to pump fluid through the pressure chamber said seal rings cooperating with the housing and oscillating means to seal the pressure chamber at the diaphragm.

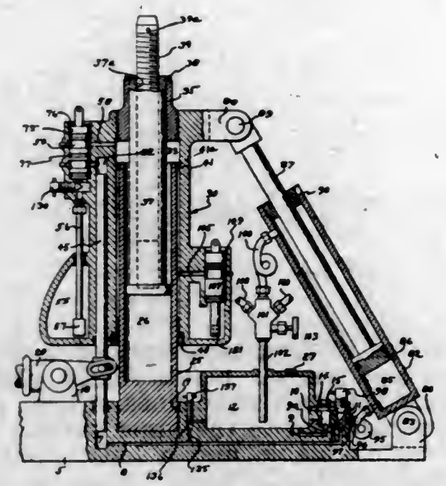
2,407,793
BOTTLE CAP OR JAR COVER REMOVER
Roscoe A. Mitchell, Evansville, Ind.
Application September 2, 1943, Serial No. 500,969
3 Claims. (Cl. 81—3.46)



1. A jar cap remover comprising a body portion, one end of the body portion adapted to rest on a jar cap, a transversely disposed lifting arm pivotally connected with the body portion, one end of said lifting arm adapted to engage under a jar cap to be removed, a substantially vertical arm having an elongated opening through which the lifting arm extends, a link pivotally connected with the body portion and to which the substantially vertical arm is pivotally connected, a pressure arm pivotally mounted on the body portion, a link connecting said pressure arm and the link connected with the substantially vertical arm, whereby pressure directed to the pressure arm operates to lift the cap-engaging end of the horizontal arm, and a coiled spring connected with the body portion and pivoted link, said spring adapted to normally pull the vertical arm upwardly.

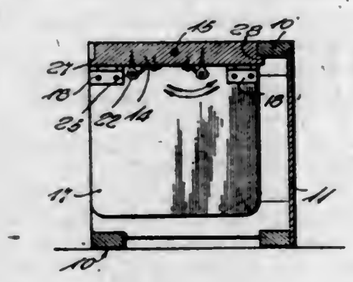
2,407,794
REFRIGERATING MECHANISM
Glenn Muffly, Springfield, Ohio
Original application November 8, 1933, Serial No. 697,124. Divided and this application January 23, 1939, Serial No. 252,291
2 Claims. (Cl. 62—2)

1. In a refrigerating system, a pair of heat exchangers, means including a capillary passage connecting said heat exchanger in series, said capillary passage acting as a refrigerant flow controlling means, and means for causing refrigerant to reverse its direction of flow through said heat exchangers and capillary passage.



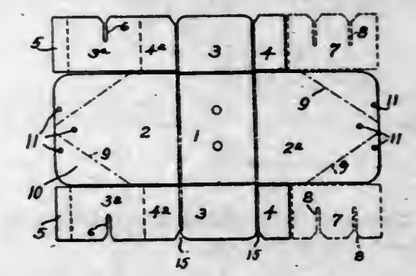
2,407,795
DEVICE FOR MAINTAINING FILM LOOPS
Clarence L. Nelson, Minneapolis, Minn.
Application September 25, 1944, Serial No. 555,603
7 Claims. (Cl. 88—17)

1. A device for maintaining a film loop in a motion picture projector or other device comprising a roller disposed adjacent the end of said loop, a member on which said roller is eccentrically journalled, said roller normally being disposed with the part of its periphery farthest from said member remote from the end of said loop, said roller being adapted to be rotated by said film if said loop is sufficiently diminished to bring said part adjacent the end of said loop to restore said loop.



2,407,796
TRIPOD JACK
Herbert E. Page, Pasadena, Calif.
Application August 17, 1943, Serial No. 498,930
13 Claims. (Cl. 60—52)

1. In a jack, the combination of a base, a telescopic work-engaging member mounted for telescopic movement perpendicular to the base, pressure-actuating means for extending the work-engaging member, and means for laterally supporting the work-engaging member comprising a plurality of telescopic support members, each including a cylinder and a piston, disposed

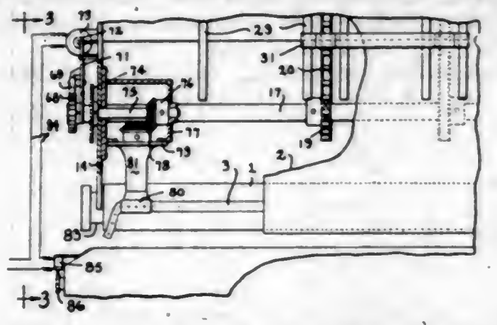


symmetrically around and inclining towards the work-engaging member, each of said telescopic support members being secured at its opposite ends to the base and work-engaging member, and hydraulic pressure-generating means communicating with the cylinders of the support members.

2,407,797
BOOKRACK OR CASING
Willis L. Ramsey, Parma, Mo.
Application October 27, 1944, Serial No. 560,635
3 Claims. (Cl. 211—42)

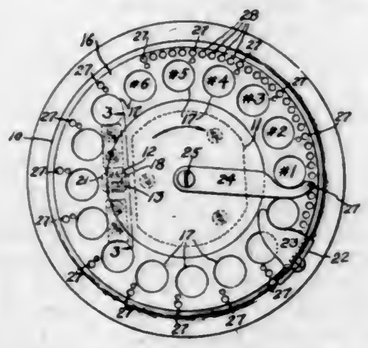
1. In a device of the character described, a frame having upright partitions mounted thereon, a member connected to the top at an outer edge of each partition, a pivot supported by the partitions near their upper edges, book carriers in the spaces between the partitions oscillatably mounted on the pivot, shoulders on the ends of each book carrier for alternately engaging the upper and lower surfaces of said member of the frame whereby the book carrier is arrested in its movement when oscillated, book backings associated with each of the book carriers, a hinge by which each book backing is mounted on the book carrier, said book carrier having recesses in its side edges forming clearances for the butts of the hinges, means for securing the hinges to the book carrier and book backing, respectively, and means on the book carrier for holding a book thereon.

2,407,798
BOTTLE CARRIER
William A. Ringler, Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio, a corporation of Ohio
Application November 12, 1942, Serial No. 465,329
1 Claim. (Cl. 229—28)



A blank for a bottle carrier formed of bendable sheet material such as boxboard, said blank having a bottom panel, end wall panels articulated thereto, said end wall panels being of sufficient depth to retain bottles against toppling, partial side wall panels articulated to each side of each of said end wall panels, a partition panel articulated to one of said partial side wall panels of each end wall panel, and an attachment flap articulated to each of said partition panels, said end wall panels together with said partial side wall panels and partition panels adapted to form a tubular structure at each end of said bottom panel when said attachment flaps are fastened to the respective opposite partial side wall panels, said partial side wall panels being less in width than half the length of the bottom wall panel, and main side wall panels articulated to the sides of the bottom panel, and when erected with respect to the bottom panel adapted to form partial carrying elements, said tubular structures being capable of erection with respect to the bottom panel to form upwardly open pockets lying within said partial carrying elements, said pockets being closed on the bottom by said bottom panel, the depth of said side wall panels being substantially equal to the combined width of a partial side wall panel, a partition panel, and an attachment flap, so that when said blank is cut from a substantially rectangular piece of sheet material, there remain two rectangular pieces equal in depth to the partition panels and in length to a combined partition panel and attachment flap, said partition panels having inwardly extending slots, and said rectangular pieces having mating slots whereby said rectangular pieces may serve as longitudinal partition panels.

2,407,799
CARBON FEEDING MEANS FOR MANIFOLDING MACHINES
Robert W. Ritzert, Dayton, Ohio, assignor to The Egry Register Co., Dayton, Ohio, a corporation of Ohio
Application April 28, 1943, Serial No. 484,810
5 Claims. (Cl. 197—126)

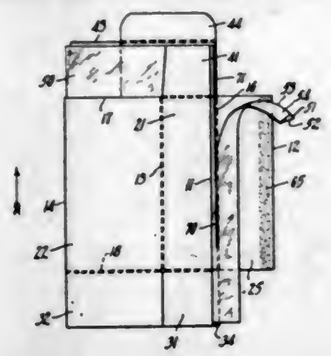


1. A typing machine including a platen, means for moving paper over the platen, a carbon ribbon extending crosswise of the paper and lengthwise of the platen, means for moving said carbon ribbon over the paper both of said paper moving means and ribbon moving means including an electromagnet in common, and means for energizing said electromagnet intermittently in accordance with line spacing and sweep feeding operations of the machine, said last mentioned means including an electrical circuit and a switch

therein, also including a star wheel adapted to intermittently operate said switch in accordance

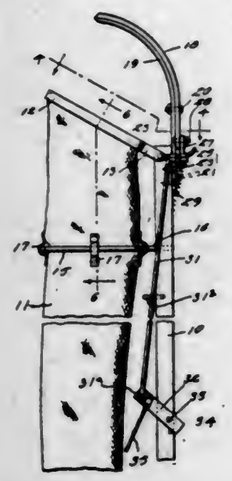
with the desired line-spacing and sweep feeding operations of the machine.

2,407,800
EXPOSURE TIMING MECHANISM
Roland L. Smith, Belmont, Mass.
Application January 26, 1945, Serial No. 574,662
6 Claims. (Cl. 161—1)



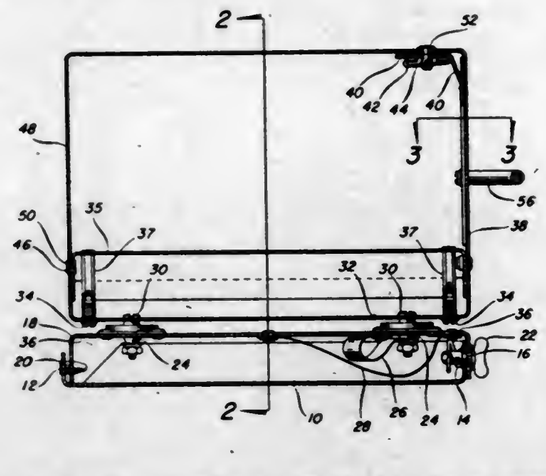
1. In a timing instrument, the combination of a rotatably supported switch-operating dial whose outer marginal portion is made with a concentric row of finger-sockets angularly spaced apart equidistantly at relatively large intervals and also with a concentric row of supplemental sockets spaced apart equidistantly at smaller angular intervals that subdivide the intervals between said finger-sockets; a radial arm pivotally supported for independent rotative adjustment at times on the axis of said dial to set said arm in a definite time-indicating position relatively to said dial; a fixed finger stop, and means on said arm for engaging one of said supplemental sockets to positively adjust said dial rotatively when said arm is swung by finger pressure toward said finger-stop.

2,407,801
METHOD OF PREPARING FRUIT FOR MARMALADES, ETC.
Otto J. Steinwand, Redwood City, Calif.
No Drawing. Application June 12, 1943, Serial No. 490,675
5 Claims. (Cl. 99—102)



1. The process for preparing citrus fruits for the making of marmalades, jams, preserves, which comprises abrading the peel of the fruit to open the oil cells, submerging the abraded fruit while whole in a weak acid solution to convert the protopectin of the peel to pectin, washing the fruit in clear water to remove the excess acid, cutting the thus treated fruit to desired size and thickness, and finally cooking the cut fruit with additional syrup, sugar and pectin as desired to complete the product.

2,407,802
LINED CARTON
Herbert J. Stotter, Shaker Heights, Ohio
Application May 1, 1941, Serial No. 391,318
1 Claim. (Cl. 229—14)

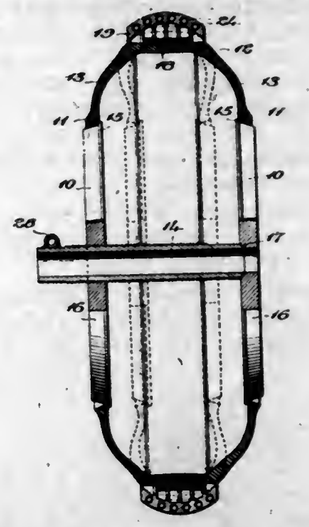


In a carton of the class described, a flat tubular four-sided carton blank folded along two parallel longitudinal score lines, a heat-sealable liner sheet adhered to the inner surface of said tubular carton blank, and a longitudinal seam in said liner, said seam being comprised of heat-sealed edges of said liner sheet and located at a fold in said blank, said blank having a second pair of longitudinal score lines parallel to said two score lines and top and bottom fold lines transverse to said score lines, said score lines and said fold lines defining a front panel, a back panel, and two side panels, and a transverse heat-sealed seam extending across said liner parallel to said bottom fold line, said transverse heat-sealed seam being spaced from said bottom fold line at least a distance equal to the square root of one-half the product of the widths of the front panel and the side panel.

2,407,803
FRUIT CLIPPER
Walter O. Thomas, Winter Park, Fla., assignor, by decree of distribution, to Carrie D. Thomas and W. Maureen Thomas
Application February 2, 1944, Serial No. 520,789
4 Claims. (Cl. 56—336)

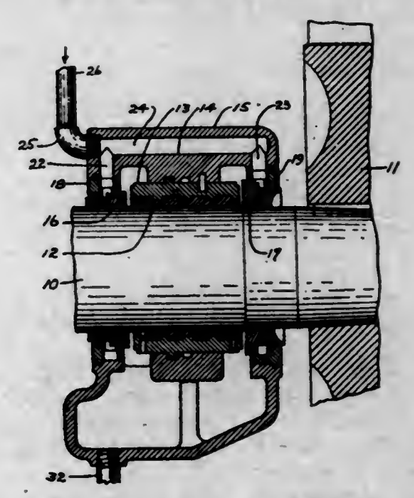
1. A fruit picker comprising a staff, a fruit receiver supported by the staff and provided with a pivotal member at its receiving end for holding said end of the receiver open, said pivotal member being provided with a crank arm extending outwardly from its pivot point, a cutter on the fruit opposing end of the staff comprising a stationary blade and a pivotal blade, a rocker supported by the staff and formed with an opening for receiving the crank arm at one side of the fulcum point of said rocker, a connection between the distal end of the rocker and the pivotal blade, a hand lever on the staff and a connection between the hand lever and the remaining end of the rocker.

2,407,804
RADIO CABINET AND SHOCKMOUNT BASE
Henry T. Winchel, North Hollywood, Calif., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 5, 1943, Serial No. 481,899
4 Claims. (Cl. 174—51)



3. A shockmount base adapted to be secured to a mounting base having opposite upwardly-extending side walls, one of which contains inwardly-extending pins, and the other of which contains means for engagement by screw-type securing means; said shockmount base comprising a plate having downwardly extending side walls at opposite edges, one of which side walls has holes therein adapted to engage said pins of the mounting base when positioned within the wall containing said pins, and the other of which side walls is adapted to rest against the outer surface of the other side wall of the mounting base and includes screw-type securing means for detachably securing said last-mentioned walls together, whereby said shockmount base is removable from said mounting base following disengagement of said securing means by sliding movement to disengage said holes from said pins, said shockmount base having shockmounts secured thereto and extending therebelow, a grounding jumper connecting at least one of said shockmounts to said plate and extending therebelow, and a shielding member extending over said jumper to protect it from injury during movement of said shockmount base to detach it from said mounting base.

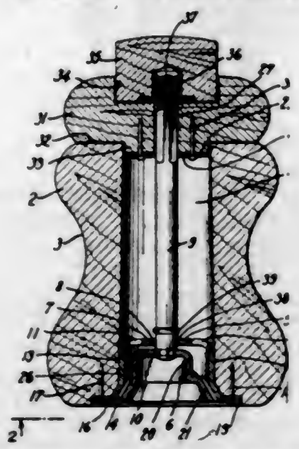
2,407,805
EXPLOSIVE COMPOSITION
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa.
No Drawing. Application May 16, 1944, Serial No. 535,873
5 Claims. (Cl. 52—13)



1. A composition of matter comprising essentially 46–52% of pentaerythritol tetranitrate, 42.5–47.5% trinitrotoluene and 2.5 to 7.5% dipentaerythritol hexanitrate.

2,407,806
APPARATUS FOR APPLYING TREAD MATERIAL TO TIRE CASINGS
Mervin V. Arnold, Clay, N. Y., and James W. Napier, Macon, Ga.
Application May 21, 1943, Serial No. 487,946
11 Claims. (Cl. 18—18)

9. Apparatus of the character described comprising a rotatable shaft, a rotatable exteriorly threaded arbor, means to mount said arbor upon said shaft coaxially therewith for rotation by the same, a pair of members supported by said arbor coaxially therewith for rotation therewith, said members having portions for engagement with the inner edges of the bead portions, respectively, of a tire casing to mount the casing upon said members and said arbor concentrically with respect to the latter for rotation therewith, said members further having portions for engagement with the inner faces of the side walls of a tire casing mounted upon said members, and at least one of said members being threaded upon said arbor for movement therealong away from and toward the other member to spread apart and to release for contraction the side walls of a tire casing mounted upon said members.

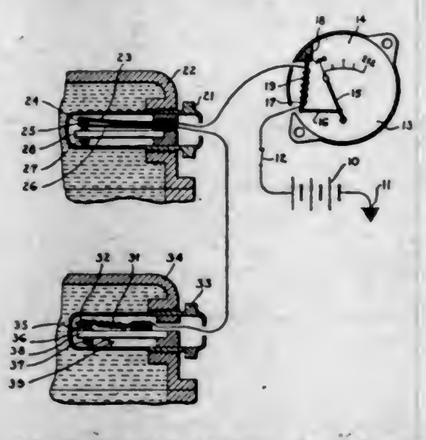


2,407,807
BEARING
Oliver D. H. Bentley, Dover, Mass., assignor to B. F. Sturtevant Company, Boston, Mass.
Application February 29, 1944, Serial No. 524,414
1 Claim. (Cl. 230—207)

In a blower having a blower wheel with a gas inlet, a supporting shaft for said wheel, a bear-

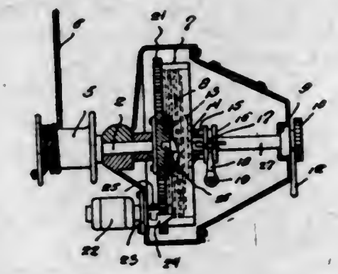
ing surface around said shaft adjacent the inlet of said wheel, a bearing retaining member attached to said surface, annular rings attached to said shaft on both sides of said surface, a bearing housing around said member and surface, said housing having end walls contacting said rings and having an outer wall spaced from said member and forming therewith a gas passage extending longitudinally of said housing between said end walls, said end walls being spaced from said member for forming gas passages on both sides thereof opening into said longitudinally extending passage, and means forming a gas passage between said longitudinally extending passage and a point external said housing.

2,407,808
PEPPER MILL
Elbert Litton Bivans, Los Angeles, Calif.
Application January 22, 1945, Serial No. 573,835
1 Claim. (Cl. 241—168)



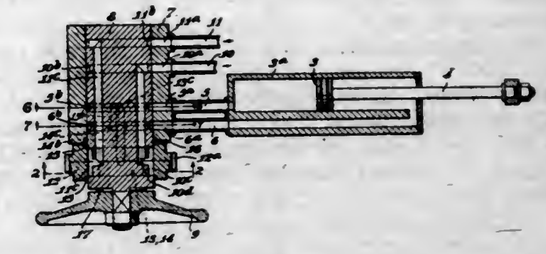
Grinding apparatus comprising sheet metal inverted cup-shaped inner and outer grinding elements, one within the other, said outer grinding element having an end wall having a bearing aperture centrally thereof and feed apertures on opposite sides of said bearing aperture, said outer member having a side wall the innermost portion of which is provided on its inside with inclined ridges and the outermost portion of which is provided on its interior with a comparatively short conical grinding surface concentric with said bearing aperture, a shaft rotatably supported in said bearing aperture in said outer element and secured to said inner element, said inner element having an eccentric side wall opposite said ridges and on its outer surface having a comparatively long conical grinding surface concentric with said shaft, the inner end of said grinding surface on said inner element projecting inwardly beyond the inner end of the grinding surface on said outer element whereby preliminary crushing is effected between said eccentric portion of said inner element and said ridges on said outer element and also between the side wall of said outer element and the inner end of the grinding surface of said inner element.

2,407,809
TREATMENT OF OXIDE COATED ALUMINUM ARTICLES
Edward V. Blackmun, Bay Village, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application February 20, 1943, Serial No. 476,655
4 Claims. (Cl. 148—6)



1. The method of uniformly coloring an aluminum article having an oxide coating anodically produced in strong acid electrolyte, said coating containing entrapped acid electrolyte, comprising immersing said article in an aqueous bath containing as a predominant component about 1 to 20 per cent by weight of dissolved alkali metal oxalate, said bath being at a pH of about 4.5 to 8, and at a temperature of about 100 to 200° F., whereby irregular coloring and spotting of the coating by the subsequent coloring step is prevented, and thereafter immersing said article in a coloring solution.

2,407,810
ELECTRICAL INDICATING SYSTEM
Leonard Boddy, Ann Arbor, Mich., assignor to The Anderson Company, a corporation of Indiana
Substitute for application Serial No. 430,785, February 13, 1942. This application November 19, 1945, Serial No. 629,552
2 Claims. (Cl. 73—347)



1. In an indicator system for showing operating conditions in connection with an internal combustion engine having a water cooling system comprising an electrical transmission circuit, including parts for its operation, a sender extending into the water cooling system adjacent one cylinder, the sender being continuously responsive to the temperature of its environment and including a housing threadedly connected to the block of said engine, an insulated take-off terminal carried by said housing, a bimetallic element supported at one end in said housing, a contact carried by the movable opposite end of the element, a stationary contact insulated from said element electrically connected to said housing and engine, a heating element associated with and influencing the action of said bimetallic element connected to said movable contact and to said take-off terminal, a receiver including a movable indicator and a dial for continuously indicating the temperature of the sender environment, a bimetallic member actable on said indicator and a heating member associated with and influencing the action of said element, said heating member being connected to one side of a source of electrical potential, said sender and receiver being of the wattage integrator type in which the wattages converted to heat by the receiver and sender bear a constant ratio to one another regardless of variation of source voltage or of resistance in series with the sender and receiver, and such wattages diminish progressively as a dangerous environmental temperature is approached, and finally when the dangerous temperature is reached, substantially disappear because of the maintenance by the sender of substantially a continuous open condition of the circuit, and a thermo-responsive switch extended into the water cooling system adjacent a second cylinder, said switch including a housing threadedly connected to the engine block, a pair of insulated terminals supported by said housing, one of said terminals being electrically connected to the heating member associated with the receiver and the other terminal being electrically connected to the take-off terminal associated with the sender, a member having one end normally engaging said other terminal of said pair of terminals and a contact carried by its other end, and a bimetallic element having one end electrically connected to the said one terminal and a contact adjacent its other end engageable with the contact of said member, said switch being constructed and arranged to remain normally closed and being normally without effect upon the receiver indication, but to open when a dangerous temperature occurs in its environment, so that the same indication will be immediately given by the receiver in response to a dangerous condition in the environment of the switch as is given in response to a dangerous condition in the environment of the sender.

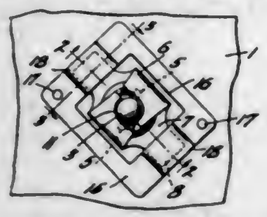
2,407,811
HOIST
Ellis W. Brundage, Sheridan, Mont.
Application January 24, 1945, Serial No. 574,272
3 Claims. (Cl. 254—187)

1. A hoist comprising a first horizontal shaft carrying at one end a drum for winding a hoist cable and at the other end a flywheel member, a clutch housing, said first shaft being journaled at an intermediate portion thereof in a first wall of said clutch housing, a second horizontal shaft aligned with said first shaft and journaled at one end in said flywheel member and at the other end in a second wall of said clutch housing, said second shaft carrying a ratchet element, pawl means on said clutch housing arranged to allow rotation of said second shaft only in a cable winding direction of said first shaft when said first and second shafts are coupled together, said flywheel member being provided with a first clutch element, said second shaft being provided with a second clutch element secured thereto to cooperate with said first clutch element to rotatably connect said second shaft to said flywheel member, means for moving said second clutch element into operative engagement with said first clutch element, gear means formed on the periphery of said flywheel, driving means for said gear means, said driving means comprising an electric motor mounted on said clutch housing, the shaft of said motor being horizontal and parallel with said first shaft of the hoist, said motor shaft extending into the housing beyond the plane of said flywheel, the inwardly extending portion of said motor shaft being threaded, a pinion member threadedly engaged with said motor shaft and adapted to be moved into meshing engagement with said gear means upon actuation of said motor by a source of electric power of definite polarity, abutment means maintaining said pinion member in meshing engagement with said gear means during operation of said motor, said definite polarity of the power source being such as to rotate said motor shaft to produce rotation of said first hoist shaft in the winding direction of said hoist cable.

2,407,812
MEANS FOR THE REMOTE CONTROL OF FLUID PRESSURE ACTUATED APPARATUS
Sidney Richard Cain, Henley-on-Thames, England
Application May 10, 1944, Serial No. 534,972
In Great Britain April 30, 1943
3 Claims. (Cl. 121—41)

1. In a machine of the character described, a movable member, a fluid motor for operating said member including a cylinder and piston, a manually operated distributor adapted to be interposed between a source of fluid pressure supply and the said movable member, said distributor having a housing, a set of ports comprising an inlet port connected to the source of supply and an exhaust port, a second set of ports in said housing connected to the cylinder of said fluid motor to thereby provide for moving said piston, said piston having a piston rod connected outside the said cylinder to said movable member, power imparting means carried by an end of said movable member, an inner and an outer ported element forming cooperating ported elements one of which is manually operated and the other of which is power driven by said power imparting means in synchronism with the movable member, all of the ports in the said distributor housing communicating with a corresponding number of ports in the periphery of the inner ported element, said latter ports all contained in a common plane normal to the axis of the inner element and all being surrounded by the outer ported element, the latter ported element having a pair of diametrically opposed ports extending around the circumference of the inner ported element so that in the idle setting of the distributor the ports in the outer element communicate with the ports in the periphery of the inner element communicating with only one of the said sets of ports in the housing, but adapted to move into communication with the other ports in the inner element immediately when rotation is imparted to one ported element relatively to the other, whereby movement of said movable member is maintained by moving said manually operated member to a selected predetermined port alignment with the said set of ports connected to the fluid motor for driving said piston and movable member to impart movement to said power driven ported element, until movement of said manually driven ported element is arrested and breaks said port alignment and stops movement of said movable member by the final movement of the piston.

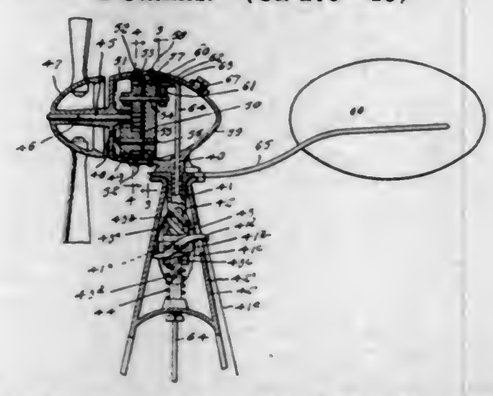
2,407,813
PROCESS FOR MANUFACTURE OF SUPPORTED CATALYSTS
Harry A. Cheney, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 21, 1943, Serial No. 491,723
8 Claims. (Cl. 252—253)



5. In the preparation of catalysts comprising a metal selected from the group consisting of cobalt and nickel and activated carbon particularly effective in the conversion of olefinic hydrocarbons to the lower boiling of the linear polymers thereof, the method of obtaining catalysts of substantially improved uniformity with respect to composition and catalytic activity which comprises admixing an aqueous solution of a nitrate of a metal selected from the group consisting of cobalt and nickel with activated carbon in a closed vessel, applying heat to the vessel under controlled conditions effecting a gradual increase in the temperature of the contents thereof up to about 400° C., removing volatilized materials and decomposition products from the vessel substantially as rapidly as formed therein, continuing the heating until evolution of any substantial amount of decomposition products has ceased, cooling the contents of the vessel, and maintaining a subatmospheric pressure below about 150 mm. of mercury in said vessel during said admixing, heating and cooling steps.

2,407,814
CATALYSTS
Harry A. Cheney, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 21, 1943, Serial No. 491,724
5 Claims. (Cl. 252—251)

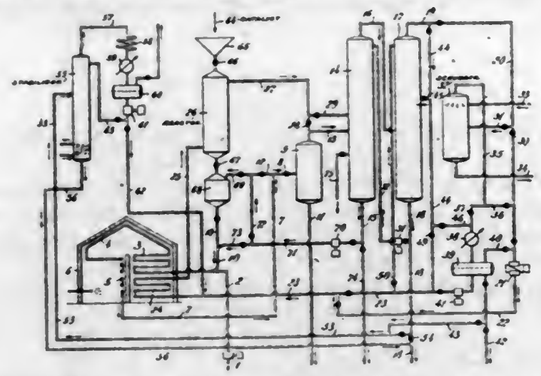
4. In the preparation of catalysts comprising activated carbon and a metal of the group consisting of cobalt and nickel, the method of obtaining catalysts of improved uniformity with respect to composition and catalytic activity which comprises heating an admixture of activated carbon and an aqueous solution of a nitrate of a metal selected from the group consisting of cobalt and nickel in a closed vessel under conditions of progressively increasing temperature, removing volatilized material and gaseous decomposition products from the vessel, introducing water into the vessel to assure the presence of water therein throughout said heating, continuing said heating in the presence of added water until at least a substantial part of the metal nitrate has undergone decomposition, and thereafter heating the contents of the vessel without further water addition at a higher temperature not substantially in excess of that required to effect decomposition of the remaining nitrate.



2,407,815
SHIFTABLE COWLING AND LIKE SOCKET FASTENER MEMBER
Wilmer H. Churchill, Saugus, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application September 14, 1942, Serial No. 458,239
6 Claims. (Cl. 24—221)

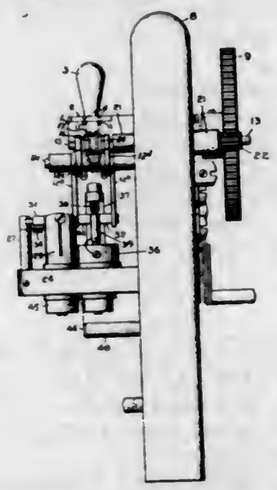
1. A shiftable socket fastener member for attachment to an apertured support comprising a stud-receiving socket having an elongated base with an aperture and a raised stud-engaging seat adjacent said aperture, the opposite end portions of said base being of less width than the intermediate portions of the base and constituting bearing sections, and a plate-like attaching member adapted to be securely attached to a support and having an aperture adapted to be aligned with the aperture of the stud-receiving socket in any of the shiftable positions, portions of said member on diametrically opposite sides of the aperture thereof being outwardly dished pro-

viding recesses for loosely receiving and confining said narrow bearing extensions, and portions of said member extending under said outwardly dished portions and constituting supporting members upon which said bearing extensions are adapted to slidably bear and maintain said member and socket in shiftable assembled relation prior to attachment of the fastener to a support.



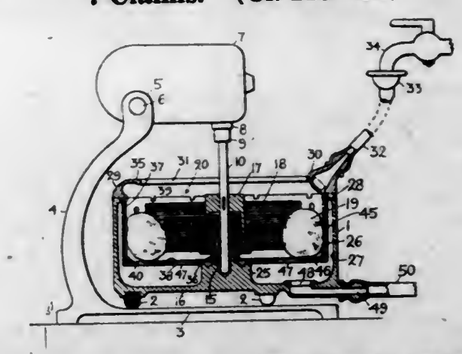
2,407,816
FOLDING TAIL VANE WINDMILL
Severin F. Czerner, Kings Mill, Tex.
Original application December 30, 1943, Serial No. 516,310. Divided and this application September 22, 1944, Serial No. 555,300
4 Claims. (Cl. 170—46)

1. A device of the class described having a body, a shaft journaled therein for rotation through the action of a wind wheel, a rod to actuate a pump or the like, a crank connected to said rod, gearing driven by said shaft and operatively connected to said crank, a tower, a wind vane, a tube journaled in said tower and connected to the wind vane, a tube depending from the body passing through and beyond the first-mentioned tube, said rod extending through the second-mentioned tube, a collar on the tubes, a lug and spiral groove connection between the collar and each of the tubes, a furling element, and a lever to actuate the collar for operation by the furling element for rotating the first mentioned tube relatively to the last mentioned tube.



2,407,817
CONVERTING HYDROCARBONS
Arthur V. Danner, Villanova, Pa., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application March 28, 1945, Serial No. 585,349
8 Claims. (Cl. 196—52)

1. In a process for the conversion of hydrocarbons of higher boiling point to motor fuel of high quality the steps which comprise: subjecting a liquid hydrocarbon to cracking conditions of time, temperature and pressure to convert a substantial portion thereof to gasoline and other portions thereof to olefines, in the presence of a solid, particle-form adsorptive contact mass maintained in suspension in said charge, separating the products of such cracking into vapors and a liquid fraction containing the suspended solid, fractionating the vapors into an olefine containing fraction, a gasoline, and a heavier-

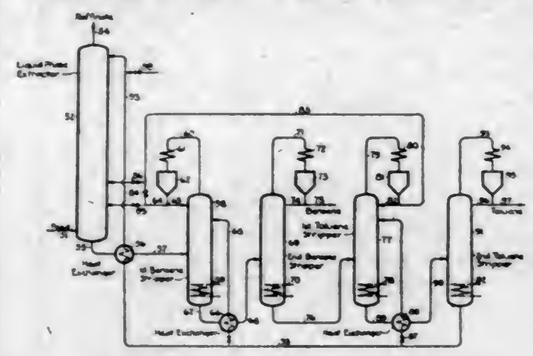


than-gasoline fraction, contacting the olefine fraction at reaction conditions of temperature and pressure with a solid particle form adsorptive catalytic contact mass to convert a substantial portion thereof to material of gasoline boiling range, passing the vaporous products of such conversion to common fractionation with the vapors of the first cracking operation, removing contact mass from the olefine conversion stage, and injecting said contact mass into suspension in the hydrocarbon in the first cracking operation.

2,407,818
AUTOMATIC TELEGRAPH TRANSMITTER
José Gomes de Almeida, Rio de Janeiro, Brazil
Application June 8, 1944, Serial No. 539,238
In Brazil June 8, 1943
3 Claims. (Cl. 178—17)

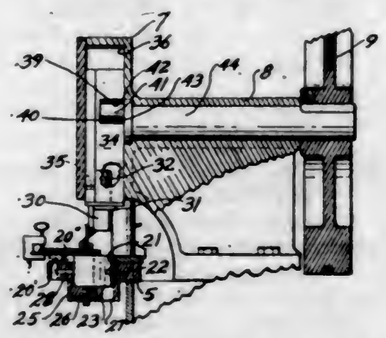
1. In an automatic telegraph transmitter, a tape support over which tape can be passed in a predetermined tape plane, a pecker axle extending parallel to said tape plane, two pecker sleeves rotatable on said pecker axle, two pecker bars projecting radially from said two pecker sleeves, respectively, substantially in a plane parallel to said tape plane, two peckers, integral with the free ends of said pecker bars, respectively, and projecting at right angles from the latter toward said tape plane, a cam shaft extending parallel to said pecker axle adjacent to and transversely of said pecker bars, two eccentrics fixed on said cam shaft for cooperation with said two pecker bars, respectively, said eccentrics being shaped to prevent normally rocking movements of said pecker bars and peckers towards said tape plane and to permit rocking of each pecker bar and pecker towards said tape plane for a fraction of each revolution of the cam shaft, two wire springs, each having one end thereof supported on one of said eccentrices and being wound around said pecker axle with the opposite end of each spring acting on the corresponding pecker bar to urge the same against the associated eccentric, two substantially parallel transmitter bars integral with said pecker sleeves and projecting radially therefrom, and a transmitter lever disposed adjacent the free ends of said transmitter bars, said transmitter lever being rockable on an axis in a plane extending between said transmitter bars at right angles to said pecker axle.

2,407,819
POTATO PEELER
Charles H. Dolan, II, Old Greenwich, Conn.
Application February 9, 1945, Serial No. 576,991
7 Claims. (Cl. 146—50)



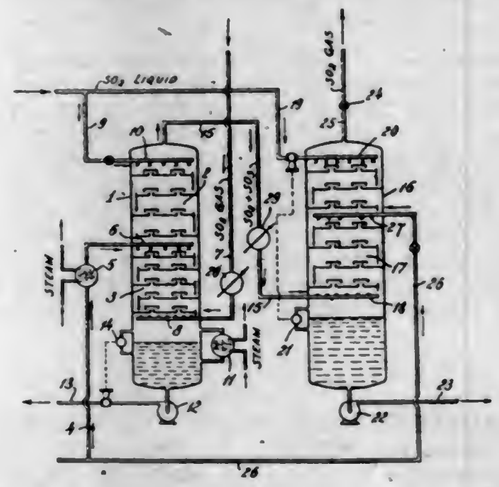
2. A potato peeler comprising an outer cylindrical bowl open at one end and having a bottom plate; a shaft rotatively supported in the bottom plate, the outer end of the shaft being arranged to be connected with a source of power for its rotation; an inner bowl having cylindrical walls open at one end and closed by a bottom plate at the other end, the walls and the bottom plate of the inner bowl being spaced from the walls and from the bottom plate of the outer bowl and provided with drain holes; means to admit water into the inner bowl, the inner bowl being adapted to receive vegetables to be peeled; means on the shaft for moving the vegetables around in the inner bowl; and sheets of an abrading material removably supported on the inner surface of the inner bowl for abrading the vegetables, the outer bowl having an opening for draining the water.

2,407,820
PROCESS FOR SEPARATING AROMATIC HYDROCARBONS
Emmett L. Durrum, Palo Alto, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application March 23, 1943, Serial No. 480,251
6 Claims. (Cl. 260—674)



5. In a process for separately recovering a plurality of successively higher-boiling aromatic hydrocarbons from a mixture containing them and non-aromatic hydrocarbons which, upon distillation of said mixture, normally form low-boiling azeotropes with said aromatic hydrocarbons, the steps of extracting said mixture in the liquid phase in an extraction zone with a relatively

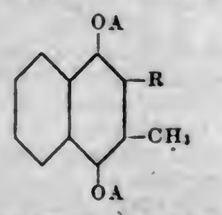
high-boiling selective solvent for aromatic hydrocarbons under conditions to form extract and raffinate phases, said extract phase containing said aromatic hydrocarbon in excess of that quantity of said non-aromatic hydrocarbons which can form azeotropes therewith, separating said phases, distilling said extract phase under conditions to take overhead first azeotropes formed with the lowest boiling of said aromatic hydrocarbons and to leave a first bottom product comprising said solvent and an excess of said lowest boiling aromatic hydrocarbon substantially free from non-aromatic hydrocarbons which normally form azeotropes therewith, and higher boiling hydrocarbons, condensing said overhead azeotrope, returning at least a portion



of the resulting condensate to said extraction zone, distilling said bottom product under conditions to take overhead said low-boiling aromatic hydrocarbon and to leave a second residual bottom product comprising solvent and residual hydrocarbons substantially free from said low-boiling aromatic hydrocarbon, distilling said second bottom product under conditions to take overhead second low-boiling azeotropes formed with the next higher boiling aromatic hydrocarbon and to leave a third bottom product comprising solvent and an excess of said next higher boiling aromatic hydrocarbon substantially free from the non-aromatic hydrocarbons which form azeotropes therewith, and distilling said third bottom product under conditions to take overhead said next higher boiling aromatic hydrocarbon.

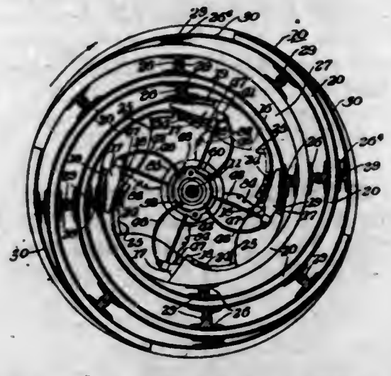
2,407,821
INDENTING DEVICE
Burr N. Engle, Los Angeles, Calif., assignor to Inga M. Engle, Los Angeles, Calif.
Application June 13, 1944, Serial No. 540,167
8 Claims. (Cl. 76—29)

1. In a notching device for bands, blades, plates, etc., a supporting means having male and female die elements attached thereto and arranged to contact one another, power means connected with one of the elements for moving it into and out of contact with the other element, a bed plate, a carrier for holding and moving the thing to be notched, plate means supported by the bed plate and having a snug fitting bearing means with one of the die elements so as to be set in any one of a plurality of angular positions with respect to the other die element, guide means fixed to the plate means and in contact with the carrier to direct it along a definite path across a portion of one of the elements, operating means for automatically moving the carrier a predetermined distance at each stroke of the moving element, and clamping means for holding the thing to be notched on the carrier for movement therewith as each notch is cut.



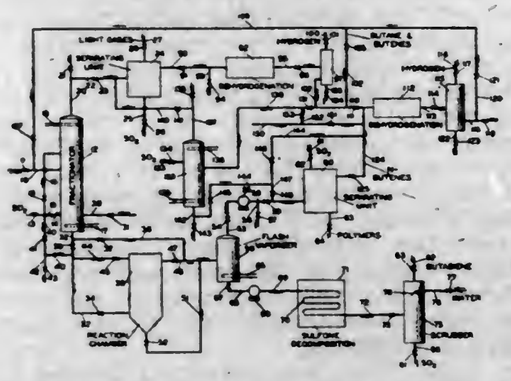
2,407,822
METHOD FOR MAKING ACID REAGENTS
Frank C. Fahnestock, Haddonfield, N. J., and William A. Hagerbaumer, Haverford Township, Delaware County, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application December 14, 1943, Serial No. 514,222
3 Claims. (Cl. 23—177)

1. That method of handling acidic oxygen products of sulfur comprising contacting an oleum containing dissolved sulfur trioxide with gaseous sulfur dioxide under temperature and pressure conditions conducive to evaporation of sulfur trioxide from oleum to produce a gaseous mixture of sulfur dioxide and trioxide and then in a separate region contacting said gaseous mixture with a liquid absorbent for said sulfur trioxide selected from the group consisting of liquid oxides of sulfur and hydrates of sulfuric anhydride to absorb sulfur trioxide therein.



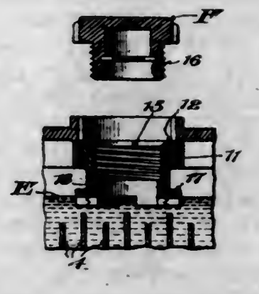
2,407,823
ANTIHEMORRHAGIC ESTERS AND METHODS FOR PRODUCING THE SAME
Louis F. Fieser, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application December 23, 1939, Serial No. 310,855
20 Claims. (Cl. 260—457)

6. A compound of the formula:



where R is a member of the group consisting of hydrogen and non-cyclic aliphatic hydrocarbon groups, and A is a member of the group consisting of SO_3H and PO_3H_2, and alkali metal salts thereof.

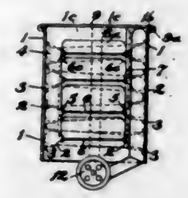
2,407,824
TURBINE ENGINE
John A. Fisher, Tarpon Springs, Fla.
Application November 22, 1943, Serial No. 511,287
15 Claims. (Cl. 60—41)



5. In an internal combustion turbine, the combination of a rotor, an axial shaft upon which the rotor is mounted and which moves with the latter, means carried by the rotor and actuated by the burning gases of combustion to rotate the same, the shaft being provided with an axial bore for conducting fuel to said means, a conduit, a rounded head on the end of the shaft and having a bore communicating with the bore of the shaft, a socket in which the head is received for rotation, the socket and the head being provided with curvilinear mating surfaces, and a conduit connected to the outer end of the socket for the supply of fuel to the latter.

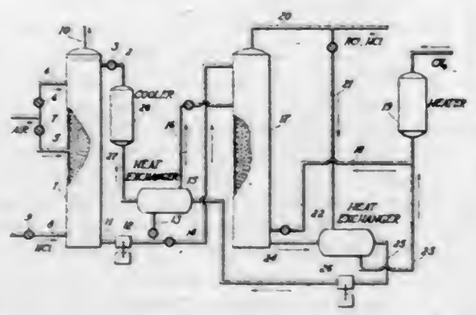
2,407,825
PRODUCING AND CONCENTRATING DIOLEFINS
Frederick E. Frey, Bartlesville, Okla., and Robert D. Snow, Edgewood, Md., assignors to Phillips Petroleum Company, a corporation of Delaware
Original application April 1, 1941, Serial No. 386,324. Divided and this application August 28, 1943, Serial No. 500,408
16 Claims. (Cl. 260—329)

8. A continuous process of separating an aliphatic conjugated diolefin from admixture with close-boiling corresponding olefin and paraffin which comprises continuously feeding said diolefin-containing mixture and from one-half to three times its weight of sulfur dioxide into a fractional distillation column, the amount of said sulfur dioxide being so much in excess of that molecularly equivalent to the diolefin present in said mixture that free sulfur dioxide is present in the bottom of said column at all times, operating said column with a bottom temperature of 80° C. and a top temperature of 60° C. fractionally distilling in said column in such manner that substantially all of said diolefin and olefin is concentrated in the bottom portion thereof in admixture with an excess of sulfur dioxide and said paraffin forms an azeotrope with sulfur dioxide, reacting substantially all of said diolefin with said sulfur dioxide in the bottom portion of said column to form diolefin monosulfone, continuously maintaining in said column a concentration of branched-chain monoolefin corresponding to said diolefin in an amount corresponding to from 2 to 10 per cent of the total hydrocarbons present such as to prevent formation of heteropolymeric reaction products of diolefin and sulfur dioxide and continuously withdrawing from said column an overhead of said azeotrope of paraffin with sulfur dioxide and a bottoms product containing said monosulfone and said olefin and relatively free from unreacted diolefin.



2,407,826
CONSTRUCTION FOR ELECTRIC STORAGE BATTERIES
George R. Godber, Los Angeles, Calif.
Application March 12, 1941, Serial No. 383,031
3 Claims. (Cl. 136—178)

1. In an electric storage battery, a casing, plates therein, a cover having a filling opening, a depending collar surrounding said opening and having the major portion of its internal diameter of the same diameter as the opening, an internal shoulder formed integrally with and near the lower end of the collar, a vertically movable sleeve for filling the battery with liquid and also providing an internal gas venting passage of wide area, said sleeve having an external annular abutment near its top whose outer edge has a close sliding fit with the internal diameter of the collar, whereby, when the sleeve is moved downwardly said abutment rests flush on said shoulder to provide a gas tight seal and also to determine the downward limit of travel of the sleeve and sustain the bottom edge thereof a predetermined distance above the upper edges of said plates, an abutment at the lower end of said sleeve extending outwardly therefrom to engage the lower end of said collar and determine the upward limit of movement of said sleeve in the collar, means for preventing rotation of the sleeve in the collar, and a closure cap having a vented head whose bottom outer edge is adapted to engage with the top of the filling opening, said cap also provided with a hollow shank communicating with the sleeve and having a threaded connection with the inner wall of said sleeve, whereby, rotation of said cap in one direction to close the filling opening raises the sleeve to its limit of upward movement to lift its lower end out of the liquid and thus permit all of the space between the liquid and the underside of the cover to communicate directly through the



sleeve with the vented head of the filler cap, and the cap upon rotation in the opposite direction and removal from the sleeve releases the sleeve for downward movement to rest on the shoulder of the collar to permit liquid to be supplied therethrough to the casing.

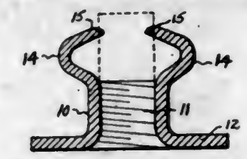
2,407,827
REFRIGERANT EVAPORATOR
George Raymond Goldsmith, Girraween Grove, Ashgrove, Brisbane, Queensland, Australia
Application March 1, 1944, Serial No. 524,604
In Australia May 13, 1943
6 Claims. (Cl. 62—126)

1. In a refrigerator of the absorption type, having an evaporating coil in the form of a plurality of substantially horizontally disposed U-shaped turns, said turns being arranged in superimposed vertically spaced relation with corresponding portions of the several turns in vertical alignment, a low temperature cooling chamber consisting of thin metal outer sides having front flanges and back held to the turns of the evaporator coil by flanged half-sleeves passing around said turns; longitudinal channelled fins upon said half-sleeves; shelves with upturned rear ends for forming sections of the rear inner wall, the side edges of said shelves being slidable in the channels of the fins, and provided with chamfers and slots for avoidance of obstacles; liners for location between the upturned ends of said shelves and the half-sleeves on the one hand, and behind right angled cover plates secured to the front flanges on the outer sides on the other hand; flanges on the tops of said sides, a top with inturned side edges for sliding along the flanges on the tops of said sides; a face plate secured upon said cover plates, and a door hinged to said face plate.

2,407,828
HYDROCARBON CONVERSION PROCESS
Everett Gorin, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application October 25, 1943, Serial No. 507,618
17 Claims. (Cl. 260—659)

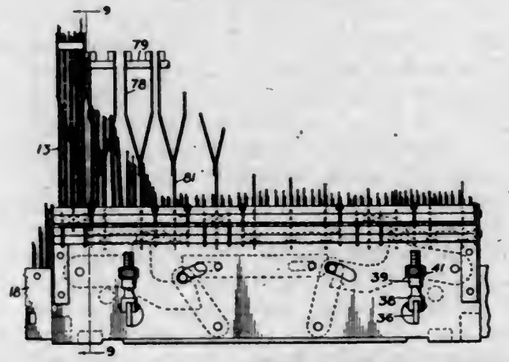
15. A continuous process for the production of aliphatic-hydrocarbon chlorides from hydrogen chloride and aliphatic hydrocarbons which comprises: passing an oxygen containing gas and hydrogen chloride in contact with cuprous chloride in a reaction zone while maintaining the temperature within the range of from 200° C. to 475° C. to form cupric chloride, removing water vapor from said reaction zone, circulating the cupric chloride to a separate reaction zone, contacting the cupric chloride with at least one aliphatic hydrocarbon in said separate reaction zone at a temperature above 325° C. to chlorinate the hydrocarbon and reform cuprous chloride from the cupric chloride, circulating the reformed cuprous chloride to the first mentioned reaction zone and recovering the aliphatic-hydrocarbon chloride formed.

2,407,829
ILLUMINATING DEVICE
John R. Gorder, Bismarck, N. Dak.
Application July 12, 1944, Serial No. 544,546
2 Claims. (Cl. 240—41.1)



1. In a beam projecting lamp of the type specified and adapted to produce a light beam directed and confined to one side of and limited by the plane of a predetermined bordering surface, a closed lamp casing having a front wall, the inner surface of which is light absorbent and non-reflective and provided with an opening for the emission of the beam, a source of light within the casing, located at a lower corner thereof and adjacent the lower edge of the front wall, a small reflector surrounding said source of light in close proximity thereto and directing the light rays therefrom through a restricted opening in said reflector, a curvilinear reflecting surface within said casing, located on an upper rear portion of the casing and formed from a radius point within the casing located adjacent the lower front wall portion and between the source of light and the beam opening of the front wall, the upper edge of the reflector terminating at an upper forward corner of the casing and contiguous to the upper edge of the front wall and its lower edge terminating substantially coincident with a transverse plane which is coincident itself with the top boundary of the beam opening of the front wall, the lower remaining portion of the casing between said reflecting portion and the source of light having its inner face made light absorbent and non-reflective, whereby a beam is projected from the beam opening of the front wall and confined effectively below and lengthwise of the aforesaid plane which is coincident with the top boundary of the beam opening.

2,407,830
LOCK NUT
Theodore R. Griffin, Belmont, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application June 5, 1943, Serial No. 489,851
3 Claims. (Cl. 151—14)

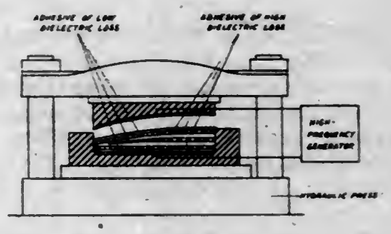


1. A lock nut for cooperation with a screw passed through an apertured piece of work, said

nut being formed from a single piece of sheet metal and having a tubular internally threaded screw-receiving barrel and a base disposed at right angles to said barrel, and locking means integrally connected with the end of the barrel opposite the head for engaging the screw beyond

said barrel, said locking means comprising a plurality of outwardly bowed resilient fingers having end portions normally disposed within the path of the threads of the screw and expandible thereby to engage the threads of the screw under tension to resist turning thereof in withdrawing direction.

2,407,831
VOTING MACHINE
Alvin N. Gustavson, Bemus Point, N. Y., assignor to Automatic Voting Machine Corporation, Jamestown, N. Y., a corporation of Delaware
Application December 24, 1942, Serial No. 470,046
4 Claims. (Cl. 235—54)

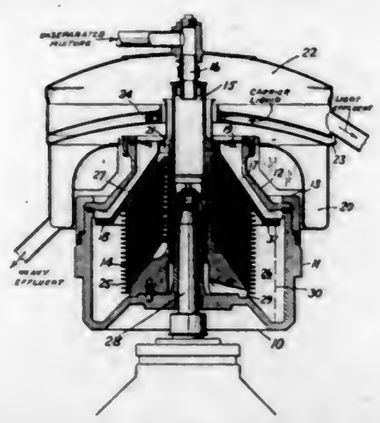


3. In a voting machine, a plurality of interlocking straps, an interlock common to all of said straps having grouping pins and compensators for limiting to a predetermined maximum the number of straps that may be actuated, a pair of pivotally movable members, hook-like elements engaged with and segregating said straps into a plurality of groups, said elements serving to connect said groups with said members, means connecting said members in a manner to render either of said members inoperative, and the straps connected therewith, upon operation of the other of said members, an adjustable compensator for said interlock, said compensator being connected with and movable by one of said members to change the capacity of said interlock to control actuation of the straps.

2,407,832
COMBINATION HAND TOOL
Ludvig Christiansen Hotvedt, Cambridge, England
Application August 10, 1943, Serial No. 498,115
In Great Britain August 10, 1942
5 Claims. (Cl. 7—15)

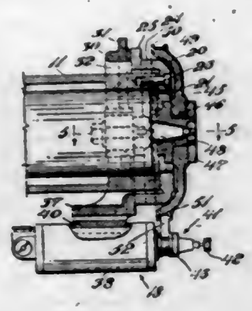
1. A tool comprising in combination a handle, a plurality of implements located in the handle so that their working ends are always outside the latter, said implements being relatively slidable endwise side by side, a spring to retain one of said implements with its working end positioned inwardly below the working end of another implement, catch means to hold the spring controlled implement projected outwardly with its working end extending beyond the other implement, and a collar on the spring retained implement at a position outside the handle, said collar embracing the implements and affording means for manipulating said spring retained implement.

2,407,833
METHOD OF MANUFACTURING ARTICLES FROM FIBROUS MATERIAL
Bruno Jablonsky, Waddon, Croydon, England
Application June 1, 1944, Serial No. 538,337
In Great Britain April 30, 1943
6 Claims. (Cl. 154—126)



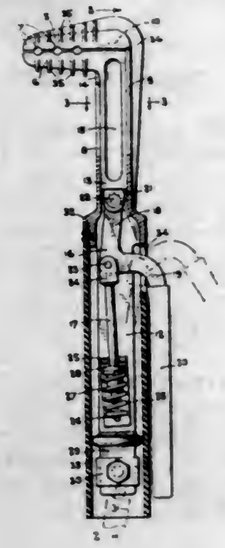
1. Method of manufacturing shaped articles from fibrous material which is bonded together by an adhesive under pressure and heat in a high frequency electric field, wherein an adhesive of high electric loss factor is used at thicker cross sections of an article and an adhesive of relatively lower electric loss factor is used at thinner cross sections of the article.

2,407,834
CENTRIFUGAL SEPARATION
Leo D. Jones, Philadelphia, Pa., assignor to The Sharples Corporation, Philadelphia, Pa., a corporation of Delaware
Application February 8, 1945, Serial No. 576,793
4 Claims. (Cl. 196—19)



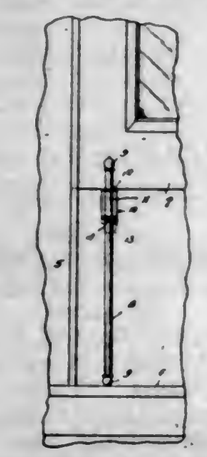
1. In the treatment of a mixture of liquid phases comprising a lightest liquid phase, a heaviest liquid phase and a liquid phase of intermediate specific gravity which is present in a minor proportion, the process comprising subjecting said mixture to centrifugal sedimentation, continuously discharging said lightest liquid phase from the zone of centrifugal sedimenta-

tion, continuously discharging the heaviest liquid phase from the zone of centrifugal sedimentation through a space interconnecting said centrifugal sedimentation zone with a liquid balancing zone of said heaviest liquid phase and thence from the influence of centrifugal force under liquid balance against the liquid phases being subjected to centrifugal sedimentation, and establishing communication between the zone of sedimentation of liquid phase of intermediate



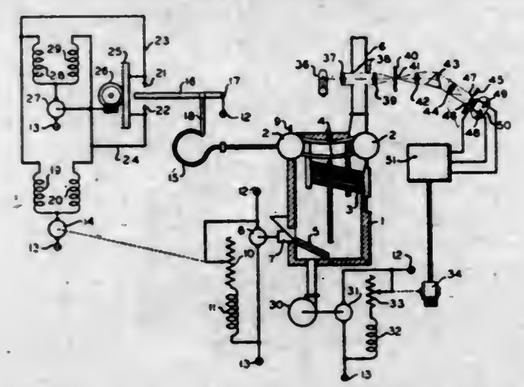
specific gravity being subjected to centrifugal sedimentation and the liquid balancing zone of the discharging heaviest liquid phase at a zone spaced inwardly from said interconnecting space, said communication being sufficient to permit passage of the sedimented intermediate phase into confluence with the discharging heaviest liquid phase for discharge therewith, but insufficient to permit discharge of a substantial proportion of the lightest phase with said heaviest phase.

2,407,835
ATTACHMENT FOR GRINDING MACHINES
Alexander W. Keema, Providence, R. I., assignor, by mesne assignments, to Bay Products Corporation, a corporation of Massachusetts
Application April 4, 1944, Serial No. 529,493
10 Claims. (Cl. 51—166)



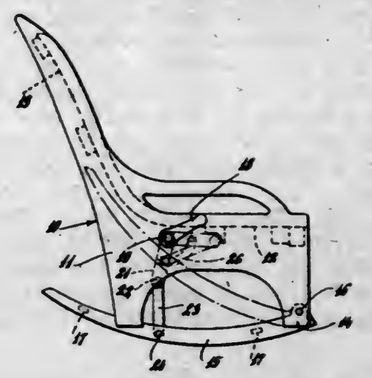
3. In combination with a grinding machine spindle and housing therefor, a grinding attachment wholly supported by said spindle and housing comprising an adapter member secured to the spindle housing, a bracket secured to said adapter to embrace the spindle housing inwardly from the outer extremity of the spindle, a tool shaft rotatably carried by said bracket, a pulley carried by said tool shaft and positioned at a location substantially inwardly of the outer extremity of the spindle, a pulley secured to said spindle cupped to extend over said adapter member and a belt embracing said pulleys whereby said spindle drives said tool shaft.

2,407,836
ELECTRODE HOLDER FOR USE IN ELECTRIC WELDING
Frederick George Ketelbey and George Mason, Birmingham, England
Application January 16, 1945, Serial No. 573,024
In Great Britain January 26, 1944
10 Claims. (Cl. 219—8)



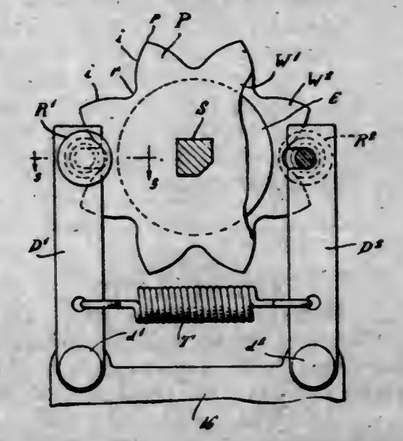
1. An electrode holder of the kind referred to, including a pair of jaws, a shank for each of said jaws, one of said shanks being of channel form in which the other shank is slidably mounted for moving the jaws in relation to one another, an abutment in said channel-like shank, toggle mechanism including toggle links, said toggle links being connected between one end of the slidably mounted shank and said abutment, an operating handle for moving said toggle mechanism, spring means associated with the toggle mechanism, and said toggle links being movable through an over-dead-centre position, so that the grip on the electrode is maintained automatically without the necessity of the operator maintaining pressure on the operating handle.

2,407,837
WINDOW STOP
William H. Kissel, Ludington, Mich.
Application June 15, 1944, Serial No. 540,396
1 Claim. (Cl. 292—288)



A removable and replaceable window sash supporting stick comprising a vertical rod adapted to have its lower end positioned longitudinally supported on a window sill or equivalent support with its upper end terminating above the lower edge and alongside of the sash as mounted vertically slidable in the window frame, and a supporting stop member adjustable longitudinally on the rod, the stop member being formed from a single elongated piece of resilient sheet metal rebent angularly to form an intermediate portion offset laterally from the rod so as to extend under the sash with an integral pair of legs adjustably supported on said rod longitudinally thereof, the upper leg being the longer and disposed substantially horizontally and perpendicularly to the rod and having therein an elongated longitudinal slot through which said vertical rod is constantly slidable freely and without binding, the intermediate portion of the stop member being inclined downwardly and towards the rod, the lower leg being the shorter and inclining upwardly from said intermediate portion towards the rod and provided with an aperture of a diameter only slightly greater than the diameter of the rod whereby, in the normal angular set of said lower leg and the weight of the sash imposed upon the leg, the supporting stop member is held from downward movement on the rod so as to support the sash and whereby, also, for a predetermined positioning of said stop member on the rod said member is readily movable upwardly on the rod and downward movement of the member is effected by spreading and holding said lower leg of the member in the direction away from the upper leg.

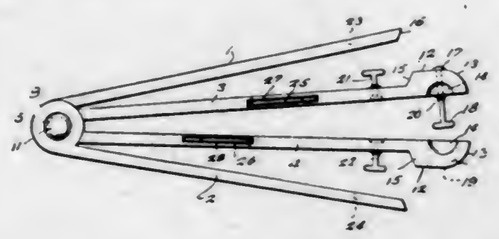
2,407,838
MEASURING APPARATUS
Waldo H. Kliever, Minneapolis, Minn., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 30, 1942, Serial No. 460,326
4 Claims. (Cl. 88—14)



1. The spectroscopic method of continuously analyzing the composition of a stream of gas moving along a predetermined flow path which consists in passing a beam of radiant energy including rays of different wave lengths into interception with the gas stream in a predetermined portion of said path, dispersing the beam rays passing through said stream in accordance with their wave lengths to form a spectrum, and selecting from said spectrum a first beam of rays of wave lengths which are not substantially absorbed by carbon dioxide and a second beam of rays of wave lengths which are absorbed by carbon dioxide, the said wave lengths being such that the intensity of the second beam is equal to the intensity of the first beam when the gas includes a predetermined carbon dioxide content and no other substance which selectively affects one of said beams to a significant extent, comparing the intensities of said selected beams, utilizing each of said selected beams to create an electromotive force proportional to the intensity of that beam, and applying said electromotive forces to an indicating means to produce an indication proportional to the difference between said intensities.

2,407,839
CONVERTIBLE ROCKING CHAIR
Manuel G. Lemos, New York, N. Y.
Application November 3, 1944, Serial No. 561,658
1 Claim. (Cl. 155—73)

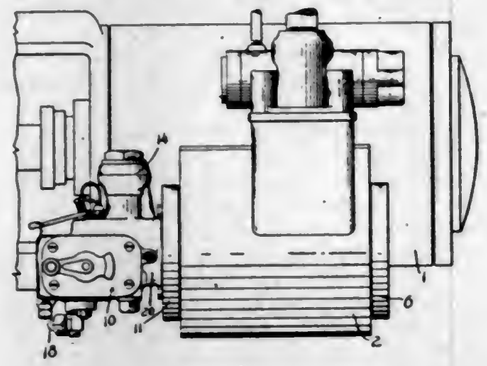
In a convertible rocking chair having four supporting legs, two rockers tiltably attached to the inner side of the lower portion of the two front legs of the chair and adapted to swing up and down between all four legs of the chair, crossbars connecting said rockers to each other, a shaft horizontally extended through the chair below its seat portion, a handle secured to each end of said shaft and adapted to be manipulated by a person sitting on the chair, two levers secured to said shaft and being located between the side portions of the chair, a connecting link pivotally secured to the lower end of each of said levers, a crossbar having cylindrical end portions which extend through the lower ends of said connecting links and through said rockers so as to secure said rockers pivotally to said connecting links and a pin laterally secured to at least one of said levers and extending into a curved groove in the side portion of the chair, said groove and said pin being adapted to limit the movement of said levers, all substantially as described.



2,407,840
ROTARY INDEXING MECHANISM
Robert D. Leonard, Aldan, Pa.
Application February 2, 1945, Serial No. 575,884
2 Claims. (Cl. 74—527)

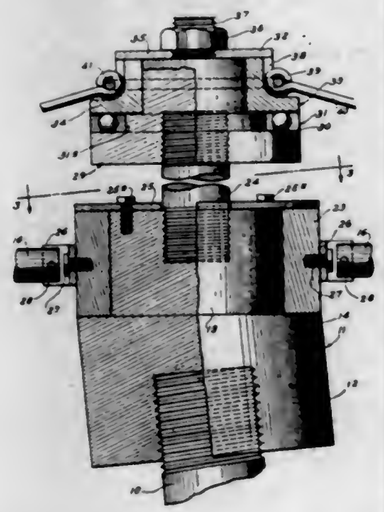
1. In a rotary indexing mechanism having a shaft mounted for axial rotation manually to locate an indexing member thereon to a plurality

of regularly spaced indexing positions, an indexing means, said means comprising a pair of identical shaped star wheels each having a plurality of star points corresponding in number to the said plurality of indexing positions and being regularly spaced apart a distance corresponding to the spacing between said indexing positions with the edges of said star points being outwardly curved to provide a high point thereon intermediate the tip and base of each star point with the base of adjacent star points grooved to provide an arcuate seat therein, means securing the star wheels coincidentally aligned upon the shaft in spaced relation to be rotated therewith with the arcuate seat between one pair of adjacent aligned star points in radial alignment with the indexing member on the shaft, and an inwardly spring urged roller member on opposite sides of said star wheels arranged for rotative engagement with the edges of said coincidentally aligned star wheels, each roller member being provided with grooves aligned to receive said star wheel edges, the diameter of the said roller member at the bottom of each groove approximating the diameter of the arcuate seat in the said star wheels.



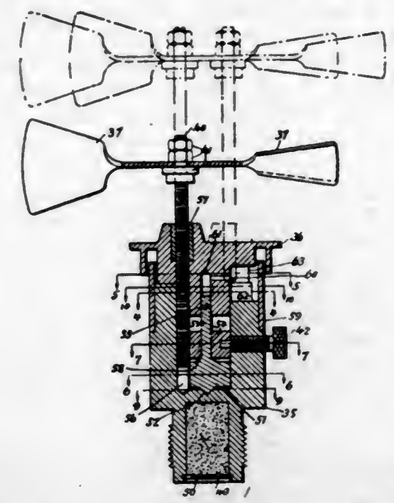
2,407,841
GARMENT HANGER
Frank Le Roy, San Diego, Calif., assignor of one-half to James D. Robinson, San Diego, Calif.
Application December 29, 1944, Serial No. 570,386
2 Claims. (Cl. 223—96)

2. In a garment hanger, a pair of inner and a pair of outer clamping bars pivoted together at corresponding ends thereof for swinging into and out of parallel relation, the inner clamping bars complementing each other to clamp a garment therebetween, and the outer clamping bars each complementing one of said inner bars to clamp a garment therebetween, means to fasten each outer clamping bar to its complementary inner clamping bar in clamping relation thereto, and means to fasten the inner clamping bars together in clamping relation, said inner bars having free ends with lateral reinforcement forming bosses thereon provided with finger grip forming sockets therein for use in swinging said inner bars, said bosses having oblique stop shoulders thereon, said outer bars having oblique free end edges for fitting against said shoulders to space said outer bars from the inner bars.



2,407,842
LUBRICATOR
Thomas C. McBride, Philadelphia, Pa., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application January 29, 1943, Serial No. 473,914
1 Claim. (Cl. 184—55)

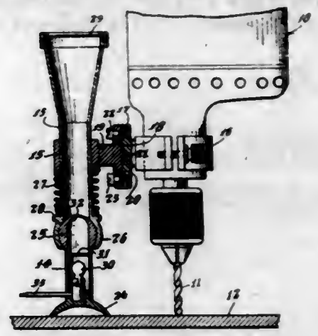
The combination of a valve chest body for a steam cylinder, said body having a piston-containing bore opening at one end through the body, means for creating a fluctuating steam pressure in said bore, a lubricator comprising in part a housing, pressure actuated lubricator operating means in said housing, a part of said housing forming a wall portion thereof and comprising a closure for the open end of said bore, and means



attaching said housing to said body, said part being provided with a steam conveying passage leading from said bore to said pressure actuated lubricator operating means to provide a supply of fluctuating steam pressure therefor.

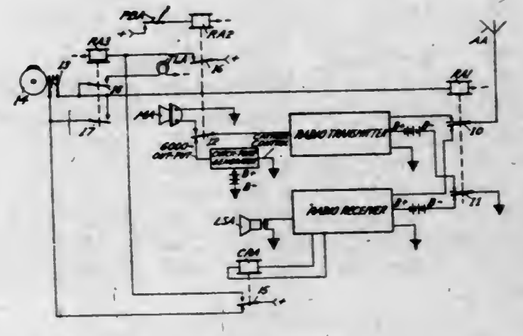
2,407,843
MERRY-GO-ROUND FOR PLAYGROUNDS AND THE LIKE
Donald A. McDonald, Dearborn, Mich.
Application April 23, 1945, Serial No. 589,793
6 Claims. (Cl. 272—40)

1. In a merry-go-round construction of the class described, a perpendicular fixed standard, a head screwed atop said standard, said head being provided with an integral upstanding cylindrical riser providing a journal, that portion of the head projecting beyond the outer periphery of said journal forming a ledge-like circular runway of greater diameter than the standard, a collar surrounding said journal and resting and riding on said runway, together with arms connected at their inner ends to said collar, said annular runway being canted to subject said collar to a gyratory wobble motion, an auxiliary extension standard connected to and rising from said journal, said auxiliary standard being laterally canted, a bearing head atop said second standard provided with a journal, and a hub ring surrounding said journal, together with guy rods connected at their inner ends to said hub ring for coaction with the aforementioned arms.



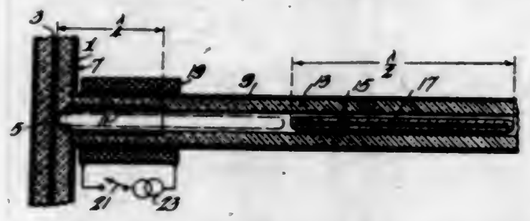
2,407,844
BOMB FUSE
Ernest C. Moriarty, Washington, D. C.
Application April 2, 1932, Serial No. 602,795
10 Claims. (Cl. 102—81.2)

1. A bomb fuse comprising a fuse body having first projections with intervening spaces thereon and provided with a cavity therein, a striker having second projections with intervening spaces thereon, a firing pin holder, a detonator holder, the three latter parts having a common axis with said cavity, said firing pin holder being secured in the body of the fuse by means of a detent operated from without the body of the fuse, said detonator holder being at the bottom of the cavity and having a stem passing through the firing pin holder and attached at the mouth of a cavity in said striker by a shearable connection, said striker being mounted in the fuse body so that it may rotate between stops, said first and second projections being in alignment in the unarmed condition and being opposite corresponding spaces in the armed condition, a firing pin, a detonator, a lead to an explosive charge, the latter three elements being out of line when the fuse is unarmed and being in line when the fuse is armed, a shaft for preventing rotation of the striker and detonator holder relative to the fuse body when the fuse is unarmed and providing a delay during arming, and a propeller for arming said fuse.



2,407,845
ALIGNING DEVICE FOR TOOLS
Roland Orisan Nemeyer, Pasadena, Calif., assignor to California Institute Research Foundation, Pasadena, Calif., a corporation of California
Application January 16, 1943, Serial No. 472,601
7 Claims. (Cl. 116—124)

1. The combination with a hand tool adapted to move with respect to a workpiece, while maintaining a desired angle of incidence with respect to said workpiece, of means associated with said hand tool for indicating deviation from said desired angle of the tool with respect to said workpiece, said indicating means comprising: a first member; means for slidably mounting said first member relative to said tool along an axis disposed in fixed angular relation thereto; a second member having a face adapted to lie against the workpiece in predetermined angular relationship therewith; a ball and socket joint pivotally interconnecting said first and second members, whereby said members assume relative angular positions corresponding to the relative angular positions of said tool and workpiece; and index means for indicating the relative angular posi-



tions of said members including a screen on said first member, and means on said second member for projecting an indication through said ball and socket joint onto said screen.

2,407,846
RADIO COMMUNICATION SYSTEM
John C. O'Brien, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application February 5, 1945, Serial No. 576,325
22 Claims. (Cl. 250—13)

1. A system for transmitting voice messages on a carrier frequency between a first station and a second station comprising, means including a transmitter at the first station normally operating to transmit a check-tone modulation of the carrier intermittently at time spaced intervals, a microphone at said first station for modulating said carrier frequency with voice frequencies, manually operable means for rendering said microphone effective and at the same time stopping the tone modulation of said carrier frequency, slow-acting means at the second station biased to assume a deenergized condition after a limited time following its last energization, indicating means governed by said slow-acting means and automatically rendered effective when said slow-acting means assumes its biased deenergized condition, means including a receiver at said second station responding to said tone modulation of the carrier frequency for intermittently energizing said slow-acting means as said check tone modulation is transmitted from said first station, and means at said second station governed by said receiver and responsive to said carrier for rendering said indicating means effective independently of the condition of said slow-acting means, whereby an immediate indication is given at said second station when a voice message is about to be sent from the first station.

2,407,847
RADIO FREQUENCY SWITCH
Donald W. Peterson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 1, 1943, Serial No. 485,388
6 Claims. (Cl. 178—44)

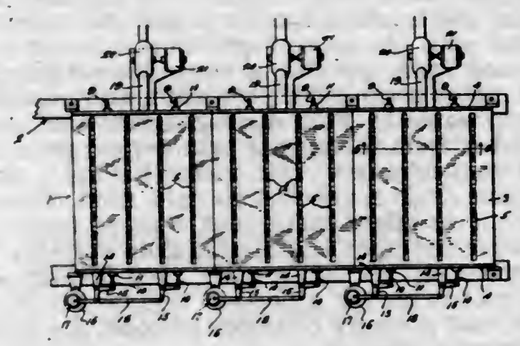
1. A system for selectively presenting an open circuit and a short circuit between two predetermined points in a radio frequency transmission system, comprising a tubular member of conductive material connected to one of said points, a second tubular conductive member connected to the other of said points and positioned within and coaxial with said first tubular member, and an insulated rod of conductive material adapted to move longitudinally within said second tubular member.

2,407,848
PRODUCTION OF CYANOALKENES
Gardner C. Ray, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application July 1, 1944, Serial No. 543,212
4 Claims. (Cl. 260—464)

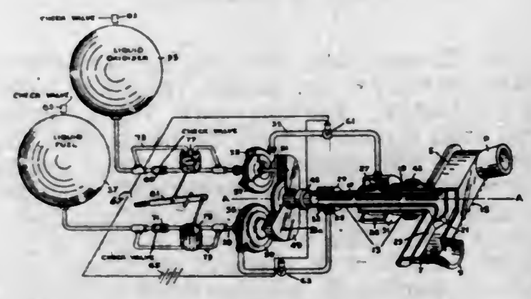
1. A process for the production of acrylonitrile which comprises passing succinonitrile over a catalyst selected from the group consisting of activated carbon, alumina, bauxite and alumina adsorbed on silica at a temperature of approximately 300° to 500° C., cooling the resulting gases and subsequently separating the acrylonitrile from the hydrogen cyanide and other products formed.

2,407,849
APPARATUS FOR FIRING PRESSED FUEL
Joseph Roth, Bronx, N. Y.
Application April 6, 1944, Serial No. 529,862
3 Claims. (Cl. 126—225)

1. A heater apparatus of the class described, comprising a cylindrical fire box casing, partition means forming a draft chamber at the lower end of the fire box, a heat radiating chamber at the upper end of the fire box, said chamber comprising top and side walls and a bottom wall arranged outwardly of said casing, a flue discharge from said chamber, said discharge extending upwardly from one side of the top wall of said casing, said partition means having an opening placing the draft chamber in communication with the lower end of said fire box, the fire box being adapted to receive a packed mass of fuel with a vertical passage in said mass in registering alinement with said first named passage to form a fire chamber extending vertically through said packed mass opening into the upper end of the fire box and into said radiating chamber, means controlling admission of air to said draft chamber, the top wall of said radiating chamber having a large opening arranged above the fire box, a cover controlling said opening for admission of fuel to the fire box of the apparatus, and a baffle integral with and supported by said cover and extending through said radiating chamber into the upper portion of said casing and to a point below the bottom wall of said radiating chamber.



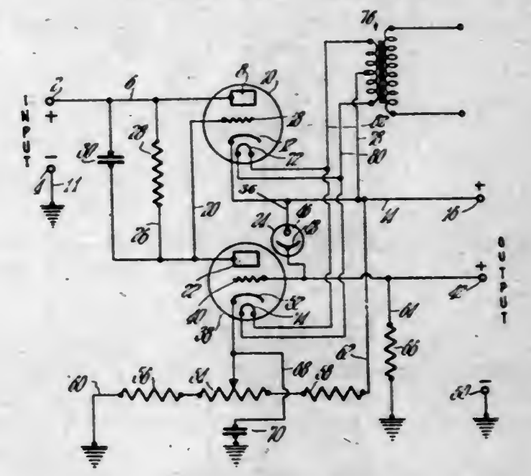
2,407,850
SUBAQUEOUS ELECTRIC CUTTING
Eugen Seifried, Waldkirch in Breisgau, Germany, assignor to United States of America, as represented by the Secretary of War
Application June 18, 1926, Serial No. 116,926
17 Claims. (Cl. 219—11)



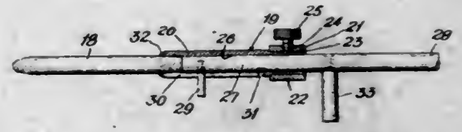
1. Arrangement for clearing mine fields by moving vessels towing submerged electrodes for severing the mine cables, comprising a source of electric energy on one of the vessels, current leads extending between the vessels and connecting with the said source, a plurality of electrodes connected to and distributed along the current leads and normally in open circuit relation thereto, adjacent electrode elements being connected to leads of opposite polarity, selected ones of which electrodes are formed as grappling elements, whereby the mine cable engaging a current lead slides along the same due to the mobility of the towed lead until the cable contacts with an electrode and is there subjected to the severing action of the source of electric energy, the cable completing the circuit through a set of electrodes of opposite polarity and through the said leads.

2,407,851
MINERAL CLASSIFIER
Joseph C. Shannon, Leadville, Colo.
Application October 8, 1943, Serial No. 505,524
1 Claim. (Cl. 209—384)

In a mineral classifier of the character described, an inclined trough for reception of the material to be treated, said trough including a flat bottom and side walls rising from said bottom, said bottom having a plurality of parallel elongated transverse slots therein, a rigid rectangular frame mounted for reciprocation transversely of the trough parallel with and beneath the bottom, said frame embodying a plurality of spaced parallel members, each alined with one of said slots, a plurality of spaced teeth rigid with said parallel members of the frame and projecting upwardly through said slots, spaced rods fixed to each end of the frame, said rods extending slidably through the side walls of the trough for mounting said frame beneath the bottom, horizontally swinging bell-crank levers mounted on one of the side walls and connected at corresponding ends to the projecting ends of the adjacent rods, an electric motor mounted on said side wall, and a rod connecting the other ends of said bell-crank levers and actuated by said motor for oscillating the levers and thereby reciprocating the frame transversely of the trough.

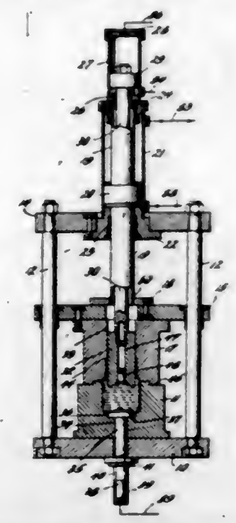


2,407,852
REACTION MOTOR
Apollo M. O. Smith, Bell, Calif., assignor to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application July 17, 1943, Serial No. 495,198
3 Claims. (Cl. 60—35.6)



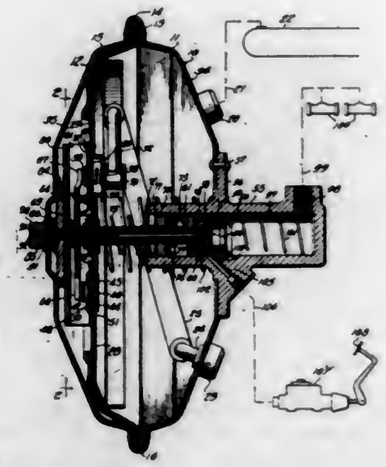
1. A rotating jet motor comprising a combustion chamber, a rotatable shaft having its rear end attached to the chamber at a central position of the latter, the axis of rotation passing through the chamber, a plurality of exhaust nozzles through the rear wall of the chamber, radially offset from the axis of rotation, to allow the escape of gases from the chamber in the form of high velocity gas jets, the axes of gas flow through said nozzles being directed rearwardly almost in the direction of the axis of rotation but having an angle of inclination in the tangential direction to produce a rotating force, said shaft having a plurality of fluid conducting channels extending in the axial direction, means for supplying fluids which are combustible in the presence of each other, into said channels, one of the fluids being supplied to one channel and the other fluid to the other channel, means providing communication from each channel into the chamber, said means comprising partition means between each channel and the chamber and orifice means through the partition means to the chamber, whereby the two propellant fluids passing through said orifices meet in said chamber, and upon combustion produce gases under pressure which are ejected through the nozzles.

2,407,853
POWER SUPPLY REGULATING APPARATUS
Wolcott M. Smith, Springfield, Mass.
Application June 30, 1944, Serial No. 542,930
6 Claims. (Cl. 171—312)



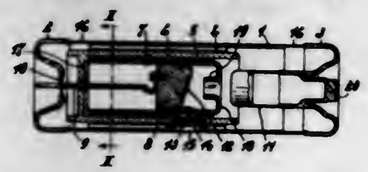
1. Direct-current power supply voltage regulating apparatus having an input and both high and low voltage outputs comprising in combination, regulating and amplifying tubes having plates, grids, and cathodes, a constant voltage drop device, a connection between the cathode of the first-named tube, said device and high voltage output, a connection between the grid of the second-named tube, low voltage output and said device, a connection between the input and plate of the regulating tube and between the plates of the amplifying and regulating tubes including a resistance, a ground in said input and outputs forming the neutral or negative side thereof resistance means connected between the high voltage output and ground and a connection between the cathode of said amplifying tube and resistance adapted for various positions on said resistance.

2,407,854
CARBON HOLDER
Arthur T. Steingard, New York, N. Y.
Application March 3, 1945, Serial No. 580,853
13 Claims. (Cl. 176—119)



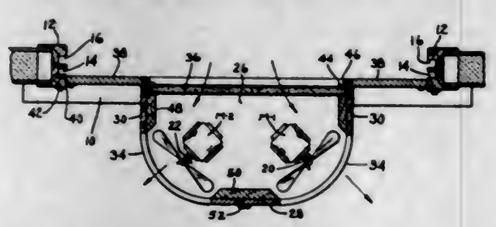
1. A carbon holder comprising a tube, said tube having a bore of common diameter throughout the length thereof, one end portion of the tube being split to provide clamping engagement with a carbon inserted in said split end, a rod mounted in said tube, means clamping the rod against movement relatively to the tube with one end portion of the rod protruding beyond the other end of said tube to form means supporting the tube and a carbon mounted therein, and a stop adjacent the first named end portion of the tube adapted to engage a stationary member for limiting movement of the tube in the direction of said member.

2,407,855
HYDRAULIC PRESS SYSTEM
William T. Stephens, Cleveland, Ohio, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application April 13, 1945, Serial No. 588,221
18 Claims. (Cl. 113—44)



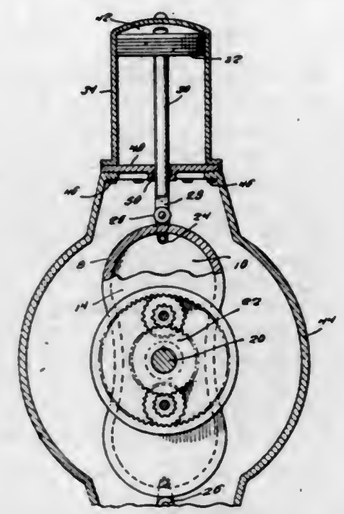
1. The combination with a press having a stationary die, a movable die and a forming plunger extending through the movable die, of a slide for said movable die, means supporting a hydraulic cylinder above said slide, a hollow rod secured to said slide, extending through said cylinder, and having an operating piston therein, a second hydraulic cylinder carried by the upper end of said hollow rod, a piston in said second cylinder, a rod on said piston extending through said hollow rod and secured to said forming plunger, means to sequentially supply hydraulic liquid under pressure to the upper faces of the pistons in said first and second mentioned cylinders, and means to automatically associate the upper side of the first piston with the lower side of the second after the first piston has reached its lower limit whereby the dies are held together during the forming plunger stroke.

2,407,856
HYDRAULIC BRAKE MECHANISM
William Stelzer, East Orange, N. J.
Application June 5, 1944, Serial No. 538,844
14 Claims. (Cl. 60—54.5)



1. A brake operating mechanism for a hydraulic brake system having a hydraulic brake cylinder and a pedal-controlled master cylinder, comprising a fluid cylinder one end of which communicates with the brake cylinder and forms a pressure chamber, a fluid-displacing element movable toward such end of said fluid cylinder to displace fluid therefrom into the brake cylinder, the other end of said fluid cylinder being closed and forming a control chamber communicating with the master cylinder, a motor carrying said fluid cylinder, a control mechanism for said motor arranged therewithin, and means axially movable by fluid displaced into said control chamber from the master cylinder to operate said control mechanism, said motor having a power-movable unit connected to said fluid displacing element to effect movement thereof toward the pressure chamber end of said fluid cylinder upon energization of said motor, said axially movable means having a portion arranged to directly enter said pressure chamber to boost the hydraulic pressure therein.

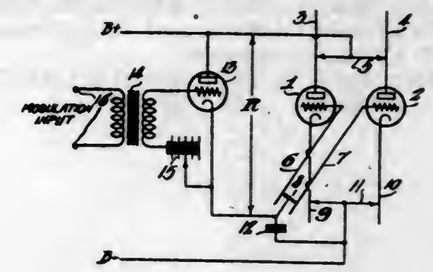
2,407,857
X-RAY TUBE
Adrianus Verhoeff, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Company, Hartford, Conn., trustee
Application January 11, 1943, Serial No. 472,068
In the Netherlands February 27, 1941
10 Claims. (Cl. 250—143)



1. An X-ray tube comprising an evacuated tubular envelope, an anode member having a heat-generating portion and being arranged within said envelope with its peripheral surface adjacent to and spaced from the inner surface of the envelope, and means to directly connect the said adjacent surfaces in heat conducting relationship comprising a member of good heat conductivity whereby to transfer the heat generated at said portion to said envelope in a radial direction from the anode member and substantially entirely by conduction.

2,407,858
AIR TRANSLATING APPARATUS
Kyle C. Whitefield, Longmeadow, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 8, 1944, Serial No. 553,177
2 Claims. (Cl. 98—94)

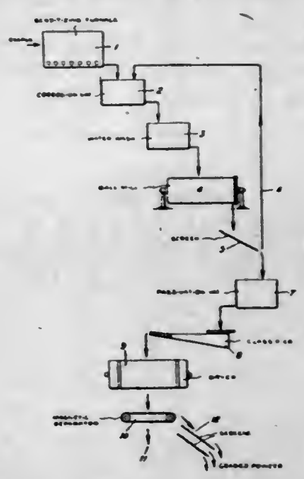
1. In a device for ventilating a room or other enclosure, a cabinet having a pair of air flow openings communicating with said room and at least one opening leading from said cabinet to a space outside of said room, a fan mounted for moving air through one of said room openings, another fan mounted for moving air through the other of said room openings, a reversible motor for each of said fans and a single switch means movable into one position in which both of said fans withdraw air from said room and discharge it through said outside opening, into a second position in which both fans draw air through said outside opening and discharge it into said room through said room openings, and into a third position in which one of said fans draws room air through one of said room openings and the other of said fans propels said air into the room through the other of said room openings.



2,407,859
MECHANICAL MOVEMENT
Russel S. Wilson, Filer, Idaho
Application April 3, 1945, Serial No. 586,338
5 Claims. (Cl. 74—55)

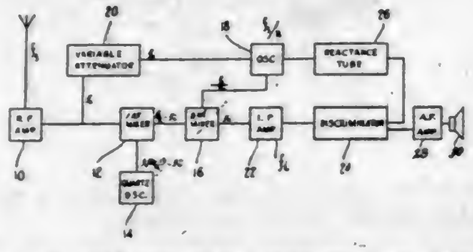
1. A mechanical movement for converting reciprocating motion into rotary motion, or vice versa, comprising opposed reciprocating members, a rotary shaft, cams carried on said shaft, and followers carried by said reciprocating members and engaged with said cams, one of said cams being directly connected with said shaft and the others indirectly connected therewith for the rotation of said one cam in a direction counter to that of said other cams, so that the angular displacement of the cams is equal in both directions of rotation at all times and the forces of the reciprocating members are in balance, said cams being three in number for each set of opposed reciprocating members and having identical outer and inner contours engaged by said followers.

2,407,860
COMMUNICATION SYSTEM FOR ULTRA-HIGH FREQUENCIES
Lester J. Wolf, Audubon, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 22, 1942, Serial No. 439,964
4 Claims. (Cl. 179—171.5)



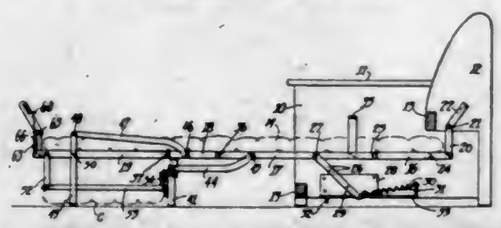
1. A pulse transmitter including an oscillator having tuned anode and control electrode circuits coupled to provide oscillations, a capacitor in said control electrode circuit connected to effectively block said oscillations, a modulator having control electrode and anode circuits, means for applying modulating potentials to said modulator control electrode circuit to vary the resistance of said modulator anode circuit, and means connecting said modulator anode circuit between said oscillator anode and control electrode circuits for varying the time intervals between pulses generated by said oscillator in accordance with said modulator anode circuit variations.

2,407,861
PROCESS OF TREATING HYDROCARBONS
I. Louis Wolk, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application September 5, 1942, Serial No. 457,471
2 Claims. (Cl. 202—57)



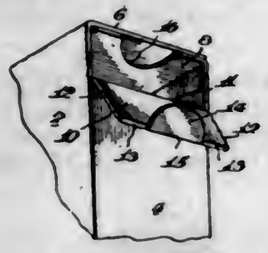
1. In the fractional distillation of a liquid polymerizable organic compound in a fractionation zone wherein said compound is subjected to conditions favorable to oxidation of said compound, the improvement which comprises introducing into said fractionation zone an oxidation inhibitor substantially non-volatile under conditions of distillation in an amount sufficient to inhibit oxidation and polymerization of said compound in the liquid state, and continuously introducing into said fractionation zone a second oxidation inhibitor more volatile than said organic compound in an amount sufficient to inhibit oxidation and polymerization of said compound in the vapor state.

2,407,862
METHOD OF PRODUCING METAL POWDERS OF HIGH ALLOY CONTENT
John Wulff, Cambridge, Mass.
Application March 17, 1941, Serial No. 383,875
10 Claims. (Cl. 75—28)



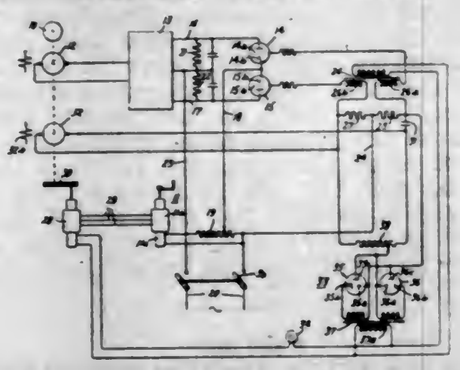
1. A method of producing metal powder which comprises heat treating a low silicon, chromium-containing ferrous alloy in solid phase at a temperature sufficiently high to effect intergranular carbide precipitation disintegrating the heat treated material and separating the granular from the intergranular material.

2,407,863
RECEPTION OF FREQUENCY MODULATED WAVES
Marc Ziegler, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 12, 1943, Serial No. 482,785
4 Claims. (Cl. 250—20)



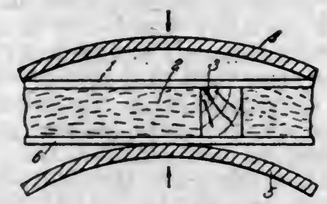
1. A superheterodyne receiver for frequency modulated waves comprising an input channel for receiving a signal wave, a first mixer stage coupled to said channel to receive said signal wave therefrom, a wave source coupled to said mixer stage for producing a first intermediate frequency wave, a second mixer stage coupled to said first mixer stage, a controllable frequency oscillator generating a fundamental frequency wave coupled to the said second mixer stage for producing an intermediate frequency wave having a predetermined frequency value, an intermediate frequency amplifier coupled to the said second mixer stage, a frequency-responsive detector coupled to the intermediate frequency amplifier for producing a control voltage proportional to the average deviation of the said second intermediate frequency wave from the said predetermined value, means responsive to the said control voltage for varying the frequency of the oscillator in a sense to reduce the deviation of said second intermediate frequency wave from the predetermined value to substantially zero, means to inject into said first mixer a wave having a frequency which is substantially equal to frequency of the wave applied from the input channel and which bears a harmonic relationship to the frequency of the said fundamental wave to produce in the intermediate frequency amplifier an intermediate frequency wave substantially the same frequency as the frequency of the intermediate frequency wave and at the output of the detector a control voltage substantially equal to the control voltage derived from said second intremediate frequency wave resulting from the signal wave, and means to vary the intensity of the said injected wave.

2,407,864
CHAIR BED
Louis Arzt, Bronx, N. Y.
Application May 9, 1945, Serial No. 592,772
4 Claims. (Cl. 5—13)



1. In a chair bed, in combination, a chair frame, an inner bed section pivoted in said frame, a middle section pivotally connected to said inner section and to said chair frame, an outer bed section, a fold section for connecting said middle and outer sections in relatively foldable relation, a rear leg, a bracket to which the rear leg is eccentrically pivoted the bracket being secured to said fold section, and a leg lever connecting said middle section and said rear leg for folding the latter when the foldable section is folded with respect to said middle section.

2,407,865
CLOSURE FOR CARTONS
Ernest J. Biskamp, San Antonio, Tex.
Application December 16, 1943, Serial No. 514,532
2 Claims. (Cl. 229—17)

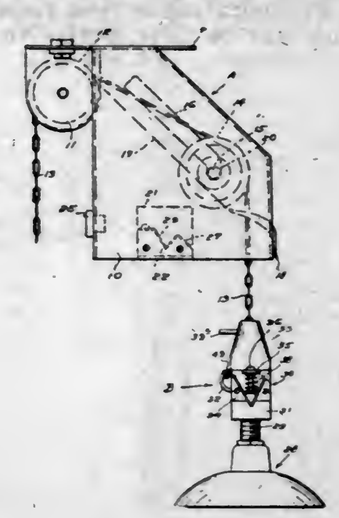


1. A blank for forming foldable boxes of the tubular type, said blank comprising side and edge panels and end flaps, said side and edge panels being separated from each other and from said end flaps by fold lines, one of said edge panels having at one end a rectangular closure section defined on two sides by perforated lines coinciding with the fold lines between said edge panel and adjacent side panels, and partially defined on a third side by a perforated line coinciding with the fold line between said edge panel and adjacent end flap, and a tab cut out of said end flap and projecting from said third side of said section, and said section being connected at its fourth side with said edge panel by means of a score line.

2,407,866
CONTROL SYSTEM
John L. Bower, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 23, 1941, Serial No. 403,699
7 Claims. (Cl. 172—239)

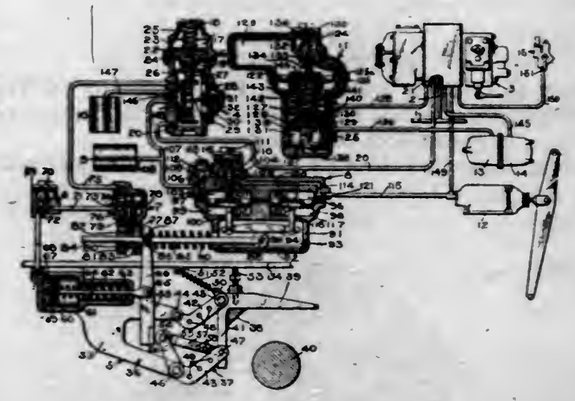
1. A follow-up control system comprising in combination a pilot device, a driven object, an electric motor for driving said object, means responsive to positional disagreement of said pilot device and driven object for producing a control voltage proportional to said disagreement, means responsive to said control voltage for supplying a variable voltage to said motor thereby to cause said motor to develop a torque proportional to said voltage to drive said object toward correspondence with said pilot device, and means responsive only to positional disagreement of said pilot device and driven object in excess of a predetermined amount for reducing said control voltage thereby to reduce the synchronizing torque of said motor.

2,407,867
METHOD OF PRODUCING CURVED "SANDWICH" MATERIAL
Charles Henry Buchanan, Kingston-on-Thames, England, assignor to Jicwood Limited, Weybridge, England, a British company
Application March 15, 1940, Serial No. 324,047
In Great Britain February 9, 1940
2 Claims. (Cl. 154—110)



1. A method of producing curved composite material suitable for aircraft fuselages and other structural parts intended to withstand very heavy dynamic loads and to have a permanent set of at least one finished bend consisting in the use of a core of expanded rubber and relatively thin flexible outer layers of relatively harder material such as e. g. plywood or metal, and in first uniting one of the said outer layers to the core by means of a thermo-hardening resin and heat and pressure so as to set the resin, applying a layer of the thermo-hardening resin between the other thin layer and the hitherto non-covered side of the core, and bending the resultant laminae to the required curvature between press members shaped to conform with the required finished curvature and with the second applied layer on the smaller radius of the curve, and when the latter applied thermo-hardening resin has set releasing the pressure from the work and removing the work from the press.

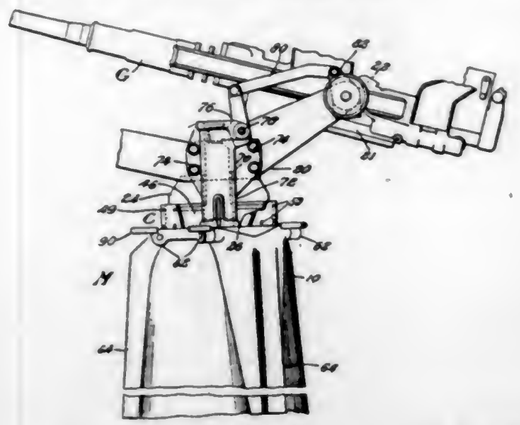
2,407,868
PROCESS FOR TREATING REFRACTORY ARTICLES
Theodore Henry David Burke, Eggertsville, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 5, 1945, Serial No. 586,818
2 Claims. (Cl. 117—46)



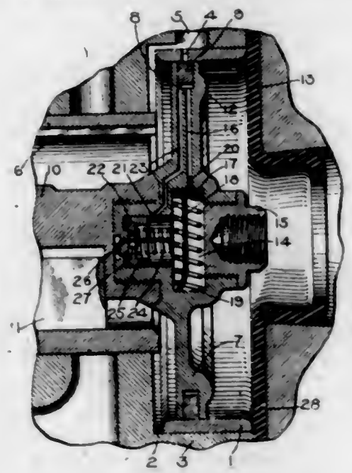
1. The process of treating a silica brick to increase its resistance to spalling which comprises, immersing the brick in liquid tar maintained at a temperature between 250° and 500° F., removing the brick from the tar and allowing the excess tar to drain off, packing the brick with sand in a retort, and firing the brick at a temperature of from 1450° to 1650° F.

2,407,869
ELEVATED HANGER AND LAMP LOWERING AND HOISTING MEANS
Anthony Lewis Ciper, Glenwillard, and Albert William Snyder, Aliquippa, Pa.
Application January 8, 1945, Serial No. 571,888
8 Claims. (Cl. 248—319)

1. In a lamp hanger and lifting and lowering assemblage of the class described, a hanger hood, a relatively fixed pulley mounted in said hood, guide means mounted in said hood, a traveling pulley cooperable with said guide means and movable toward and from the fixed pulley, a chain trained over the pulleys and having depending reaches, one for hand manipulation purposes and the other to suspend a lamp, the front end of said hood being provided with a pilot and guide lip to coact with a complemental part on a lamp fixture, there being opposed shoulders mounted on the inner surfaces of the walls of said hood, these serving as suspension seats and being provided with contact strips.

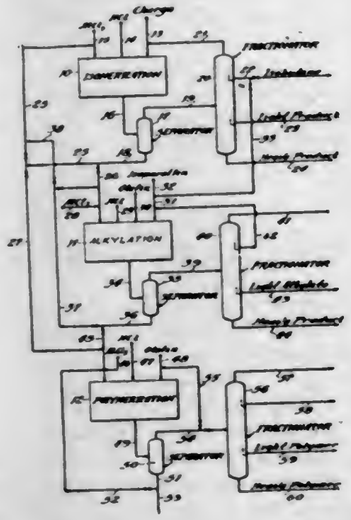


2,407,870
VARIABLE LOAD BRAKE APPARATUS
Earle S. Cook, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 28, 1944, Serial No. 570,053
28 Claims. (Cl. 303—22)



1. In a variable load fluid pressure brake equipment for a vehicle, in combination, a brake cylinder, a brake controlling valve device operative to supply fluid under pressure to the brake cylinder to effect an application of the brakes, a reservoir arranged to receive fluid supplied by the brake controlling valve device to control the pressure of fluid in the brake cylinder, valve means subject to the opposing pressures of fluid in said reservoir and brake cylinder and operative in response to an increase in the pressure of fluid in the reservoir for controlling the amount of fluid flowing to the reservoir, and means operative according to different weights of lading carried by the vehicle for variously conditioning said valve means for response to different reservoir pressures to provide the pressure of fluid in the brake cylinder for any given weight of lading carried by the vehicle.

2,407,871
DIRECTION-CONTROLLING MECHANISM FOR GUNS
Garrett P. S. Cross, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 25, 1944, Serial No. 537,301
7 Claims. (Cl. 89—41)

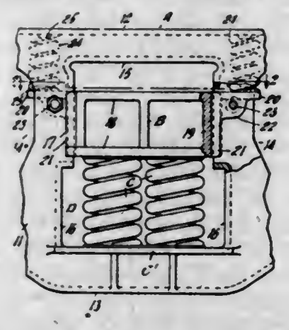


1. The combination with a mount including a pedestal, a column rotatable and movable vertically therein and a trunnion-bracket fixed to the column, and a gun trunnioned upon the bracket, of stop means mounted upon the column independently of the pedestal and in proximity to the trunnion-bracket, said stop means being movable vertically with the column and having a movement-limiting surface, means for preventing rotation of the stop means with the column, and a follower movable with the trunnion-bracket and upon said bracket in the movement of the gun and co-operating with the limiting surface of the stop means.

2,407,872
PISTON DEVICE
Sidney G. Down, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 22, 1942, Serial No. 462,907
6 Claims. (Cl. 184—18)

1. In a lubricating apparatus for the cooperating friction surfaces of two members, at least one of which is movable relative to the other, a fluid pressure chamber to which a surface of the movable member is exposed and in which the pressure of fluid may be varied, a lubricant storage reservoir formed in said movable member and adapted to receive a lubricant, a passage leading from said reservoir to at least one of said surfaces and to said chamber, said passage constituting a communication through which fluid under pressure may flow from said lubricant storage reservoir in response to a reduction in the pressure of fluid in said chamber, means adapted to supply lubricant from said lubricant storage reservoir to the fluid which flows from the reservoir to said passage, a second passage leading from said lubricant storage reservoir to the surface to be lubricated and to said chamber, said second passage constituting a communication of less restricted flow capacity than the first mentioned communication through which fluid under pressure may breathe into and out of said reservoir in response to variation in the pressure of fluid in said chamber, and said second passage being normally open so as to inhibit the flow of fluid and thereby the lubricant through the first mentioned passage, and inertia means operative upon a sudden change in the speed of said movable member for inhibiting the flow of fluid from said reservoir to said second passage, so that fluid flows from the reservoir to the first mentioned passage.

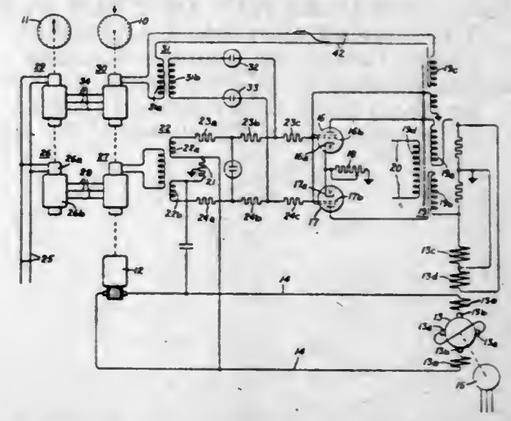
2,407,873
POLYMERIZATION OF OLEFINS
Bernard L. Evering, Chicago, Ill., Edmond L. d'Ouville, Pittsburgh, Pa., and Don R. Carmody, Newton, Iowa, assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application November 13, 1943, Serial No. 510,112
11 Claims. (Cl. 260—683.15)



5. The method of polymerizing normally gaseous olefins which comprises continuously passing said olefins upwardly in the liquid phase through a column at least five feet in height of catalytically active liquid aluminum chloride aliphatic hydrocarbon complex in a polymerization zone, said complex being immiscible with hydrocarbons and polymer products and having an aluminum chloride content in the range of about 40% to about 80% by weight and at least one mol $AlCl_3$ per double bond in the oil which results from hydrolysis of said complex, continuously introducing with said olefins a substantial amount of liquefied normally gaseous paraffin hydrocarbons for lowering the viscosity and density of polymerization products by dilution and thus facilitating their separation from the heavier complex in which hydrocarbons are substantially insoluble, maintaining the column at substantially constant polymerization temperature by precooling the introduced hydrocarbons to a temperature below the polymerization temperature and by abstracting heat from the column by indirect heat exchange with a coolant circulated through the polymerization zone, continuously separating diluted products from complex in the upper part of the polymerization zone, continuously removing separated diluted products from the upper part of the polymerization zone at a point spaced from the column of complex whereby the bulk of the complex is retained in the polymerization zone and employing a space velocity, column height and complex activity in the polymerization zone for effecting an olefin clean-up within the range of about 40% to at least about 80%.

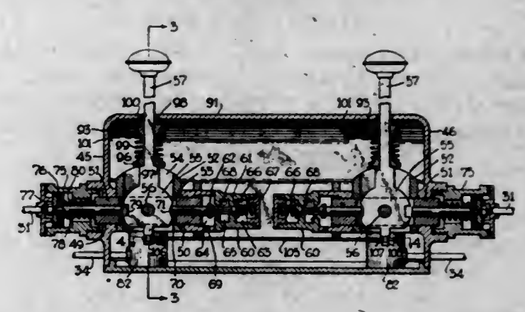
2,407,874
FLUORINE-CONTAINING CERAMICS AND METHOD OF MAKING SAME
Walter A. Fraser, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
No Drawing. Application August 31, 1943, Serial No. 500,632
2 Claims. (Cl. 106—52)

1. A glass batch containing the following materials in approximately the following parts by weight:



SiO_2	300
K_2CO_3	25.8
KNO_3	18.9
KHF_2	168.4
H_3BO_3	212.2
As_2O_3	0.63

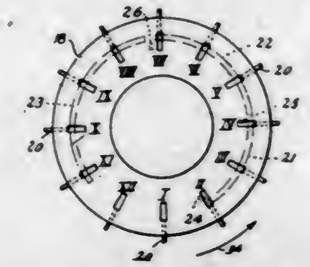
2,407,875
RAILWAY CAR TRUCK
William A. Geiger, Chicago, Ill., assignor to William P. Sidley, M. F. Back, Albert P. Withall, Edwin C. Austin, and George A. Johnson, all of Chicago, Ill., and Alice T. Miner, Chazy, N. Y., as trustees of The William H. Miner Foundation
Application July 13, 1944, Serial No. 544,664
7 Claims. (Cl. 105—197)



2. In a railway car truck, the combination of a side frame comprising side walls spaced apart and having a bolster opening therethrough, a bolster disposed transversely of the truck and guided for vertical movement by the wall margins of said opening, spring means below the bolster supporting said bolster in said frame, pivotally mounted levers positioned between the walls of the frame and having friction shoe portions frictionally engaging the side walls of the bolster, said levers having arms forming spring seats, and springs in the upper part of the frame above the bolster compressed between said spring seats and the frame for forcing the shoe portions against the bolster.

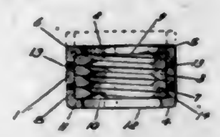
2,407,876
FOLLOW-UP CONTROL SYSTEM
Sidney Godet, Albany, N. Y., assignor to General Electric Company, a corporation of New York
Application November 30, 1943, Serial No. 512,359
2 Claims. (Cl. 172—239)

1. A follow-up control system comprising in combination, a pilot device, a driven object, driving means for said object, coarse and fine controlling means responsive to positional disagreement of said pilot device and driven object for producing periodically varying control voltages for controlling said driving means to drive said object toward a position of correspondence with said pilot device, means for transferring control of said driving means between said fine and coarse controlling means in response to the magnitude of said positional disagreement, means for dephasing the control voltage produced by said coarse control means a predetermined amount with respect to the other of said control voltages, and means for adding to said coarse control voltage an alternating voltage opposite in phase and substantially equal in magnitude to the magnitude of said dephased voltage when said pilot device and driven object are in positional agreement.



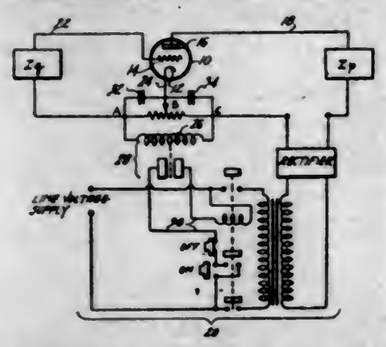
2,407,877
INTERLOCK APPARATUS
John N. Good, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 30, 1942, Serial No. 452,950
5 Claims. (Cl. 74—483)

1. In combination, a casing, two independent lever members each having a first position in which both are arranged side by side, said lever members being movable in opposite directions each to a second position and being then further movable in opposite directions each to a third position, interlock means connecting said lever members providing for independent movement thereof to their first and second position and movement of either to its third position with the



other in its first or second position, said interlock means being operative with either of said lever members in its said third position to prevent movement of the other to its third position.

2,407,878
MEANS FOR CARRYING OUT THE HEAT-TREATMENT OF GLASS ARTICLES
Ernest Greetham, London, England
Application October 17, 1944, Serial No. 559,102
In Great Britain December 11, 1942
6 Claims. (Cl. 49—58)

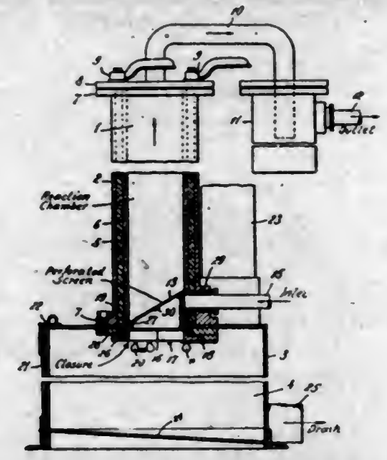


1. In a device for heating glass articles to progressively increasing temperatures said device having a table rotatable about a stationary support and work holders and heaters arranged on said table, gas supply means for said heaters, said means comprising a valve plate secured to the stationary support, said plate having at one surface thereof a plurality of spaced apart main gas ports and auxiliary ports intermediate the spaces between the main ports, a second valve plate, said second valve plate being secured to the table and movable therewith, and in surface engagement with the first mentioned plate, the said second plate having a plurality of ports in its engaging surface, and corresponding in number to the number of work holders, the ports in the movable plate being arranged so as to be in communication with the main ports and to register with one of the auxiliary ports just prior to breaking communication with one of said main ports and to break communication with the said auxiliary port immediately after making communication with the next main port, gas inlet means connected to the stationary plate ports, and gas outlet means from the movable plate ports connected to the heaters.

2,407,879
COMPOSITE NUT
Otto Haas, Richmond Hill, N. Y., assignor to Aircraft Screw Products Company, Inc., Long Island City, N. Y., a corporation of New York
Application July 8, 1944, Serial No. 544,029
16 Claims. (Cl. 85—32)

1. A nut comprising a barrel with a cylindrical inner surface and embodying a top rim and a bottom flange both inwardly projecting, and a helical coil between said rim and said flange and having screw-thread-forming portions of its convolutions projecting inwardly from said rim and said flange, said coil convolutions being bonded to the wall of said barrel intermediate the ends of the coil.

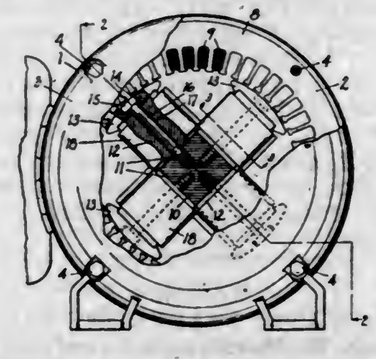
2,407,880
PROTECTION FOR ELECTRON TUBES
Robert F. Holtz, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 31, 1944, Serial No. 561,280
4 Claims. (Cl. 315—119)



1. A system for protecting an electron tube, which has external grid and anode circuits, from damage due to an abnormal flow of current in either of said circuits, said system comprising a resistor connected in each of said circuits to form a balanced bridge circuit on normal flow of current in said circuits, said resistors forming two of the arms of said bridge, and the remaining total impedances of each of said circuits forming the other two arms of said bridge, means for adjusting the relative values of said resistors, and a relay for de-energizing said tube having its actuating winding connected across opposite points of said bridge, whereby on abnormal flow of current in either of said external circuits the balance of said bridge will be disturbed and said relay actuated to de-energize said tube.

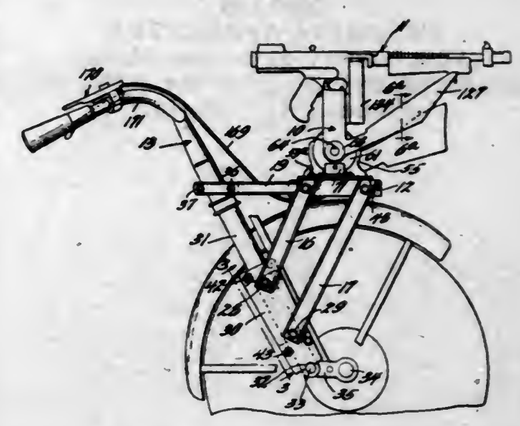
2,407,881
PREPARATION OF GALVANIZED SHEETS TO RECEIVE RESINOUS COATINGS
George R. Hoover and Noble E. Hays, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
No Drawing. Application July 30, 1940, Serial No. 348,442
6 Claims. (Cl. 117—49)

1. A process for the treatment of galvanized ferrous articles including steps to free them from a blistering tendency when coated with thermosetting enamels, which comprises heat treating the galvanized sheets at a temperature and for a time sufficient to destroy the blistering tendency, but below a temperature and time cycle at which adherence of a galvanized coating will be adversely affected, and hence without altering the extent of alloy formation, said temperature being applied by passing the articles through a continuous heat treating furnace and subjecting them therein to a temperature of from 450 to 550° F. for from 3 to 15 minutes, the time duration of the heat treatment varying substantially inversely to the temperature thereof, and thereafter coating the articles with a thermosetting enamel.



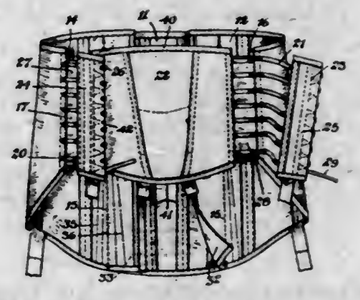
2,407,882
GENERATOR
Willis S. Hutchinson, St. Paul, Minn., and Eric R. Woodward, New York, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application May 27, 1944, Serial No. 537,752
5 Claims. (Cl. 23—281)

1. A gas generator comprising a reaction chamber, a vented discharge chamber below the reaction chamber, and a gas-impervious disc intermediate the chambers sufficiently strong to withstand a predetermined operating pressure in the



reaction chamber but rupturable at pressures exceeding such predetermined pressure to provide a passage-way between the chambers.

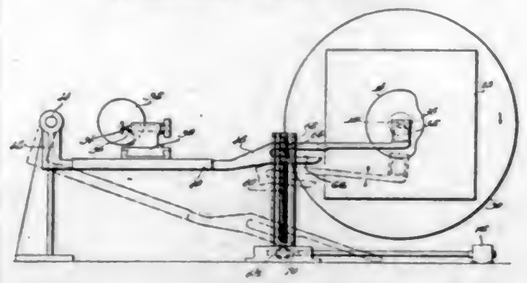
2,407,883
PERMANENT MAGNET FIELD GENERATOR
Corwill Jackson, Ludington, Mich.
Application February 21, 1944, Serial No. 523,222
5 Claims. (Cl. 171—209)



1. In a generator, the combination of a wound armature stator, a rotor rotatable within said stator and comprising a shaft having a portion of rectangular section intermediate its bearings, a plurality of pairs of block-like permanent magnet pole pieces mounted on the flat sides of said shaft in radially disposed relation, pole piece shoes detachably connected to said permanent magnet pole pieces and having recessed inner sides receiving the ends of said permanent magnet pole pieces, each permanent magnet pole piece being disposed with one magnetic pole abutting said shaft and with the opposite magnetic pole abutting a pole piece shoe, said pole piece shoes being of a length corresponding substantially to the width of the armature, radially disposed cap screws, each cap screw arranged through one of said pole piece shoes and radially through both the north and south magnetic poles of one of said permanent magnet pole pieces and threaded into said shaft whereby the permanent magnet pole pieces and pole piece shoes are detachably secured together and to the shaft, and copper bands of low resistance surrounding the permanent magnet pole pieces in closely embracing direct contact therewith, the ends of the copper bands being overlapped and brazed together, the width of the bands approximating the radial length of the permanent magnet pole pieces and extending approximately from said shaft to the pole piece shoes.

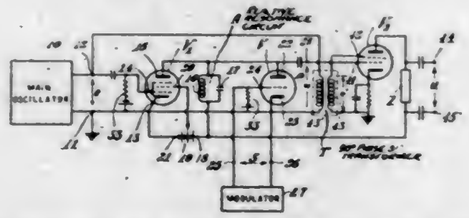
2,407,884
MACHINE GUN MOUNT
Greenhow Johnston, Richmond, Va., assignor of one-half to Greenhow Maury, Jr., Richmond, Va.
Application December 3, 1942, Serial No. 467,770
26 Claims. (Cl. 89—40)

1. In a mount for an instrument having a portion to be engaged, a pair of hook members for engaging said instrument portion, means to move said hook members upwardly and outwardly to allow the entry of the portion therebetween, and downwardly and convergently to clamp said portion in position, and a second means to impart an additional downward movement to said hook members.



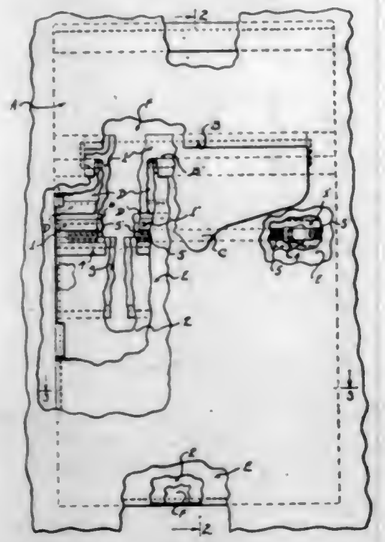
2,407,885
GARMENT
Joseph J. Kispert, New Haven, Conn., assignor to I. Newman & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application September 17, 1942, Serial No. 458,659
2 Claims. (Cl. 2—27)

1. A step-in maternity garment comprising an elongated back section covering the wearer's buttocks, side sections with marginal portions in overlapping relation to said back section and temporarily secured thereto by basting, the marginal portions of said side sections being provided with downwardly diverging gauge lines serving as guides in stitching the sections together more permanently when the garment is fitted, a short unitary abdomen supporting front section extending only to the lower part of the abdomen and loosely connected to the forward edges of the side sections by tapes passing through eyelets therein, lacing flaps secured to the opposite ends of said tapes and provided with flexible stays and lacing hooks, protecting sections of light fabric underlying said tapes and stitched to the forward edges of the side sec-



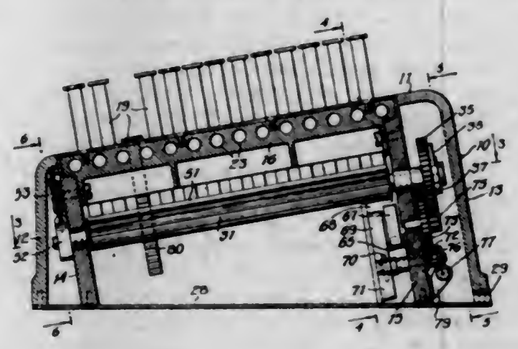
tions and the side edges of the front section, said protecting sections and said tapes being of sufficient length to permit the garment to be pulled over the wearer's hips, and laces cooperating with the lacing hooks to tighten the garment as desired.

2,407,886
TRACKING APPARATUS
Max Knobel, Arlington, Mass.
Application March 31, 1944, Serial No. 529,000
5 Claims. (Cl. 90—13.7)



1. Tracking apparatus comprising a pattern having a narrow light-transmitting line scratched in an opaque coating on a transparent sheet, a movable member having an aperture through which the line is sighted, a work support, an instrument for operating on the work, the aperture being of the same shape as the operating part of said instrument but of different size according to a scale factor, a pivoted rigid connection between said member and said instrument whereby they are moved with relation to the pattern and the work, respectively, at rates depending on the scale factor.

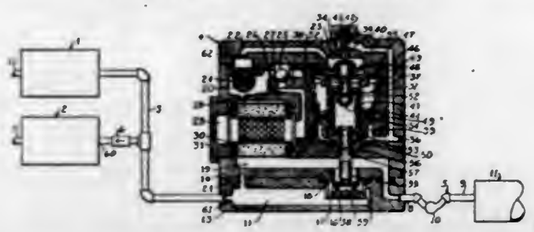
2,407,887
PHASE MODULATION SYSTEM
Edouard Labin, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 20, 1944, Serial No. 527,286
10 Claims. (Cl. 179—171.5)



9. A system for modulating the phase angle of an electrical oscillation in accordance with a modulating potential, which comprises a source of main oscillation, a network comprising a susceptance and a variable conductance coupled to said source, means energized by said modulating potential to vary said conductance proportional to the trigonometric tangent function from zero to $\pi/2$ of an angle proportional to the amplitude of said modulating potential to produce a first component oscillation having a phase angle varying as the ratio of said conductance to said susceptance and an amplitude varying as a trigonometric function of said phase angle, means to derive a second component oscillation of constant amplitude and phase with respect to said main oscillation, and means to vectorially combine said first and second component oscillations to produce a resultant oscillation of constant amplitude having a phase angle linearly proportional to the amplitude of said modulating potential.

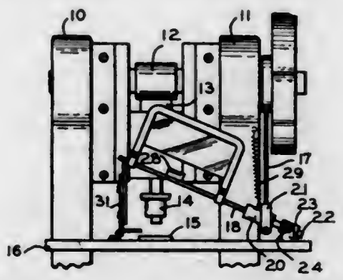
2,407,888
CONCEALED GARMENT POCKET
Julius Lesser, Chicago, Ill.
Application October 19, 1945, Serial No. 623,321
1 Claim. (Cl. 2—253)

A double garment pocket comprising an intermediate wall having a lower mouth lip, a reinforcing piece extending below said wall lip, a series of stitched folds about the lip, including the ends of the wall and reinforcing piece, a tape interfolded with the end wall and reinforcing piece forming an offset guard ridge, links projecting from the tape intermediate of the projecting guard ridges of said lip, a strip extending downwardly to complete the intermediate wall, and links carried thereby engaging the lower guarded links, whereby the user's hand is protected when inserted in the pocket.



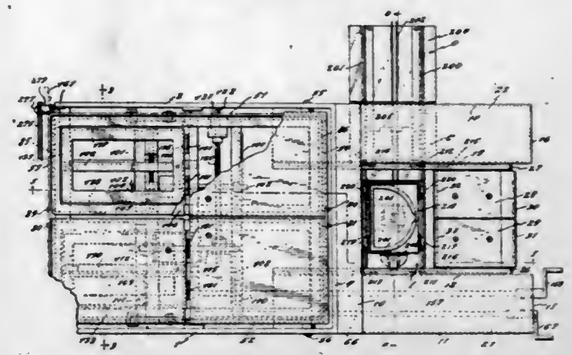
2,407,889
AUTOMATIC TELEPHONE DIALER
Thomas W. MacKenzie, Cranford, N. J.
Application June 9, 1944, Serial No. 539,512
21 Claims. (Cl. 179—90)

1. An automatic telephone dialer comprising a frame, means forming two rows of longitudinally spaced key receiving channels at the upper portion of the frame, keys having rack surfaces mounted to move vertically in said channels, elongated gears in the frame one adjacent each row of keys and adapted to be operated by any one of the keys in a row, spring motors operatively engaging said gears, two control rods, one arranged longitudinally of each row of keys, said rods being of rectangular cross sectional form, means maintaining said rods in operative engagement with spaced elements on each of the keys



characterizing predetermined telephone numbers, two independent impulse transmitting devices, independent switches controlling circuits to said devices, and means in direct operative engagement with each bar for closing and opening the circuit through an associated switch device in controlling automatic transmission of a telephone number by movement of a key relatively to its associated rod.

2,407,890
PROTECTION VALVE DEVICE
Glenn T. McClure, McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 15, 1945, Serial No. 582,934
11 Claims. (Cl. 303—84)



1. The combination with a fluid conducting conduit normally charged with fluid under pressure, of a valve device comprising a casing having two communicating passages constituting a portion of said conduit, a valve operative to open and close the communication between said passages, movable abutment means for actuating said valve and operative in response to fluid pressure for closing said valve, a spring urging the movable abutment in a direction for opening said valve, and valve means for controlling communication between one of said two passages and said movable abutment means, said valve means being responsive to a reduction in fluid pressure in said one passage to a predetermined degree to open the latter communication and responsive to an increase in fluid pressure in said one passage to a predetermined higher degree to close the latter communication.

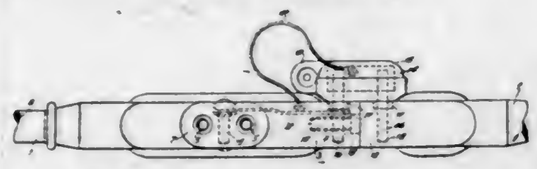
2,407,891
SAFETY APPLIANCE
George W. McKinstry, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application May 22, 1943, Serial No. 488,075
5 Claims. (Cl. 74—615)

1. In a machine of the type described having a bedplate for holding a workpiece to be acted upon by a die, the combination of means for moving said die into work engaging position; guard means adapted to be actuated by one hand of an operator and movable to a position intermediate said bedplate and the operator, said guard means actuating said moving means as the same is moved to said intermediate position; means for locking said guard means against movement; and means spaced from said guard means and requiring the other hand of the operator to actuate the same to release said locking means.

2,407,892
HOSPITAL BED
Otto Mehr, North Bergen, N. J.
Application May 20, 1943, Serial No. 487,702
3 Claims. (Cl. 5—90)

1. The combination with a hospital bed having a frame, a torso-supporting portion and a leg-supporting portion mounted on said frame, of a centrally disposed section slidably mounted in said leg-supporting portion for movement to provide an opening in said leg-supporting portion, a bed-pan support and track means disposed underneath the leg-supporting portion, means mounting said track means on said frame for disposition from a point beneath said opening to a position beyond an edge of said frame, said support being movable along said track means from a station below said opening to a station outside said frame, said track mounting means including a platform located underneath the leg-supporting portion, means mounting said platform on said bed frame for movement in a horizontal direction therebeneath, including means for raising and lowering said platform, a portion of said track means being carried upon said platform and movable therewith both horizontally and in the raising and lowering thereof, said movable portion of said track means being thereby adapted to be aligned with the non-movable portion, whereby said bed pan support may be placed upon the movable platform and raised therewith into said opening or may be lowered from said opening and moved along said track means.

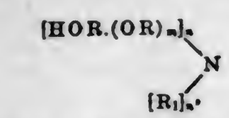
2,407,893
NAVIGATOR
Albert Meyer, Albuquerque, N. Mex.
Application October 13, 1943, Serial No. 506,111
2 Claims. (Cl. 33—1)



1. In a navigation calculating instrument one transparent washable disc of pyralin or other suitable material graduated circumferentially around its outer edge and having a circular hole or opening at its center for mounting upon its companion disc, a companion disc of like transparent material arranged for mounting through a central opening below the upper disc and being graduated circumferentially along its outer edge and having lines approximately 1 inch square etched upon its face, a disc of fibre or other material of the same circular dimensions as its companion transparent discs and having a circular hole at its center containing a retaining spring for the purpose of holding and retaining a central mounting stud upon which companion

transparent discs are mounted, a stud or bolt retained in fibre disc and extending thru central

openings of transparent super-imposed discs said discs being retained in position on stud by a thumb nut screwed to stud from top.



2,407,894
ELECTRICAL CONNECTING UNIT
James B. Miller, Webster Groves, Mo., assignor to Mines Equipment Company, St. Louis, Mo., a corporation of Missouri
Application November 24, 1941, Serial No. 420,249
9 Claims. (Cl. 173—334)

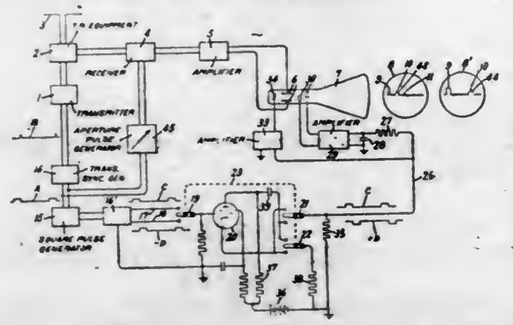
1. A plug-socket connector combination of the character described, comprising: a socket connector having a body, a socket contact housed in said body, and means on said body engageable with external locking means; a plug connector having a body, a plug contact housed therein, and engageable with said socket contact, and means on said plug connector body engageable with external locking means; and a locking device having means engageable with said lock-engageable means on both said bodies when said plug and socket connectors are in engagement with each other to lock the same against accidental disengagement, said bodies having mutually engageable sealing means, and said locking device having sealing means engageable with said sealing means on one of said bodies when not in engagement with the other to provide a water-tight enclosure for the contact thereof.

2,407,895
PROCESSES FOR RESOLVING OIL-IN-WATER EMULSIONS
Louis T. Monson, Alhambra, William W. Anderson, Montebello, and Fred W. Jenkins, Los Angeles, Calif., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application October 5, 1944, Serial No. 557,374
8 Claims. (Cl. 252—344)

1. A process for breaking petroleum emulsions of the oil-in-water type, characterized by subjecting the emulsion to the action of a surface-active heat-polymerized aminoalcohol of the formula:

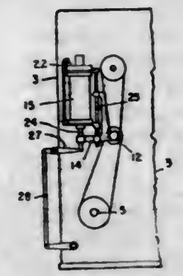
wherein OR is an alkylene oxide radical having not over 4 carbon atoms and selected from the class consisting of ethylene oxide radicals, propylene oxide radicals, butylene oxide radicals, glycid radicals, and methyl glycid radicals consisting of hydrogen atoms and alkyl radicals having 6 carbon atoms or less; m represents a numeral varying from 0 to 3; n represents the numeral 2 or 3; and n' represents the numeral 0 or 1, with the proviso that $n+n'=3$; said heat-polymerized compound being selected from the class consisting of the anhydro base, the hydrated base, and salts.

2,407,896
METHOD OF RECOVERING THE SALT-FORMING COMPONENTS OF NYLON
Clovis D. Myers, Ardentown, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 29, 1943, Serial No. 492,716
7 Claims. (Cl. 260—78)



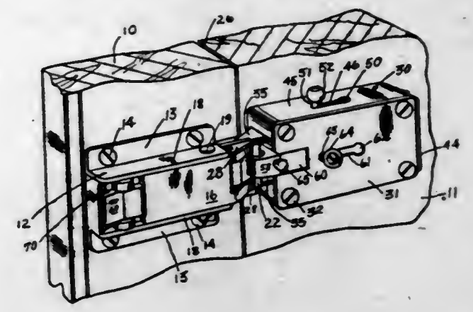
1. A process of recovering adipic acid and hexamethylene diamine suitable for reuse from polymeric hexamethylene adipamide waste, which comprises repeatedly hydrolyzing a mass containing the said adipamide with a mineral acid, and removing the adipic acid from the hydrolyzed mixture of each hydrolyzing step.

2,407,897
POCKETKNIFE
George W. Newman, Kansas City, Mo.
Application July 9, 1945, Serial No. 603,871
1 Claim. (Cl. 30—159)



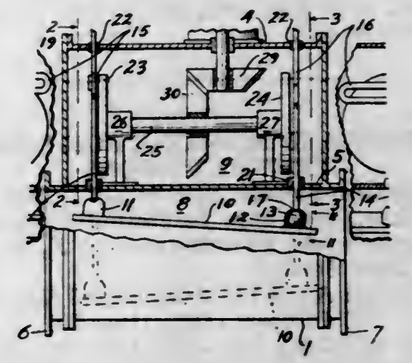
In a pocket knife, in combination with a handle having two parallel longitudinal lining plates, a cap end plate fastened to the outer side of one of said lining plates and forming therewith at its inner side a chamber, said one lining plate having through it a hole communicating with said chamber, said cap end plate having a hole therethrough communicating with said chamber and the atmosphere, and a pivot pin extending through said lining plates and said cap end plate, of a blade pivoted at its butt end on said pivot pin between said lining plates and adapted to swing approximately 180 degrees on said pivot pin to and extended open position and to a closed position, the side of said butt end next said lining plate having said hole having in it two locking recesses at diametrically opposite sides of said pivot pin and equally spaced therefrom and positioned to alternately register with said hole in said lining plate when said blade is in the fully open and fully closed positions, a locking lever in said chamber pivoted between its ends against said one lining plate and having at one end on its inner side a locking projection adapted to extend through said hole in said lining plate into the said recess in said butt end which at the time registers with said hole in said lining plate and having at its other end and outer side a manually depressible portion normally extending into said hole in said end cap, and, when so depressed, swinging said lever to its unlocked position in which said locking projection will be withdrawn from said registering recess, said lever having through it between its ends a tapering hole through which said pivot pin extends, and means normally forcing said lever to its locking position.

2,407,898
CATHODE-RAY APPARATUS
Donald E. Norgaard, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Original application June 8, 1942, Serial No. 446,231. Divided and this application February 5, 1943, Serial No. 474,766
7 Claims. (Cl. 315—22)



4. In combination, a cathode ray device having a viewing screen, means to deflect the ray of said device over a predetermined path on said screen in either of two different time intervals, said means comprising means to select either one of two square waves in accord with the time interval desired, means to integrate the square wave selected by said last means, and means to deflect said ray in accord with the integral produced by said last means, each of said square waves having positive and negative portions related in duration to deflect said ray over said path in the respective time interval.

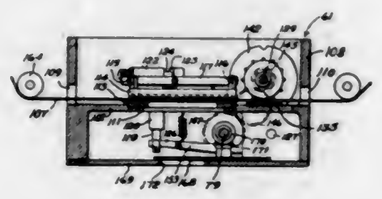
2,407,899
WIRE REELING MECHANISM
Norman H. Nye, Cuyahoga Falls, and Walter E. Rogers, Stow, Ohio, assignors to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a corporation of Ohio
Application May 30, 1944, Serial No. 537,998
3 Claims. (Cl. 242—45)



1. In mechanism for winding stranded material, a rotatable winding spool, a variable speed drive therefor, and means for adjusting said drive, said means including a fluid-containing cylinder, a piston reciprocable in said cylinder and operatively connected with said drive, means other than said fluid associated with said piston and tending to move same to reduce the speed of said drive, a check valve normally preventing escape of fluid from said cylinder in front of said piston whereby such movement of the latter is restrained, means engaging the material as it passes to said spool and adapted to be actuated thereby to unseat said check valve, and a by-pass permitting flow of fluid from the rear to the front of said piston.

2,407,900
COMBINATION LOCK AND LATCH FOR DOORS
Irving Paul, Chicago, Ill.
Application January 10, 1946, Serial No. 640,271
6 Claims. (Cl. 70—93)

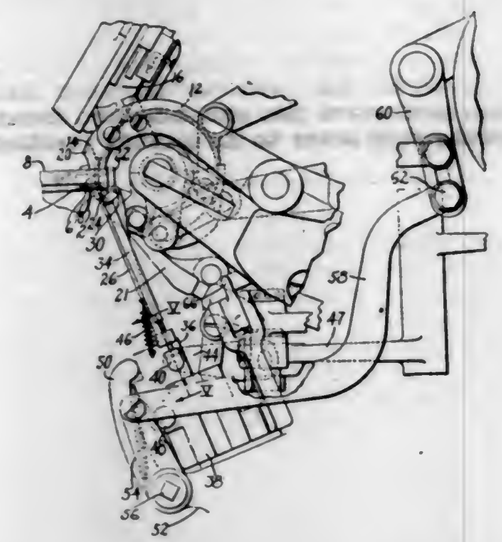
1. In combination, a body attached to a door and providing a key-actuated slidable lock bolt and a slidable latch bolt, a keeper plate attached to a door jamb with which the door is swingingly associated and adapted to cooperate with the lock bolt for locking the door to the jamb, and a latch arm comprising sections adapted to be folded upon themselves and pivotally carried by the jamb and adapted to cooperate with the latch bolt to limit the opening of the door relative to the jamb when the lock bolt and keeper plate are disassociated with respect to each other.



2,407,901
VANE MOTOR
Earl E. Petzold, Burbank, Calif.
Application December 21, 1943, Serial No. 515,168
5 Claims. (Cl. 103—80)

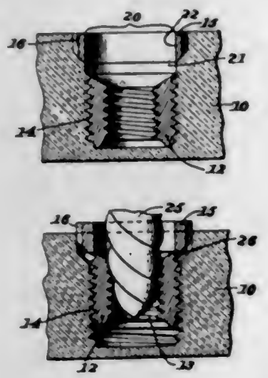
1. A fluid propelling device comprising a housing having a plurality of chambers, one of the chambers constituting an open duct and another of the chambers constituting a closed compartment, a movable plate means in the duct and mechanism in the compartment for moving the plate means in a sinuous manner, the mechanism comprising a crank shaft with a pair of spaced apart crank elements keyed thereto, a crank-pin at the periphery of each of the elements, a reciprocable rod adjacent each of the elements and

entering said duct, means at the top of the rods connecting with their respective adjacent crank-pin and means at the other ends of the rods pivotally connecting with opposite edges of the plate means and power means connected to the shaft for rotating it, said rods including cross-like frames, each frame having a short arm and a long arm, the short arm of each frame having a guide slot, and said crank-pins engaging the slots of the short arms of the frame.



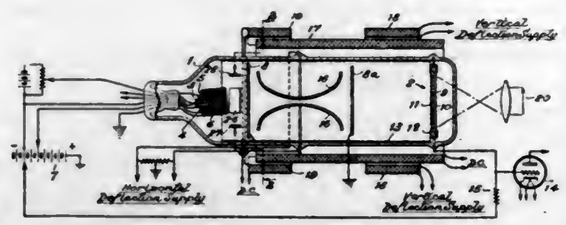
2,407,902
CAMERA
Verneur E. Pratt, Norwalk, Conn., assignor to Microstat Corporation, a corporation of Delaware
Original application January 3, 1942, Serial No. 425,528. Divided and this application July 1, 1943, Serial No. 493,034
3 Claims. (Cl. 88—28)

1. In a camera projector, a horizontal rectangular frame having vertical sides, a web within said frame and joining said sides to divide said frame into an upper and a lower compartment, a film gate formed in said web, a transparent pressure plate in said upper compartment, a holder for said pressure plate, a yoke on which said holder is trunnioned, a lever supported on said web in said upper compartment and carrying said yoke, a plunger reciprocally mounted in said web and having its upper end pivotally connected to said lever, spring means urging said plunger and imparting said urge via said lever to said pressure plate, an intermittent movement for moving said film through said gate, and cam means in said lower compartment connected to said movement and adapted to move said plunger against the urge of said spring and separate the pressure plate from said film gate while said film is moving therethrough.



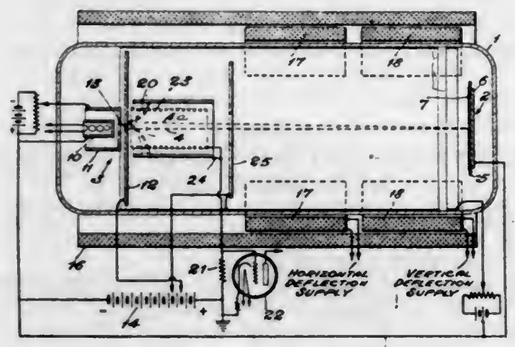
2,407,903
METHOD AND MACHINE FOR MAKING PREWELT SHOES
Edward Quinn, Saugus, and Israel I. Hersey, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 17, 1943, Serial No. 483,410
28 Claims. (Cl. 112—46)

10. In a machine for sewing the marginal portions of a shoe sole to the projecting edge portions of the welt on a prewelted upper while unsupported by a last, the combination with stitch forming devices including a needle, a work feeding awl, a work support shaped to enter the crease between the welt and the upper, a presser foot for clamping and releasing the sole and welt to enable movement of the work on the work support and the parts to become connected together in relatively unrestrained condition, and a back gage for guiding the outer edge of the welt and sole into registry, of a welt engaging pointed member located along the line of feed in advance of the needle and actuated to draw an unsewed portion of the welt only uniformly against the back gage



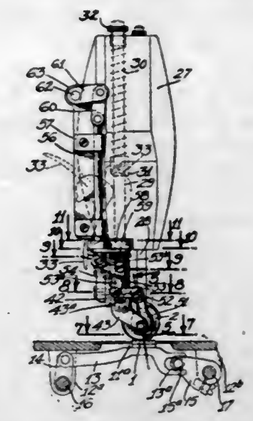
before the awl penetrates the work in each sewing cycle.

2,407,904
METHOD OF REMOVING AND REPLACING INSERTS
Joseph Rosan, North Hollywood, Calif.
Application June 9, 1943, Serial No. 490,200
1 Claim. (Cl. 29—148)



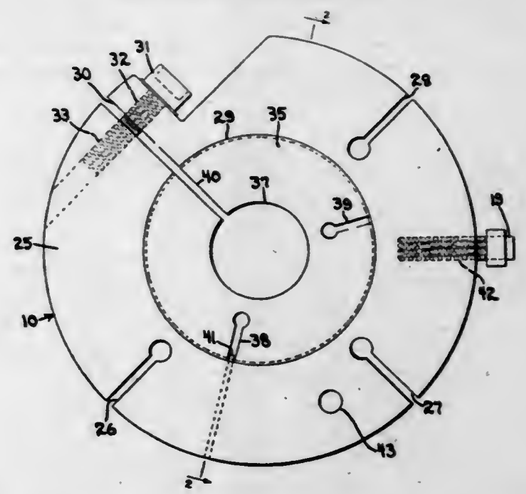
A method of removing an insert from a body and replacing the same with a substitute insert, the first insert having a threaded shank fitting within a correspondingly shaped cavity in the body, and an enlarged axially serrated head disposed and restrained against rotation within a correspondingly shaped cavity, said method comprising cutting into the body on a diameter less than the root diameter of the axial serrations on the head to disconnect the head from the shank, unscrewing the shank from its cavity, axially removing the head, thereby leaving in said body an interiorly threaded bore and an enlarged, axially serrated counterbore, screwing into the bore a substitute insert having an exteriorly threaded shank and an axially serrated head of substantially less diameter than said counterbore, and inserting in the counterbore a locking ring having internal serrations mating with those on the insert head and external serrations mating with those in the walls of the counterbore, to prevent rotation of the ring and the substitute insert with respect to the body.

2,407,905
TELEVISION TRANSMITTING APPARATUS AND METHOD OF OPERATION
Albert Rose, East Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 11, 1942, Serial No. 438,562
20 Claims. (Cl. 178—7.2)



1. The method of reducing distortion in a television transmitting tube of the low velocity electron beam type comprising the steps of developing an electron beam having a helical path in a longitudinal magnetic field, developing a field of constant magnitude having lines of force transverse to the axis of said helical path and orienting said field to a position at which the radius of said helical path is a minimum and approaches a substantially straight path.

2,407,906
LOW VELOCITY TELEVISION TRANSMITTING APPARATUS
Albert Rose, East Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 27, 1942, Serial No. 456,344
10 Claims. (Cl. 250—150)



1. Television transmitting apparatus comprising an evacuated envelope, an electron source within said envelope, a target oppositely disposed from said source adapted to receive electrons from said source, magnetic means to develop a magnetic field extending from said cathode to said target, an anode having an electron beam limiting aperture between said source and said target, magnetic means between said anode and said target to deflect electrons passing through said limiting aperture over the surface of said target whereby electrons not reaching said target are returned to said anode along paths substantially coincident with but surrounding the initial path of electrons flowing toward said target, and means including an electrode positioned about said initial path and between said anode and said magnetic means to intercept secondary electrons developed by electrons returning from said target incident on said anode.

2,407,907
MATERIAL FEED MECHANISM FOR SEWING MACHINES
John E. Scott, Los [illegible]eles, Calif.
Application January 3, 1944, Serial No. 516,752
8 Claims. (Cl. 112—214)

2. In a feed mechanism of the class described, the combination with a sewing machine having a walking feed, means for operating the same, and a presser bar, of a roller positioned above and opposite said feed, a support on the machine for the roller, means, connected to the operating means, for intermittently and positively rotating the roller for moving the peripheral portion thereof in the direction of and simultaneously with the movement of the walking feed, said support being pivotally supported on a vertical axis on the presser bar, means for raising the presser bar and roller, and means in connection with the support and the presser bar for detachably locking the roller for normal sewing operation against shifting about said vertical axis.

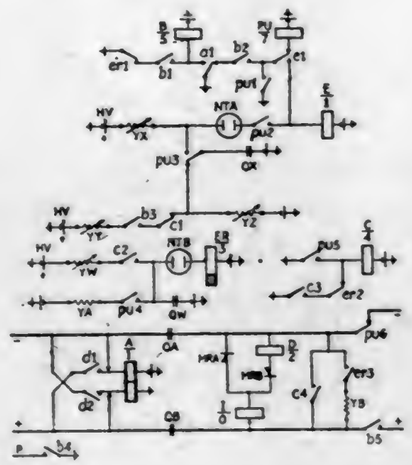
2,407,908
WORK DRIVING DOG
Elio C. Ventres, Worcester, Mass.
Application June 20, 1945, Serial No. 600,587
5 Claims. (Cl. 82—41)

5. In a work holding and driving dog, a disk-shaped driving plate, a driving pin adjustably mounted thereon, a central aperture in said plate, a radially extending slot through said plate, a work receiving bushing the outer periphery of which mates with the aperture in said plate, a radially extending slot through said bushing, means to align the radial slots in said plate and said bushing, and a lever actuated clamping

mechanism arranged on opposite sides of the radial slot through said plate to facilitate clamping the plate and bushing into driving relation with a work piece.

2,407,909
PURIFICATION OF CRUDE CELLULOSIC MATERIAL

George P. Vincent, Poughkeepsie, N. Y., and Archie L. Dubeau, Rumford, R. I., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia



No Drawing. Application September 18, 1940, Serial No. 357,281
4 Claims. (Cl. 92—13)

1. A process for purifying crude cellulosic vegetable materials which comprises impregnating said material with an alkaline aqueous solution containing about 4 to 12% of caustic soda, discharging solution from the material until the ratio by weight of solution remaining in the material to the material is about 2:1, exposing the said material while wet with the solution to the action of steam for a period of at least about one-half hour in a steam chamber, thereafter washing the material with water, impregnating it with an acid aqueous solution containing sodium chlorite in amount effective to eliminate a substantial part of the non-cellulose impurities remaining in the material, discharging solution therefrom until the ratio by weight of solution remaining in the material to the material is about 2:1, and exposing the said material while wet with the second said solution to the action of steam for a period of at least about one-half hour in a steam chamber.

2,407,910
ELECTRICAL SIGNALING SYSTEM

Reginald Taylor and George Thomas Baker, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

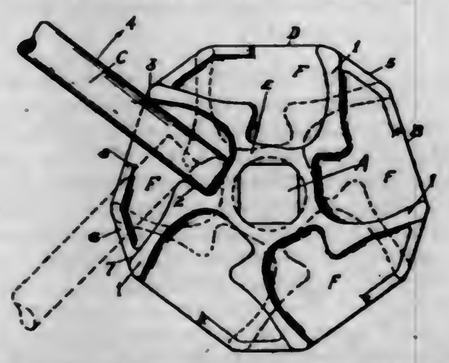
Application June 30, 1943, Serial No. 492,832
In Great Britain August 20, 1942
11 Claims. (Cl. 179—16)

1. In a signaling system, a repeater responsive to received make and break impulses over an incoming circuit for repeating the same over an outgoing circuit, a relay in the repeater operated by the first interruption of the incoming circuit, a second relay responsive to the operation of the first relay to open the outgoing circuit, a condenser, a gas discharge tube, means for charging the condenser to the striking voltage of the tube, and means responsive to the striking of the tube to terminate the operation of the second relay and thereby close the outgoing circuit.

2,407,911
WAVE PROPAGATION

Lewi Tonks and Le Roy Apker, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application April 16, 1942, Serial No. 439,248
7 Claims. (Cl. 178—44)

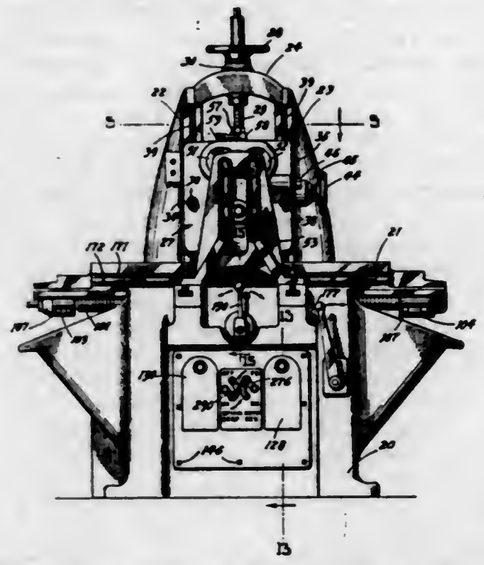


1. An electromagnetic system for propagating centimeter waves comprising a wave-propagating structure having a discontinuity at which reflection tends to occur, and means in proximity to said discontinuity and in the path of wave propagation for annulling the said reflection, said means comprising the combination of a plurality of spaced elements each constituting in itself a short section of wave-propagating structure and having a thickness in the direction of wave propagation which is a material fraction of the wave length of the waves to be propagated whereby the overall reflection from said combination is defined by a reflection coefficient in which both the spacing and thickness of the elements enter as dominant factors, the spacing of said elements with respect to one another being so adjusted that at any plane in said structure located in advance of the said elements and the said discontinuity with reference to the direction of wave propagation the reflection attributable to the elements is equal to that attributable to the said discontinuity, and the spacing of said elements with respect to the discontinuity being such that at the said plane a phase displacement of approximately $n\pi$ radians exists between reflections attributable to the discontinuity and reflections attributable to the elements, n being an odd integer.

2,407,912
SAFETY OPERATING HANDLE FOR CAR DOOR MECHANISM

Albert E. Zimmer, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois

Application February 12, 1945, Serial No. 577,464
3 Claims. (Cl. 74—552)

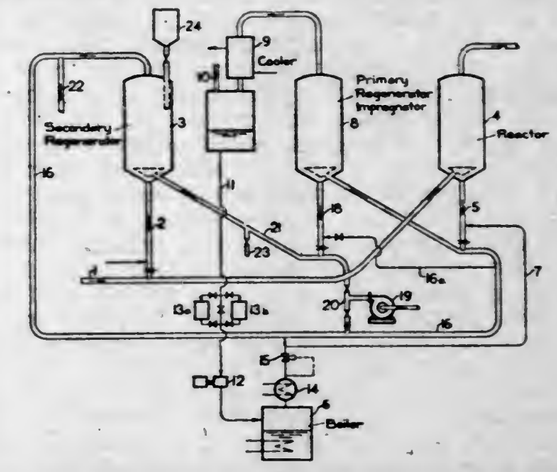


1. In a safety operating mechanism for the dump door operating mechanism of railway cars, the combination of an operating shaft for said door operating mechanism, manually operated means for rotating said shaft in either direction comprising a disc-like socket member secured to the shaft and having a plurality of sockets for the reception of a removable operating handle bar each of said sockets opening both on the periphery and on a side of the disc-like socket member, and a cam member associated with each socket and having an inclined surface adapted to engage the handle bar when the socket member is rotated in the same direction faster than it is rotated by the handle bar and eject said handle bar from said socket in a direction axially of the shaft.

2,407,913
MACHINE TOOL TRANSMISSION AND CONTROL MECHANISM

Joseph B. Armitage, Wauwatosa, and Orrin W. Barker, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis., a corporation of Wisconsin

Application February 23, 1942, Serial No. 431,908
20 Claims. (Cl. 90—21)



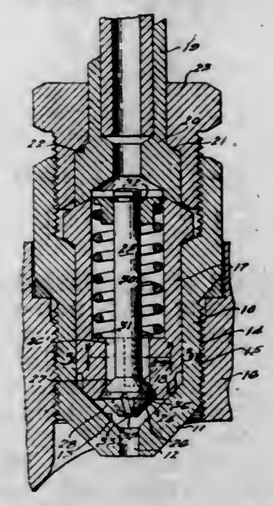
1. In a machine tool, a driving mechanism including a disconnecting clutch, a fluid pressure system arranged to move said clutch alternatively to connecting position or to disconnecting position, a valve operatively connected to control said fluid pressure system, means biasing said control valve to a position effecting movement of said clutch to connecting position, fluid pressure means selectively operable to force said valve to a position effecting disconnecting movement of said clutch, control means acting upon said fluid pressure means for controlling said valve to thereby effect control of said disconnecting clutch, and other control means acting mechanically upon said valve to move it to a position effecting disconnecting movement of said clutch.

2,407,914
CATALYTIC CONVERSION OF HYDROCARBONS AND THE PREPARATION OF CATALYSTS THEREFOR

William A. Bailey, Jr., Wilmington, and James Burgin, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application August 22, 1944, Serial No. 550,632
18 Claims. (Cl. 196—52)

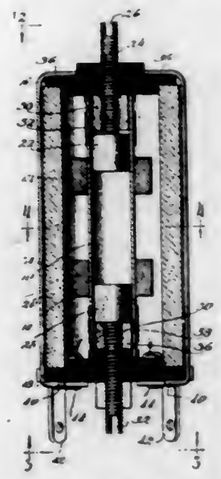
1. Process for the preparation of boric oxide catalysts which comprises continuously feeding to a boiler an aqueous solution of boric acid, continuously generating in said boiler and withdrawing a steam-boric acid vapor mixture, superheating said mixture, expanding said superheated mixture, passing the superheated and expanded mixture up through a bed of an adsorptive base material consisting predominantly of alumina maintained at a temperature between about 140° C. and 590° C., cooling the exit vapors to condense an aqueous boric acid solution, adjusting the concentration of boric acid in said condensed boric acid solution, and feeding said solution to said boiler, thereby to impregnate said adsorptive aluminous base material with an effective amount of boric oxide.



14. In a process for the catalytic conversion of a hydrocarbon with a catalyst comprising boric oxide and alumina in a fluidized catalyst system, the improvement which comprises effecting the regeneration of the catalyst in two stages, effecting the first stage at a temperature below about 500° C. with steam containing vapors of boric acid at a partial pressure of steam below 1 atmosphere, effecting the second stage at a temperature above about 500° C. with air, and replacing a portion of the total catalyst with an adsorptive base material consisting predominantly of alumina, whereby the activity of the catalyst in the system is maintained by the formation of fresh catalyst in said first regeneration stage.

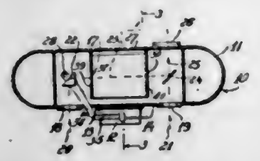
2,407,915
INJECTION NOZZLE

Thomas M. Ball, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware



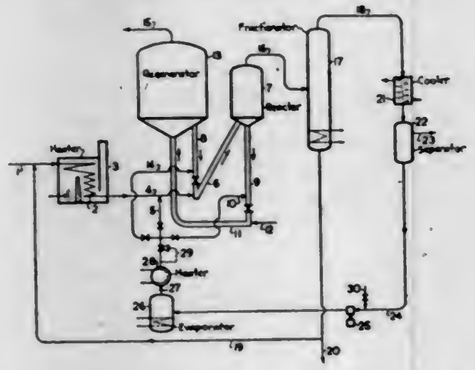
Application August 20, 1942, Serial No. 455,401
1 Claim. (Cl. 299—107.6)

A fuel nozzle comprising a hollow body portion provided with a fuel discharge opening communicating with the interior of said body portion, means for supplying fuel to the latter, a recipro-



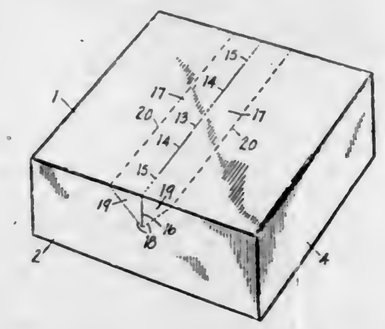
cable valve member shiftably mounted in the interior of said body portion having a head part provided with opposed faces, one adjacent and the other remote from said discharge opening and having a cylinder located between said faces, a fuel passageway extending through said valve head having an open inlet end located in the face of said head remote from said discharge opening, the face of said head adjacent said discharge opening having a fuel whirling groove therein provided with an open end at the periphery of said cylinder, an abutment surface in said body portion engageable in mating relationship by the face of said valve head remote from said discharge opening for closing the open inlet end of said passageway and cutting off the flow of fuel to said discharge outlet when said valve member is closed, a second abutment surface in said body portion engageable in mating relationship with the face of said valve head adjacent said discharge outlet when said valve member is in open position for closing a side of said fuel whirling groove, and a cylinder wall in said body portion between said abutment surfaces for receiving said cylinder of said valve head and closing the end of said fuel whirling groove, the face of said valve head remote from said outlet being disengageable from said first mentioned abutment face upon initial opening movement of said valve member for accommodating a preliminary flow of fuel through said passageway and said cylinder being removed from within said cylinder wall after a predetermined extent of opening movement of said valve member for accommodating a subsequent flow of fuel through said fuel whirling groove.

2,407,916
SHIELDED COIL
Howard O. Berg, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 10, 1943, Serial No. 482,528
5 Claims. (Cl. 250—16)



4. A shielded coil of the class described, comprising an insulating and non-magnetic tube having an inner and an outer metallic film at each end thereof, each inner film and its adjacent outer film forming a separate electrical condenser, electrical coils wound on said tube on the uncoated portion thereof, an iron dust core for each of said coils, an iron dust sleeve enclosing said coils and tube, end plates maintaining said tube and sleeve in spaced co-axial relationship, and a metal shield surrounding said sleeve and having portions overlying said end plates.

2,407,917
RANGE FINDER
Jacques Bolsey, New York, N. Y.
Substituted for abandoned application Serial No. 372,507, December 31, 1940. This application April 30, 1943, Serial No. 485,177
2 Claims. (Cl. 95—44)

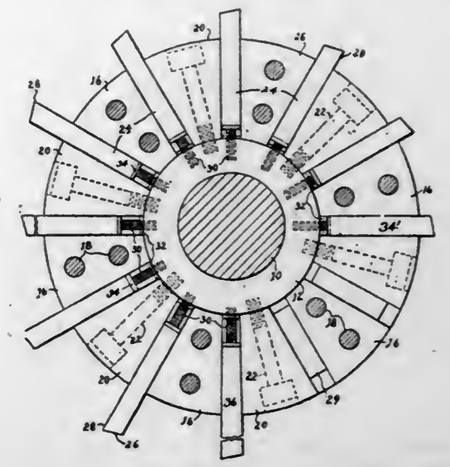


1. In a reflex camera a camera casing, a camera lens, a lens mount for said lens arranged on the front wall of said casing, a viewing chamber arranged in said casing and having side walls, aligned apertures in said side walls, a translucent screen for focusing purposes arranged within said viewing chamber parallel to the top wall of said casing, a focusing mirror in said viewing chamber adapted to reflect the light rays entering said casing through said camera lens on said translucent screen, two openings in the front wall of said casing defining a horizontal base and adapted to accept two light beams coming from the object to be photographed, a first reflecting member arranged inside of said casing in the path of the first of said light beams and reflecting it inside of said casing through said aligned apertures in said side walls of said viewing chamber and said viewing chamber itself along a path parallel to said camera front wall and said translucent screen crossing the path of the light rays reflected by said focusing mirror, a second reflecting member arranged at least partly in the path of the second of said light beams and adapted to reflect said reflected first light beam in a direction parallel to the path of said second light beam, a viewing opening in the rear wall of said camera casing arranged in the path of said second and said twice reflected first light beams, and means for adjusting said range finder in accordance with the position of said camera lens.

2,407,918
CATALYTIC CONVERSION OF CARBONACEOUS MATERIALS
James Burgin, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application June 1, 1943, Serial No. 489,296
22 Claims. (Cl. 196—50)

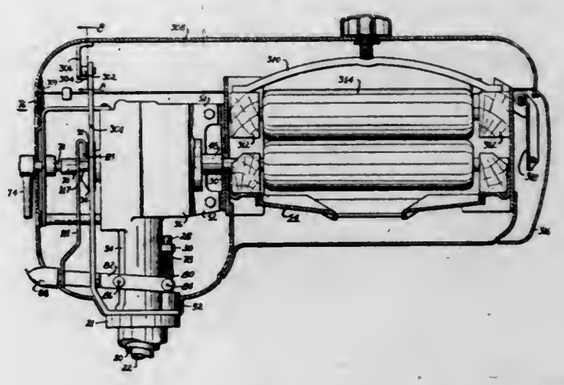
7. In a process for effecting a catalytic conversion of a hydrocarbon at an elevated temperature with a catalyst consisting essentially of a minor effective amount of boric oxide and a major amount of a relatively inert catalyst carrier wherein the hydrocarbon to be converted is passed in a fluid state in contact with the catalyst in a suitable reaction zone, the improvement which comprises forming a mixture of steam and boric acid, and passing said mixture through the reaction zone with the fluid hydrocarbon reactant to be converted.

2,407,919
DISPENSING BOX OR CONTAINER
Kenneth T. Buttery, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich., a corporation of Michigan
Application October 8, 1945, Serial No. 621,003
2 Claims. (Cl. 206—57)



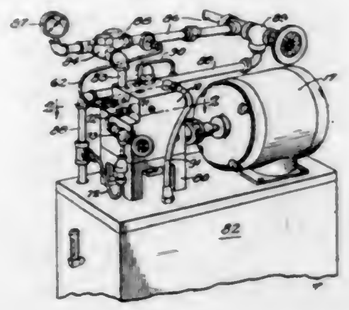
1. A dispensing carton comprising a top wall, and end walls integral therewith, the top wall having a central fracturing line extending from end to end thereof and comprising spaced relatively long slits and relatively short strips between said long slits, the end walls having slits of substantial length alined with and joining the fracturing line of the top, the top wall also having weakened hinge lines parallel to and spaced from said fracturing line, the end walls having diagonally disposed fracturing lines extending from said hinge lines to the outer ends of said slots in said end walls, the top wall sections between said hinge lines when the walls are fractured along said fracturing lines constituting closure members swingable to oppositely inclined positions and from between which the contents of the carton may be withdrawn.

2,407,920
PROCESS OF PRODUCING PENTAERYTHRITOL
Richard F. B. Cox, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 25, 1942, Serial No. 459,707
8 Claims. (Cl. 260—635)



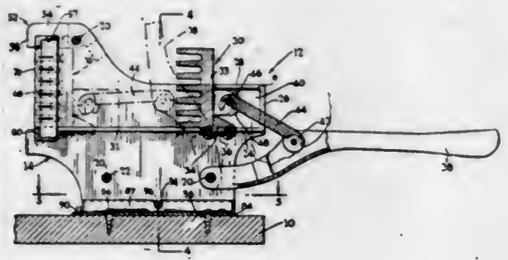
5. A process for making pentaerythritol comprising condensing acetaldehyde and formaldehyde in the presence of an alkaline material, adding an acidic precipitant for the metal ion of the alkaline material thereby freeing formic acid, treating the resulting mixture with a monohydric alcohol, which will form a ternary azeotropic composition having a boiling point of not more than 99° C. of such monohydric alcohol, the formic ester thereof and water, to convert the formic acid into the ester, distilling off said formic ester while maintaining the temperature of the mixture at from about 60° C. to about 99° C., and recovering pentaerythritol from the residue.

2,407,921
ROTARY BROACH
John Deliso, Worcester, Mass.
Application February 19, 1944, Serial No. 523,010
4 Claims. (Cl. 29—95.1)



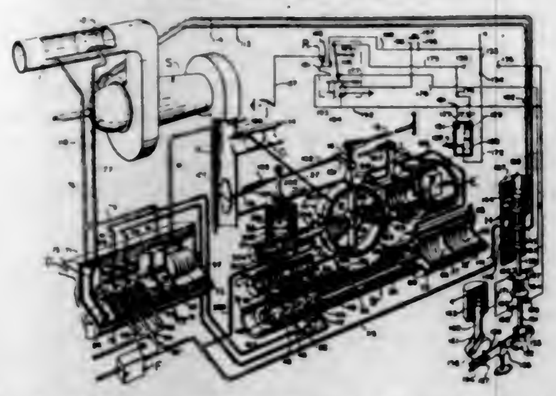
1. A rotary broach comprising a circular plate, spaced generally triangular elements secured in radial relation to a face of the plate, clamping members interposed between the elements, cutting tools clamped between the members and elements, and means to adjust the tools radially of the plate.

2,407,922
WRINGER
Donald K. Ferris, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application May 28, 1943, Serial No. 488,840
5 Claims. (Cl. 68—249)



3. A wringer having a wringer frame, rolls mounted in the frame, a pressure means for the rolls, a driving mechanism for driving the rolls, normal control means having forward, reverse and neutral positions for controlling said driving mechanism, means providing a floating support for said frame, and means responsive to a movement of said frame with respect to its floating support for first moving said normal control means to its neutral position for disconnecting the driving mechanism from the rolls and thereafter upon further movement of said frame for releasing the pressure from the rolls.

2,407,923
PUMP
George E. Gall, Chicago, Ill., assignor to Anker-Holth Manufacturing Company, Inc., Chicago, Ill., a corporation of Michigan
Application January 31, 1944, Serial No. 520,391
7 Claims. (Cl. 103—10)

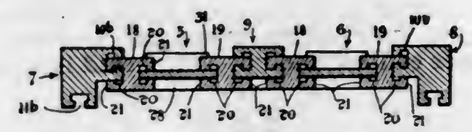


1. A pumping unit having a main outlet and comprising a high and low pressure section each having an outlet communicating with said main outlet, said low pressure section having its outlet connected also with the inlet of said high pressure section and being adapted to deliver liquid to said main outlet at a relatively fast rate so long as the pressure at said main outlet does not exceed a predetermined pressure, said low pressure section being also adapted to deliver liquid to said high pressure section when the pressure of said main outlet is in excess of said predetermined amount, a shaft for driving both of said pumping sections, a valve preventing backflow of liquid from said main outlet to said high pressure section, and a valve preventing backflow of liquid from the inlet of said high pressure section to said low pressure section.

2,407,924
FOOD SLICING MACHINE HAVING STATIONARY KNIVES AND A FOLLOWER FEED
Louis X. Garfunkel, New York, N. Y.
Application May 25, 1943, Serial No. 488,366
6 Claims. (Cl. 146—169)

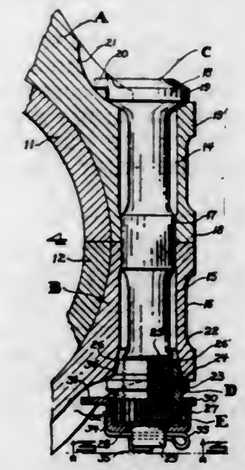
1. In combination with a slicing machine frame on which is mounted a slicing machine head and a pusher ram reciprocable towards and away from said head, a mounting plate and cooperating means on said frame and plate to permit relative translatory sliding movement thereof in a direction parallel to that in which the ram reciprocates and to prevent movement in any direction transverse thereto, and means to optionally securely lock said frame and plate against such relative sliding movement in either direction.

2,407,925
APPARATUS FOR COMPARING PRESSURES
Henry W. Gilfillan, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Original application March 27, 1943, Serial No. 480,786. Divided and this application December 31, 1943, Serial No. 516,423
11 Claims. (Cl. 73—432)



1. A device for comparing a small pressure quantity with a much larger pressure quantity by causing the small quantity to act against a much larger area than that acted against by the much larger quantity, said device comprising first and second diaphragms positioned opposite one another, the pressure-responsive area of the first diaphragm being larger than that of the second diaphragm, means for causing the much larger pressure quantity to apply force in one direction against the outer side of the first diaphragm, means for causing the much larger pressure quantity to apply force in the opposite direction against the second diaphragm, members secured to the inner sides of the first and second diaphragms and abutting one another for causing the forces to act in opposition to one another and to be resolved to a small force acting in the said one direction and being proportional to the product of the much larger pressure quantity and the difference in the pressure-responsive areas of the first and second diaphragms, a third diaphragm, means for applying the small pressure quantity against the third diaphragm in the said opposite direction, and means connecting the third diaphragm with the first and second diaphragms.

2,407,926
PAPER YARN
Kenneth Hamilton, Amsterdam, N. Y., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a corporation of New York
Application February 7, 1945, Serial No. 576,669
7 Claims. (Cl. 57—154)

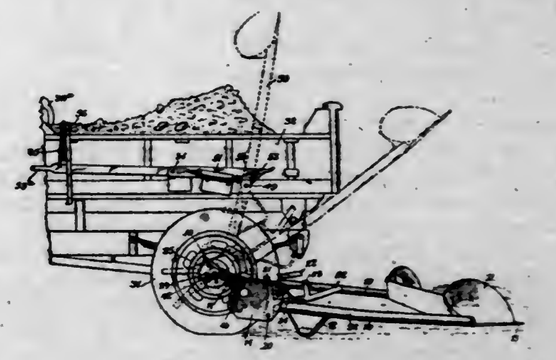


1. A yarn which comprises a strip of paper containing a substantial quantity of water distributed throughout the paper, the strip being formed with random generally longitudinal folds and twisted about its longitudinal axis, and a substantially continuous coating impenetrable by water covering the outer surface of the twisted strip, the water within the paper making the twisted coated strip flexible and the coating both adding to the wet strength of the twisted strip and preventing the escape of water therefrom.

2,407,927
MINIATURE SECTIONAL BUILDING CONSTRUCTION
Edward Hayden, Windsor, Ontario, Canada
Application May 5, 1945, Serial No. 592,100
2 Claims. (Cl. 46—19)

1. A miniature sectional building structure adapted to serve as a toy or builder's model, said structure comprising a plurality of detachably interlocked building elements, each element being provided with a T-shaped groove open at both ends and having one of the L-shaped defining walls of said groove slidably fitted within the T-shaped groove of an adjoining element, each part of the said L-shaped portion being in direct engagement with a wall portion of the T-shaped groove.

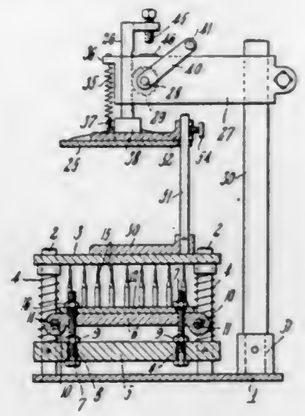
2,407,928
FASTENING DEVICE
Alexander G. Herreshoff, Grosse Pointe, and Wade Lamb, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application October 30, 1941, Serial No. 417,171
9 Claims. (Cl. 85—1)



1. In a fastening device, a reaction-taking member having an opening formed with a frusto-conical seat portion, an abutment, a tension-taking element extending into said opening for seating at one end portion thereof on said abutment, the other end portion of said element having threads one portion of which extend for a distance along said element inwardly of said opening beyond said frusto-conical seat portion and another portion of which extend for a distance outwardly beyond said opening and said frusto-conical seat portion, a circumferentially continuous nut having threaded engagement with the threads of said element, said nut having a first portion thereof disposed within said opening and engaging said one portion of said threads, said nut having a second portion engaging said another portion of said threads, said nut having a frusto-conical seating portion intermediate its said first and second portions adapted to seat on the frusto-conical seat portion of said reaction-taking member such that said first and second portions of said nut extend in opposite directions beyond said seat portion of said opening.

2,407,929
CATHETER
Norman C. Jeckel, Glens Falls, N. Y., assignor to United States Catheter & Instrument Corp., a corporation of New York
Application April 29, 1944, Serial No. 533,281
13 Claims. (Cl. 87—11)

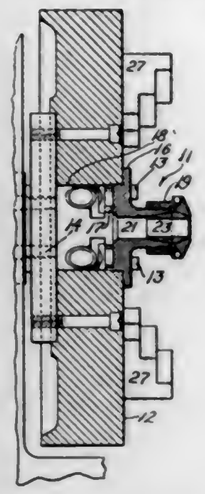
7. A braided tubular article having cylindrical portions and converging tapered portions therebetween, said tapered portions being formed from threads which enter into the braid of the cylindrical portions, certain of said threads leaving the braid in step-like order along the lengths of the tapered portions, passing inside of the braided tube and extending from one tapered portion to the other and inside thereof in unbraided relation.



2,407,930
SHOVEL
Albert A. La Pointe, West Hartford, Conn., assignor to La Pointe Engineering Company, Unionville, Conn., a copartnership
Application March 9, 1945, Serial No. 581,729
5 Claims. (Cl. 214—81)

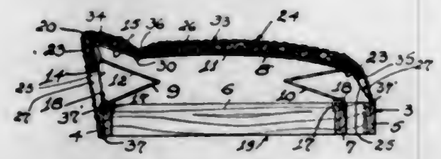
1. The combination with a vehicle having a body and a pair of drive wheels, of a pair of ratchet wheels connected to said drive wheels coaxially therewith, a pair of lifting arms pivotally mounted at one end coaxially with said drive and ratchet wheels, a scoop mounted at the opposite end of said arms and a pair of pawls mounted on said arms adjacent said pivoted end and engaging said ratchet wheels whereby the arms are caused to pivot upwardly raising the scoop in an arcuate line of movement from a ground position to a position above the vehicle body when the drive wheels rotate in one direction, and the arms are permitted to pivot downwardly and the scoop to return to the ground position along said arcuate line of movement in response to the attraction of gravity when the

drive wheels rotate in the opposite direction, further rotation of the drive wheels in the latter direction causing no vertical change in the ground position of the scoop.



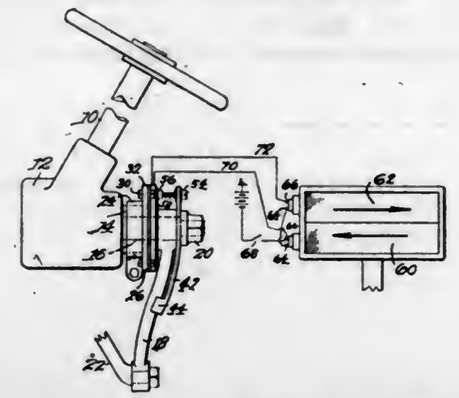
2,407,931
CIGAR PUNCHING MACHINE
John H. Lindsay and Sam Reso, Jacksonville, Fla., assignors to Universal Tobacco Machine Co., Inc., Jacksonville, Fla., a corporation of Florida
Application April 4, 1944, Serial No. 529,548
5 Claims. (Cl. 131—254)

1. A machine of the class described, comprising a pair of members movable from and toward each other, one of said members having recesses in its face remote from the other of said members spaced in accordance with the spacing of cigars in a bunch of cigars and perforated through said member from the bases of said recesses, a set of needles carried by the other of said members in line with said perforations, yieldable means normally separating said members sufficiently for the points of said needles to be back from the open ends of said recesses, a presser member moving in line with said pair of members for clamping a bunch of cigars with their rounded ends resting in said recesses, and for then pressing said perforated member toward the other of said pair of members to cause said needles to punch said cigars, and means limiting the approach of said presser member toward said perforated member to a predetermined distance during which approach said yielding means clamps the cigars of the bunch between said perforated and presser members, to thereby cause further motion of said presser member in pressing direction to move said perforated member positively and force the end portions of the cigars against the points of said needles to cause punching of the cigars.



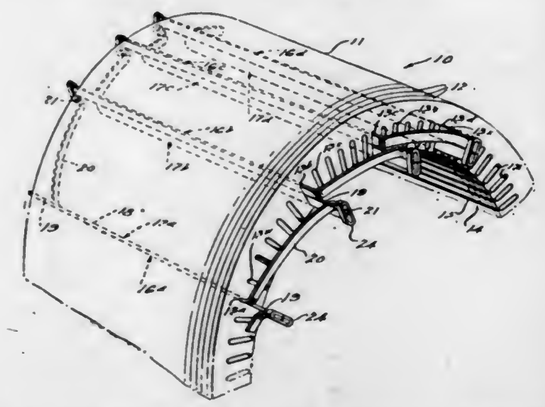
2,407,932
ATTACHMENT CHUCK
Frank R. Maxwell, Malden, Mass.
Application March 4, 1944, Serial No. 525,035
1 Claim. (Cl. 279—54)

An adapter attachment for application to an existing lathe chuck between the jaws thereof thereby to render the existing chuck capable of holding smaller work than is possible with the existing chuck as originally constructed, said adapter attachment comprising a body made with a hole through it, with a radial apertured flange upon its exterior to seat against the front face of the existing chuck, with a circular boss at its inner end to snugly but removably fit within the outer end of the bore of the existing chuck thereby to center the attachment, and having its outer end portion in the form of an exteriorly threaded nipple, the outer end portion of said hole being made conical with the larger end of said conical portion adjacent to the outer end of said nipple; an interiorly threaded nut adjustably mounted on said nipple; a longitudinally split bi-conical collet whereof one end is fitted within the outer conical end portion of said hole and the



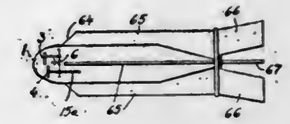
opposite end is fitted within a conical socket provided within the outer end portion of said nut, the latter serving to clamp the collet on to the work, a plurality of anchor blocks each made with a threaded hole and adapted to be removably confined within a separate one of the radial slots of said existing chuck, and screws occupying the apertures of said radial flange and said threaded holes by which screws the flange is rigidly fixed in position against the outer face of the existing chuck.

2,407,933
UPHOLSTERED SPRING CONSTRUCTION
William H. Neely, Cleveland, Ohio, assignor to The Universal Wire Spring Company, Cleveland, Ohio, a corporation of Ohio
Application May 1, 1944, Serial No. 533,621
11 Claims. (Cl. 155—179)



1. An upholstered spring structure embodying a spring construction including corrugated, elongated wire springs arranged side by side so that their corrugations align with each other and form a supporting surface, said corrugations comprising left and right handed loops connected by straight portions rectangularly related to the longitudinal axes of said springs, a pad seated upon the supporting surface and secured thereto between opposite edges thereof, said pad embodying an elongated sleeve member between its opposite ends in rectangular relationship to said axes of said springs and in alignment with certain straight portions thereof, aligning and attachment means within said sleeve member, and means directly connecting the straight portions of said springs with said aligning and attachment means in said sleeve member.

2,407,934
AUTOMATIC DIRECTION INDICATOR
Frederick W. Nilson, Worcester, Mass.
Application October 17, 1942, Serial No. 462,320
1 Claim. (Cl. 200—59)



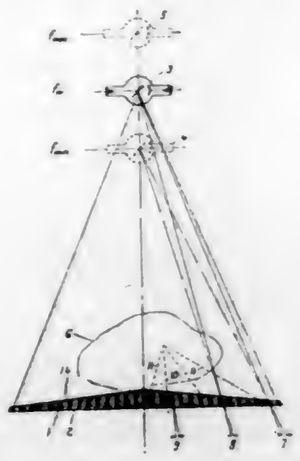
A switch comprising a plate, segmental spaced contacts on the plate, a collar fixed to the plate said collar adapted to be disposed about a relatively fixed part of a vehicle, means to tighten the collar for quick attachability, an arm provided with an aperture intermediate its ends to receive an associated fixed vehicle part for pivotal movement thereon, a sweeping contact arranged adjacent one end of the arm, means yielding urging the sweeping contact into selective engagement with the segmental contacts, means on the arm adapted to engage a movable vehicle part so that the arm is pivoted thereby, said means and arm being detachable.

2,407,935
ELECTRICAL MACHINE
John F. Perfetti, Dearborn, and Harold E. Waldron, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 25, 1944, Serial No. 537,336
11 Claims. (Cl. 171—206)

1. In combination, a core formed of a stack of laminations and having a plurality of openings extending through the stack, a first conductor positioned in a first opening in the stack and having a straight end protruding from one end of the stack and a bent end protruding from the other end of the stack, a second conductor positioned in a second opening of the stack and having a straight end protruding from the said other end of the stack and into proximity with the bent end of the first conductor and a second bent end protruding from the said one end of the stack, and means electrically connecting the bent end of the first conductor and the straight end of the second conductor.

2,407,936
AERIAL DROP BOMB
Helge Fabian Rost, Djursholm, Karl Harry Thunell, Nockeby, Sten Daniel Vigren, Stockholm, and Per Harry Elias Claesson, Jakobsberg, Sweden
Application December 26, 1941, Serial No. 424,496
In Sweden October 8, 1940
10 Claims. (Cl. 250—2)

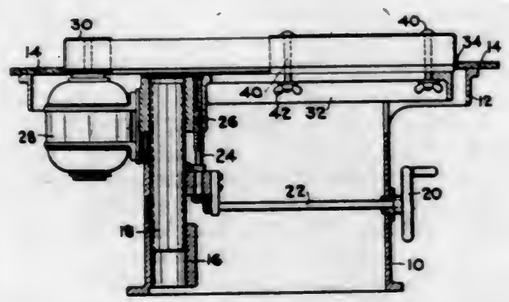
5. The combination with steering means responsive to electrical impulses to cause deviations of an object moving in space from a predetermined axis in two directions at right angles to each other and to said axis, of a single wave energy responsive element centered on said axis, a scanning device including wave energy collecting means to converge wave energy emitted from a scanning field upon said responsive element, two rotatable screens having overlapping parts disposed in front of said responsive element, means for rotating said screens, each screen being provided with two concentric scanning slots displaced a certain angle relative to each other and being so disposed with respect to said responsive element and said collecting means as to pass, in one angular position of said screens, wave energy from an area on one side of a center plane of the scanning field through one of said concentric slots to said responsive element, and, after each screen has rotated through said certain angle, to pass wave energy from an equal area on the other side of said center plane of the scanning field through the other concentric slot to said responsive element to generate electrical potentials therein, distributing means electrically connected to the responsive element and to the steering means to apply to the latter for steering purposes the positive or negative differentials between two potentials obtained from opposite halves of the scanning field, and means for operating said distributing means synchronously with said rotating screens.



2,407,937
TERPENE DERIVATIVES
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 31, 1941, Serial No. 396,214
14 Claims. (Cl. 260—468)

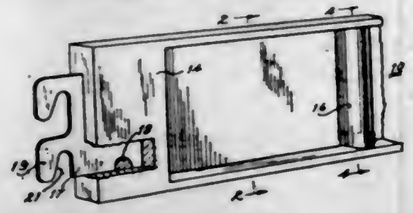
1. An ester of a carboxylic organic acid and trimethyl butyl hexahydrobenzyl alcohol.

2,407,938
X-RAY SCREENING APPARATUS
Nils Georg Schönander, Stockholm, Sweden
Application November 24, 1943, Serial No. 511,503
In Sweden March 9, 1943
7 Claims. (Cl. 250—62)



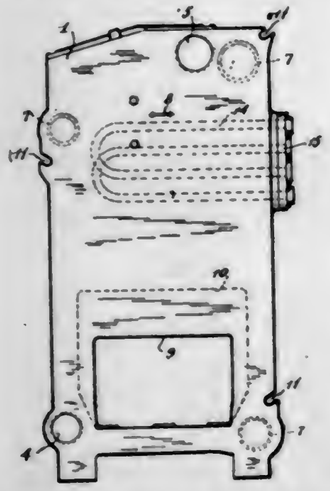
1. An X-ray apparatus comprising an X-ray tube, a screen for reducing secondary X-ray radiation on X-ray fluoroscopic or photographic plates or films and interposed between the object to be X-rayed and the said plate or film, said screen comprising on edge standing leaves of

material substantially impervious to X-rays, said leaves being alternately interspaced with material substantially transparent to X-rays, and means for moving the X-ray tube to vary the distance between the focus of said tube and the said screen, plate or film, in which the leaves are convergently directed towards a point located about half way



between the extreme positions of said variable focus in which the height of said leaves are lower near the edges of said screen than near the center of the same, in order thus to obtain substantially the same width of shadows and sharpness of picture over the entire surface of said plate or film at varying distances between the said X-ray focus and the said screen, plate or film.

2,407,939
BELT SANDER
Berthold Steinhilber, Worcester, Mass., assignor of two-fifths to George L. Anger, Worcester, Mass.
Application December 19, 1944, Serial No. 568,851
2 Claims. (Cl. 51—135)



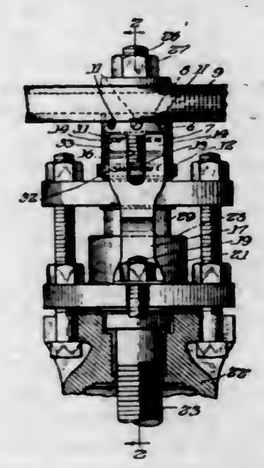
1. A belt sanding machine comprising a base, a fixed table thereon, said table having an aperture therein, a vertically adjustable bed located in the aperture, a depending bracket on the bed, said bracket being located within the base, a depending standard on the bracket, a vertically disposed guideway in the base receiving the standard for vertical movement therein, means to vertically move the bracket and standard, a motor on the bracket for movement therewith, a vertical shaft on the motor extending above the bed, a pulley on the shaft, a sanding belt trained over the pulley, said bed having a plurality of longitudinal slots therein, an elongated block having rounded ends disposed in adjustable relation on the bed, a pair of fasteners in the block for selective disposition through one or more slots to hold the block to the bed selectively parallel or at angles relative to the slots, said sanding belt being trained about the block, said bed, motor, and sanding belt being vertically adjustable relative to the table to provide desired heights of exposed sanding areas.

2,407,940
MANUFACTURED ARTICLE OF FURNITURE
Clinton L. Stevens, Jamestown, N. Y.
Application April 19, 1944, Serial No. 531,728
7 Claims. (Cl. 5—286)

3. In an article of furniture, a support member having solid ends, hook plates having their ends permanently joined to said solid ends, said member, intermediate its ends, being channel-like in cross section, the sides of the channel constituting top and bottom ledges, a plurality of spaced ribs formed integral with said ledges and the connecting web of the channel, each of said ribs, in cross section, being wedge-shaped with the wider part at the web of the channel and the narrow edge terminating substantially flush with the free edges of the top and bottom ledges.

2,407,941
BOILER
Ralph D. Terhune, Ridgewood, N. J., assignor to The Bryant Heater Company, Cleveland, Ohio, a corporation of Ohio
Application April 13, 1945, Serial No. 588,082
1 Claim. (Cl. 122—225)

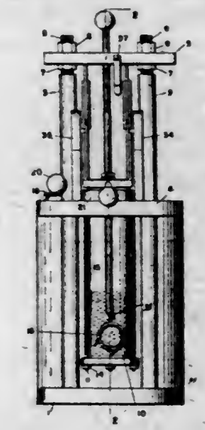
In a sectional heating boiler including a pair of end sections and an intermediate section therebetween arranged to provide a combustion chamber with flue passages leading therefrom between said sections, means interconnecting said sections at one side adjacent the water line and at the other side adjacent the top and the bottom, said end sections having cold water inlets adjacent the bottom at said first named side, and a domestic water heat exchanger disposed within said intermediate section above said combustion chamber and below the waterline, said intermediate section having, at said other side, a top outlet and mounting means for said heat exchanger.



2,407,942
CARBALKOXYLATION OF ORGANIC COMPOUNDS
Vernon H. Wallingford, Ferguson, and August H. Homeyer, St. Louis, Mo., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Application February 20, 1941, Serial No. 379,828
14 Claims. (Cl. 260—476)

1. The method for simultaneously carbalkoxylating and metallating acetophenone, which comprises mixing said compound with an anhydrous alcoholate of an alkali metal and a large excess of a dialkyl carbonate over that required as a reactant.

2,407,943
RESIN MOLDING COMPOSITION
George W. Whitehead, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 8, 1943, Serial No. 482,315
19 Claims. (Cl. 260—73)



19. A polyvinyl acetal resin pressure molding composition having a decreased tendency to stick to a mold after molding, containing a water-insoluble polyvinyl acetal resin, and normally having a tendency to stick to a mold, to which has been added a sufficient proportion of glycolic acid effective to reduce the tendency to stick to a mold, said polyvinyl acetal resin containing at least 20% acetal on a chemical equivalent basis and the sum of the ester and twice the number of the acetal groups in said polyvinyl acetal resin exceeding the number of the hydroxyl groups.

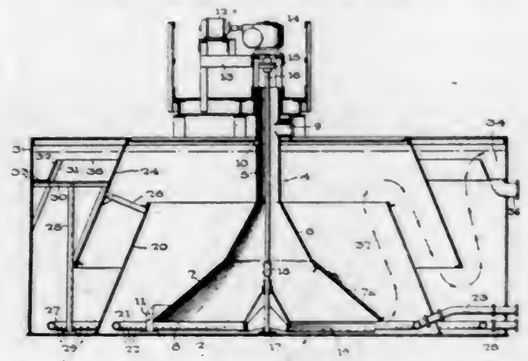
2,407,944
INDICATOR FOR VALVES
Charles H. Bassett, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application March 17, 1944, Serial No. 526,981
1 Claim. (Cl. 116—125)

An indicator device for a non-rising stem valve or the like having a closure member and an operating stem, stem actuating means therefor provided with a lower depending hub portion, an externally threaded sleeve provided on and fixed to the external portion of the said hub portion of the said stem actuating means, an internally threaded pointer mounted for relative rotation on and axial movement along said threaded sleeve, the said rotation and axial movement being responsive to rotational movement of the said threaded sleeve, a graduated indicator plate coacting with the said pointer to prevent rotational movement of the said pointer but to provide axial movement and for indicating the position of the said closure member at and between its open and closed positions.

2,407,945
APPARATUS FOR TESTING WATERPROOF WATCHCASES
William Ogle Bennett, Jr., Lancaster Township, Lancaster County, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.
Substitute for abandoned application November 1, 1943, Serial No. 508,538. Divided and this application February 14, 1946, Serial No. 647,566
3 Claims. (Cl. 73—40)

1. An apparatus for testing watch cases comprising a lower base, uprights extending upward from said base, an upper base formed with a central opening and supported by said uprights, an upper guiding plate supported by said uprights and above said upper base, means for varying the distance between said upper base and said upper guiding plate, a sealing plate for said upper base opening, a cylinder closed at one end and depending from said upper base opening, a link mechanism connected to said upper plate and said sealing plate, a handle connected with said link mechanism to swing said sealing plate from open to closed position, a resilient washer around said opening and contacted by said sealing plate, means limiting the motion of the handle to permit the link mechanism to move the sealing plate against and compress said resilient washer, said link mechanism passing beyond the straight line position to firmly lock said sealing plate in sealing position and means controlling the pressure within said cylinder.

2,407,946
COPOLYMERIZATION OF VINYL COMPOUNDS
Edgar C. Britton and Walter J. Le Fevre, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application May 6, 1944, Serial No. 534,530
14 Claims. (Cl. 260—84)

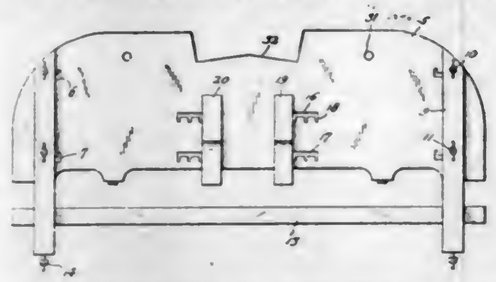


1. In a method wherein different polymerizable

organic compounds, each containing the radical:

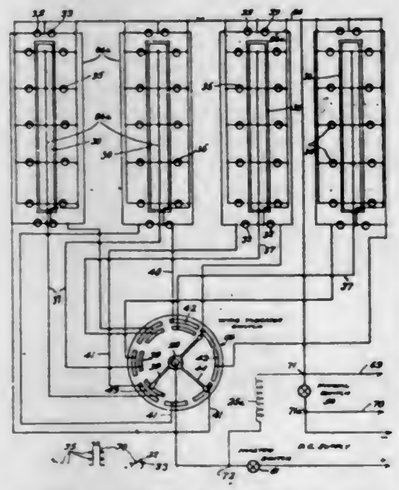
$$H_2C{=}C\diagup\!\diagdown$$

are copolymerized, the step of catalyzing the reaction by carrying it out in the presence of a peroxygen compound, a farric salt of an inorganic acid in amount having an iron content corresponding to between about 0.0001 and about 0.05 per cent of the combined weight of the polymerizable organic compounds, and an acid in amount sufficient to give the polymerization mixture a pH value between about 1.5 and about 3, the peroxygen compound, ferric salt and acid each being dispersed within the polymerization mixture.



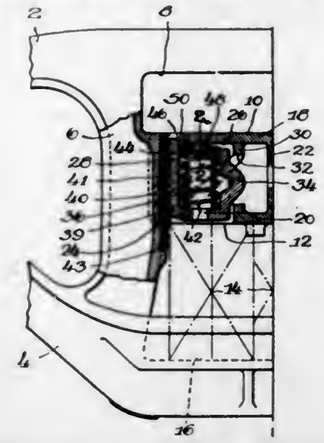
2,407,947
APPARATUS FOR THE CLARIFICATION OF LIQUIDS
Alfred Butcher, Pittsburgh, Pa., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 19, 1945, Serial No. 600,274
8 Claims. (Cl. 210—16)

1. A liquid clarifier comprising a tank having a bottom and a peripheral wall, a downcomer for the liquid to be treated, disposed substantially centrally of the tank and terminating in a lower edge spaced above the tank bottom, a rotatable vertical shaft mounted centrally of said downcomer, means for rotating said shaft, agitator blades carried by said shaft and adapted to sweep over the tank bottom with a horizontal propelling effect, an annular baffle surrounding the lower portion of the downcomer and adapted to direct upwardly the outflow from beneath said lower edge, an annular liquid withdrawal trough in said tank surrounding said baffle, a perforated annular sludge withdrawal conduit within said baffle adjacent the lower portion thereof toward which said agitator blades sweep precipitated sludge, a second annular baffle disposed between said trough and first baffle, said second baffle extending above and below the upper edge of the first baffle and above the upper edge of said trough and terminating downwardly a distance above the tank bottom, and a perforated annular sludge withdrawal conduit in the tank adjacent the lower portion of said peripheral wall.



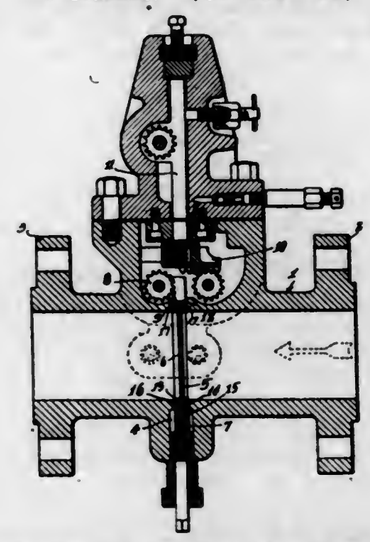
2,407,948
FOOTREST FOR EMBALMING TABLES
William Hobart Cawood, Middlesboro, Ky.
Application July 26, 1944, Serial No. 546,619
1 Claim. (Cl. 311—11)

A foot rest for embalming tables comprising a member disposed transversely of the surface of the table, means for securing the member against movement on the table, said member having horizontal slots therein, and spaced parallel vertical slots communicating with the horizontal slots, foot props positioned against one side of the member and adapted to abut the sides of the feet



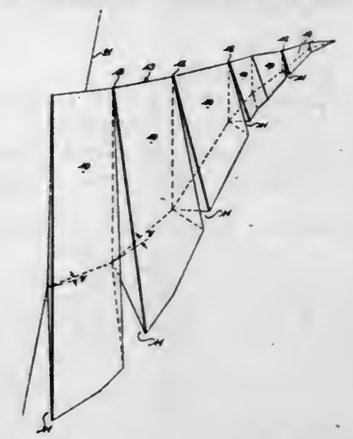
of a body resting on the table, and pins carried by the props and adapted for selective engagement in said vertical slots to secure the props in adjusted position transversely of the table.

2,407,949
RADIO CONTROLLED SIGNAL AND ILLUMINATING SYSTEM FOR AIRWAYS
Alfred A. Corcanges, Greenville, S. C.
Application November 15, 1943, Serial No. 510,386
5 Claims. (Cl. 177—352)



1. In an automatic lighting system for airdromes and airfields having a plurality of landing strips provided with directive head lights at the end of each strip for indicating the desirable and the undesirable direction of landing for the time being, and further provided with illuminating floodlights alongside the landing strips, a radio reception system, for operation by wave signals from a landing aircraft, a relay system, relay contacts associated therewith closed for the duration of the landing operation when the relay system has been operated initially by a signal, a wind indicator, comprising a windstock and an electrically operated windstock freezer, holding the windstock in its position for the duration of the landing operation, means for operating said freezer, a rotational double selector switch with two independently operated sets of contact strips arranged in a circle and two independent contactor arms co-operating with the two sets of contacts, the latter being adapted to be connected with the windstock, permanent connections between each of the contact strips of one contact set of the selector with the illuminating floodlights of one landing strip and permanent connections between one contact strip of the second set with one of the directive lights at each end, and a current supply circuit for the connections made by the contactor arms including the contacts of the relay set closed for the duration of the landing operation.

2,407,950
TRUCK
Robert B. Cottrell, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 6, 1945, Serial No. 571,611
13 Claims. (Cl. 105—197)



3. In a railway car truck, a side frame comprising spaced columns and an intervening bolster opening, resilient means on said frame in said opening, a bolster supported on said resilient means, spaced wedge surfaces on said bolster at each side thereof, a friction shoe interposed between the wedge surfaces at each side of said bolster and having means bearing on adjacent surfaces, each of said shoes bearing against the adjacent column, and pivotal spring means interposed between each shoe and a wall of said bolster operative to urge said shoe along said wedge surfaces and against the adjacent column.

2,407,951
ORIFICE PLATE CARRIER
Paul P. Daniel, Los Angeles, Calif.
Application October 18, 1943, Serial No. 506,722
2 Claims. (Cl. 138—44)

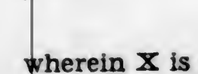
1. In a device of the class described, the combination of a plate carrier adapted to be positioned in a flow line, an orifice plate carried by the carrier within an opening formed therethrough, and a sealing ring interposed between the carrier and the plate within the said opening, said sealing ring being internally grooved to receive the peripheral edge of the orifice plate and of an external diameter to freely fit the said carrier opening, and the sealing ring being of thickness greater than the thickness of the carrier.

2,407,952
DAM STRUCTURE
Eugenio Diaz del Castillo y Español, Buenos Aires, Argentina
Application May 12, 1943, Serial No. 486,717
In Argentina March 20, 1943
3 Claims. (Cl. 61—30)

1. A dam structure having a broken line axis comprising a plurality of sections substantially in the over-all form of truncated prisms; the horizontal axes of said prisms being oblique to the horizontal projections of the line of maximum slope of the hillsides; the foundation base of each section being declivent, transversally to the section axis, toward upstream; whereby to afford foundation reactions opposite to water pressure, stability against sliding, reduced foundation width, and downstream reduction of height and accordingly diminution of the stresses; said sections being set in angular relationship with each other, defining between them at the reentrant upstream angles of the dam angular open spaces facing downstream, providing for drainage and free contraction; and impervious joints at the upstream contact of these sections.

2,407,953
TACKY RUBBERLIKE COMPOSITIONS AND METHOD OF MAKING THE SAME
Robert R. Dreisbach, Edgar C. Britton, and Walter J. Le Fevre, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application July 16, 1943, Serial No. 495,028
8 Claims. (Cl. 260—42)

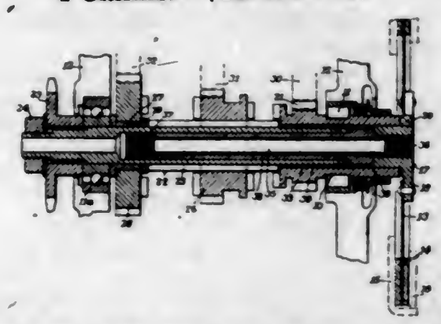
1. A tacky rubber-like composition comprising from 75 to 95 per cent by weight of a non-tacky rubber-like co-polymer and from 5 to 25 per cent of a tacky, cyclohexanone-soluble co-polymer, based on the combined weight of the co-polymers, each of which co-polymers is composed, in chemically combined form, of from 37 to 65 per cent of an aliphatic conjugated diolefine, from 1 to 30 per cent of a 2-aryl-1-alkene, and from 20 to 60 per cent of an unsaturated ketone having the general formula:



$$R{-}\overset{\displaystyle O}{\overset{\|}{C}}{-}\overset{\displaystyle R'}{\overset{|}{C}}{=}CH_2$$

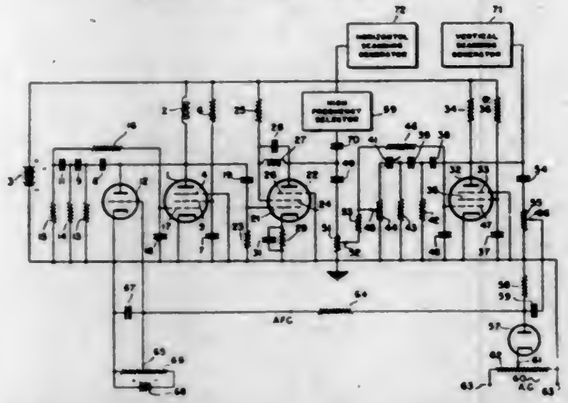
wherein R represents an alkyl radical and R' represents a member of the group consisting of hydrogen and alkyl radicals, the above-mentioned tacky cyclohexanone-soluble co-polymer being one formed by co-polymerizing the corresponding polymerizable monomeric compounds

while in an aqueous emulsion thereof which is of a pH value below 3 and which contains an iron salt and a peroxide, and the non-tacky rubber-like co-polymer component of the composition being one prepared by co-polymerizing the corresponding polymerizable monomeric compounds under conditions other than those just specified for formation of the tacky co-polymer component.



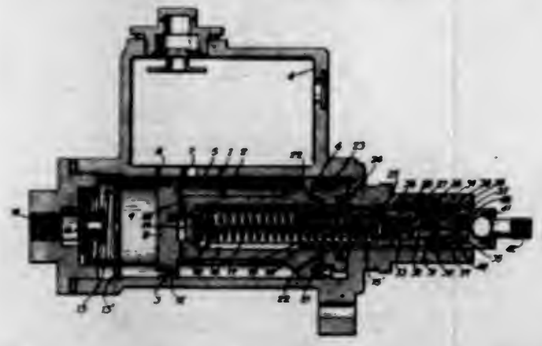
2,407,954
LUBRICATING COMPOSITION
Merrell R. Fenske and George H. Cummings, State College, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application May 23, 1942, Serial No. 444,262
7 Claims. (Cl. 252—52)

1. A lubricant comprising a lubricating oil and an oil-soluble, polymerized ester of the general formula—



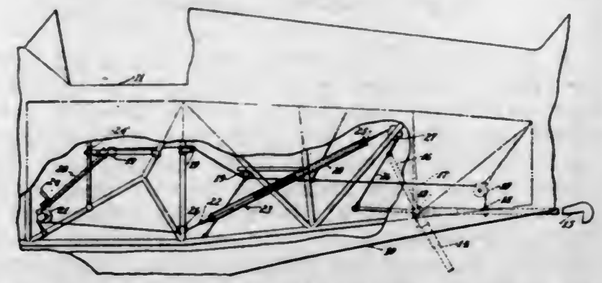
wherein X is a member of the class consisting of hydrogen and the methyl group, and R represents a saturated hydrocarbon group of at least five carbon atoms, said polymerized ester being present in an amount sufficient to improve the lubricating properties of the oil, and a hydrocarbon oil-soluble, alcoholic hydroxyl-containing ester of a polyhydric aliphatic alcohol and a long chain fatty acid in an amount sufficient to reduce substantially the emulsifying tendency of the oil containing said polymerized ester alone.

2,407,955
CONNECTION OF CLUTCHES TO SPEED GEARS
George Frederic Halliday and Albert William Thomas, Kingswood, Bristol, England, assignors to Douglas (Kingswood) Limited
Application November 13, 1944, Serial No. 563,162
In Great Britain September 28, 1943
4 Claims. (Cl. 192—20)



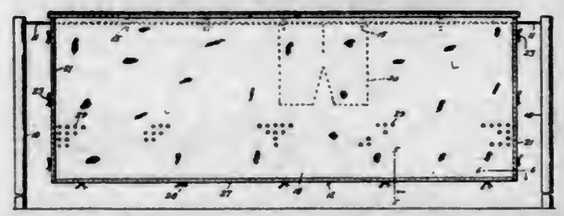
1. In a gear box and clutch unit, including a driven clutch element, a cushion drive device, including a straight torsion bar spring, a tubular member enclosing said torsion bar and rigidly connected thereto at its inner end, a rigid connection between the driven clutch element of the unit and the outer end of the torsion bar, a lost motion connection operating between the outer end of the tubular member and the said driven element of the clutch to limit the angle of twist of the torsion bar, a tubular shaft providing the power output shaft of the said gear box, the tubular member and torsion bar being disposed within the bore of the tubular shaft, and a toothed gear wheel splined to the outer end of the tubular member beyond the tubular output shaft, said gear wheel serving to transmit the drive within the gear box of the unit.

2,407,956
SYNCHRONIZING SIGNAL GENERATOR
Clyde E. Hallmark, Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application November 18, 1943, Serial No. 510,759
4 Claims. (Cl. 178—7.2)



1. In a scanning frequency generator for a television system, means for producing oscillations of a distorted wave form at a submultiple frequency of a low frequency field scanning voltage and containing a plurality of harmonics of said submultiple frequency, means coupled to said oscillation producing means and controlled by a harmonic of said distorted wave form oscillations to produce a deflecting voltage for said television system at field scanning frequency, and means coupled to said oscillation producing means and controlled by another harmonic of said distorted wave form oscillations to produce a deflecting voltage for said television system at line scanning frequency.

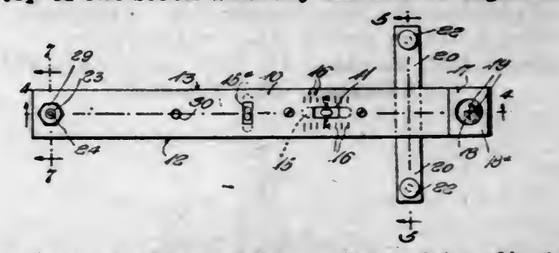
2,407,957
COMPOUND HYDRAULIC BRAKE COMPRESSOR AND THE LIKE
Arthur Hull-Ryde, Bayside, N. Y., assignor of one-fourth to Arthur Wilde, Bayside, and one-half to Martin V. Groves, Brooklyn, N. Y.
Application June 25, 1943, Serial No. 492,281
7 Claims. (Cl. 60—54.6)



4. A valve structure comprising a pressure chamber having an outlet port, a reciprocable valve member for opening and closing said port, resilient means for yieldably holding said valve member in closed position, a piston for driving said valve member to open position against said resilient means, a cylinder within which said piston is disposed and providing therewith a closed cylinder chamber on one side of said piston for actuation of said piston, said cylinder on the opposite side of said piston being provided with a relief port, said piston and valve being provided with a passage in communication with said pressure chamber and said cylinder chamber, and valve means in said passage providing when closed a continuously open restricted fluid passage therethrough into said cylinder chamber and providing when open relatively free passage therethrough from said cylinder chamber into said pressure chamber.

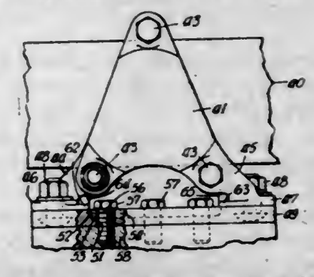
2,407,958
SNUBBER
Norman L. Kearney, Buffalo, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation, a corporation of New York
Application March 28, 1936, Serial No. 71,514
5 Claims. (Cl. 244—110)

1. A tension hold-down device for an aircraft arresting hook including a cable circuit for raising and lowering said hook, comprising a cylinder and a piston having a rod engaged for sliding therein, said cylinder and piston rod respectively being attached in series in said cable, said piston and cylinder together forming a dashpot, and a tension coil spring embracing said cylinder and attached at its ends to said cylinder and said rod respectively.



2,407,959
CLOTHESLINE COVER
Lillie Mae Littlejohn, North Birmingham, Ala.
Application July 14, 1945, Serial No. 605,080
4 Claims. (Cl. 211—119.18)

3. In a device of the character described adapted for use with clotheslines, a covering including a top, sides, ends and a bottom, means secured to said top for supporting said covering from a clothesline, said means spacing the top above said line, and comprising clothes pins adapted to engage said line, said bottom and ends being split, means for securing said split portions together, and means forming apertures in said sides and ends to permit circulation of air within said covering.

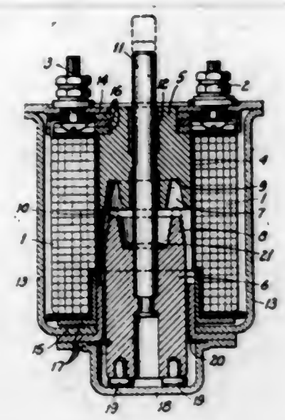


2,407,960
TRANSIT LEVEL
Anthony Mariotti, Lorain, Ohio
Application January 5, 1944, Serial No. 517,094
1 Claim. (Cl. 88—2.3)

A transit level comprising a stock having an upwardly angularly disposed end and carrying a mirror on the upper side thereof, an adjustable sighting point on the stock at the end thereof opposite the mirror and angularly disposed with respect to said stock, whereby said sighting point is reflected in said mirror, a spirit level exposed through the top of the stock, a second sighting point arranged on said mirror, said first and second sighting points being the same distance above the top of the stock whereby the line of sight will

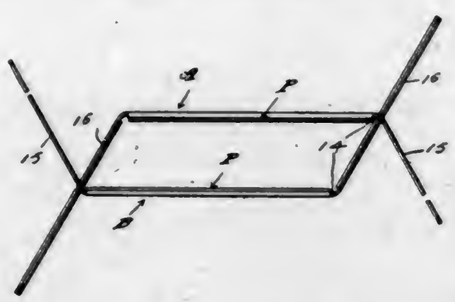
be horizontal when said transit level is adjusted to a position in which the spirit level bubble is centered.

2,407,961
ROTATABLE BUS SUPPORT CLAMP
Irving Frederick Matthysse, New York, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application October 24, 1942, Serial No. 463,178
2 Claims. (Cl. 174—169)



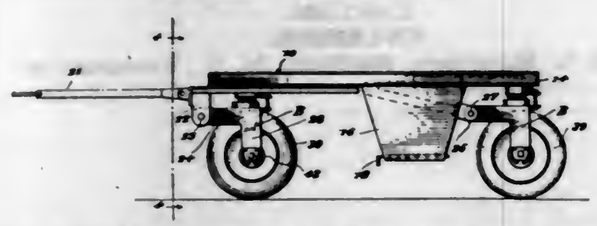
1. A clamp for supporting a bus bar on an insulator cap, comprising a base member having means for detachably mounting said base member to the insulator cap; a plurality of clamping members having pressure applying surfaces for gripping a bus bar; bolt means positioned on each side of the pressure applying surfaces for applying pressure uniformly to the surface of the bus bar and for locking the bus bar therebetween; means for rotating said clamping members with respect to said base member; said clamping members and base member being provided with male and female portions having relatively smooth contacting surfaces to permit rotation one on the other for facilitating the rotating movement there between and bolt means extending through the male and female portions for locking the two together in any angular position.

2,407,962
MOLDING CELLULOSE ESTER COMPOSITIONS
Howard K. Nason, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 24, 1944, Serial No. 527,959
8 Claims. (Cl. 18—55)



1. In a process of molding thick masses of cellulose ester plastic compositions wherein the plastic is heated above about 150° F., the steps which comprise placing the plastic material in a mold, the temperature of both the plastic and the mold being not over about 150° F., raising the temperature of all portions of the plastic above 150° F., by raising the temperature of the mold, the rate of increase of the mold temperature being such that a temperature gradient of not over about 30° F. is produced within the plastic mass before the temperature of any portion of the plastic goes above about 150° F. and a temperature gradient of not over about 30° F. is thereafter maintained within the plastic.

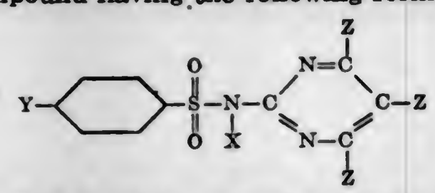
2,407,963
SOLENOID
Lawrence M. Persons, Ladue, Mo., assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo., a corporation of Delaware
Application January 11, 1943, Serial No. 471,919
5 Claims. (Cl. 175—341)



1. An electro-magnet comprising, an annular coil, a stationary yoke of magnetic material including a part extending exteriorly about the coil to provide a continuous external flux path and a part extending centrally of the coil to provide part only of an interior flux path, said central part terminating in a doubly tapered face, and an axially movable core piece disposed centrally of the coil to complete the interior flux path, said core piece having its side surfaces parallel with its axis and terminating in a doubly tapered face, the doubly tapered faces on said parts being of a size and shape complemental to each other and arranged to internest upon energization of the electro-magnet whereby the pull of said electro-magnet throughout the operative stroke of the movable core piece is substantially uniform.

2,407,964
WALLET OR PURSE
Norman W. Post, Philadelphia, Pa.
Application January 2, 1945, Serial No. 571,070
2 Claims. (Cl. 150—38)

1. A wallet of the character described, comprising two flat bodies each having a pocket with a mouth opening, on one side of the body, the bodies being designed to be placed together when in use with the pocket mouths upon the opposing sides of the bodies, a relatively long flap extending from one end of each body and having a slot cut therethrough adjacent to its attached end, a tongue extending from the other end of each body and adapted to extend through the slot of the flap of the other body, and means for connecting together the tongue and flap of each body across the back of the other body.

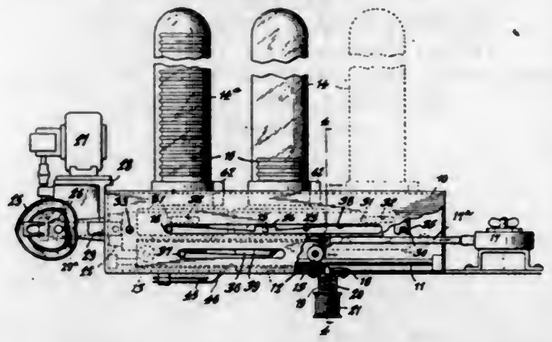


2,407,965
ROLLER
Luther B. Smith, Camp Hill, Pa., assignor to L. B. Smith, Incorporated, Camp Hill, Pa., a corporation of Pennsylvania
Application May 4, 1943, Serial No. 485,636
5 Claims. (Cl. 94—50)

1. A roller of the character described, comprising a weighted body and a forward and a rear series of supporting units therefor, each series comprising a plurality of angled brackets, each having a substantially horizontally disposed leg in close proximity to said body and a substantially vertical, downwardly extending leg having a forked lower end, a horizontal pivotal coupling between the first leg of each bracket and the body, a ground engaging wheel rotatably carried within said forked lower end of the downwardly extending leg and underlying a part of said horizontally disposed leg, and a short compression spring interposed between said part of each of the first legs and the body.

2,407,966
DIAZINE COMPOUNDS
James M. Sprague, Drexel Hill, Pa., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland
No Drawing. Application October 14, 1940, Serial No. 361,106
6 Claims. (Cl. 260—239.6)

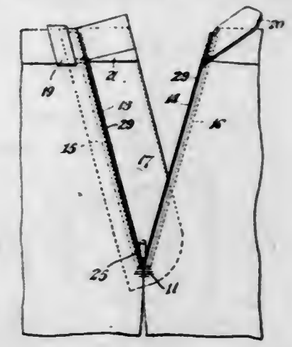
1. A p-substituted benzene sulfonamido pyrimidine compound having the following formula:



in which X is a positive radical and Y is a radical of the group consisting of NH_2 and radicals hydrolyzable to NH_2, the Z radicals being taken from the group consisting of lower alkyl hydrocarbon radicals and H, at least one Z radical being a lower alkyl hydrocarbon radical, prepared as a therapeutic agent and being effective against pneumococcal and streptococcal infections.

2,407,967
SURFACE COATED PROPELLENT EXPLOSIVE POWDERS
Thomas Thomson, Kilmarnock, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 15, 1943, Serial No. 494,833. In Great Britain August 19, 1942
6 Claims. (Cl. 52—20)

1. A process for the treatment of single base smokeless powders which comprises tumbling the base grain powder with an alcoholic solution of a solid deterrent which has good solubility in alcohol and which has weak gelatinizing power selected from the group consisting of pentaerythritol tetra-acetate and phthalide.

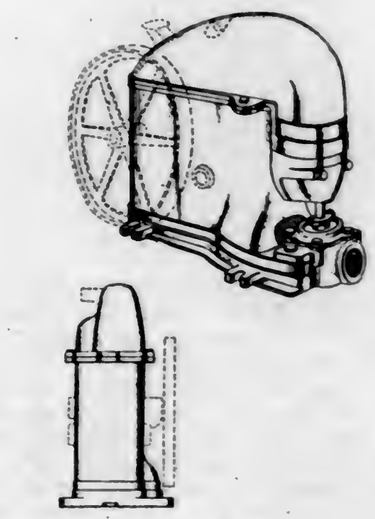


2,407,968
CUP DISPENSING MECHANISM
Walter Von Stoeser, North Tonawanda, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application September 17, 1943, Serial No. 502,771
12 Claims. (Cl. 312—44)

3. An apparatus of the character described, comprising a frame, a carriage guided on said frame and having a plurality of cup-dispensing magazines mounted thereon and adapted for movement to bring such magazines from and to a cup-dispensing position, each of said magazines having an actuating trigger therefor, means common to and releasably engageable at predetermined times with the magazine-triggers for actuating them to dispense cups, and means on said carriage and frame for governing the displacement of the trigger-actuating means to a released position from one of the magazine-triggers and into coupling engagement with the trigger of another magazine when the carriage is moved to bring the first magazine out of and the next magazine into cup-dispensing position when said first magazine is empty of cups.

2,407,969
GARMENT FASTENING DEVICE
Emanuel Di Ianni, Norristown, Pa.
Application November 17, 1944, Serial No. 563,869
1 Claim. (Cl. 2—234)

A garment fastening device for the upper edge of a garment whereby smoothness and freedom from wrinkles are substantally attained, comprising the combination of a nether garment having an elongated substantially vertical opening and an attached belt forming the upper edge of said garment, said belt being peripherally effectively of greater extent than such garment and terminating at each end in free tabs arranged for overlapping relation in closing said opening, said opening being delineated in part at least by flexible flaps formed of the material of the garment each extending vertically from the lower end of the opening across the belt line to termination vertically close to the lower edge of said belt peripherally spaced from the tab ends, two slide fastener parts including stringers seamed respectively inwardly of and behind the respective flaps and of a length such as to extend from the bottom of said opening upwardly across



the upper terminations of the respective flaps to termination vertically below the upper edge of said belt and peripherally spaced from the respective tab ends, a locking slide for said parts arranged when in locked relation to be disposed vertically between the upper terminations of the flaps and the upper edge of the belt and transversely between the overlapping tabs, said belt and slide fastener parts so arranged that when the latter are locked the tabs conceal the locking element and adjacent portions of the slide fastener parts above the lower edge of the belt while the flaps conceal the slide fastener parts from a point just inside of the lower edge of the belt to the bottom of the opening, while the entire tensile strain of the belt is taken by said locked slide fasteners in the peripheral line of the belt.

DESIGNS

SEPTEMBER 17, 1946

145,595
DESIGN FOR A DEEP WELL PUMP HEAD
Elmer M. Deters, Davenport, Iowa, assignor to Red Jacket Manufacturing Co., Davenport, Iowa, a corporation of Iowa
Application July 11, 1945, Serial No. 120,640
Term of patent 14 years
(Cl. D65—1)

The ornamental design for a deep well pump head, substantially as shown and described.

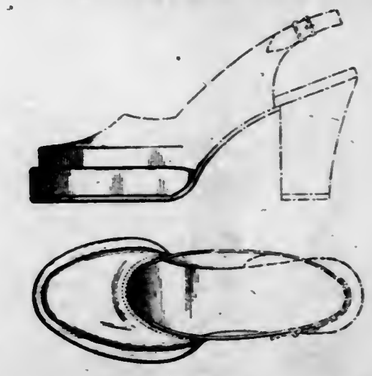
145,596
DESIGN FOR A CHILD'S COAT
Ethel Fischer, New York, N. Y.
Application May 20, 1946, Serial No. 129,858
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a child's coat, substantially as shown.

145,597
DESIGN FOR A COAT
Mario Frascino, New York, N. Y.
Application May 20, 1946, Serial No. 129,861
Term of patent 3½ years
(Cl. D3—4)

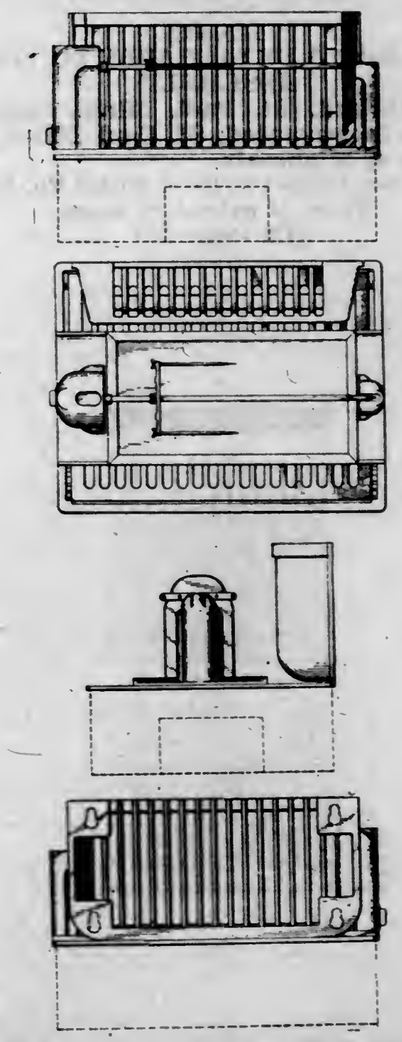
The ornamental design for a coat, substantially as shown.

145,598
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y.
Application May 29, 1946, Serial No. 130,215
Term of patent 3½ years
(Cl. D3—4)



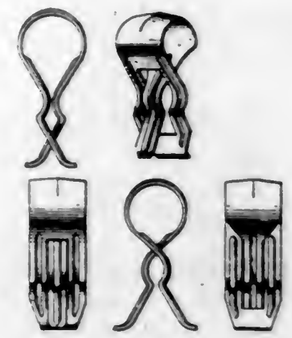
The ornamental design for a coat, substantially as shown.

145,599
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y.
Application May 29, 1946, Serial No. 130,216
Term of patent 3½ years
(Cl. D3—4)



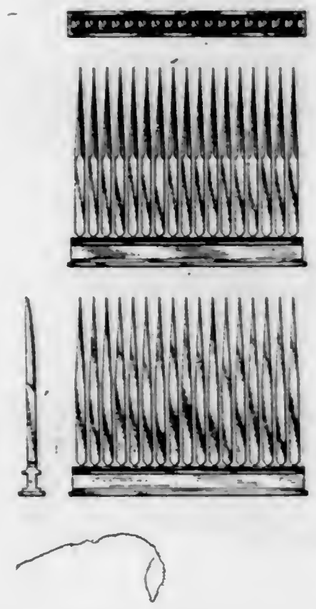
The ornamental design for a coat, substantially as shown.

145,600
DESIGN FOR A SHOE
Samuel Huberman, New York, N. Y.
Application June 5, 1946, Serial No. 130,419
Term of patent 7 years
(Cl. D7—7)



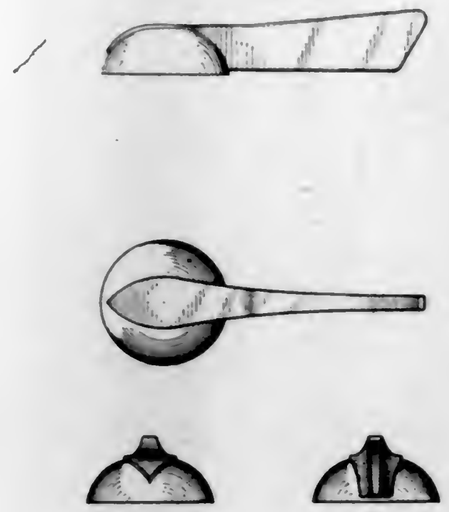
The ornamental design for a shoe, substantially as shown and described.

145,601
DESIGN FOR A ROTATABLE SPIT BARBECUE
Lewis C. Hufford and Landon R. Gray, Redondo Beach, Calif.
Application November 27, 1944, Serial No. 116,571
Term of patent 3½ years
(Cl. D81—10)



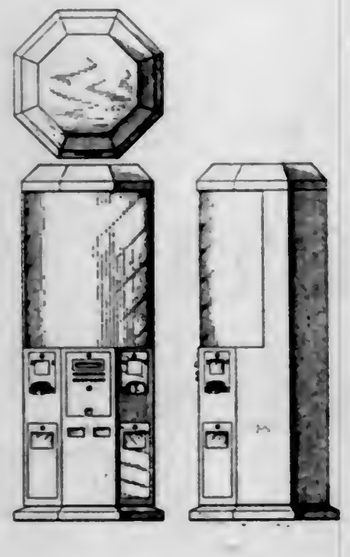
The ornamental design for a rotatable spit barbecue, substantially as shown and described.

145,602
DESIGN FOR A CLOTHESPIN
Alfred M. Jacobson, Denver, Colo.
Application March 18, 1946, Serial No. 127,626
Term of patent 3½ years
(Cl. D17—6)



The ornamental design for a clothespin, substantially as shown.

145,603
DESIGN FOR A DETACHABLE TOOTHPICK ASSEMBLY
Glen E. Millard, St. Paul, Minn., assignor to Lactona Incorporated, St. Paul, Minn., a corporation of Minnesota
Application August 3, 1945, Serial No. 121,193
Term of patent 14 years
(Cl. D86—10)



The ornamental design for a detachable toothpick assembly, as shown.

145,604
DESIGN FOR A HANDLE FOR A VALVE OR THE LIKE
Martin J. Rausch, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application September 9, 1944, Serial No. 115,243
Term of patent 14 years
(Cl. D91—3)

The ornamental design for a handle for a valve or the like, as shown.

145,605
DESIGN FOR A VENDING MACHINE
Olga V. Wells, Alhambra, Calif.
Application December 22, 1945, Serial No. 125,016
Term of patent 14 years
(Cl. D52—3)

The ornamental design for a vending machine, as shown and described.

145,606
DESIGN FOR A DRAWER HANDLE OR SIMILAR ARTICLE
James White, Corbridge, England
Application July 27, 1945, Serial No. 121,019
Term of patent 3½ years
(Cl. D10—8)

The ornamental design for a drawer handle or similar article, as shown.

145,607
DESIGN FOR A FAUCET HANDLE OR THE LIKE
Roy H. Zinkil, Oak Park, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application September 24, 1945, Serial No. 122,268
Term of patent 14 years
(Cl. D91—3)

The ornamental design for a faucet handle or the like, substantially as shown.

Whiskey. Security Liquor Company. 423,930; Sept. 17; Serial No. 485,888; published July 2, 1946.

CLASS 50

Covers, Protective brush. Hughes-Autograf Brush Co. Inc. 424,121; Sept. 17.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 17TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Huck, Louis C., Grosse Pointe, assignor to Huxon Holding Corporation, Detroit, Mich. Riveted structure and making the same. Re. 22,792; Sept. 17.

Huxon Holding Corporation, assignee: *See*—
Huck, Louis C.

Satchwell, Leonard, Slough, England. Boiler. Re. 22,793. Sept. 17.

LIST OF PLANT PATENTEES

Etter, Albert F., Ettersburg, assignor to G. C. Roeding, Jr., Niles, Calif. Apple tree. 710; Sept. 17.

Roeding, George C., Jr., assignee: *See*—
Etter, Albert F.

LIST OF DESIGN PATENTEES

Crane Co., assignee: *See*—
Zinkil, Roy H.

Deters, Elmer M., assignor to Red Jacket Manufacturing Co., Davenport, Iowa. Deep well pump head. 145,595; Sept. 17.

Fischer, Ethel, New York, N. Y. Child's coat. 145,596; Sept. 17.

Frascino, Mario, New York, N. Y. Coat. 145,597; Sept. 17.

Goldberg, Harry, New York, N. Y. Coat. 145,598; Sept. 17.

Goldberg, Harry, New York, N. Y. Coat. 145,599; Sept. 17.

Gray, Landon R.: *See*—
Hufford, Lewis C., and Gray.

Huberman, Samuel, New York, N. Y. Shoe. 145,600; Sept. 17.

Hufford, Lewis C., and L. R. Gray, Redondo Beach, Calif. Rotatable spit barbecue. 145,601; Sept. 17.

Imperial Brass Manufacturing Company, The, assignee: *See*—
Rausch, Martin J.

Jacobson, Alfred M., Denver, Colo. Clothespin. 145,602; Sept. 17.

Lactona Incorporated, assignee: *See*—
Millard, Glen E.

Millard, Glen E., assignor to Lactona Incorporated, St. Paul, Minn. Detachable toothpick assembly. 145,603; Sept. 17.

Rausch, Martin J., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Handle for valves or the like. 145,604; Sept. 17.

Red Jacket Manufacturing Co., assignee: *See*—
Deters, Elmer M.

Wells, Olga V., Alhambra, Calif. Vending machine. 145,605; Sept. 17.

White, James, Corbridge, England. Drawer handle or similar article. 145,606; Sept. 17.

Zinkil, Roy H., Oak Park, assignor to Crane Co., Chicago, Ill. Faucet handle or the like. 145,607; Sept. 17.

Kern, Jean G.
Allied Control Company, Inc., assignee: *See*—
Horman, John H.
McPherson, Hal W.
Aluminum Company of America, assignee: *See*—
Blackmun, Edward V.
American Rolling Mill Company, The, assignee: *See*—
Hoover, George R., and Hays.
American Steel Foundries, assignee: *See*—
Cottrell, Robert B.
Anchor Hocking Glass Corporation, assignee: *See*—
Herrold, Gordon W.
Anderson, Arthur A., Rose Township, Ramsey County, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Adhesive tape dispenser and applier. 2,407,641; Sept. 17.
Anderson Company, The, assignee: *See*—
Boddy, Leonard.
Anderson, John F., Oakland, Calif. Drilling vise. 2,407,769; Sept. 17.
Anderson, William W.: *See*—
Monson, Louis T.; Anderson, and Jenkins.
Anger, George L., assignee: *See*—
Steinhilber, Berthold.
Anglo-Iranian Oil Company Limited, assignee: *See*—
Fawcett, Eric W. M.
Anker-Holth Manufacturing Company, Inc., assignee: *See*—
Gall, George E.
Apker, Le Roy: *See*—
Tonks, Lewi, and Apker.
Armitage, Joseph B., Wauwatosa, and O. W. Barker, Milwaukee, assignors to Kearney & Trecker Corporation, West Allis, Wis. Machine tool transmission and control mechanism. 2,407,913; Sept. 17.
Arnold, Mervin V., Clay, N. Y., and J. W. Napier, Macon, Ga. Apparatus for applying tread material to tire casings. 2,407,806; Sept. 17.
Arzt, Louis, Bronx, N. Y. Chair bed. 2,407,864; Sept. 17.
Ashby, Carl T., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Two temperature evaporator for inert gas type absorption refrigerators. 2,407,733; Sept. 17.
Ashworth, Robert W., assignor to Hughes Tool Company, Houston, Tex. Treating cutter teeth. 2,407,642; Sept. 17.
Austin, Edwin C., trustee, et al., assignee: *See*—
Geiger, William A.
Automatic Electric Laboratories, Inc., assignee: *See*—
Droel, Louis W.
Gillings, Charles, and Beale.
Taylor, Reginald, and Baker.
Woodruff, Albert E.
Automatic Voting Machine Corporation, assignee: *See*—
Gustavson, Alvin N.
Back, M. F., trustee, assignee, et al.: *See*—
Geiger, William A.
Bailey, William A., Jr., Wilmington, and J. Burgin, Oakland, assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons and the preparation of catalysts therefor. 2,407,914; Sept. 17.
Bailliere, Edna C., Warren, Ohio. Toy and ball casing. 2,407,734; Sept. 17.
Baker, George T.: *See*—
Taylor, Reginald, and Baker.
Ball, Thomas M., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Injection nozzle. 2,407,915; Sept. 17.
Barger, Edgar L.: *See*—
Engler, Kyle, Barger, and Thompson.
Barker, Orrin W.: *See*—
Armitage, Joseph B., and Barker.
Basic Refractories, Inc., assignee: *See*—
Schoenlaub, Robert A.
Bassett, Charles H., assignor to Crane Co., Chicago, Ill. Indicator for valves. 2,407,944; Sept. 17.
Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,407,643; Sept. 17.
Bausch & Lomb Optical Company, assignee: *See*—
Fraser, Walter A.
McKinstry, George W.
Bay Products Corporation, assignee: *See*—
Keema, Alexander W.
Beale, Charles E.: *See*—
Gillings, Charles, and Beale.
Beckerman, Raymond, Danbury, Conn. Finger bandage. 2,407,735; Sept. 17.
Bell Telephone Laboratories, Inc., assignee: *See*—
Budenbom, Horace T.
Butterfield, Joseph T., Knapp, and Runyon.
Kircher, Reymond J.
Ohl, Russell S.
Roberts, Leland C.
Southworth, George C.
Bendix Aviation Corporation, assignee: *See*—
MacCallum, Alan M.
Winchel, Henry T.
Benioff, Hugo, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Ranging system. 2,407,644; Sept. 17.
Bennett, William O., Jr., Lancaster Township, Lancaster County, assignor to Hamilton Watch Company, Lancaster, Pa. Apparatus for testing waterproof watchcases. 2,407,945; Sept. 17.
Bentley, Oliver D. H., Dover, assignor to B. F. Sturtevant Company, Boston, Mass. Bearing. 2,407,807; Sept. 17.
Berg, Howard O., assignor to Stewart-Warner Corporation, Chicago, Ill. Shielded coil. 2,407,916; Sept. 17.
Bersworth, Frederick C., Verona, assignor to The Martin Dennis Company, Newark, N. J. Aliphatic polycarboxylic amino acids and making them. 2,407,645; Sept. 17.
Best, John W., Arlington, Calif. High chair. 2,407,646; Sept. 17.
Bird, John C., Pleasantville, and A. Kuna, Douglaston, N. Y., assignors, by mesne assignments, to The William S. Merrell Company, Cincinnati, Ohio. Aqueous solution of riboflavin. 2,407,624; Sept. 17.
Bird & Son, inc., assignee: *See*—
Young, James G.
Biskamp, Ernest J., San Antonio, Tex. Closure for cartons. 2,407,865; Sept. 17.
Bivans, Elbert L., Los Angeles, Calif. Pepper mill. 2,407,808; Sept. 17.
Blackmun, Edward V., Bay Village, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa. Treatment of oxide coated aluminum articles. 2,407,809; Sept. 17.
Board Of Trustees of the University of Arkansas, assignee: *See*—
Engler, Kyle, Barger, and Thompson.
Boddy, Leonard, Ann Arbor, Mich., assignor to The Anderson Company. Electrical indicating system. 2,407,810; Sept. 17.
Bodman, John W., Winchester, assignor to Lever Brothers Company, Cambridge, Mass. Synthetic organic nonsoap detergent in bar form and making same. 2,407,647; Sept. 17.
Boehm, Alfred A., Jr., New York, N. Y. Warpage measuring machine. 2,407,648; Sept. 17.
Bolsey, Jacques, New York, N. Y. Range finder. 2,407,917; Sept. 17.
Bower, John L., Schenectady, N. Y., assignor to General Electric Company. Control system. 2,407,866; Sept. 17.
Brand, Frederick F., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,407,625; Sept. 17.
Bristol Aeroplane Company Limited, The, assignee: *See*—
Goodby, William T.
Britton, Edgar C.: *See*—
Dreisbach, Robert R., Britton, and Le Fevre.

Britton, Edgar C., and W. J. Le Fevre, assignors to The Dow Chemical Company, Midland, Mich. Copolymerization of vinyl compounds. 2407,946; Sept. 17.
Brown Instrument Company, The, assignee: *See*—
Kliever, Waldo H.
Brundage, Ellis W., Sheridan, Mont. Hoist. 2,407,811; Sept. 17.
Bruns, August, assignee: *See*—
Hoffstad, Ole J.
Brunswick-Balke-Collender Company, The, assignee: *See*—
Luth, Harold J.
Bryant Heater Company, The, assignee: *See*—
Terhune, Ralph D.
Buchanan, Charles H., Kingston-on-Thames, assignor to Jicwood Limited, Weybridge, England. Producing curved "sandwich" material. 2,407,867; Sept. 17.
Budenbom, Horace T., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Direction finding system. 2,407,649; Sept. 17.
Burgin, James: *See*—
Bailey, William A., Jr., and Burgin.
Burgin, James, Oakland, assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of carbonaceous materials. 2,407,918; Sept. 17.
Burke Theodore H. D., Eggertsville, assigner to Otis Elevator Company, New York, N. Y. Treating refratory. 2,407,868; Sept. 17.
Burndy Engineering Company, Inc., assignee: *See*—
Matthysse, Irving F.
Butcher, Alfred, assignor to Gulf Oil Corporation, Pittsburgh, Pa. Apparatus for the clarification of liquids. 2,407,947; Sept. 17.
Butterfield, Joseph T., Summit, N. J., H. M. Knapp, Flushing, N. Y., and B. F. Runyon, Basking Ridge, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wiper contact for electrical devices. 2,407,650; Sept. 17.
Buttery, Kenneth T., assignor to Sutherland Paper Company, Kalamazoo, Mich. Dispensing box or container. 2,407,919; Sept. 17.
Cain, Sidney R., Henley-on-Thames, England. Remote control of fluid pressure actuated apparatus. 2,407,812; Sept. 17.
California Institute Research Foundation, assignee: *See*—
Nemeyer, Roland O.
Carmody, Don R.: *See*—
Evering, Bernard L., d'Ouville, and Carmody.
Marschner, Robert F., and Carmody.
Castedello, William: *See*—
Schwartz, Morris, and Castedello.
Cawood, William H., Middlesboro, Ky. Footrest for embalming tables. 2,407,948; Sept. 17.
Chandler, James H., Oak Park, Ill., assignor to Ekco Products Company. Pressure cooker. 2,407,627; Sept. 17.
Cheney, Harry A., Oakland, assignor to Shell Development Company, San Francisco, Calif. Manufacture of supported catalysts. 2,407,813; Sept. 17.
Cheney, Harry A., Oakland, assignor to Shell Development Company, San Francisco, Calif. Catalysts. 2,407,814; Sept. 17.
Chrysler Corporation, assignee: *See*—
Ball, Thomas M.
Gilfillan, Henry W.
Herreshoff, Alexander G., and Lamb.
Perfetti, John F., and Waldron.
Churchill, Wilmer H., Sangus, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Shiftable cowling and like socket fastener member. 2,407,815; Sept. 17.
Ciper, Anthony L., Glenwillard, and A. W. Snyder, Aliquippa, Pa. Elevated hanger and lamp lowering and hoisting means. 2,407,869; Sept. 17.
Claesson, Per H. E.: *See*—
Rost, Helge, F., Thunell, Vigren, and Claesson.
Clark, Donald H., Stockton, Calif. Bead dispenser control. 2,407,628; Sept. 17.
Clemmer, Julius B., and B. H. Clemmons, Tuscaloosa, Ala., assignors to the United States of America, as represented by the Secretary of Interior. Concentrating fluorspar by froth flotation. 2,407,651; Sept. 17.
Clemmons, Ballard H.: *See*—
Clemmer, Julius B., and Clemmons.
Cook, Earle S., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Variable load brake apparatus. 2,407,870; Sept. 17.
Corcanges, Alfred A., Creenville, S. C. Radio controlled signal and illuminating system for airways. 2,407,949; Sept. 17.
Costa, Philip J., Franklin Square, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Detonation responsive means for controlling internal-combustion engines. 2,407,652; Sept. 17.
Cottrell, Robert B., assignor to American Steel Foundries, Chicago, Ill. Truck. 2,407,950; Sept. 17.
Courtenay, William A., Jr., Chester, assignor to Sun Oil Company, Philadelphia, Pa. Vehicle hoist. 2,407,629; Sept. 17.
Cox, Richard F. B., assignor to Hercules Powder Company, Wilmington, Del. Producing pentaerythritol. 2,407,920; Sept. 17.
Crane Co., assignee: *See*—
Bassett, Charles H.
Crompton & Knowles Loom Works, assignee: *See*—
Fletcher, Norman.
Cross, Bert S.: *See*—
Palmquist, P. V., Cross, and Netherly.
Cross, Garrett P. S., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Direction-controlling mechanism for guns. 2,407,871; Sept. 17.
Crown Can Company, assignee: *See*—
Gladfelter, Wiltie I., and Ehrlich.
Crown Cork & Seal Company, assignee: *See*—
Stewart, Robert J.
Cummings, George H.: *See*—
Fenske, Merrell R., and Cummings.
Curtiss-Wright Corporation, assignee: *See*—
Kearney, Norman L.
Czerner, Severin F., Kings Mill, Tex. Folding tail vane windmill. 2,407,816; Sept. 17.
Daniel, Isabelle H., Los Angeles, Calif. Liquid applicator. 2,407,770; Sept. 17.
Daniel, Paul P., Los Angeles, Calif. Orifice plate carrier. 2,407,951; Sept. 17.
Danner, Arthur V., Villanova, Pa., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Converting hydrocarbons. 2,407,817; Sept. 17.
De Almeida, José G., Rio de Janeiro, Brazil. Automatic telegraph transmitter. 2,407,818; Sept. 17.
Del Castillo y Español, Eugenio D., Buenos Aires, Argentina. Dam structure. 2,407,952; Sept. 17.
Deliso, John, Worcester, Mass. Rotary broach. 2,407,921; Sept. 17.
Dempsey, Walter E., Moose Jaw, Saskatchewan, Canada. Grain cleaner. 2,407,653; Sept. 17.
De Rose, John P., Albany, Calif. Seat support. 2,407,771; Sept. 17.
Deserno, Peter, Berlin, Germany; vested in the Alien Property Custodian. Television receiver. 2,407,654; Sept. 17.
Deurmyer, Richard H., Eugene, and C. G. Yocum, Cheshire, Oreg. Saw filing gauge. 2,407,736; Sept. 17.
Dewan, Leon, Arverne, N. Y. Supercharger. 2,407,630; Sept. 17.
Dexter, Roger W., and P. L. Loewe, Chicago, Ill. Piston. 2,407,631; Sept. 17.
Dextone Company, The, assignee: *See*—
Falco, Louis A.
Di Ianni, Emannel, Norristown, Pa. Garment fastening device. 2,407,969; Sept. 17.
Di Santi, Thomas G., Newark, N. J. Scaffold. 2,407,655; Sept. 17.
Dodge, Adiel Y., Rockford, Ill. Clutch and bearing construction. 2,407,772; Sept. 17.
Dolan, Charles H., II, Old Greenwich, Conn. Potato peeler. 2,407,819; Sept. 17.
Douglas (Kingswood) Limited, assignee: *See*—
Halliday, George F., and Thomas.
D'Ouville, Edmond L.: *See*—
Evering, Bernard L., d'Ouville, and Carmody.
Dow Chemical Co., The, assignee: *See*—
Britton, Edgar C., and Le Fevre.
Dreisbach, Robert R., Britton, and Le Fevre.
Down, Sidney G., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Piston device. 2,407,872; Sept. 17.
Dreisbach, Robert R., E. C. Britton, and W. J. Le Fevre, assignors to The Dow Chemical Company, Midland, Mich. Tacky rubberlike compositions and making the same. 2,407,953; Sept. 17.
Dreyfus, Camille, New York, N. Y. Screening material. 2,407,632; Sept. 17.
Droel, Louis W., Oak Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Retarded relay. 2,407,633; Sept. 17.
Dubeau, Archie L.: *See*—
Vincent, George P., and Dubeau.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Myers, Clovis D.
Du Pont, Richard C., Granogue, assignor to All American Aviation, Inc., Wilmington, Del. Shock absorbing aerial towline. 2,407,634; Sept. 17.
Durrum, Emmett L., Palo Alto, assignor to Shell Development Company, San Francisco, Calif. Separating aromatic hydrocarbons. 2,407,820; Sept. 17.
Egry Register Co., The, assignee: *See*—
Ritzert, Robert W.
Ehrlich, Walter A.: *See*—
Gladfelter, Wiltie I., and Ehrlich.
Ekco Products Company, assignee: *See*—
Chandler, James H.
Emmer, Charles E., assignor to General Binding Corporation, Chicago, Ill. Binding element. 2,407,656; Sept. 17.
Engelbaugh, Harold E.: *See*—
Gettig, Martin S., and Engelbaugh.
Engle, Burr N., assignor to I. M. Engle, Los Angeles, Calif. Indenting device. 2,407,821; Sept. 17.
Engle, Inga M., assignee: *See*—
Engle, Burr N.

Engler, Herman, assignor to P. Koletzko and C. A. Hands, New York, N. Y. Preparation for treating launderable fabric articles. 2,407,635; Sept. 17.

Engler, Kyle, Fayetteville, Ark., E. L. Barger, Ames, Iowa, and A. H. Thompson, deceased, by R. G. Thompson, administratrix, assignors to Board of Trustees of the University of Arkansas, Fayetteville, Ark. Drier. 2,407,636; Sept. 17.

Enterprise Railway Equipment Company, assignee: *See*— Zimmer, Albert E.

Erasmus, Martha C., Krugersdorp, Transvaal, Union of South Africa. Inspection lamp for motor vehicles and the like. 2,407,737; Sept. 17.

Esval, Orland E., Huntington, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Transformer pick-off. 2,407,657; Sept. 17.

Evering, Bernard L., Chicago, Ill., E. L. d'ouville, Pittsburgh, Pa., and D. R. Carmody, Newton, Iowa, assignors to Standard Oil Company, Chicago, Ill. Polymerization of olefins. 2,407,873; Sept. 17.

Fahnestock, Frank C., Haddonfield, N. J., and W. A. Hagerbaumer, Haverford Township, Delaware County, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Making acid reagents. 2,407,822; Sept. 17.

Falco, Louis A., assignor to The Dextone Company, New Haven, Conn. Bathtub. 2,407,738; Sept. 17.

Farnsworth Television and Radio Corporation, assignee: *See*— Hallmark, Clyde E. Rasley, Donald R.

Fawcett, Eric W. M., Sunbury-on-Thames, assignor to Anglo-Iranian Oil Company, Limited, London, England. Production of branched chain alkanes. 2,407,637; Sept. 17.

Federal Telephone and Radio Corporation, assignee: *See*— Fuchs, Morton.

Fenske, Merrell R., and G. H. Cummings, State College, assignors to Rohm & Haas Company, Philadelphia, Pa. Lubricating composition. 2,407,954; Sept. 17.

Ferrante, Gaspare, assignor to Grasoph Building Corp., Brooklyn, N. Y. Plastic cementitious material. 2,407,739; Sept. 17.

Ferris, Donald K., assignor to General Motors Corporation, Dayton, Ohio. Wringer. 2,407,922; Sept. 17.

Fieser, Louis F., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Antihemorrhagic esters and producing the same. 2,407,823; Sept. 17.

Fisher, John A., Tarpon Springs, Fla. Turbine engine. 2,407,824; Sept. 17.

Fletcher, Norman, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft tension for Axminster looms. 2,407,773; Sept. 17.

Folkers, Karl: *See*— Major, Randolph T., and Folkers.

Fowler, Harlan D., San Diego, Calif. Airplane construction. 2,407,774; Sept. 17.

Fram, David: *See*— Holschuh, Carl G., and Fram.

Fraser, Walter A., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Fluorine-containing ceramics and making same. 2,407,874; Sept. 17.

Frey, Frederick E., Bartlesville, Okla., and R. D. Snow, Edgewood, Md., assignors to Phillips Petroleum Company. Producing and concentrating diolefins. 2,407,825; Sept. 17.

Frost, Horace E., Grand Rapids, Mich. Indoor latch and lock. 2,407,775; Sept. 17.

Fuchs, Alfred R.: *See*— Fuchs, John R. and A. R.

Fuchs, John R. and A. R., Kansas City, Mo. Slicing device. 2,407,658; Sept. 17.

Fuchs, Morton, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Phase comparison system. 1,407,659.

Fuller, Frederic B.: *See*— Guibert, Francis W., and Fuller.

Gallus, George, Stillwater, Minn. Hoe. 2,407,740; Sept. 17.

Gall, George E., assignor to Anker-Holth Manufacturing Company, Inc., Chicago, Ill. Pump. 2,407,923; Sept. 17.

Gardner-Richardson Company, The, assignee: *See*— Ringler, William A.

Garfunkel, Louis X., New York, N. Y. Food slicing machine having stationary knives and a follower feed. 2,407,924; Sept. 17.

Geiger, William A., assignor to W. P. Sidley, M. F. Back, A. P. Withall, E. C. Austin, and G. A. Johnson, Chicago, Ill., and A. T. Miner, Chazy, N. Y., as trustees of The William H. Miner Foundation. Railway car truck. 2,407,875; Sept. 17.

General Binding Corporation, assignee: See— Emmer, Charles E.

General Electric Company, assignee: *See*— Bower, John L. Brand, Frederick F. Godet, Sidney. Norgaard, Donald E. Sclater, Ivanhoe H. Tonks, Lewi, and Apker. Welch, Alanson U., Jr.

General Motors Corporation, assignee: *See*— Ferris, Donald K. Martin, Thomas B., and Haines.

General Railway Signal Company, assignee: *See*— O'Brien, John C.

Gettig, Martin S., Poland, and H. E. Engelbaugh, assignors to The Youngstown Sheet and Tube Company, Youngstown, Ohio. Apparatus for delivering elongated cylindrical articles. 2,407,638; Sept. 17.

Gilbert, Frank, Jr., Olmsted Falls, Ohio. Container and making same. 2,407,639; Sept. 17.

Gilfillan, Henry W., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Apparatus for comparing pressures. 2,407,925; Sept. 17.

Gillings, Charles, and C. E. Beale, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc. Telephone or like signaling system. 2,407,640; Sept. 17.

Gladfelter, Willie I., Philadelphia, Pa., and W. A. Ehrlich, Bridgeport, Conn., assignors to Crown Can Company, Philadelphia, Pa. Can-beading machine. 2,407,776; Sept. 17.

Godber, George R., Los Angeles, Calif. Construction for electric storage batteries. 2,407,826; Sept. 17.

Godet, Sidney, Albany, N. Y., assignor to General Electric Company. Follow-up control system. 2,407,876; Sept. 17.

Goldsmith, George R., Girraween Grove, Ashgrove, Brisbane, Queensland, Australia. Refrigerant evaporator. 2,407,827; Sept. 17.

Good, John N., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Interlock apparatus. 2,407,877; Sept. 17.

Goodby, William T., assignor to The Bristol Aeroplane Company Limited, Bristol, England. Screw-threaded member. 2,407,741; Sept. 17.

Gorder, John R., Bismarck, N. Dak. Illuminating device. 2,407,829; Sept. 17.

Gorin, Everett, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Hydrocarbon conversion process. 2,407,828; Sept. 17.

Graham & Allen, assignee: *See*— Graham, George C.

Graham, George C., assignor, by mesne assignments, to Graham & Allen, Ridgewood, N. J. Washing machine. 2,407,660; Sept. 17.

Grasoph Building Corp., assignee: *See*— Ferrante, Gaspare.

Grawunder, Henry C., Bellville, assignor of one-half to J. B. Huff, Jr., Harris County, Tex. Glider. 2,407,777; Sept. 17.

Greetham, Ernest, London, England. Carrying out the heat-treatment of glass articles. 2,407,878; Sept. 17.

Griffin, Theodore R., Belmont, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Lock nut. 2,407,830; Sept. 17.

Groene, William F., Cincinnati, and H. C. Kemper, Goshen Township, Clermont County, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Taper turning apparatus. 2,407,778; Sept. 17.

Grove, Edwin W., III, Ladue, Mo. Perambulator. 2,407,779; Sept. 17.

Groves, Martin V., assignee, et al.: *See*— Hull-Ryde, Arthur.

Guibert, Francis W., Beverly Hills, and F. B. Fuller, Whittier, Calif.; said Fuller assignor to said Guibert. Fluid pressure device. 2,407,698; Sept. 17.

Gulf Oil Corporation, assignee: *See*— Butcher, Alfred.

Gurries, Albert G., Gilroy, Calif. Finishing leveler. 2,407,780; Sept. 17.

Gustavson, Alvin N., Bemus Point, assignor to Automatic Voting Machine Corporation, Jamestown, N. Y. Voting machine. 2,407,831; Sept. 17.

Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Method and apparatus for sealing cartons. 2,407,781; Sept. 17.

Haas, Otto, Richmond Hill, assignor to Aircraft Screw Products Company, Inc., Long Island City, N. Y. Composite nut. 2,407,879; Sept. 17.

Hagerbaumer, William A.: *See*— Fahnestock, Frank C., and Hagerbaumer.

Haines, John F.: *See*— Martin, Thomas B., and Haines.

Halliday, George F., and A. W. Thomas, Kingswood, Bristol, England, assignors to Douglas (Kingswood) Limited. Connection of clutches to speed gears. 2,407,955; Sept. 17.

Hallmark, Clyde E., Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation. Synchronizing signal generator. 2,407,956; Sept. 17.

Hamilton, Kenneth, assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Paper yarn. 2,407,926; Sept. 17.

Hamilton Watch Company, assignee: *See*— Bennett, William O., Jr.

Hands, C. Alfred, assignee, et al.: *See*— Engler, Herman.

Hardy, John S., Los Gatos, Calif. Tray stacker. 2,407,782; Sept. 17.

Harries, John H. O., Clapham Park, London, S. W. 4, England. Construction and assembly of electron discharge tubes. 2,407,742; Sept. 17.

Harrison, Bertram M., Newton Highlands, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling device. 2,407,661; Sept. 17.

Hart, Harold M., Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Method and apparatus for submarine signaling. 2,407,662; Sept. 17.

Hart, Robert W., Lynn, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Method and means for distance and direction finding. 2,407,663; Sept. 17.

Hartford National Bank and Trust Company, trustee, assignee: *See*— Labin, Edouard. Verhoeff, Adrianus. Ziegler, Marc.

Hayden, Edward, Windsor, Ontario, Canada. Miniature sectional building construction. 2,407,927; Sept. 17.

Hays, Noble E.: *See*— Hoover, George R., and Hays.

Helyar, Charles M., St. Vital, Manitoba, Canada. Air draft timing and volume control. 2,407,743; Sept. 17.

Hercules Powder Company, assignee: *See*— Cox, Richard F. B. Rummelsburg, Alfred L.

Herreshoff, Alexander G., Grosse Pointe, and W. Lamb, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Fastening device. 2,407,928; Sept. 17.

Herrold, Gordon W., Connellsville, Pa., assignor to Anchor Hocking Glass Corporation, Lancaster, Ohio. Transferring device for annealing leers. 2,407,664; Sept. 17.

Hersey, Israel I.: *See*— Quinn, Edward, and Hersey.

Herwick, Ole, and T. M. Taylor, Portland, Oreg. Lawn mower sharpener. 2,407,783; Sept. 17.

Hill, Henry C., Montclair, N. J., assignor to Wright Aeronautical Corporation. Hydraulic brake. 2,407,699; Sept. 17.

Hoffstad, Ole J., Rahway, N. J., assignor of one-half to A. Bruns, Port Chester, N. Y. Rollable type window screen. 2,407,784; Sept. 17.

Holschuh, Carl G., Wood-ridge, N. J., and D. Fram, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Aircraft fire control computer. 2,407,665; Sept. 17.

Holtz, Robert F., Merchantville, N. J., assignor to Radio Corporation of America. Protection for electron tubes. 2,407,880; Sept. 17.

Homeyer, August H.: *See*— Wallingford, Vernon H., and Homeyer.

Hoover, Edward M., Anderson, Ind. Reciprocating tool. 2,407,785; Sept. 17.

Hoover, George R., and N. E. Hays, assignors to The American Rolling Mill Company, Middletown, Ohio. Preparation of galvanized sheets to receive resinous coatings. 2,407,881; Sept. 17.

Horman, John H., Tuckahoe, assignor, by mesne assignments, to Allied Control Company, Inc., New York, N. Y. Electromagnetic relay. 2,407,744; Sept. 17.

Hotvedt, Ludvig C., Cambridge, England. Combination hand tool. 2,407,832; Sept. 17.

Huff, J. B., Jr., assignee: *See*— Grawunder, Henry C.

Huff, Lyman C., assignor to Universal Oil Products Company, Chicago, Ill. Conversion of fluid reactants. 2,407,700; Sept. 17.

Hughes Tool Company, assignee: *See*— Ashworth, Robert W.

Hull-Ryde, Arthur, assignor of one-fourth to A. Wilde, Bayside, and one-half to M. V. Groves, Brooklyn, N. Y. Compound hydraulic brake compressor and the like. 2,407,957; Sept. 17.

Hutchinson, Willis S., St. Paul, Minn., and E. R. Woodward, assignors to The Mathieson Alkali Works, Inc., New York, N. Y. Generator. 2,407,882; Sept. 17.

Hydraulic Control Engineering Company, assignee: *See*— Stephens, William T.

Imperial Chemical Industries Limited, assignee: *See*— Jones, David G., and Phillipson. Thomson, Thomas.

Interior, United States of America, as represented by the Secretary of, assignee: *See*— Clemmer, Julius B., and Clemmons.

International Harvester Company, assignee: *See*— Morkoski, James.

Jablonsky, Bruno, Waddon, Croydon, England. Manufacturing articles from fibrous material. 2,407,833; Sept. 17.

Jackson, Corwill, Ludington, Mich. Permanent magnet field generator. 2,407,883; Sept. 17.

Jacobson, Franz, New York, N. Y. Rotary joint. 2,407,745; Sept. 17.

Jeckel, Norman C., Glens Falls, N. Y., assignor to United States Catheter & Instrument Corp. Catheter. 2,407,929; Sept. 17.

Jenkins, Fred W.: *See*— Monson, Louis T., Anderson, and Jenkins.

Jicwood Limited, assignee: *See*— Buchanan, Charles H.

Johnson, George A., trustee, assignee, et al.: *See*— Geiger, William A.

Johnson, Herbert L.: *See*— Perrine, John H., and Johnson.

Johnson, Jesse E., Colbert, Wash. Oscillating welding rod. 2,407,746; Sept. 17.

Johnston, Greenhow, assignor of one-half to G. Maury, Jr., Richmond, Va. Machine gun mount. 2,407,884; Sept. 17.

Jones, David G., and M. Phillipson, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Manufacture of halogenated hydrocarbons. 2,407,701; Sept. 17.

Jones, Leo D., assignor to The Sharples Corporation, Philadelphia, Pa. Centrifugal separation. 2,407,834; Sept. 17.

Jowett, John A., Scottsville, N. Y. Sounding device. 2,407,702; Sept. 17.

Joy Manufacturing Company, assignee: *See*— Paget, Win W.

Kalart Company, Inc., The, assignee: *See*— Schwartz, Morris, and Castedello.

Kaplan, Saul, Rutherford, N. J., assignor to Onyx Oil & Chemical Company. Amino amide compounds. 2,407,703; Sept. 17.

Kearney, Norman L., Buffalo, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation. Snubber. 2,407,958; Sept. 17.

Kearney & Trecker Corporation, assignee: *See*— Armitage, Joseph B., and Barker.

Kearny, Cresson H., U. S. Army, Fort Clayton, Canal Zone. Boat. 2,407,666; Sept. 17.

Keema, Alexander W., Providence, R. I., assignor, by mesne assignments, to Bay Products Corporation. Attachment for grinding machines. 2,407,835; Sept. 17.

Keest, Frank, Urbana, Ill. Combination chair and cot. 2,407,786; Sept. 17.

Kelsey-Hayes Wheel Company, assignee: *See*— Sinclair, Charles W.

Kemper, Harry C.: *See*— Groene, William F., and Kemper.

Kern, Jean G., Orchard Park, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Anthraquinone acid dyestuff. 2,407,704; Sept. 17.

Kernahan, Ray, Portland, Oreg. Packsack. 2,407,787; Sept. 17.

Ketelbey, Frederick G., and G. Mason, Birmingham, England. Electrode holder for use in electric welding. 2,407,836; Sept. 17.

Kilgore, George R.: *See*— Shulman, Carl I., and Kilgore.

Kilgore, George R., Verona, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,407,705; Sept. 17.

Kilgore, George R., Verona, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,407,707; Sept. 17.

Kilgore, George R., Verona, and L. Malter, Newark, N. J., assignors to Radio Corporation of America. Electron discharge device. 2,407,708; Sept. 17.

Kingsburg Cotton Oil Co., assignee: *See*— Peterson, Clarence J.

Kircher, Reymond J., Neptune, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Harmonic generator. 2,407,667; Sept. 17.

Kispert, Joseph J., assignor to I. Newman & Sons, Inc., New Haven, Conn. Garment. 2,407,885; Sept. 17.

Kissel, William H., Ludington, Mich. Window stop. 2,407,837; Sept. 17.

Kliever, Waldo H., Minneapolis, Minn., assignor to The Brown Instrument Company, Philadelphia, Pa. Measuring apparatus. 2,407,838; Sept. 17.

Knapp, Harry M.: *See*— Butterfield, Joseph T., Knapp, and Runyon.

Knauss, Richard H., Peoria, Ill. Internal-combustion engine. 2,407,788; Sept. 17.

Knobel, Max, Arlington, Mass. Tracking apparatus. 2,407,886; Sept. 17.

Koehler, Gustave J., Dayton, Ohio. Fluid valve. 2,407,789; Sept. 17.

Koletzko, Paul, assignee, et al.: *See*— Engler, Herman.

Koppers Company, Inc., assignee: *See*— O'Brochta, John, and Rodman.

Kuna, Andrew: *See*— Bird, John C., and Kuna.

Labin, Edouard, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Phase modulation system. 2,407,887; Sept. 17.

Lamb, Wade: *See*— Herreshoff, Alexander G., and Lamb.

La Pointe, Albert A., West Hartford, assignor to La Pointe Engineering Company, Unionville, Conn. Shovel. 2,407,930; Sept. 17.

La Pointe Engineering Company, assignee: *See*— La Pointe, Albert A.

Leatherman, Martin, Hyattsville, Md. Fire resistant coating composition. 2,407,668; Sept. 17.

Le Blond, R. K., Machine Tool Company, The, assignee: *See*— Groene, William F., and Kemper.

Le Fevre, Walter J.: *See*—
Britton, Edgar C., and Le Fevre.
Dreisbach, Robert R., Britton, and Le Fevre.

Lemos, Manuel G., New York, N. Y. Convertible rocking chair. 2,407,839; Sept. 17.

Leonard, Robert D., Aldan, Pa. Rotary indexing mechanism. 2,407,840; Sept. 17.

Le Roy, Frank, assignor of one-half to J. D. Robinson, San Diego, Calif. Garment hanger. 2,407,841; Sept. 17.

Lescher, George W., Garden City, and W. H. Steet, Roosevelt, N. Y., assignors to Republic Aviation Corporation. Manually operated arresting hook. 2,407,709; Sept. 17.

Lesser, Julius, Chicago, Ill. Concealed garment pocket. 2,407,888; Sept. 17.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Reciprocating pressure generator. 2,407,790; Sept. 17.

Lever Brothers Company, assignee: *See*—
Bodman, John W.

Lindsay, John H., and S. Reso, assignors to Universal Tobacco Machine Co., Inc., Jacksonville, Fla. Cigar punching machine. 2,407,931; Sept. 17.

Lipe-Rollway Corporation, assignee: *See*—
Spase, Charles B.

Littlejohn, Lillie M., North Birmingham, Ala. Clothesline cover. 2,407,959; Sept. 17.

Loewe, Peter L.: *See*—
Dexter, Roger W., and Loewe.

Logan, Frank G., Mount Vernon, N. Y., assignor to Ward Leonard Electric Company. Electric switch. 2,407,710; Sept. 17.

Lombard Governor Corporation, assignee: *See*—
Schmidt, Edward.

Luth, Harold J., Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill. Building and forming plywood parts. 2,407,711; Sept. 17.

Luth, Harold J., Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill. Solenoid. 2,407,712; Sept. 17.

Lyon, George A., Allenhurst, N. J. Wheel structure. 2,407,669; Sept. 17.

MacCallum, Alan M., Maywood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Magnetic clutch. 2,407,757; Sept. 17.

MacCluney, William R., Dearborn, Mich. Fastening device. 2,407,758; Sept. 17.

MacKenzie, Thomas W., Cranford, N. J. Automatic telephone dialer. 2,407,889; Sept. 17.

Major, Randolph T., Mountainside, and K. Folkers, Plainfield, assignors to Merck & Co., Inc., Rahway, N. J. Erythrina alkaloid and its production. 2,407,713; Sept. 17.

Mallinckrodt Chemical Works, assignee: *See*—
Wallingford, Vernon H., and Homeyer.

Maloney, William J., Ansonia, Conn. Human carrier. 2,407,714; Sept. 17.

Malter, Louis: *See*—
Kilgore, George R., and Malter.

Manson, Frank G., Chicago, Ill. Quick-release connector. 2,407,715; Sept. 17.

Margolin, Meyer, Elgin, Ill. Resilient insole. 2,407,670; Sept. 17.

Mariotti, Anthony, Lorain, Ohio. Transit level. 2,407,960; Sept. 17.

Marschner, Robert F., assignor to Standard Oil Company, Chicago, Ill. Superfuel. 2,407,716; Sept. 17.

Marschner, Robert F., Homewood, assignor to Standard Oil Company, Chicago, Ill. Aviation superfuel. 2,407,717; Sept. 17.

Marschner, Robert F., Homewood, Ill., and D. R. Carmody, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Aviation superfuel. 2,407,718; Sept. 17.

Martin Dennis Company, The, assignee: *See*—
Bersworth, Frederick C.

Martin, Thomas B., and J. F. Haines, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich. Governor valve. 2,407,791; Sept. 17.

Mason, George: *See*—
Ketelbey, Frederick H., and Mason.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Hutchinson, Willis S., and Woodward.
Vincent, George P., and Dubeau.

Matthysse, Irving F., New York, N. Y., assignor to Burndy Engineering Company, Inc. Rotatable bus support clamp. 2,407,961; Sept. 17.

Maury, Greenhow, Jr.: *See*—
Johnston, Greenhow.

Maxwell, Frank R., Malden, Mass. Attachment chuck. 2,407,932; Sept. 17.

McBride, Thomas C., Philadelphia, Pa., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Lubricator. 2,407,841; Sept. 17.

McClure, Glenn T., McKeesport, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Protection valve device. 2,407,890; Sept. 17.

McDonald, Donald A., Dearborn, Mich. Merry-go-round for playgrounds and the like. 2,407,843; Sept. 17.

McDougal, Royden K., San Pedro, Calif. Fishhook, 2,407,759; Sept. 17.

McKinstry, George W., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Safety appliance. 2,407,891; Sept. 17.

McLaughlin, John R., Palmer, Mass., assignor, by mesne assignments, to Tampax, Inc., New York, N. Y. Method of and apparatus for fitting telescopic tubes and the like. 2,407,760; Sept. 17.

McMillan, James O., Wichita, Kans. Diaphragm pump. 2,407,792; Sept. 17.

McPherson, Hal W., Chicago, Ill., assignor to Allied Control Co., Inc., New York, N. Y. Valve. 2,407,761; Sept. 17.

McQuay-Norris Manufacturing Company, assignee: *See*—
Persons, Lawrence M.

Mehr, Otto, North Bergen, N. J. Hospital bed. 2,407,892; Sept. 17.

Melchior, Frederick C., New York, N. Y. Carburetor preheat system. 2,407,719; Sept. 17.

Merck & Co., Inc., assignee: *See*—
Major, Randolph T., and Folkers.

Merrell, William S., Company, The, assignee: *See*—
Bird, John C., and Kuna.

Mesnel, Pierre, Colombes, France; vested in the Alien Property Custodian. Guideway for sliding windows. 2,407,671; Sept. 17.

Messner, Georg: *See*—
Suchy, Robert, and Messner.

Meyer, Albert, Albuquerque, N. Mex. Navigator. 2,407,893; Sept. 17.

Microstat Corporation, assignee: *See*—
Pratt, Verneur E.

Milas, Nicholas A., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Synthesis of 1-alkyl-8-methyl hexahydroindanone-4. 2,407,672; Sept. 17.

Milas, Nicholas A., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Synthesis of 1-keto-8-methylhexahydroindanol-1. 2,407,673; Sept. 17.

Miller, James B., Webster Groves, assignor to Mines Equipment Company, St. Louis, Mo. Electrical connecting unit. 2,407,894; Sept. 17.

Miner, Alice T., trustee, assignee, et al.: *See*—
Geiger, William A.

Miner, William H., Foundation, The, assignee: *See*—
Geiger, William A.

Mines Equipment Company, assignee: *See*—
Miller, James B.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Anderson, Arthur A.
Palmquist, Philip V., Cross, and Netherly.

Mitchell, Roscoe A., Evansville, Ind. Bottle cap or jar cover remover. 2,407,793; Sept. 17.

Mohawk Carpet Mills, Inc., assignee: *See*
Hamilton, Kenneth.

Monsanto Chemical Company, assignee: *See*—
Nason, Howard K.
Whitehead, George W.

Monson, Louis T., Alhambra, W. W. Anderson, Montebello, and F. W. Jenkins, Los Angeles, Calif., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Resolving oil-in-water emulsions. 2,407,895; Sept. 17.

Morgan, David H., Youngstown, Ohio. Door and operating means therefor. 2,407,674; Sept. 17.

Morgan, Mathew B., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Vehicle drive axle gearing. 2,407,675; Sept. 17.

Moriarty, Ernest C., Washington, D. C. Bomb fuse. 2,407,844; Sept. 17.

Morkoski, James, Canton, Ill., assignor to International Harvester Company. Mechanical power lift. 2,407,762; Sept. 17.

Muffly, Glenn, Springfield, Ohio. Refrigerating mechanism. 2,407,794; Sept. 17.

Mull, Arthur B., Hollywood, Calif., assignor to Spotswood Specialty Co., Inc., Lexington, Ky. Toy airplane. 2,407,720; Sept. 17.

Munson, Alexander L., Detroit, Mich. Welding mechanism. 2,407,676; Sept. 17.

Myers, Clovis D., Ardentown, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Recovering the salt-forming components of nylon. 2,407,896; Sept. 17.

Napier, James W.: *See*—
Arnold, Mervin V., and Napier.

Nason, Howard K., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Molding cellulose ester compositions. 2,407,962; Sept. 17.

National Lock Co., assignee: *See*—
North, Edwin W., and Stone.

Nauert, Carl H., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Refrigerating apparatus. 2,407,721; Sept. 17.

Neely, William H., assignor to The Universal Wire Spring Company, Cleveland, Ohio. Upholstered spring construction. 2,407,933; Sept. 17.

Nelson, Clarence L., Minneapolis, Minn. Device for maintaining film loops. 2,407,795; Sept. 17.

Nemeyer, Roland O., assignor to California Institute Research Foundation, Pasadena, Calif. Aligning device for tools. 2,407,845; Sept. 17.

Netherly, George P.: *See*—
Palmquist, P. V., Cross, and Netherly.

Newman, George W., Kansas City, Mo. Pocketknife. 2,407,897; Sept. 17.

Newman, I., & Sons, Inc., assignee: *See*—
Kispert, Joseph J.

Nilson, Frederick W., Worcester, Mass. Automatic direction indicator. 2,407,934; Sept. 17.

Norgaard, Donald E., Schenectady, N. Y., assignor to General Electric Company. Cathode ray apparatus. 2,407,898; Sept. 17.

North, Edwin W., and R. A. Stone, assignors to National Lock Co., Rockford, Ill. Furniture handle. 2,407,763; Sept. 17.

Nye, Norman H., Cuyahoga Falls, and W. E. Rogers, Stow, assignors to The Vaughn Machinery Company, Cuyahoga Falls, Ohio. Wire reeling mechanism. 2,407,899; Sept. 17.

O'Brien, John C., assignor to General Railway Signal Company, Rochester, N. Y. Radio communication system. 2,407,846; Sept. 17.

O'Brochta, John, and H. Rodman, Jr., Pittsburgh, Pa., assignors, by mesne assignments, to Koppers Company, Inc. Separating carbazole from crudes thereof. 2,407,677; Sept. 17.

Oebbecke, Bernard F., Pittsburgh, Pa. Thermostatic switch plug. 2,407,764; Sept. 17.

Ohl, Russell S., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Thermoelectric system. 2,407,678; Sept. 17.

Onyx Oil & Chemical Company, assignee: *See*—
Kaplan, Saul.

Otis Elevator Company, assignee: *See*—
Burke, Theodore H. D.

Page, Herbert E., Pasadena, Calif. Tripod jack. 2,407,796; Sept. 17.

Paget, Win W., Michigan City, Ind., assignor to Joy Manufacturing Company. Drilling apparatus. 2,407,679; Sept. 17.

Palmer, John F., Waukesha, Wis. Push-button pump type soap dispenser. 2,407,765; Sept. 17.

Palmquist, Philip V., New Canada Township, Ramsey County, B. S. Cross, and G. P. Netherly, assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Reflex light reflector. 2,407,680; Sept. 17.

Parenti, Joseph S., Buffalo, N. Y. Internal-combustion engine. 2,407,681; Sept. 17.

Paul, Irving, Chicago, Ill. Combination lock and latch for doors. 2,407,900; Sept. 17.

Perfetti, John F., Dearborn, and H. E. Waldron, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Electrical machine. 2,407,935; Sept. 17.

Perrine, John H., Prospect Park, and H. L. Johnson, Norwood, assignors to Sun Oil Company, Philadelphia, Pa. Modified alkyd resins. 2,407,766; Sept. 17.

Persons, Lawrence M., Ladue, assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo. Solenoid. 2,407,963; Sept. 17.

Peterson, Alfred T., Minneapolis, Minn. Push mower. 2,407,767; Sept. 17.

Peterson, Clarence J., assignor to Kingsburg Cotton Oil Co., Kingsburg, Calif. Dust collector. 2,407,722; Sept. 17.

Peterson, Donald W., Princeton, N. J., assignor to Radio Corporation of America. Radio frequency switch. 2,407,847; Sept. 17.

Petrie, John W., assignor to Petrie-Lewis Manufacturing Co., Inc., New Haven, Conn. Wand. 2,407,723; Sept. 17.

Petrie-Lewis Manufacturing Co., Inc., assignee: *See*—
Petrie, John W.

Petrolite Corporation, Ltd., assignee: *See*—
Monson, Louis T., Anderson, and Jenkins.

Petzold, Earl E., Burbank, Calif. Vane motor. 2,407,901; Sept. 17.

Phillips Petroleum Company, assignee: *See*—
Frey, Frederick E., and Snow.
Ray, Gardner C.
Wolk, I. Louis.

Phillipson, Maddison: *See*—
Jones, David G., and Phillipson.

Post, Norman W., Philadelphia, Pa. Wallet or purse. 2,407,964; Sept. 17.

Powderloys Limited, assignee: *See*—
Trent, Edward M.

Poz, William M., U. S. Navy, Park Ridge, N. J. Terminal weight. 2,407,682; Sept. 17.

Pratt, Verneur E., Norwalk, Conn., assignor to Microstat Corporation. Camera. 2,407,902; Sept. 17.

Predmore, Bert, assignor to The Seamless Rubber Company, New Haven, Conn. Making rubber goods. 2,407,768; Sept. 17.

Prentice, William G., Indianapolis, Ind. Cable splice vulcanizing mold. 2,407,683; Sept. 17.

Quinn, Edward, Saugus, and I. I. Hersey, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Method and machine for making prewelt shoes. 2,407,903; Sept. 17.

Radio Corporation of America, assignee: *See*—
Holtz, Robert F.
Kilgore, George R.
Peterson, Donald W.
Rose, Albert.
Shulman, Carl I., and Kilgore.
Wolf, Lester J.

Ramsey, Willis L., Parma, Mo. Bookrack or casing. 2,407,797; Sept. 17.

Rasley, Donald R., Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation. Voltage rectifier. 2,407,724; Sept. 17.

Ray, Gardner C., Bartlesville, Okla., assignor to Phillips Petroleum Company. Production of cyanoalkenes. 2,407,848; Sept. 17.

Regents of the University of Minnesota, assignee: *See*—
Smith, Lee I., and Renfrow.

Renfrow, William B., Jr.: *See*—
Smith, Lee I., and Renfrow.

Republic Aviation Corp., assignee: *See*—
Lescher, George W., and Steet.

Research Consultants Limited, assignee: *See*—
Smith, Frederick G.

Research Corporation, assignee: *See*—
Fieser, Louis F.
Milas, Nicholas A.

Reso, Sam: *See*—
Lindsay, John H., and Reso.

Ringler, William A., Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio. Bottle carrier. 2,407,798; Sept. 17.

Ritzert, Robert W., assignor to The Egry Register Co., Dayton, Ohio. Carbon feeding manifolding machines. 2,407,799; Sept. 17.

Roberts, Leland C., Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio communication system. 2,407,684; Sept. 17.

Robinson, James D., assignee: *See*—
Le Roy, Frank.

Rodman, Hugh, Jr.: *See*—
O'Brochta, John, and Rodman.

Rogers, Walter E.: *See*—
Nye, Norman H., and Rogers.

Rohm & Haas Company, assignee: *See*—
Fenske, Merrell R., and Cummings.

Rosan, Joseph, North Hollywood, Calif. Removing and replacing inserts. 2,407,904; Sept. 17.

Rose, Albert, East Orange, N. J., assignor to Radio Corporation of America. Television transmitting apparatus and operation. 2,407,905; Sept. 17.

Rose, Albert, East Orange, N. J., assignor to Radio Corportation of America. Low velocity television transmitting apparatus. 2,407,906; Sept. 17.

Rost, Helge F., Djursholm, K. H. Thunell, Nockeby, S. D. Vigren, Stockholm, and P. H. E. Claesson, Jakobsberg, Sweden. Aerial drop bomb. 2,407,936; Sept. 17.

Roth, Joseph, Bronx, N. Y. Apparatus for firing pressed fuel. 2,407,849; Sept. 17.

Rudolph, Corrie F., Washington, D. C. Fluorescent light control. 2,407,685; Sept. 17.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Terpene derivatives. 2,407,937; Sept. 17.

Runyon, Benjamin F.: *See*—
Butterfield, Joseph T., Knapp, and Runyon.

Ruskin, Frances R., assignee: *See*—
Ruskin, Simon L.

Ruskin, Simon L., New York, N. Y., assignor to F. R. Ruskin. Sulphanilamide derivatives and preparing same. 2,407,686; Sept. 17.

Sanderson, Leonard W., Toronto, Ontario, Canada. Motion display stand. 2,407,747; Sept. 17.

Schmidt, Edward, Andover, assignor to Lombard Governor Corporation, Asland, Mass. Rotary pump. 2,407,748; Sept. 17.

Schoenlaub, Robert A., Tiffin, assignor to Basic Refractories, Inc., Cleveland, Ohio. Refractory lining of metallurgical structures. 2,407,725; Sept. 17.

Schönander, Nils G., Stockholm, Sweden. X-ray screening apparatus. 2,407,938; Sept. 17.

Schwartz, Morris, and W. Castedello, assignors to The Kalart Company, Inc., Stamford, Conn. Range finder. 2,407,687; Sept. 17.

Sclater, Ivanhoe H., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,407,688; Sept. 17.

Scott, John E., Los Angeles, Calif. Material feed mechanism for sewing machines. 2,407,907; Sept. 17.

Seamless Rubber Company, The, assignee: *See*—
Predmore, Bert.

Seifried, Eugen, Waldkirch in Breisgau, Germany, assignor to United States of America, as represented by the Secretary of War. Subaqueous electric cutting. 2,407,850; Sept. 17.

Servel, Inc., assignee: *See*—
Ashby, Carl T.
Nauert, Carl H.
Taylor, Robert S.

Shannon, Joseph C., Leadville, Colo. Mineral classifier. 2,407,851; Sept. 17.

Sharp & Dohme, Incorporated, assignee: *See*—
Sprague, James M.

Sharples Corporation, The, assignee: *See*—
Jones, Leo D.

Shell Development Company, assignee: *See*—
Bailey, William A., Jr., and Burgin.
Burgin, James.
Cheney, Harry A.
Durham, Emmett L.

Shulman, Carl I., East Orange, and G. R. Kilgore, Verona, N. J., assignors to Radio Corporation of America. Electron discharge device. 2,407,706; Sept. 17.

Sidley, William P., trustee, assignee, et al.: *See*—
Geiger, William A.

Sinclair, Charles W., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Vehicle wheel. 2,407,749; Sept. 17.

Smith, Apollo M. O., Bell, assignor to Aerojet Engineering Corporation, Azusa, Calif. Reaction motor. 2,407,852; Sept. 17.

Smith, Frederick G., assignor to Research Consultants Limited, Toronto, Ontario, Canada. Temperature sensitive resistor. 2,407,750; Sept. 17.

Smith, L. B., Incorporated, assignee: *See*—
Smith, Luther B.

Smith, Lee L., Minneapolis, Minn., and W. B. Renfrow, Jr., Charlotte, N. C., assignors to Regents of the University of Minnesota, Minneapolis, Minn. Preparing chemical products. 2,407,726; Sept. 17.

Smith, Luther B., assignor to L. B. Smith Incorporated, Camp Hill, Pa. Roller. 2,407,965; Sept. 17.

Smith, Roland L., Belmont, Mass. Exposure timing mechanism. 2,407,800; Sept. 17.

Smith, Wolcott M., Springfield, Mass. Power supply regulating apparatus. 2,407,853; Sept. 17.

Snow, Robert D.: *See*—
Frey, Frederick E., and Snow.

Snyder, Albert W.: *See*—
Ciper, Anthony L., and Snyder.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Danner, Arthur V.
Fahnestock, Frank C., and Hagerbaumer.
Gorin, Everett.

Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Chemical process and product. 2,407,689; Sept. 17.

Southworth, George C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave guide electrotherapeutic system. 2,407,690; Sept. 17.

Spase, Charles B., Nedrow, assignor to Lipe-Rollway Corporation, Syracuse, N. Y. Clutch. 2,407,727; Sept. 17.

Spase, Charles B., Nedrow, assignor to Lipe-Rollway Corporation, Syracuse, N. Y. Friction clutch. 2,407,728; Sept. 17.

Sperry Gyroscope Company, Inc., assignee: *See*—
Costa, Philip J.
Esval, Orland E.
Holschuh, Carl G., and Fram.

Spotswood Specialty Co. Inc., assignee: *See*—
Mull, Arthur B.

Sprague, James M., Drexel Hill, assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa. Diazine compounds. 2,407,966; Sept. 17.

Standard Oil Company, assignee: *See*—
Evering, Bernard L., d'Ouville, and Carmody.
Marschner, Robert F.
Marschner, Robert F., and Carmody.

Steet, Walter H.: *See*—
Lescher, George W., and Steet.

Steingard, Arthur T., New York, N. Y. Carbon holder. 2,407,854; Sept. 17.

Steinhilber, Berthold, assignor of two-fifths to G. L. Anger, Worcester, Mass. Belt sander. 2,407,939; Sept. 17.

Steinwand, Otto J., Redwood City, Calif. Preparing fruit for marmalades, etc. 2,407,801; Sept. 17.

Stelzer, William, East Orange, N. J. Hydraulic brake mechanism. 2,407,856; Sept. 17.

Stephens, William T., assignor to Hydraulic Control Engineering Company, Cleveland, Ohio. Hydraulic press system. 2,407,855; Sept. 17.

Stevens, Clinton L., Jamestown, N. Y. Manufactured article of furniture. 2,407,940; Sept. 17.

Stewart, Robert J., assignor to Crown Cork & Seal Company, Baltimore, Md. Dust collector. 2,407,751; Sept. 17.

Stewart-Warner Corporation, assignee: *See*—
Berg, Howard O.

Stone, Roy A.: *See*—
North, Edwin W., and Stone.

Stotter, Herbert J., Shaker Heights, Ohio. Lined carton. 2,407,802; Sept. 17.

Sturtevant, B. F., Company, assignee: *See*—
Bentley, Oliver D. H.

Submarine Signal Company, assignee: *See*—
Batchelder, Laurence.
Benioff, Hugo.
Harrison, Bertram M.
Hart, Harold M.
Hart, Robert W.
Williams, Robert L.

Suchy, Robert, and G. Messner, Bitterfeld, Germany; vested in the Alien Property Custodian. Cell for the production of metals by electrolysis of fused electrolytes. 2,407,691; Sept. 17.

Sun Oil Company, assignee: *See*—
Courtenay, William A., Jr.
Perrine, John H., and Johnson.

Sutherland Paper Company, assignee: *See*—
Buttery, Kenneth T.

Tampax, Inc., assignee: *See*—
McLaughlin, John R.

Taylor, Reginald, and G. T. Baker, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc., Chicago, Ill. Electrical signaling system. 2,407,910; Sept. 17.

Taylor, Robert S., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Catalytic igniter for gaseous fuels. 2,407,729; Sept. 17.

Taylor, Thomas M.: *See*—
Herwick, Ole, and Taylor.

Terhune, Ralph D., Ridgewood, N. J., assignor to The Bryant Heater Company, Cleveland, Ohio. Boiler. 2,407,941; Sept. 17.

Thomas, Albert W.: *See*—
Halliday, George F., and Thomas.

Thomas, Carrie D., assignee, et al.: *See*—
Thomas, Walter O.

Thomas, W. Maureen, assignee, et al.: *See*—
Thomas, Walter O.

Thomas, Walter O., Winter Park, Fla., assignor, by decree of distribution, to C. D. and W. M. Thomas. Fruit clipper. 2,407,803; Sept. 17.

Thompson, Arthur H.: *See*—
Engler, Kyle, Barger, and Thompson.

Thompson, Rebecca G., administratrix: *See*—
Engler, Kyle, Barger, and Thompson.

Thomson, Thomas, Kilmarnock, Scotland, assignor to Imperial Chemical Industries Limited. Surface coated propellent explosive powders. 2,407,967; Sept. 17.

Thunell, Karl H.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Timken-Detroit Axle Company, The, assignee: *See*—
Morgan, Mathew B.

Tonks, Lewi, and Le R. Apker, Schenectady, N. Y., assignors to General Electric Company. Wave propagation. 2,407,911; Sept. 17.

Trent, Edward M., assignor to Powderloys Limited, Coventry, England. Separating hard constituents from sintered hard metals. 2,407,752; Sept. 17.

Trojan Powder Company, assignee: *See*—
Wyler, Joseph A.

United-Carr Fastener Corporation, assignee: *See*—
Churchill, Wilmer H.
Griffin, Theodore R.

United Gas Improvement Company, The, assignee: *See*—
Soday, Frank J.

United Shoe Machinery Corporation, assignee: *See*—
Cross, Garrett P. S.
Quinn, Edward, and Hersey.

United States Catheter & Instrument Corp., assignee: *See*—
Jeckel, Norman C.

Universal Oil Products Company, assignee: *See*—
Huff, Lyman C.

Universal Tobacco Machine Co., Inc., assignee: *See*—
Lindsay, John H., and Reso.

Universal Wire Spring Company, The, assignee: *See*—
Neely, William H.

Vaughn Machinery Company, The, assignee: *See*—
Nye, Norman H., and Rogers.

Ventres, Elio C., Worcester, Mass. Work driving dog. 2,407,908; Sept. 17.

Verhoeff, Adrianus, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Company, Hartford, Conn., trustee. X-ray tube. 2,407,857; Sept. 17.

Vickers, Harry F., Washington, D. C., assignor, by mesne assignments, to Vickers, Incorporated, Detroit, Mich. Safety control for hoists. 2,407,692; Sept. 17.

Vickers, Harry F., assignor to Vickers Incorporated, Detroit, Mich. Safety control for hoists and circuit therefor. 2,407,693; Sept. 17.

Vickers, Harry F., assignor to Vickers, Incorporated, Detroit, Mich. Hoist control and drive. 2,407,694; Sept. 17.

Vickers, Incorporated, assignee: *See*—
Vickers, Harry F.

Vigren, Sten D.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Vincent, George P., Poughkeepsie, N. Y., and A. L. Dubeau, Rumford, R. I., assignors to The Mathieson Alkali Works, Inc., New York, N. Y. Purification of crude cellulosic material. 2,407,909; Sept. 17.

Von Stoeser, Walter, assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y. Cup dispensing mechanism. 2,407,968; Sept. 17.

Waldorf Paper Products Company, assignee: *See*—
Guyer, Reynolds.

Waldron, Harold E.: *See*—
Perfetti, John F., and Waldron.

Wallgren, August G. F., assignor to Aktiebolaget Bolinder-Munktell, Eskilstuna, Sweden. Gear wheel pump. 2,407,753; Sept. 17.

Wallingford, Vernon H., Ferguson, and A. H. Homeyer, assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Carbalkoxylation of organic compounds. 2,407,942; Sept. 17.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Seifried, Eugen.

Ward Leonard Electric Company, assignee: *See*—
Logan, Frank G.

Washcoe, Wilfred C., Arlington County, Va. Rotor. 2,407,695; Sept. 17.

Webster, George C., U. S. Navy. Detent mechanism. 2,407,696; Sept. 17.

Welch, Alanson U., Jr., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,407,626; Sept. 17.

Westinghouse Air Brake Company, The, assignee: *See*—
Cook, Earle S.
Down, Sidney G.
Good, John N.
McCure, Glenn T.

Westinghouse Electric Corporation, assignee: *See*—
Whitefield, Kyle C.

Wethers, Clifford H., Detroit, Mich. Roller for twister machines. 2,407,730; Sept. 17.

Whitefield, Kyle C., Longmeadow, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Air translating apparatus. 2,407,858; Sept. 17.

Whitehead, George W., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Resin molding composition. 2,407,943; Sept. 17.

Wilde, Arthur, assignee, et al.: *See*—
Hull-Ryde, Arthur.

Williams, Elmer R., Tulsa, Okla. Pressure relief valve. 2,407,754; Sept. 17.

Williams, Robert L., Newton, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,407,697; Sept. 17.

Wilson, Russel S., Filer, Idaho. Mechanical movement. 2,407,859; Sept. 17.

Winchel, Henry T., North Hollywood, Calif., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Radio cabinet and shockmount base. 2,407,804; Sept. 17.

Withall, Albert P., trustee, assignee, et al.: *See*—
Geiger, William A.

Witham, Marion R., Westfield, N. J. Shoulder pad. 2,407,755; Sept. 17.

Wolf, Lester J., Audubon, N. J., assignor to Radio Corporation of America. Communication system for ultra-high frequencies. 2,407,860; Sept. 17.

Wolk, I. Louis, Bartlesville, Okla., assignor to Phillips Petroleum Company. Treating hydrocarbons. 2,407,861; Sept. 17.

Woodruff, Albert E., Oak Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Receiver ear piece. 2,407,731; Sept. 17.

Woodward, Eric R.: *See*—
Hutchinson, Willis S., and Woodward.

Worthington Pump and Machinery Corporation, assignee: *See*—
McBride, Thomas C.

Wright Aeronautical Corp., assignee: *See*—
Hill, Henry C.

Wulff, John, Cambridge, Mass. Producing metal powders of high alloy content. 2,407,862; Sept. 17.

Wurlitzer, Rudolph, Co., The, assignee: *See*—
Von Stoeser, Walter.

Wyler, Joseph A., assignor to Trojan Powder Company, Allentown, Pa. Explosive composition. 2,407,805; Sept. 17.

Yocum, Cleo G.: *See*—
Deurmyer, Richard H., and Yocum.

Young, James G., Shreveport, La., assignor to Bird & Son, Inc., East Walpole, Mass. Saturating fibrous sheet material. 2,407,756; Sept. 17.

Youngstown Sheet and Tube Company, The, assignee: *See*—
Gettig, Martin S., and Engelbaugh.

Youngstrom, Axel H., Minneapolis, Minn. Multiple filing spindle. 2,407,732; Sept. 17.

Ziegler, Marc, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Reception of frequency modulated waves. 2,407,863; Sept. 17.

Zimmer, Albert E., assignor to Enterprise Railway Equipment Company, Chicago, Ill. Safety operating handle for car door mechanism. 2,407,912; Sept. 17.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 17TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Boiler. L. Satchwell. Re. 22,793; Sept. 17.
Riveted structure and making the same. L. C. Huck. Re. 22,792; Sept. 17.

LIST OF PLANT INVENTIONS

Apple tree. A. F. Etter. Plant Pat. 710; Sept. 17.

LIST OF DESIGN INVENTIONS

Clothespin. A. M. Jacobson. 145,602; Sept. 17.
Coat. M. Frascino. 145,597; Sept. 17.
Coat. H. Goldberg. 145,598–9; Sept. 17.
Coat, Child's. E. Fischer. 145,596; Sept. 17.
Handle for valves or the like. M. J. Rausch. 145,604; Sept. 17.
Handle or similar article, Drawer. J. White. 145,606; Sept. 17.
Handle or the like, Faucet. R. H. Zinkil. 145,607; Sept. 17.
Pump head, Deep well. E. M. Deters. 145,595; Sept. 17.
Shoe. S. Huberman. 145,600; Sept. 17.
Spit Barbecue, Rotatable. L. C. Hufford and L. R. Gray. 145,601; Sept. 17.
Toothpick assembly, Detachable. G. E. Millard. 145,603; Sept. 17.
Vending machine. O. V. Wells. 145,605; Sept. 17.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 17TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid reagents, Making. F. C. Fahnestock and W. A. Hagerbaumer. 2,407,822; Sept. 17.
Airplane construction. H. D. Fowler. 2,407,774; Sept. 17.
Aligning device for tools. R. O. Nemeyer. 2,407,845; Sept. 17.
Aliphatic polycarboxylic amino acids and making them. F. C. Bersworth. 2,407,645; Sept. 17.
Alkanes, Production of branched chain. E. W. M. Fawcett. 2,407,637; Sept. 17.
Alkyl resins, Modified. J. H. Perrine and H. L. Johnson. 2,407,766; Sept. 17.
Aluminum articles, Treatment of oxide coated. E. V. Blackmun. 2,407,809; Sept. 17.
Amino amide compounds. S. Kaplan. 2,407,703; Sept. 17.
Antihemorrhagic esters and producing the same. L. F. Fieser. 2,407,823; Sept. 17.
Apparatus for applying tread material to tire casings. M. V. Arnold and J. W. Napier. 2,407,806; Sept. 17.
Apparatus for comparing pressures. H. W. Gilfillan 2,407,925; Sept. 17.
Apparatus for delivering elongated cylindrical articles. M. S. Gettig and H. E. Engelbaugh. 2,407,638; Sept. 17.
Apparatus for firing pressed fuel. J. Roth. 2,407,849; Sept. 17.
Apparatus for submarine signaling. L. Batchelder. 2,407,643; Sept. 17.
Apparatus for submarine signaling. R. L. Williams. 2,407,697; Sept. 17.
Apparatus for testing waterproof watchcases. W. O. Bennett, Jr. 2,407,945; Sept. 17.
Apparatus for the clarification of liquids. A. Butcher. 2,407,947; Sept. 17.
Applicator, Liquid. I. H. Daniel. 2,407,770; Sept. 17.
Aqueous solution of riboflavin. J. C. Bird and A. Kuna. 2,407,624; Sept. 17.
Articles from fibrous material, Manufacturing. B. Jablonsky. 2,407,833; Sept. 17.
Attachment for grinding machines. A. W. Keema. 2,407,835; Sept. 17.
Automatic direction indicator. F. W. Nilson. 2,407,934; Sept. 17.
Bandage, Finger. R. Beckerman. 2,407,735; Sept. 17.
Bathtub. L. A. Falco. 2,407,738; Sept. 17.
Bearing. O. D. H. Bentley. 2,407,807; Sept. 17.
Bed, Chair. L. Arzt. 2,407,864; Sept. 17.
Bed, Hospital. O. Mehr. 2,407,892; Sept. 17.
Binding element. C. E. Emmer. 2,407,656; Sept. 17.
Boat. C. H. Kearny. 2,407,666; Sept. 17.
Boiler. R. D. Terhune. 2,407,941; Sept. 17.
Bottle carrier. W. A. Ringler. 2,407,798; Sept. 17.
Box or container, Dispensing. K. T. Buttery. 2,407,919; Sept. 17.
Brake: *See*—
Hydraulic brake.
Brake apparatus, Variable load. E. S. Cook. 2,407,870; Sept. 17.
Brake compressor and the like, Compound hydraulic. A. Hull-Ryde. 2,407,957; Sept. 17.
Brake mechanism, Hydraulic. W. Stelzer. 2,407,856; Sept. 17.
Broach, Rotary. J. Delleo. 2,407,921; Sept. 17.
Building construction, Miniature sectional. E. Hayden. 2,407,927; Sept. 17.
Cabinet and shockmount base, Radio. H. T. Winchel. 2,407,804; Sept. 17.
Cable splice vulcanizing mold. W. G. Prentice. 2,407,683; Sept. 17.
Camera. V. E. Pratt. 2,407,902; Sept. 17.
Can-beading machine. W. I. Gladfelter and W. A. Ehrlich. 2,407,776; Sept. 17.
Carbalkoxylation of organic compounds. V. H. Wallingford and A. H. Homeyer. 2,407,942; Sept. 17.
Carbazole from crudes thereof, Separating. J. O'Brochta and H. Rodman, Jr. 2,407,677; Sept. 17.
Carbon holder. A. T. Steingard. 2,407,854; Sept. 17.
Carrier: *See*—
Bottle carrier.
Human carrier.
Orifice plate carrier.
Carton, Lined. H. J. Stotter. 2,407,802; Sept. 17.
Casing, Toy and ball. E. C. Bailliere. 2,407,734; Sept. 17.
Catalysts. H. A. Cheney. 2,407,814; Sept. 17.
Catalysts, Manufacture of supported. H. A. Cheney. 2,407,813; Sept. 17.
Catalytic conversion of carbonaceous materials. J. Burgin. 2,407,918; Sept. 17.
Catalytic conversion of hydrocarbons and the preparation of catalysts therefor. W. A. Bailey, Jr. and J. Burgin. 2,407,914; Sept. 17.
Catheter. N. C. Jeckel. 2,407,929; Sept. 17.
Cathode ray apparatus. D. E. Norgaard. 2,407,898; Sept. 17.
Cell for the production of metals by electrolysis of fused electrolytes. R. Suchy and G. Messner. 2,407,691; Sept. 17.
Cellulose ester compositions, Molding. H. K. Nason. 2,407,962; Sept. 17.
Cellulosic material, Purification of crude. G. P. Vincent and A. L. Dubeau. 2,407,909; Sept. 17.
Cementitious material, Plastic. G. Ferrante. 2,407,739; Sept. 17.
Centrifugal separation. L. D. Jones. 2,407,834; Sept. 17.
Ceramics and making same, Fluorine-containing. W. A. Fraser. 2,407,874; Sept. 17.
Chair: *See*—
Convertible rocking chair.
High chair.
Chair and cot, Combination. F. Keest. 2,407,786; Sept. 17.
Chemical process and product. F. J. Soday. 2,407,689; Sept. 17.
Chemical products, Preparing. L. I. Smith and W. B. Renfrow, Jr. 2,407,726; Sept. 17.
Chuck, Attachment. F. R. Maxwell. 2,407,932; Sept. 17.
Clamp: *See*—
Rotatable bus support clamp.
Classifier, Mineral. J. C. Shannon. 2,407,851; Sept. 17.
Cleaner: *See*—
Grain cleaner.
Clipper, Fruit. W. O. Thomas. 2,407,803; Sept. 17.
Closure for cartons. E. J. Biskamp. 2,407,865; Sept. 17.
Clothesline cover. L. M. Littlejohn. 2,407,959; Sept. 17.
Clutch: *See*—
Friction clutch.
Magnetic clutch.
Clutch. C. B. Spase. 2,407,727; Sept. 17.
Clutch and bearing construction. A. Y. Dodge. 2,407,772; Sept. 17.
Clutches to speed gears, Connection of. G. F. Halliday and A. W. Thomas. 2,407,955; Sept. 17.
Coating composition, Fire resistant. M. Leatherman. 2,407,668; Sept. 17.
Coil, Shielded. H. O. Berg. 2,407,916; Sept. 17.
Collector, Dust. C. J. Peterson. 2,407,722; Sept. 17.
Collector, Dust. R. J. Stewart. 2,407,751; Sept. 17.
Combination hand tool. L. C. Hotvedt. 2,407,832; Sept. 17.
Communication system for ultra high frequencies. L. J. Wolf. 2,407,860; Sept. 17.
Communication system, Radio. J. C. O'Brien. 2,407,846; Sept. 17.
Communication system, Radio. L. C. Roberts. 2,407,684; Sept. 17.
Comparison system, Phase. M. Fuchs. 2,407,659; Sept. 17.
Connecting unit, Electrical. J. B. Miller. 2,407,894; Sept. 17.
Connector: *See*—
Quick-release connector.
Constituents from sintered hard metals, Separating hard. E. M. Trent. 2,407,752; Sept. 17.
Construction and assembly of electron discharge tube. J. H. O. Harries. 2,407,742; Sept. 17.
Construction for electric storage batteries. G. R. Godber. 2,407,826; Sept. 17.
Contact for electrical devices, Wiper. J. T. Butterfield, H. M. Knapp, and B. F. Runyon. 2,407,650; Sept. 17.
Container and making same. F. Gilbert, Jr. 2,407,639; Sept. 17.
Control system. J. L. Bower. 2,407,866; Sept. 17.
Control system, Follow-up. S. Godet. 2,407,876; Sept. 17.
Convertible rocking chair. M. G. Lemos. 2,407,839; Sept. 17.
Cooker, Pressure. J. H. Chandler. 2,407,627; Sept. 17.
Core, Magnetic. F. F. Brand. 2,407,625; Sept. 17.
Core, Magnetic. I. H. Sclater. 2,407,688; Sept. 17.
Core, Magnetic. A. U. Welch, Jr. 2,407,626; Sept. 17.

Cover: *See*—
Clothesline cover.
Cover remover, Bottle cap or jar. R. A. Mitchell. 2,407,793; Sept. 17.
Cowling and like socket fastener member, Shiftable. W. H. Churchill. 2,407,815; Sept. 17.
Cutter teeth, Treating. R. W. Ashworth. 2,407,642; Sept. 17.
Cyanoalkenes, Production. G. C. Ray. 2,407,848; Sept. 17.
Dam structure. E. D. del Castillo y Espanol. 2,407,952; Sept. 17.
Detent mechanism. G. C. Webster. 2,407,696; Sept. 17.
Detergent in bar form and making same, Synthetic organic nonsoap. J. W. Bodman. 2,407,647; Sept. 17.
Device for annealing leers, Transferring. G. W. Herrold. 2,407,664; Sept. 17.
Device for maintaining film loops. C. L. Nelson. 2,407,795; Sept. 17.
Diaphragm pump. J. O. McMillan. 2,407,792; Sept. 17.
Diazine compounds. J. M. Sprague. 2,407,966; Sept. 17.
Diolefins, Producing and concentrating. F. E. Frey and R. D. Snow. 2,407,825; Sept. 17.
Direction-controlling mechanism for guns. G. P. S. Cross. 2,407,871; Sept. 17.
Direction finding system. H. T. Budenbom. 2,407,649; Sept. 17.
Dispenser: *See*—
Push-button pump type soap dispenser.
Dispenser and applier, Adhesive tape. A. A. Anderson. 2,407,641; Sept. 17.
Dispenser control, Bead. D. H. Clark. 2,407,628; Sept. 17.
Dispensing mechanism, Cup. W. Von Stoeser. 2,407,968; Sept. 17.
Distance and direction finding. R. W. Hart. 2,407,663; Sept. 17.
Door and operating means therefor. D. H. Morgan. 2,407,674; Sept. 17.
Drier. K. Engler, E. L. Barger, and A. H. Thompson. 2,407,636; Sept. 17.
Drilling apparatus. W. W. Paget. 2,407,679; Sept. 17.
Dropbomb, Aerial. H. F. Frost, K. H. Thunell, S. D. Vigren, and P. H. E. Claesson. 2,407,936; Sept. 17.
Dyestuff, Anthraquinone acid. J. G. Kern. 2,407,704; Sept. 17.
Ear piece, Receiver. A. E. Woodruff. 2,407,731; Sept. 17.
Electric switch. F. G. Logan. 2,407,710; Sept. 17.
Electrical machine. J. F. Perfetti and H. E. Waldron. 2,407,935; Sept. 17.
Electron discharge device. G. R. Kilgore. 2,407,705; Sept. 17.
Electron discharge device. G. R. Kilgore. 2,407,707; Sept. 17.
Electron discharge device. G. R. Kilgore and L. Malter. 2,407,708; Sept. 17.
Electron discharge device. C. I. Shulman and G. R. Kilgore. 2,407,706; Sept. 17.
Electrotherapeutic system, Wave guide. G. C. Southworth. 2,407,690; Sept 17.
Emulsions, Resolving oil-in-water. L. T. Monson, W. W. Anderson, and F. W. Jenkins. 2,407,895; Sept. 17.
Engine: *See*—
Internal-combustion engine. Turbine engine.
Evaporator for inert gas type absorption refrigerators, Two temperature. C. T. Ashby. 2,407,733; Sept. 17.
Evaporator, Refrigerant. G. R. Goldsmith. 2,407,827; Sept. 17.
Explosive composition. J. A. Wyler. 2,407,805; Sept. 17.
Eyrthrina alkaloid and its production. R. T. Major and K. Folkers. 2,407,713; Sept. 17.
Fabric articles, Preparation for treating launderable. H. Engler. 2,407,635; Sept. 17.
Fastening device. A. G. Herreshoff and W. Lamb. 2,407,928; Sept. 17.
Fastening device. W. R. MacCluney. 2,407,758; Sept. 17.
Fastening device, Garment. E. Di Ianni. 2,407,969; Sept. 17.
Feed mechanism for sewing machines, Material. J. E. Scott. 2,407,907; Sept. 17.
Feeding means for manifolding machines, Carbon. R. W. Ritzert. 2,407,799; Sept. 17.
Fibrous sheet material, Saturating. J. G. Young. 2,407,756; Sept. 17.
Fire control computor, Aircraft. C. G. Holschuh and D. Fram. 2,407,665; Sept. 17.
Fishhook. R. K. McDougal. 2,407,759; Sept. 17.
Fluid reactants, Conversion of. L. C. Huff. 2,407,700; Sept. 17.
Fluid valve. G. J. Koehler. 2,407,789; Sept. 17.
Fluorspar by froth flotation, Concentrating. J. B. Clemmer and B. H. Clemmons. 2,407,651; Sept. 17.
Footrest for embalming tables. W. H. Cawood. 2,407,948; Sept. 17.
Frequency modulated waves, Reception of. M. Ziegler. 2,407,863; Sept. 17.
Friction clutch. C. B. Spase. 2,407,728; Sept. 17.
Fruit for marmalades, Preparing fruit. O. J. Steinwand. 2,407,801; Sept. 17.
Furniture handle. E. W. North and R. A. Stone. 2,407,763; Sept. 17.
Furniture, Manufactured article of. C. L. Stevens. 2,407,940; Sept. 17.
Fuse, Bomb. E. C. Moriarty. 2,407,844; Sept. 17.
Garment. J. J. Kispert. 2,407,885; Sept. 17.
Garment hanger. F. Le Roy. 2,407,841; Sept. 17.
Gauge: *See*—
Saw filing gauge.
Gear wheel pump. A. G. F. Wallgren. 2,407,753; Sept. 17.
Gearing, Vehicle drive axle. M. B. Morgan. 2,407,675; Sept. 17.
Generator: *See*—
Harmonic generator. Synchronizing signal generator.
Permanent magnet field generator.
Reciprocating pressure generator.
Generator. W. S. Hutchinson and E. R. Woodward. 2,407,882; Sept. 17.
Glider. H. C. Grawunder. 2,407,777; Sept. 17.
Governor valve. T. B. Martin and J. F. Haines. 2,407,791; Sept. 17.
Grain cleaner. W. E. Dempsey. 2,407,653; Sept. 17.
Guideway for sliding windows. P. Mesnel. 2,407,671; Sept. 17.
Handle: *See*—
Furniture handle.
Handle for car door mechanism, Safety operating. A. E. Zimmer. 2,407,912; Sept. 17.
Hanger: *See*—
Garment hanger.
Hanger and lamp lowering and hoisting means, Elevated. A. L. Ciper and A. W. Snyder. 2,407,869; Sept. 17.
Harmonic generator. R. J. Kircher. 2,407,667; Sept. 17.
Heat-treatment of glass articles, Carrying out. E. Greetham. 2,407,878; Sept. 17.
High chair. J. W. Best. 2,407,646; Sept. 17.
Hoe. G. Gallus. 2,407,740; Sept. 17.
Hoist. E. W. Brundage. 2,407,811; Sept. 17.
Hoist control and drive. H. F. Vickers. 2,407,694; Sept. 17.
Hoist, Vehicle. W. A. Courtenay, Jr. 2,407,629; Sept. 17.
Holder: *See*—
Carbon holder.
Holder for use in electric welding, Electrode. F. G. Ketelbey and G. Mason. 2,407,836; Sept. 17.
Hook: *See*—
Manually operated arresting hook.
Human carrier. W. J. Maloney. 2,407,714; Sept. 17.

Rotor. W. C. Washcoe. 2,407,695; Sept. 17.
Rubber goods, Making. B. Predmore. 2,407,768; Sept. 17.
Rubberlike compositions and making the same, Tacky. R. R. Dreisbach, E. C. Britton, and W. J. Le Fevre. 2,407,953; Sept. 17.
Safety appliance. G. W. McKinstry. 2,407,891; Sept. 17.
Safety control for hoists. H. F. Vickers. 2,407,692; Sept. 17.
Safety control for hoists and circuits therefor. H. F. Vickers. 2,407,693; Sept. 17.
Sander, Belt. B. Steinhilber. 2,407,939; Sept. 17.
"Sandwich" material, Producing curved. C. H. Buchanan. 2,407,867; Sept. 17.
Saw filing gauge. R. H. Deurmyer and C. G. Yocum. 2,407,736; Sept. 17.
Screen: *See*—
Rollable type window screen.
Scaffold. T. G. Di Santi. 2,407,655; Sept. 17.
Screening apparatus. X-ray. N. G. Schonander. 2,407,938; Sept. 17.
Screening material. C. Dreyfus. 2,407,632; Sept. 17.
Screw-threaded member. W. T. Goodby. 2,407,741; Sept. 17.
Sealing cartons, Method and apparatus for. R. Guyer. 2,407,781; Sept. 17.
Seat support. J. P. De Rose. 2,407,771; Sept. 17.
Sharpener, Lawn mower. O. Herwick and T. M. Taylor. 2,407,783; Sept. 17.
Sheets to receive resinous coatings, Preparation of galvanized. G. R. Hoover and N. E. Hays. 2,407,881; Sept. 17.
Shoulder pad. M. R. Witham. 2,407,755; Sept. 17.
Shovel. A. A. La Pointe. 2,407,930; Sept. 17.
Signal and illuminating system for airways, Radio controlled. A. A. Corcanges. 2,407,949; Sept. 17.
Signaling device, Submarine. B. M. Harrison. 2,407,661; Sept. 17.
Signaling system, Electrical. R. Taylor and G. T. Baker. 2,407,910; Sept. 17.
Slicing device. J. R. and A. R. Fuchs. 2,407,658; Sept. 17.
Slicing machine having stationary knives and a follower feed, Food. L. X. Garfunkel. 2,407,924; Sept. 17.
Snubber. N. L. Kearney. 2,407,958; Sept. 17.
Solenoid. H. J. Luth. 2,407,712; Sept. 17.
Solenoid. L. M. Persons. 2,407,963; Sept. 17.
Sounding device. J. A. Jowett. 2,407,702; Sept. 17.
Spindle, Multiple filing. A. H. Youngstrom. 2,407,732; Sept. 17.
Spring construction, Upholstered. W. H. Neely. 2,407,933; Sept. 17.
Stand: *See*—
Motion display stand.
Subaqueous electric cutting. E. Seifried. 2,407,850; Sept. 17.
Submarine signaling, Method and apparatus for. H. M. Hart. 2,407,662; Sept. 17.
Sulphanilamide derivatives and preparing same. S. L. Ruskin. 2,407,686; Sept. 17.
Supercharger. L. Dewan. 2,407,630; Sept. 17.
Superfuel. R. F. Marschner. 2,407,716; Sept. 17.
Superfuel, Aviation. R. F. Marschner. 2,407,717; Sept. 17.
Superfuel, Aviation. R. F. Marschner and D. R. Carmody. 2,407,718; Sept. 17.

Support: *See*—
Seat support.
Switch: *See*—
Electric switch. Radio frequency switch.
Synchronizing signal generator. C. E. Hallmark. 2,407,956; Sept. 17.
Telephone dialer, Automatic. T. W. MacKenzie. 2,407,889; Sept. 17.
Telephone or like signaling system. C. Gillings and C. E. Beale. 2,407,640; Sept. 17.
Telescopic tubes and the like, Method and apparatus for fitting. J. R. McLaughlin. 2,407,760; Sept. 17.
Tension for Axminster looms, Weft. N. Fletcher. 2,407,773; Sept. 17.
Terpene derivatives. A. L. Rummelsburg. 2,407,937; Sept. 17.
Thermoelectric system. R. S. Ohl. 2,407,678; Sept. 17.
Thermostatic switch plug. B. F. Oebbecke. 2,407,764; Sept. 17.
Timing and volume control, Air draft. C. M. Helyar. 2,407,743; Sept. 17.
Timing mechanism, Exposure. R. L. Smith 2,407,800; Sept. 17.
Tool: *See*—
Combination hand tool. Reciprocating tool.
Towline, Shock absorbing aerial. R. C. du Pont. 2,407,634; Sept. 17.
Toy airplane. A. B. Mull. 2,407,720; Sept. 17.
Tracking apparatus. M. Knobel. 2,407,886; Sept. 17.
Transformer pick-off. O. E. Esval. 2,407,657; Sept. 17.
Transit level. A. Mariotti. 2,407,960; Sept. 17.
Translating apparatus, Air. K. C. Whitefield. 2,407,858; Sept. 17.
Transmission and control mechanism, Machine tool. J. B. Armitage and O. W. Barker. 2,407,913; Sept. 17.
Transmitter, Automatic telegraph. J. G. de Almeida. 2,407,818; Sept. 17.
Transmitting apparatus and operation, Television. A. Rose. 2,407,905; Sept. 17.
Transmitting apparatus, Low velocity television. A. Rose. 2,407,906; Sept. 17.
Tray stacker. J. S. Hardy. 2,407,782; Sept. 17.
Tripod jack. H. E. Page. 2,407,796; Sept. 17.
Truck. R. B. Cottrell. 2,407,950; Sept. 17.
Truck, Railway car. W. A. Geiger. 2,407,875; Sept. 17.
Tube: *See*—
X-ray tube.
Turbine engine. J. A. Fisher. 2,407,824; Sept. 17.
Turning apparatus, Taper. W. F. Groene and H. C. Kemper. 2,407,778; Sept. 17.
Valve: *See*—
Fluid valve. Pressure relief valve.
Governor valve.
Valve. H. W. McPherson. 2,407,761; Sept. 17.
Valve device, Protection. G. T. McClure. 2,407,890; Sept. 17.
Vane motor. E. E. Petzold. 2,407,901; Sept. 17.
Vehicle wheel. C. W. Sinclair. 2,407,749; Sept. 17.
Vinyl compounds, Copolymerization of. E. C. Britton and W. J. Le Fevre. 2,407,946; Sept. 17.
Vise, Drilling. J. F. Anderson. 2,407,769; Sept. 17.
Voting machine. A. N. Gustavson. 2,407,831; Sept. 17.
Wallet or purse. N. W. Post. 2,407,964; Sept. 17.
Wand. J. W. Petrie. 2,407,723; Sept. 17.
Washing machine. G. C. Graham. 2,407,660; Sept. 17.
Wave propagation. L. Tonks and Le R. Apker. 2,407,911; Sept. 17.
Weight, Terminal. W. M. Poz. 2,407,682; Sept. 17.
Welding mechanism. A. L. Munson. 2,407,676; Sept. 17.
Wheel: *See*—
Vehicle wheel.
Wheel structure. G. A. Lyon. 2,407,669; Sept. 17.
Windmill, Folding tail vane. S. F. Czerner. 2,407,816; Sept. 17.
Window stop. W. H. Kissel. 2,407,837; Sept. 17.
Work driving dog. E. C. Ventres. 2,407,908; Sept. 17.
Wringer. D. K. Ferris. 2,407,922; Sept. 17.
X-ray tube. A. Verhoeff. 2,407,857; Sept. 17.
Yarn, Paper. K. Hamilton. 2,407,926; Sept. 17.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 17, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

U. S. GOVERNMENT PRINTING OFFICE: 1946

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 590—No. 4 TUESDAY, SEPTEMBER 24, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Notice of Cancellation

U. S. Patent Office, *Richmond, Va., August 21, 1946.*

American Gear Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Burd Piston Ring Company, 2401 Tenth Street, Rockford, Ill., to effect the cancellation of trade-mark registration of American Gear Company, 212 South Horton Street, Jackson, Mich., No. 228,726, dated June 7, 1927, and the notice of such proceeding sent by registered mail to the said American Gear Company, at the said address, having been returned by the post office undeliverable, notice is hereby given that unless said American Gear Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

Trade-Mark Registrations Canceled

39,209. Glass tubes. Schott & Gen., Jena, Germany. Registered Nov. 4, 1902. Canceled July 9, 1946.

214,552. Imitation pearls. Felix Guillard, Paris, France. Registered June 29, 1926. Canceled July 9, 1946.

254,217. Certain named heat protecting and insulating material. Eduard Dyckerhoff, Schloss-Blumenau, near Wunstorf, Germany. Registered Mar. 12, 1929. Canceled July 9, 1946.

309,823. Certain named clothing. Goodman Suss Clothes Corporation, New York, N. Y. Registered Jan. 30, 1934. Canceled Aug. 7, 1946.

412,788. Hair nets. Lewis Messinger, New York, N. Y. Registered Mar. 27, 1945. Canceled July 9, 1946.

Drawings

Rule 38

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals (preferably the latter).

Rule 52—Extract

(*f*) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the closed and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refer to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appears in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Adjudicated Patent

(C. C. A. N. Y.) Dugan patent, No. 1,959,254, for an airplane mechanism, claims 1, 2, 3, 4, and 6 *Held* invalid. *Dugan* v. *Lear, Inc.*, 156 F.(2d) 29; 69 USPQ 357.

Condition of Applications Under Examination at Close of Business September 6, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 123,332; Trade-Mark Division, 10,061. Oldest new case, March 23, 1945; oldest amended, March 21, 1945.)

(The dates given are 1945 except where † indicates 1946.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE BARNETT

*No. 5,088. Decided June 7, 1946**

[155 F.(2d) 540; 69 USPQ 609]

1. PATENTABILITY—TEA BAGS.

Certain claims to tea bags *Held* properly rejected "on the ground of aggregation and the lack of invention resting in the printed legend, 'tea,' on the handle of the bags."

2. APPEAL—REJECTION.

Held that the Board of Appeals had the right to apply a new ground of rejection if it saw fit.

3. PATENTABILITY—METHOD.

"It is a well-settled rule in patent law that a method claim, though defining the method of the machine or its operation, is allowable in the same application with the machine claims if the thing accomplished by the machine could be done by another method or by hand."

4. SAME—SAME.

"If the machine performs a new, useful, inventive method, the party is entitled to method claims along with his machine claims not only because his method requires protection but because they are related inventions."

5. SAME—SAME.

"The method of the operation of the machine may, in some instances, be inventive when considered independently of the machine, or may be a related invention to that of the machine and allowable only as claims for a dependent invention in the same application as that of the machine."

6. SAME—SAME.

"The claims for a method which depend upon a machine and which are allowable only along with article claims in one application should never be measured, when their allowability is being considered, by the standard which would be required if they were in a separate application and for a separate and unrelated invention."

7. SAME—SAME.

"There is respectable authority supporting the conclusion that in certain cases where it is apparent that difficulty is encountered in defining the article invented and where method claims in the same application with allowable article claims serve the purpose of better defining the article than the article claims, and are intended to define nothing more than the article, such method claims should be allowed for that reason."

8. SAME—SAME.

Held that appellant's claimed tea bags may be made by more than one method; that certain of the appealed claims to a method of making tea bags are true method claims; and that they "should be allowed in the instant application along with the article claims as a dependent invention."

9. CLAIMS—PLURALITY.

Held that the practice of permitting the same invention to be defined in different ways a reasonable number of times "is certainly one to be commended as long as the rule relating to multiplicity is not violated and as long as claims are not couched in such language as to be misleading or intended to cover more than the real invention or to becloud a consideration of their patentability."

10. SAME—FORM.

"Reasonable latitude of expression in the claims of an application should be permitted."

11. SAME—MULTIPLICITY.

"Since the other appealed claims, which we think are allowable, fully protect the method phase of appellant's invention (*In re Dann*, 18 C. C. P. A. (Patents) 1031, 47 F.(2d) 356, 8 USPQ 367, 409 O. G. 7), it is not deemed necessary to require allowance of claim 1 over the views of the Board that it is not in proper form for a method claim."

12. SAME—DEPENDENT.

"Our holding as to claim 1 brings about the result of the same ground of rejection applying to claims 2 and 22, which are dependent on claim 1. As we understand the practice of the Patent Office in a case of this character, it is within the discretion of the Office to allow the applicant to select some other claim upon which to append such claims as 2 and 22. Of course it might be that appending something to an allowable claim would make the claim non-allowable because of aggregation or possibly other reasons. Therefore, with this suggestion, we affirm the action of the Board in rejecting claims 2 and 22 in their present form."

APPEAL from the Patent Office. Modified.

JACKSON, *J.*, and HATFIELD, *J.*, dissenting.

Mr. Louis Barnett, pro se.

Mr. W. W. Cochran (*Mr. R. F. Whitehead* of counsel) for the Commissioner of Patents.

BLAND, *J.:*

The Primary Examiner of the United States Patent Office, after allowing article claims 10, 13, 14, and 16 to 21, inclusive, for a patent relating to infusion packages, or more particularly tea balls, rejected two article claims, 12 and 15, and all the method claims, 1 to 9, inclusive, and 22. The rejection of the Examiner of all the claims involved in this appeal was, upon grounds hereinafter discussed, affirmed by the Board of Appeals, and the applicant has appealed here seeking a revision and reversal of the Board's decision.

During the prosecution of the case certain references were cited against the claims and they were carried forward in the statement of the Examiner and the decision of the Board, but in neither of the decisions do the references form the basis of rejection except as to claims 12 and 15 and it is not deemed necessary to discuss any of them here.

The invention relates to a tea bag and like articles made from an oblong section of filter paper folded upon itself and upon the inside face of which, on the three open sides thereof, there is a thin layer of some thermoplastic material. All three of the coated edges are then sealed together by heat and pressure. A slit is next made along one or more of the edges in the mid-portion of the sealed flange, stopping short of complete severance. By thus slitting the flange at a place within the sealed portion the result is obtained of having the two strip portions which are to be used as a handle sealed together and at the same time leaving the closure of the bag intact. The partially severed

* This appeal was originally decided by this court on March 4, 1946. Thereafter, the Solicitor for the Patent Office filed a petition for rehearing. The rehearing was granted June 7, 1946, for the purpose of permitting the court to revise certain language in its original opinion and to modify its original decision.

strip, when displaced from the plane of said flange, forms a handle for manipulation of the bag when the tea is brewed. A number of different forms are shown in which the handle may take the form of a loop, etc., and the bag may also be made in two parts so that it may be separated along a weakened line somewhere in the middle of the whole bag in case only half strength of the tea is desired.

[1] The main controversy and the important question of law involved are concerned with the method claims, and we will first dispose of the appeal as to article claims 12 and 15. There is but little controversy on this subject and since the Board's opinion affirming the Examiner's rejection of these claims on the ground of aggregation and the lack of invention resting in the printed legend, "tea," on the handle of the bags, especially when the disclosures of Mock and Salfisberg are considered, is so clearly in accordance with well-settled law we do not feel called upon to discuss this question at length, and its decision as to claims 12 and 15 will be affirmed.

The main issue is of such importance that we feel required to here set out all of the rejected method claims, the necessity for which will appear as our discussion progresses. They follow:

1. In a method of manufacturing infusion bag packages each made with a sealed marginal closure forming a border flange, the step of through-splitting a sufficient amount of said flange along a substantial length thereof to provide a handle solely from a continuous integral segment of said flange when displaced out of the plane of the latter for manipulating said package by the handle during brewing.

2. The method defined in claim 1 in which said step of through-splitting is continued beyond a length necessary to form the segment-handle to a cut termination for eliminating accidental tearing and stabilizing the suspension of the bag by said handle.

3. In a method of making an infusion bag package formed with a closure portion, the steps of heat sealing a marginal area of said closure portion to form a border flange, through-splitting a substantial continuous length of said flange short of complete severance while retaining said sealed closure intact to provide an integral handle when only a portion thereof is displaced from the plane of said flange for suspending said package by said handle in manipulating said package during brewing.

4. The method of manufacturing an infusion package of the character described including the steps of enclosing an essence containing product in a filter sheet material to form a package with a seam joint closure, and constructing solely from an integral portion of said seam joint closure a dependent elongated handle as and for the purpose described and specified.

5. The method of making an infusion bag package defined in claim 4 including the step of crimping the seam joint closure including the handle forming portion with the ridges produced thereby extending longitudinally said closure and handle to strengthen the structure against tension strains and accidental tearing.

6. A method of manufacturing infusion packages of the character described including the steps of enclosing an essence containing product in a filter sheet material to form a package with a sealed joint seam closure flange, and through-cutting a mid-portion of the flange wholly within the border of the flange to provide an integral bail-handle segment for suspending the package by said bail-handle segment in manipulating the package during brewing while retaining the sealing of the joint seam closure flange intact.

7. A method of manufacturing infusion packages of the character described including the steps of enclosing an essence containing product in a filter sheet material to form a package with a sealed joint seam closure flange extending more than half way about the periphery of the package through-cutting a mid-portion of the flange wholly within the border of the flange to provide an integral bail-handle segment displaceable from the plane of said flange for suspending the package by said bail-handle segment in manipulating the package during brewing while retaining the sealing of the joint seam closure flange intact, and shaping the ends at the through-cutting to provide terminals for eliminating accidental tearing of the bail-handle segment from the package.

8. The method of manufacturing an infusion package of the character described including the steps of sectionalizing an essence containing product in a filter sheet material bag, sealing the sections along a border flange to form a seam joint, constructing solely from an integral portion of the seam joint a dependent handle, and weakening a mid-portion of said seam along a line for folding said sections toward each other when suspending the package by the handle during brewing.

9. The method defined in claim 8 in which the step of weakening a mid-portion of said seam includes perforating said line to provide tearing means for separating the sections for independent use.

22. The method defined in claim 1 in which said step of through-splitting is continued inwardly the edge of the flange to form a "tear-proof" termination end and to provide stabilization to the bag suspension by the handle.

In rejecting these claims the Examiner said:

These claims are rejected as being unpatentable since they involve but *the* obvious method of producing the article. The article may be invention, as indicated by the allowance of article claims, but this does not mean that the method of making the article is patentable. It is thought that any one skilled in the art, having seen the article, would use substantially the same method in producing it. Attention is directed to *Ex parte Trevette*, 97 O. G. 1173. [First italics ours.]

It will be noted that the Examiner, by the use of the term, "*the* obvious method of producing the article," implied that there was but one method of doing so. He might have arrived at a different conclusion if he had used the word "an" instead of "the." The importance of this circumstance will appear later.

It will also be observed that the Examiner's holding as to the method claims was upon the authority of *Ex parte Trevette*, 97 O. G. 1173, 1910 C. D. 170. The Board, however, in its stated grounds of rejection of the claims has departed materially from those of the Examiner, and we must frankly confess we have had some difficulty in arriving at the real position of the Board by reason of the language it used. In considering this decision we feel it necessary to call attention to several features of the language used and quote the following [italics and numbers by us]:

[1] The objection noted against the appealed claims is that while they are alleged to cover a process *no real steps are defined*. About all that is said in the claims is that the article is formed so as to have certain structural characteristics. [2] After a careful reading of the detailed *description* we fail to find any disclosure of procedure followed in making the article. Apparently no special sequence of steps is followed in the making up of the article. [3] Just when the charge of tea is placed in the bag is not stated, nor does it appear in the description when and how the slit is made. [4] It appears to us that whatever patentable merit there may be in this case resides in the particular concept of the structure and *after conception the article of manipulative steps employed in making it are so simple that no invention is seen in this feature.* It is obvious that bags made from paper by folding a sheet on itself and then sealing the other three sides are very old and common and there is certainly no invention involved in merely making a slit through one of these sealing edges. For reasons stated, we can see no invention in the process claims.

It will be noted that the concluding sentence is "For reasons stated, we can see no invention in the process claims," and the Board at no place cites the Trevette case or any of the many other cases having a bearing on the particular question involved. It does not indicate whether or not appellant's method is the obvious or only way of making the article.

We are at a loss to know whether or not by language [1] above the Board meant to reject the claims on account of defective form (no real steps). If it had been its purpose to do so, surely it would have given more consideration to the question, because if either the specifications or some of the claims are read it will be seen that there are well-defined steps disclosed.

[2] Since this may be regarded as a new ground of rejection, and the Board had the right to apply a new ground if it saw fit, it is thought best to point out that as to claim 1, which apparently, unfortunately, the Board used as illustrative, the claim may be regarded as a one-step claim, and if so there is considerable doubt as to whether it meets the requirements of the law as being in proper form as a true method claim. More as to this claim and the two dependent claims, 2 and 22, will be stated later herein.

As to the language indicated by [3], did the Board intend as a ground of rejection to hold that the claims were fatally defective because they did not state just when the charge of tea was placed in the bag? Some of the claims, such as 4, 6, 7, 8, and 9, specifically refer to the step of enclosing the essence containing product. In the light of this circumstance we look upon this statement on the part of the Board as not being a ground of rejection, but if so, an unwarranted one.

As to [4], we interpret the Board's decision as a holding to the effect, although not in definite language and without supporting citation, that the Examiner properly rejected the claims for the reasons stated in the above quotation from the Examiner's statement, and we think that the language employed by the Board was intended to be another way of stating the law of the Trevette case as applied by the Examiner.

In addition to the above-mentioned features of the Board's decision, it would appear from the last italicised phrase that it was possibly of the opinion that method claims defining a dependent invention and presented in the same application with allowable article claims must involve invention independent of the article. If it was of the opinion that the method claims define only the obvious method, or only method, of making the article, as stated by the Examiner, this inference from the said language need not be necessarily drawn.

The Solicitor for the Patent Office here presented the Board's decision to us upon the theory that it affirmed the view expressed by the Examiner, though in different language, and that the principles laid down in *Ex parte Trevette*, supra, rather than the principles of *Ex parte Kilbourn et al.*, 122 O. G. 737, 1915 C. D. 40, were controlling.

It is regrettable, in view of the importance of the issue, that the Board failed to make any mention of the applicability of the doctrines of these two cases, particularly in view of the unsettled practice of the Patent Office in relation to this subject matter as is discussed hereinafter.

Appellant here has stressed with great force his contention that *Ex parte Trevette*, supra, is not controlling and that *Ex parte Kilbourn et al.*, supra, and other decisions and principles of law are controlling.

This brings us to a careful consideration of the two above-cited authorities, and several others.

The Trevette case, the decision by Moore, Acting Commissioner of Patents, is an important one. It involved a question in some respects similar to the one involved here but evidently, judging from the language used, it turned upon questions essentially different from those presented by this appeal.

There only the method of stitching signatures was involved. It was held that the invention rested in the stitched article for which the applicant had presented no claims. The Commissioner there held that there was nothing inventive in the method of stitching because the method claims stated "nothing more than *the necessary* or *obvious* manner of effecting the product" [italics supplied] and that therefore they were not patentable since they did not state the real invention. The large portion of the opinion is devoted to the proposition that it was the duty of the Patent Office to permit the applicant who had described his invention in the wrong form of claim to substitute article claims which properly defined the invention.

There (not so here) no article claims were presented or allowed. There, method claims, defining the inventive article only were presented. Commissioner Moore, in the Trevette case, had under consideration solely the patentability of method claims when not associated with any other character of claims in an application. It is true that implicit in that decision is a holding that the only thing patentable was the article itself, because he concluded that the method was only "the necessary and obvious manner of effecting the product." He necessarily meant that the necessary and obvious manner defined by the method claims was the only method by which the article could be produced and it seems that that was true in that case.

It would probably be sufficient on this most important issue to rest decision of the case here with the statement that the holding in the Trevette case is not applicable here for reasons already pointed out and for the further reason that in the instant case we differ with the Examiner (the Board said nothing about it) in his statement that the claims involve but "the obvious method." He was of the opinion evidently that the tea bags involved could be made by only one method. Even if this were true under the circumstances at bar we do not feel justified (for reasons more fully appearing hereinafter) in approving the holding of the Examiner as a principle of patent law applicable in all cases involving this question.

We agree with the position of the appellant that the instant article can be made by more than one method, and no speculation or specific disclosure seems to be required to justify this conclusion. All of the claims here, except possibly claim 1, call for a step of heat sealing the marginal area of the closure portion to form a border flange. The second

step is through-cutting, or, in some of the claims, weakening or perforating the structure in the middle portion of the flange; this takes place after the flange is formed by sealing. Appellant suggests that the method defined by the claims is the most practicable and economical means of producing the article and it is the method which he claims will so cheapen the production of the article as to meet the real need of the art. He points out that the bag material may be first cut with the handle formed therewith and thereafter the same may be folded about the tea and the application of the heat sealing step forming the flange and the part of the flange which becomes the handle might subsequently take place. It is obvious that this would be a different method from that defined by the appealed claims. That it is a less economical method, as appellant states, we have no reason to doubt.

[3] Now, it is a well-settled rule in patent law that a method claim, though defining the method of the machine or its operation, is allowable in the same application with the machine claims if the thing accomplished by the machine could be done by another method or by hand. *In re Ernst et al.*, 21 C. C. P. A. (Patents) 1235, 71 F.(2d) 169, 22 USPQ 28, 449 O. G. 507; *Ex parte Trevette*, supra; *In re McCurdy*, 22 C. C. P. A. (Patents) 1140, 76 F.(2d) 400, 25 USPQ 136, 459 O. G. 923.

[4][5][6] In other words, if the machine performs a new, useful, inventive method, the party is entitled to method claims along with his machine claims not only because his method requires protection but because they are related inventions. The method of the operation of the machine may, in some instances, be inventive when considered independently of the machine, or may be a related invention to that of the machine and allowable only as claims for a dependent invention in the same application as that of the machine. The claims for a method which depend upon a machine and which are allowable only along with article claims in one application should never be measured, when their allowability is being considered, by the standard which would be required if they were in a separate application and for a separate and unrelated invention.

The same is obviously true where, as in a case like that at bar, the method of making an article, such as a tea bag, is not the only method which could be pursued to produce the article. It must be remembered that the holding in the Trevette case, involving a method claim where the invention rested in the article, was said to be a "corollary" to the proposition that a process which amounts to nothing more than the mere functioning of a machine is not patentable. In the Trevette case the process claims were the only claims presented and they were considered as an independent and separate invention.

There has been some misapplication of the Trevette doctrine in the Patent Office. It has been regarded, as in this case, as controlling in this kind of an issue. It has not been followed in all instances, as will hereinafter appear and for reasons which we think are sound.

It is worthy of note that it is an unusual circumstance to find that the Trevette case has been cited at least a dozen times in the Patent Office but so far as we have been able to discover has never been involved in the decision of an issue in any court at any time—neither by our predecessor in this jurisdiction nor by us. In this court, in *In re Stack* 24 C. C. P. A. (Patents) 836, 87 F.(2d) 210, 32 USPQ 250, 479 O. G. 997, the case was mentioned as being referred to in the decision of the Board but it was not discussed or considered in our decision.

Appellant's contention here, as hereinbefore stated, is that the tribunals of the Patent Office should have followed the holding in the Kilbourn case, supra, rather than that in the Trevette case, and to understand this contention it is necessary to state that in the Kilbourn case (decision by Newton, Assistant Commissioner of Patents, later Commissioner) there was more than one method of making the article and he stated that of course the claims should be allowed under these circumstances. But he also held that even if this were not true and the method claims did nothing more than to define the article and they were the only method of making it they should be allowable on the ground that patent applicants should be permitted a wide latitude in forms of expression to define their invention, since judicial tribunals and others concerned might differ as to the clearest and most definite way of defining the inventive article.

[7] This first above-stated holding in the Kilbourn case has been followed in most instances in the Patent Office, and we think we may properly add that there is respectable authority supporting the conclusion that in certain cases where it is apparent that difficulty is encountered in defining the article invented and where method claims in the same application with allowable article claims serve the purpose of better defining the article than the article claims, and are intended to define nothing more than the article, such method claims should be allowed for that reason. *Ex parte Heyman Rosenberg* (P. O. Bd. App.), 10 USPQ 1.

Cases involving the consideration of one or both of the two cases around which the chief controversy here revolves, the Trevette case and the Kilbourn case, are as follows: *Ex parte Butterfield*, (Comr. Pats.), 108 O. G. 795, 1904 C. D. 29; *Ex parte Frank Grasso*, (P. O. Bd. App.) 20 USPQ 229; *Ex parte Claxton et al.*, (P. O. Bd. App.), 43 USPQ 361; *Ex parte Laskin*, (P. O. Bd. App.) 54 USPQ 500; *Ex parte Plass*, (P. O. Bd. App.), 54 USPQ 504; *Ex parte Wayne* (P. O. Bd. App.) 59 USPQ 438; *Ex parte Daiger* (P. O. Bd. App.), 557 O. G. 586, 60 USPQ 65; *Ex parte Scott* (P. O. Bd. App.) 66 USPQ 371.

[8] In view of our conclusion that the article as defined by the article claims may be made by more than one method and that the appealed claims (except claim 1) are true method claims and should be allowed in the instant application along with the article claims as a dependent invention, it is unnecessary for us to further discuss the Kilbourn case or make any holding with respect to that portion of the decision which holds that method claims may be allowed upon the sole ground that they may be the best way of defining the article.

[9][10] From "Patentability and Validity," Revise and Caesar, page 433, we quote that which is well-settled patent law:

> An inventor is entitled to restate his inventive thought in different phraseology and with varying degrees of particularity a reasonable number of times. According to strict views, two distinct claims for substantially the same matter should not be allowed, yet out of regard for the variety of views among different legal tribunals as to the interpretation of claims and the difficulty of always correctly defining the invention, it has become the practice to permit the same invention to be defined in different ways a reasonable number of times.

This principle becomes important only in view of the argument of the Solicitor hereinafter quoted and the fact that in appellant's application he presents nine method claims in defining different modifications of his inventive method.

The above quotation states the practice of the Patent Office with respect to the allowance of more than one claim in the same application to the same invention which are of the same breadth and cover the same subject matter but are couched in different language. The practice is certainly one to be commended as long as the rule relating to multiplicity is not violated and as long as claims are not couched in such language as to be misleading or intended to cover more than the real invention or to becloud a consideration of their patentability. Reasonable latitude of expression in the claims of an application should be permitted.

Counsel representing the Solicitor for the Patent Office, in his brief in this case, makes the following statement:

> • • • it is submitted that this rule [rule 41 of the Rules of Practice of the Patent Office] does not contemplate the presentation, in any application, of claims which are essentially the same, though expressed in different words, and this is true even though the claims in form fall within two of the statutory classes of invention.

We think this language is entirely too broad to properly reflect the law upon the question and we quote it because it might well be said that certain language used by this court in certain cases reflects this view. "Patentability and Validity," supra, mentions this fact with the statement that "unfortunately the court [this court] used language from which it might be inferred that two claims cannot be allowed unless they differ from each other in material respects."

In *In re Einstein*, 18 C. C. P. A. (Patents) 885, 46 F.(2d) 373, 8 USPQ 166, 406 O. G. 287, the court stated what the general principle of law is, without stating the exceptions to the rule which now are universally made. We there said:

> Two distinct claims for the same substantial matter, differing only in nonessentials, cannot both be sustained. *Dececo Co. v. Gilchrist Co.*, 125 Fed. 293; *In re Prescott*, 51 App. D. C. 281, 278 Fed. 590; *In re McConnell*, 17 C. C. P. A. (Patents) 1139, 40 F.(2d) 567.

None of the cases cited, when considered in their entirety, sustains this statement. On the contrary, the Dececo Co. case is in effect the direct opposite. In that case is the following language:

> While according to strict rules of law, two distinct claims for the same substantial matter, differing only in nonessentials, cannot both be sustained, yet, out of regard to the frailty of human methods of expression, and the variety of views among different legal judicial tribunals as to the construction of instruments of the character of letters patent, and conceding, also, the difficulty of always correctly defining what one's invention really is, the practice has become settled to allow the same substantial invention to be stated in different ways, very much as the same cause of action, or the same offense intended to be covered by indictment, are permitted to be propounded in different counts, with a general verdict on all of them.

The statement in the Einstein case was only part of the important statement in the Dececo Co. case.

Since the decision in that case this court has uniformly held that more than one claim for the same invention may be included in one application and the whole question was thoroughly discussed and decided in *In re Clark*, 25 C. C. P. A. (Patents) 1317, 97 F.(2d) 628, 38 USPQ 139, 497 O. G. 549. There we said:

> As we understand it, under the patent law and the prevailing Patent Office practice, an inventor, where it is difficult to express his invention in the form of claims, has the right to, and ordinarily for his own protection does, express the same invention in more than one claim. If by so doing he more clearly defines his invention and does not by undue multiplicity obscure the same, he is acting within the rights granted and the duties required by the patent laws.

The method claims on appeal here were not rejected by the Patent Office on the ground of multiplicity or that appellant was not entitled to express the inventive concept of the method by employing different language though directed toward accomplishing the same purpose. The claims are not unduly multiplied, nor are they of such character as to render the application and the claims therein subject to the criticism that the real invention is beclouded and the purpose of the patent statute in requiring clarity of definition is being violated.

It may be pointed out that claim 1, upon which is dependent claims 2 and 22, may be subjected to the objection that if it is regarded as defining only a method and not an article it is deficient insofar as it may be interpreted to be a single-step claim and not in proper form for defining a method. This conclusion must be reached if the phrase "each made with a sealed marginal enclosure forming a border flange" is not interpreted to be a step in the method.

[11] Since the other appealed claims, which we think are allowable, fully protect the method phase of appellant's invention (*In re Dann*, 18 C. C. P. A. (Patents) 1031, 47 F.(2d) 356, 8 USPQ 367, 409 O. G. 7), it is not deemed necessary to require allowance of claim 1 over the views of the Board that it is not in proper form for a method claim.

[12] Our holding as to claim 1 brings about the result of the same ground of rejection applying to claims 2 and 22, which are dependent on claim 1. As we understand the practice of the Patent Office in a case of this character, it is within the discretion

of the Office to allow the applicant to select some other claim upon which to append such claims as 2 and 22. Of course it might be that appending something to an allowable claim would make the claim non-allowable because of aggregation or possibly other reasons. Therefore, with this suggestion, we affirm the action of the Board in rejecting claims 2 and 22 in their present form.

The decision of the Board rejecting claims 1, 2, 12, 15, and 22 is affirmed, and its decision rejecting claims 3, 4, 5, 6, 7, 8, and 9 is reversed.

Modified.

JACKSON, *J.*, (dissenting):

I disagree with that part of the majority decision which reverses the decision of the Board. To my mind the issue is uninvolved for the reason that it is in its essence whether or not the method claims are patentable over the allowed article claims.

The article is a square-shaped tea ball made from filter paper folded over on itself to form one seam of the bag. The other three seams are heat-sealed after the tea has been put into the bag. After sealing, one of the seams is partially cut through its midportion to form a handle.

The decisions of the Primary Examiner and the Board of Appeals are very clear to me. The Examiner in his statement said:

> The article may be invention, as indicated by the allowance of article claims, but this does not mean that the method of making the article is patentable. It is thought that any one skilled in the art, having seen the article, would use substantially the same method in producing it. Attention is directed to *Ex parte Trevette*, 97 O. G. 1173.

The Board in its decision stated:

> It appears to us that whatever patentable merit there may be in this case resides in the particular concept of the structure and after conception the article of manipulative steps employed in making it are so simple that no invention is seen in this feature. It is obvious that bags made from paper by folding a sheet on itself and then sealing the other three sides are very old and common and there is certainly no invention involved in merely making a slit through one of these sealing edges. For reasons stated, we can see no invention in the process claims.

I am in entire agreement with the decisions below, and cannot see how it would be anything but obvious to anyone having seen the article to employ appellant's obvious method or methods in producing it. In my opinion the decision of the Board should be affirmed.

I am authorized to state that Judge HATFIELD joins in this dissent.

U. S. Court of Customs and Patent Appeals

IN RE SOLAKIAN ET AL.

No. 5,132. Decided May 7, 1946

[155 F.(2d) 404; 69 USPQ 514]

1. PATENTABILITY—FURNACE.

Certain claims to a furnace for the heat treatment of metal *Held* properly rejected as unpatentable, since appellants "have done nothing more than to merely consolidate the desirable features of the cited prior art in such a manner that there is no new coaction between the elements and no new and unexpected result flowing from the device except that which could be expected from a mere consolidation of the old elements."

2. SAME—METHOD.

"It has been uniformly held that the mere fact that a machine is found that will perform the method is no justification for the disallowance of the method claim if it defines a novel and useful method."

3. SAME—SAME.

"While a method claim is not necessarily bad because it reads upon a device for performing the method where there is more than one way of performing it, a method claim that does nothing more than define the method of operation of a cited prior art device is certainly not an allowable method claim."

4. SAME—SAME.

"In the instant case it is our view that appellants' contention with respect to the allowability of the method claim is without merit and that they have not pointed out any other means by which their method could be carried out except on their machine and we know of no other way it could be carried out except on their furnace."

APPEAL from the Patent Office. Affirmed.

Messrs. Rockwell & Bartholow (*Mr. Henry E. Rockwell* and *Mr. Edwin R. Hutchinson* of counsel) for Solakian et al.

Mr. W. W. Cochran for the Commissioner of Patents.

BLAND, *J.*:

The Primary Examiner of the United States Patent Office rejected all of the claims, numbered 1, 7, 9, 10, 16 to 20, inclusive, and 22 to 24, inclusive, in appellants' application for a patent relating to Furnaces for Heat Treatment of Metal. Upon appeal to the Board of Appeals it reversed the action of the Examiner as to claims 10, 17, 23 and 24, and affirmed the Examiner's rejection as to the other claims.

From the decision of the Board affirming that of the Examiner as to said claims the appellants have here appealed. The claims involved are, therefore, claims 1, 7, 9, 16, 18, 19, 20 and 22.

Claims 9 and 22 seem to be representative of the appealed subject matter and read:

> 9. A furnace for the heat treatment of metal, comprising a pot, a charge of salts therein, means for fusing the salts and maintaining them in fused condition including a source of heating current and electrodes immersed in the salt bath, means for controlling the temperature of said fusing means including a lens and an open-ended ray-collecting tube associated therewith having its open end spaced upwardly from the surface of the salt bath, and means for supplying a downward current of air to the interior of said tube so as to cool the same and maintain a clear sighting space between the upper surface of the bath and the lens, said tube being in an intermediate position with respect to said electrodes.
>
> 22. The method of treating high-speed steel for hardening which comprises immersing the steel articles in a bath of salts heated to a high temperature for fusing and fluid only at a high temperature, collecting heat rays emanating from the upper surface of the bath in a predetermined localized part thereof, and utilizing those rays to control the temperature of the bath.

It will be noted that claim 22 is a method claim and it is the only method claim in the case.

The references cited by the Examiner (some of them are not discussed by the Board, being regarded by it as cumulative) are as follows: Siefert et al., 1,782,482, November 25, 1930; Bellis, 1,864,885, June 28, 1932; Larsen et al., 2,054,382, September 15, 1936; Adam, Jr., 2,145,677, January 31, 1939; Sordahl, 2,184,169, December 19, 1939; Dike, 2,232,594, February 18, 1941; Brooke, 2,290,028, July 14, 1942; Titcomb, 2,291,007, July 28, 1942; British patent, 510,060, July 26, 1939; Norwegian patent, 63,295, March 3, 1941.

We think the invention is well described in the Examiner's decision and we quote therefrom as follows, omitting the references to numerals:

> The alleged invention relates to an apparatus, and alleged method, for treating high speed steel for hardening in a fused salt bath furnace. The furnace is particularly characterized by having its electrodes immersed in the salt bath and provided with supporting shanks extended over the wall of the pot and the pot is square, the electrodes being arranged at the apices of a triangle, the middle electrode being located in one corner portion of the pot, and all three of the electrodes being on one side of a diagonal of the pot, to allow space to insert the work. On a bridge member, supported above the electrode shanks, is mounted a radiation pyrometer, provided with a tube and lens for collecting and concentrating heat rays from the upper surface of the bath upon the thermopile. The pyrometer controls the current supply to the electrodes, and hence the temperature of the bath, in a usual manner. It is claimed that by not immersing the pyrometer in the fused salt bath corrosion thereof is avoided, and that by placing the lens at some distance above the open tube end, which is adjustable with respect to the bath level, clouding of the lens by the fumes from the bath will be prevented.

In rejecting the claims the Examiner said:

> Claim 22 is the only alleged "method" claim now in the case, and it stands finally rejected as not defining the alleged invention. The step of "utilizing" rays to control the temperature of the bath is clearly no more than the function of a machine. See *In re Ernst et al.*, 1934 C. D. 595. *It is not seen that there can be any novel method in the case, in view of the fact that pyrometric control of the temperature of a salt bath furnace is generally old, as is shown by Adam, Jr., and also by Titcomb.* [Italics ours.]
>
> Claims 1, 7, 9, 16 to 20, 23 and 24 stand finally rejected as based on the old and unpatentable combination of Adam, Jr., or Titcomb. There is no evidence that there is any cooperation between specific features of the electrode arrangement with respect to the furnace, and specific construction of the pyrometer and/or the support therefor. Each of these arrangements performs its function independently of the other. Both Adam, Jr., and Titcomb show that the combination of a pyrometric control and a salt bath furnace whose temperature is controlled thereby is old, and applicant indeed admits this state of the art in his specification.
>
> Claims 1, 7, 9 and 22 stand finally rejected as unpatentable over Adam, Jr., or Titcomb, in view of Larsen et al., Sordahl, or Dike * * *, which show that the radiation pyrometer as claimed by applicant is old, in every essential detail. The Larsen et al. and Dike * * * arrangements are used to modify the temperature of bodies which they do not contact, and it is obvious that the Sordahl pyrometer may also be so used. This feature of applicant's alleged invention is therefore thought not to be novel, or to confer patentability on any claims wherein it is recited. It is not seen that it is patentably material what part of a furnace or charge is used to activate a controlling pyrometer for the furnace. Any skilled mechanic will obviously choose such a part as will produce the desired results, when used for this purpose.
>
> Claims 10 and 16 to 20 stand finally rejected as unpatentable over the art as applied to claim 1 in view of Bellis or Siefert et al., which show that it is old to arrange electrodes, whatever their number may be, at one side of a pot, in order to leave the remaining surface of the pot open and free, said pot, as shown in Bellis, may be the pot of a fused salt bath furnace. Attention is particularly directed to the statement in lines 71 to 75 of page 3 of Bellis that the single electrode * * * may be arranged adjacent to one side of the pot so that greater pot capacity is attained for receiving the metal objects to be treated. The Bellis patent shows also a like arrangement for two electrodes, and it is thought to be evident to any skilled mechanic that the same results as are obtained by Bellis with one or two electrodes may be obtained in the same way where three or any other number of electrodes is used. The British and the Norwegian patents show that the use of three electrodes is old, and also show a rectangular pot as claimed. Siefert also shows a rectangular pot, so this feature also is not thought to be patentably material. Claims 23 and 24 stand finally rejected on the art as above applied to claim 10. These claims being essentially of the type which are condemned in *Ex parte Fine*, 1927 C. D. 84, it is held that the additional details of construction which are recited therein are mere matters of aggregation, and are, moreover, well within the range of mechanical skill.

It will be noticed that in rejecting the method claim, 22, the Examiner held, first, that it did not define the alleged invention, and, second, that the steps defined nothing more than the function of the machine. He further stated that, "It is not seen that there can be any novel method in the case, in view of the fact that pyrometric control of the temperature of a salt bath furnace is generally old, as is shown by Adam, Jr., and also by Titcomb."

Whether the Board meant to affirm the Examiner's rejection of the claim on the prior art is subject to considerable doubt, although it did not specifically reverse the Examiner's decision in this regard. As to claim 22 the Board stated:

> Claim 22 is directed to an alleged method of treating high speed steel but the real subject matter in issue is a radiation pyrometer tube.

Later it said:

> * * * We are unable to see wherein this claim [22] defines any step that can be regarded as a true process step. The tube apparently functions exactly the same as those shown in the prior art. At best it merely sets forth the function of a specific apparatus and that is not regarded as a true process.

[1] We have considered very carefully the rejection by the Examiner and by the Board of the claims on appeal and we are in entire agreement with the conclusion reached by the Board as to their lack of patentability. We conclude that what appellants have done, in view of the prior art, as has been pointed out by both tribunals below, does not rise to the level of invention.

Appellants may have an improved device over those disclosed in the prior art, but it seems to us that they have done nothing more than to merely consolidate the desirable features of the cited prior art in such a manner that there is no new coaction between the elements and no new and unexpected result flowing from the device except that which could be expected from a mere consolidation of the old elements.

[2] As to claim 22, we find ourselves in rather an unusual position. The above-quoted statement by the Board indicates that if a method claim sets forth the function of a machine it is not a true process claim. This is not the first time we have had this question before us and it has been uniformly held that the mere fact that a machine is found that will perform the method is no justification for the disallowance of the method claim if it defines a novel and useful method.

This position is supported clearly by the decision in the case of *Waxham* v. *Smith et al.*, 294 U. S. 20, 451 O. G. 492, where the Supreme Court said, "A method * * * is not to be rejected as 'functional' merely because the specification shows a machine capable of using it."

The rule was stated and thoroughly discussed in *In re Parker*, 23 C. C. P. A. (Patents) 721, 79 F.(2d) 908, 27 USPQ 340, 462 O. G. 5. There we quoted with approval certain phases of this question which had been discussed by the Board but we found our-

selves in disagreement with its conclusion and stated:

From all the authorities it appears that the rule has become well settled that if the method of a claim can be performed by any other apparatus than that of the applicant, or if it can be performed by hand, it cannot be said that the claim recites the mere function of the apparatus so as to make its allowance double patenting. We think this rule, when applied to the issue at bar, controls the decision of the only question presented. If the steps of the method may be performed by other apparatus or by hand, the ground of rejection by the Board, we think, must be held to be unsound.

Then we pointed out that in that case the Board concluded that the steps could be performed by hand and we reversed the decision disallowing the claim.

In the instant case, as we read the decision of the Examiner, he rejected claim 22 by reciting that it was old, as shown by the prior art, to control the temperature of a salt bath furnace by pyrometric control. In other words, this portion of his decision rejects claim 22 upon the prior art.

The Board apparently agreed with the Examiner that claim 22 did not define the real subject matter in issue, i. e., a radiation pyrometer tube. In the above-quoted statement of the Board with respect to this claim, however, it used language so broad as to imply that if a method claim sets forth the function of a specific apparatus it is not allowable. It may or may not be allowable, depending upon the applicability of the rule stated in *In re Parker*, supra, and in many other decisions handed down by this court.

[3] It seems to us that the claim is objectionable on the ground that it is not inventive over the method of operation of the devices of the prior art, and we think the claim is so broad as not to cover the elements which are so specifically defined in claims 10, 17, 23 and 24 as to cause their allowance by the Board. We think the claim was properly rejected by the Examiner in one of his grounds of rejection, namely, on the prior art, because while a method claim is not necessarily bad because it reads upon a device for performing the method where there is more than one way of performing it, a method claim that does nothing more than define the method of operation of a cited prior art device is certainly not an allowable method claim.

We interpret the holding of the Examiner to be that claim 22 defines nothing inventive over the cited prior art. This ground of rejection the Board did not definitely disagree with although it implied that the claim was not "anticipated" by the prior art.

[4] In the instant case the situation seems to be very much like that which prevailed in *In re Ernst*, 21 C. C. P. A. (Patents) 1235, 71 F.(2d) 169, 22 USPQ 28, 449 O. G. 507. There it was pointed out that under the general rule it would be proper to allow a method claim which described the function of a machine if the method could be performed by other means and it was then held that it was not apparent that the method there under consideration could be done in any other way than on the precise machine described in the allowed apparatus claims. We held that the method was dependent upon the machine and that nowhere had it been pointed out that the process could be carried out except by means of the apparatus. In the instant case it is our view that appellants' contention with respect to the allowability of the method claim is without merit and that they have not pointed out any other means by which their method could be carried out except on their machine and we know of no other way it could be carried out except on their furnace.

We find ourselves in agreement with the holding of the Board affirming the rejection by the Examiner of the claims here on appeal and its decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MOORE

No. 5,139. Decided May 7, 1946

[155 F.(2d) 379; 69 USPQ 524]

1. APPEAL—CLAIMS CONSIDERED.
"Claims 4 and 5 were rejected as being drawn to non-elected species and, therefore, need not be considered on their merits, as they are allowable only in the event claim 2, which is generic to claims 3, 4, and 5, is held to be patentable."

2. PATENTABILITY—INVENTION.
" "Owing to the fact that the record discloses that acetonitrile (methyl cyanide) is a well-known insecticide, and as it appears from the Bousquet et al. patent that the substitution of a chlorine did not subtract from the effectiveness of the patentees' lauryl cyanide, it would seem to be obvious that when appellant used chloroacetonitrile, in which a chlorine is substituted for a hydrogen in acetonitrile (methyl cyanide), it was to be expected that it would possess insecticidal properties when used in a toxic amount. Under the circumstances, appellant's discovery that chloroacetonitrile was useful as an insecticide, or that it possessed insecticidal properties to a greater degree than acetonitrile, does not, in our opinion, involve invention."

3. SAME—SAME.
"Having every reason to suppose that his composition would be valuable as an insecticide when used in a toxic amount, appellant is not entitled to a patent for a method of killing insects by the use of such a composition based solely on the degree of effectiveness which he found the composition possessed."

4. CLAIM—FUNCTION.
The function of a claim is not to cover everything as to which the prior art is silent, but to point out what the applicant has invented.

5. SAME—BROADER THAN DISCLOSURE.
Where appellant's application was limited to so-called "fumigants," and nothing therein indicated that his composition would kill insects when applied in either solid or liquid form, *Held* that claims drawn to the "method of killing insects which includes the step of exposing the insects to a toxic amount" of the composition were properly rejected as broader than the disclosure in appellant's application.

APPEAL from the Patent Office. Affirmed.

Mr. Ellis S. Middleton (*Mr. Edmund H. Parry, Jr.*, of counsel) for Moore.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 2, 3, 4, and 5 in appellant's application for a patent for an alleged invention relating to "fumigants" for the killing of insects by exposing them to "mono substituted halogen acetonitrile."

[1] Claims 2 and 3 were rejected on the prior art, and as being broader than the disclosure in appellant's application. Claims 4 and 5 were rejected as being drawn to non-elected species and, therefore, need not be considered on their merits, as they are allowable only in the event claim 2, which is generic to claims 3, 4, and 5, is held to be patentable.

The claims are method claims. They read:

2. A method of killing insects which includes the step of exposing the insects to a toxic amount of a mono substituted halogen acetonitrile having a boiling point less than 200° C.

3. A method of killing insects which includes the step of exposing the insects to a toxic amount of chloroacetonitrile.

4. A method of killing insects which includes the step of exposing the insects to a toxic amount of bromoacetonitrile.

5. A method of killing insects which includes the step of exposing the insects to a toxic amount of iodoacetonitrile.

At the time of the Examiner's statement to the Board of Appeals, appellant's application contained 13 claims, and the references relied upon by the Examiner in rejecting all of the 13 claims were: I. G. F. (British), 432,188, July 23, 1935; Bousquet et al., 2,030,093, February 11, 1936; French patent, 816,921, May 10, 1937; Collie et al., 2,268,108, December 30, 1941; Technical Bulletin No. 162, published in 1929 by U. S. Dept. of Agriculture. See pages 30 and 31.

In appellant's brief before the Board of Appeals it was stated that appellant acquiesced in the rejection of the Primary Examiner as to claims 1, and 6 to 13, inclusive.

Claim 1, which was withdrawn before the Board of Appeals, was rejected by the Primary Examiner on the patent to Collie et al. and the British patent. As that claim is not before us, those patents need not be considered since they were not used as references against the claims here on appeal.

It is not contended here by counsel for appellant that the mono substituted halogen acetonitrile, called for by claim 2, or the chloroacetonitrile, called for by claim 3, are new compounds.

In claim 2, which as hereinbefore noted is generic to the other appealed claims, appellant has substituted a halogen for a hydrogen in acetonitrile.

Claim 3 is a species claim in which the halogen substituted is chlorine and the compound produced is chloroacetonitrile.

"Halogen" is defined in Webster's New International Dictionary as:

• • • *Chem.* An element or radical which forms salts by direct union with metals; — at present applied to chlorine, bromine, and iodine, and usually fluorine; sometimes also to cyanogen. See *chlorine family*

"Chlorine family" is defined by the same authority as:

Chem. The elements fluorine, chlorine, bromine, and iodine, called the halogens (salt formers). They are univalent toward hydrogen, metals, and other elements, but chlorine, bromine, and iodine also form higher oxygen compounds.

In agreeing with counsel for appellant that the disclosure in the French patent should not be given great weight in the consideration of the appealed claims, the Board of Appeals said:

Regarding the French patent, applicant urges that its teaching is that the common property of the class of compounds disclosed is due to the olefinic linkage. With this we agree, and we do not give great weight to the disclosure among his compounds of one which would contain both chlorine and a CN group.

With reference to the Bousquet et al. patent, attention was called by the tribunals of the patent Office to a statement contained therein, reading:

The toxicity of these lauryl derivatives also persists if the lauryl chain carries a negative substituent such as Cl, SO_3H which does not modify the straight carbon chain character of the lauryl radical.

In other words, the patentees Bousquet et al. disclosed that the substitution of a chlorine did not add to, or subtract from, the effectiveness of the insecticidal properties of their product, and it is argued by counsel for appellant that because the substitution of chlorine did not increase the toxicity of the patentees' insecticide, the patent is not a good reference.

In affirming the Examiner's rejection of the appealed claims on the prior art, the Board relied upon the reference Technical Bulletin No. 162, published by the United States Department of Agriculture in 1929.

It clearly appears from Bulletin No. 162 that acetonitrile (methyl cyanide) is used as a "fumigant" and is effective as an insecticide. It further appears from that publication that a maximum dosage of 392 mg. per liter of acetonitrile killed 90% of weavils upon exposure for twenty-four hours.

Counsel for appellant contend that, although the toxic effect of acetonitrile (methyl cyanide) had been known since 1929, "it never occurred to anyone to try a halogen substituted acetonitrile," and argue that, therefore, the appealed claims are patentable.

It appears from appellant's application, and it is not questioned by the Board of Appeals, that using chloroacetonitrile of 5 mg. per liter produced a 100% kill in a period of one hour; that, as stated by counsel for appellant, "This is 1/78th of the dosage of the Bulletin [reference] for 1/24th of the time and it resulted in total destruction of the insects"; and that when the dosage was reduced to 3 mg. per liter a 98.3% kill was obtained in one hour.

Without going into detail, it may be pointed out that the insecticidal properties of appellant's product are far superior to the insecticidal properties of acetonitrile (methyl cyanide) disclosed in the Bulletin reference.

It is not questioned here that chloroacetonitrile, the specific compound called for by claim 3, is, as stated by the Board in its decision, "one of the simplest derivatives of methyl cyanide, having the

same structure except that one hydrogen has been replaced by chlorine."

[2] Owing to the fact that the record discloses that acetonitrile (methyl cyanide) is a well-known insecticide, and as it appears from the Bousquet et al. patent that the substitution of a chlorine did not subtract from the effectiveness of the patentees' lauryl cyanide, it would seem to be obvious that when appellant used chloroacetonitrile, in which a chlorine is substituted for a hydrogen in acetonitrile (methyl cyanide), it was to be expected that it would possess insecticidal properties when used in a toxic amount. Under the circumstances, appellant's discovery that chloroacetonitrile was useful as an insecticide, or that it possessed insecticidal properties to a greater degree than acetonitrile, does not, in our opinion, involve invention.

[3] It certainly could not properly be contended that had appellant discovered that chloroacetonitrile possessed to the same degree the insecticidal properties of acetonitrile, his discovery involved invention. Having every reason to suppose that his composition would be valuable as an insecticide when used in a toxic amount, appellant is not entitled to a patent for a method of killing insects by the use of such a composition based solely on the degree of effectiveness which he found the composition possessed.

For the reasons stated, we are of opinion that appealed claims 2 and 3 were properly rejected on the prior art.

As hereinbefore noted, claims 2 and 3 were also rejected on the ground that they are broader than the disclosure in appellant's application.

Appellant states in his application that his alleged invention relates to "fumigants," and there is nothing stated therein to indicate that at the time of the filing of his application he was aware of the fact, if it be a fact, that the insecticidal properties of mono substituted halogen acetonitrile, called for by claim 2, and chloroacetonitrile, called for by claim 3, could be used otherwise than as "fumigants."

It will be observed that the claims are not limited to so-called "fumigants," but are sufficiently broad to read upon other forms of insecticides, such as solids and liquids.

In his statement to the Board of Appeals, the Primary Examiner stated that claims 2 and 3

> are further rejected as too broad and indefinite in failing to restrict the claims to fumigation. The disclosure is restricted to fumigation only. Fumigation necessitates the use of compounds in gaseous form. * * * and there is nothing in the case to indicate that the compounds disclosed would kill insects when applied in solid or liquid form. Accordingly, the present claims are not confined to the subect matter disclosed, and fail to set forth the alleged invention with the particularity required by statute.

With reference to that ground of rejection, the Board of Appeals said:

> The rejection of claims 2 and 3 as too broad and indefinite in failing to restrict them to fumigation was not traversed in the brief, so is assumed to have been proper * * *,

and entered a general affirmance of the Examiner's decision.

Counsel for appellant state in their brief that they had

> inadvertently omitted to set out in writing any argument with regard to the form rejection as to claims 2 and 3, that is, because the Examiner thought they should be limited to a method of fumigation rather than a method of killing insects. This matter was argued orally before the Board and it may well be that inasmuch as the decision was written almost four months after the hearing that they did not recall the argument. It may well be that this court will decide, as is their right, to stand on the printed record.

(It may be said at this point that the court accepts without question the statement of counsel for appellant that the Primary Examiner's holding that the claims are broader than appellant's disclosure was argued orally before the Board of Appeals.)

With reference to that issue, counsel further state:

> The fact is that no good reason has been advanced by anyone for so limiting the claims. While toxic materials which have a boiling point below 200° C. are particularly useful as fumigants due to their comparative ease of vaporization, yet this fact alone does not exclude the ability of those materials to kill by other methods, that is, as a contact poison. The art of record being absolutely silent as to the use of the killing agents by any method, no reason is seen why the applicant is not entitled to claim the killing of insects with them no matter what the specific method. This requirement is thought to be unreasonable and unjustified.

[4] It may be, as argued by counsel for appellant, that appellant's compounds "are particularly useful as fumigants due to their comparative ease of vaporization," and that that fact does not "exclude the ability of those materials to kill by other methods, that is, as a contact poison." However, appellant's application is limited, as stated by the Primary Examiner and as hereinbefore noted, to so-called "fumigants," and there is nothing in the application to indicate that appellant's composition would kill insects when applied in either solid or liquid form. On the contrary, appellant states in his application that his alleged "*invention in its broadest aspect* is concerned with the discovery that all members of the generic class of mono substituted acetonitriles which have a boiling point below 200° C. *are useful as fumigants.*" [Italics not quoted.] Furthermore, as stated in the brief of the Solicitor for the Patent Office, "the function of a claim is not to cover everything as to which the prior art is silent, but to point out what the applicant has invented."

It is well settled that claims in an application which are broader than the applicant's disclosure are not allowable. See *In re Bryson D. Horton*, 19 C. C. P. A. (Patents) 871, 875, 54 F.(2d) 961, 12 USPQ 221, 418 O. G. 273; *In re Thompson*, 30 C. C. P. A. (Patents) 1058, 1062, 135 F.(2d) 930, 57 USPQ 547, 554 O. G. 202.

[5] We are of opinion that appealed claims 2 and 3 are broader than the disclosure in appellant's application and that they were properly rejected for that reason. Accordingly, the decision of the Board of Appeals, affirming the decision of the Primary Examiner rejecting claims 2 and 3 on the prior art and on the ground that they are broader than the disclosure in appellant's application, is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE COULTER

No. 5,145. Decided May 7, 1946

[155 F.(2d) 271; 69 USPQ 531]

DIVISION—SUBCOMBINATION.

Upon consideration of a requirement for division between I, combination claims defining a signalling system for vehicles and broadly calling for a switch and a relay; II, a subcombination claim to the switch; and III, subcombination claims to the relay, *Held* "that the three groups of claims are for separate and distinct inventive subject matter, and that the mechanisms defined by the subcombination claims in groups II and III are not so co-related or interdependent, either in design or operation, to each other or to the signalling system for vehicles defined by the combination claims in group I as to entitle the subcombination claims to be claimed in the same application or in an application with the combination claims."

APPEAL from the Patent Office. Affirmed.

Mr. Edmund B. Whitcomb for Coulter.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner requiring division between three groups of claims in appellant's application for a patent for an alleged invention relating to improvements in a signalling system, particularly for vehicles.

The question of the patentability of the claims here on appeal has not been considered by the tribunals of the Patent Office. Accordingly, the question is not before us for consideration.

Group I includes claims 1 to 7, inclusive, and 13. Group II consists of claim 8. Group III includes claims 9 to 12, inclusive.

Claims 1, 8, and 9 are sufficiently illustrative of the claims on appeal. They read:

> 1. A signalling system for vehicles, spaced signalling means located at each side of the vehicle body including light sources; tell-tale means remotely positioned from said signalling means; connections between said tell-tale means, light sources and a source of electrical energy; controlling means for said connections including a selector switch having a central position and manually movable to operative positions for establishing a closed circuit through said connection from the source of electrical energy to energize the sources of light positioned on one side of the vehicle to indicate the direction of the turning of the vehicle and a normally open circuit with said tell-tale means; and switching means responsive to a predetermined flow of current in the circuit of said light sources for closing the normal open circuit of said tell-tale means.
>
> 8. In combination, an electrical switching arrangement to establish several circuits including a support; a pivoted arm carried by said support having a central position and movable in opposite directions; a plurality of contacting means movable by said arm; a stationary contact element engaging one of said contacting means in its central position and extending in the path of movement thereof; and stationary contacts adapted to be selectively engaged by said contacting means whereby several circuits are established.
>
> 9. A relay for a circuit indicating means arranged for intercalation in a wiring harness including a hollow housing; a frame in said housing; a stationary contact carried by said frame; an electro-responsive means carried by said frame including a movable contact arranged for cooperative engagement with said stationary contact; a plurality of terminals insulatingly supported in said housing; said housing having a plurality of openings to accommodate portions of the wiring harness extending into said housing; the portions of said wiring harness extending into said housing being connected to said terminals; said wiring harness providing the sole support for said housing.

The references are: Swartwout, 1,365,127, January 11, 1921; Tolmach, 1,623,219, April 5, 1927; Harvey, 2,034,866, March 24, 1936; Lamb, 2,178,479, October 31, 1939.

It will be observed that claim 1 defines a signalling system for vehicles which includes a manually selective switch mechanism and a relay mechanism, or, as stated in the claim, "switching means responsive to a predetermined flow of current in the circuit of said light sources for closing the normal open circuit of said tell-tale means."

Claim 8 is a subcombination claim and defines the switching mechanism called for broadly in claim 1.

Claim 9 is also a subcombination claim and defines the relay mechanism called for broadly in claim 1.

In requiring division between the three groups of claims, the Primary Examiner in his statement to the Board of Appeals stated that the signalling system defined in group I belongs to a well-established class of invention, and is so recognized in the art as is clearly shown by the claims in the patents to Swartwout and Tolmach.

With regard to group II (claim 8), the Examiner stated that the claim

> reads on the manual two way or double throw switch 69 of Fig. 5. That the switch is not so highly specialized as to be of doubtful use in any other than the applicant's signalling system is too obvious to require extended comment. Simple double throw switches of the type are very old and in common use in many and various situations * * *,

and that the patent to Harvey, although disclosing a somewhat specialized switch, had general utility and belonged to a "well established class of invention, distinct from any system in which the switch might be used."

As to group III, of which claim 9 is illustrative, the Examiner stated that it defines a relay mechanism which has various uses and is well recognized in the art as an established class of invention, and that the function of the relay defined in group III is "the simplest that a relay can have." The Examiner referred to claim 4 in the Lamb patent which, he stated:

> includes sufficient supporting means to constitute "a unitary assembly," which is strictly analogous to details providing support by the wiring harness in the present claims.

The Examiner then said that applicant's relay mechanism with its support had

> general application in many systems, for instance the ignition harness on an airplane or a submarine, or even for the control of a pilot light in a fire alarm system * * *;

that the switch mechanism defined in group II and the relay mechanism defined in group III could be used in many systems without any change in the structure of those mechanisms; and that "therefore there is no novel or peculiar relation making the switch and relay necessary parts of the system of group I."

In affirming the decision of the Examiner, the Board of Appeals stated that the switching mechanism, defined in claim 8, and the relay mechanism,

defined in claim 9, were capable of general use and were not limited to applicant's signalling system as clearly disclosed by the patents to Harvey and Lamb, and that the signalling system defined in claim 1 was a well-recognized separate and independent subject of invention as disclosed in the patents to Swartwout and Tolmach.

In replying to the argument of counsel for appellant that appellant disclosed in his application a unitary signalling system and that, therefore, the three groups of claims should be considered together as combination and subcombination claims, the Board stated that many complex mechanisms, including those in the electrical arts, employ subcombinations that are recognized as separate and independent subjects of invention; that switches and relay mechanisms in electrical systems have long been recognized as separate subjects of invention; and that, although the classification in the Patent Office was not conclusive on the question of division, nevertheless, division was required where subcombinations such as electrical switches and relay mechanisms are separate subjects of invention. The Board further stated:

> Another point urged by applicant is that in this case the sub-combination or subjects of invention, that is, the switch and relay are such that the system must depend upon them and that they mutually contribute to producing a certain result. It is not apparent but that other switches and relays could be used in applicant's system and the specific switch and relay do not necessarily contribute to produce a single result any more than other specific forms could accomplish.

Counsel for appellant contends that the Patent Office tribunals have improperly construed the provision of rule 41 of the Rules of Practice in the United States Patent Office, which, so far as material here, provides that "Two or more independent inventions can not be claimed in one application; but where several distinct inventions are dependent upon each other and mutually contribute to produce a single result they may be claimed in one application," and it is urged by counsel that where separate inventions actually depend upon each other and contribute to produce a single result, it is immaterial under the rule that the separate inventions might be independently used, and, as he states, "therefore dependent on other combinations, or that the separate inventions might not also mutually contribute in other environments to *other* results." [Italics quoted.]

It is further contended by counsel for appellant that as the switching mechanism, defined in claim 8, and the relay mechanism, defined in the claims of group III, are necessary to the operation of the signalling system for vehicles defined in the claims of group I, and as appellant's disclosure is an "inventive conception of a complete, unitary, successfully operating, directional signal system and each part thereof is essential to every other part" and dependent thereon, appellant is entitled to have the subject matter defined in the three groups of claims considered in the same application.

It is not questioned here by counsel for appellant that the three groups of claims are separately and independently classified in the Patent Office, or that the switch mechanism, defined in claim 8, and the relay mechanism, defined in the claims in group III, could be used in other systems without any change in the structure of those mechanisms.

There is no evidence whatsoever of record to warrant a holding that the tribunals of the Patent Office were in error in stating that the switch mechanism and the relay mechanism defined in groups II and III, respectively, could be used in many other systems, or that the combination called for by the first group of claims and the subcombination called for by the second and third groups of claims are recognized in the art as separate and independent subjects of invention as disclosed in the patents of record.

The quoted provisions of rule 41, supra, and issues similar to those raised here by counsel for appellant have been fully considered by this court in several cases. See *In re Pedersen*, 22 C. C. P. A. (Patents) 788, 73 F.(2d) 928, 23 USPQ 345, 453 O. G. 466, and cases therein cited; *In re Ferenci*, 23 C. C. P. A. (Patents) 1023, 83 F.(2d) 279, 29 USPQ 162, 468 O. G. 747; *In re Moss et al.*, 26 C. C. P. A. (Patents) 861, 101 F.(2d) 536, 40 USPQ 479, 503 O. G. 583; *In re Freeman*, 26 C. C. P. A. (Patents) 1265, 104 F.(2d) 187, 41 USPQ 784, 508 O. G. 290.

In the last cited case, we quoted the following excerpt from our decision in the case of *In re Ferenci*, supra:

> It will be noticed in the above quotation [from the decision of the Board of Appeals] that there are two main reasons which brought the Board to the conclusion that the inventions were so unrelated as to prevent their being included in the same application: First, agreeable to the holding in *In re Creveling* * * * [46 App. D. C. 536] (although not cited), it is pointed out that the wrapping material severing means and the bread slicing machine "have each acquired a distinct status in the art"; second, it is intimated that the details of the subcombination claims "are adapted for use generally in other structures or combinations and their functions are well understood."
>
> While we approve of the application of these two considerations in determining when two or more inventions may be "related" in respects heretofore referred to, we are not willing to say that the application of one or both of them may in every instance be determinative of the question. We think, however, that where a subcombination has acquired an independent status in the art, as is evidenced by patents being granted for the subject matter of such subcombination, and a separate examining division in the Patent Office is set up for its consideration, and where the subject matter of such combination is a matter of common understanding and is adapted for substantial, practical uses other than in, and independent of, the general combination, it ordinarily would not be regarded as being so related to the general combination as to entitle it to be claimed in the same application with the combination to which it belonged.
>
> Obvious difficulties in making application of the foregoing principles in every instance where the question might arise would suggest that they should not be regarded as inflexible and indispensable criteria. In some of the cases involving this question, there might be no factual basis for the application of all the above principles, and yet the subcombinations there involved might clearly be unrelated to the other claimed subject matter.
>
> The views above expressed are, in part, very clearly and succinctly stated at page 465 of the Journal of the Patent Office Society, Volume 1, No. 9, in an article by C. H. Pierce, and we quote therefrom as follows:
>
> * * * it is believed to be the more modern doctrine and practice that where an element or subcombination which is claimed in the same case with a combination of which it forms a part, even if that combination be new, is clearly capable of use apart from the combination and in other relations and not restricted in its design, operation and capabilities to use therewith, and if in addition there is a developed state of the art in relation to it, constituting a different field of activity and search, division may be required without awaiting determination of the novelty of the combination * * *,

and held, in accordance with the statement of the law as announced in the quoted excerpt, that as the subcombination claims there involved were not "restricted either in design or operation to any particular machine" and as they involved "separate and independent inventive acts," they were "not so related as to entitle them to be claimed in the same application."

It will be observed that in the Ferenci case, supra, we said, in substance, that where subcombinations had acquired an independent status in the art as evidenced by issued patents and were separately classified in the Patent Office, as in the instant case, and where such subcombinations were adapted for "practical uses other than in, and independent of, the general combination," claims to such subcombinations would not ordinarily be considered "as being so related to the general combination as to entitle * * * [them] to be claimed in the same application with the combination to which * * * [they] belonged."

Counsel for appellant also contends that claim 8, by virtue of the language contained therein, actually includes the relay, and that, therefore, "the whole purpose of applicant's system is involved in" that claim. In support of his argument, counsel relies upon the last clause in that claim which reads: "and stationary contacts adapted to be selectively engaged by said contacting means whereby several circuits are established." Counsel concedes that the quoted language in the claim is broadly worded. He contends, however, that it "inferentially, but nevertheless, actually" includes the relay.

The purpose of a switching mechanism is to establish circuits, and we are of opinion that the quoted excerpt from claim 8, relied upon by counsel, cannot properly be held to define a relay mechanism.

It is further contended by counsel for appellant that the claims in group III call for the relay therein defined arranged for connection in a wiring harness, portions of the wiring harness extending into a hollow housing and providing the sole support therefor; that the "combined relay and housing combination" called for by quoted claim 9 includes the "wiring harness which constitutes the elements of the connections of the system claimed in" quoted claim 1 of group I; and that, therefore, the signalling system defined in claim 1 and the relay mechanism defined in claim 9 depend upon each other.

Assuming that the wiring harness, referred to in quoted claim 9, is a positive element of that claim, and that it is the sole support for the housing of the relay mechanism, there is nothing in the claim to indicate that the wiring harness is the connection between the source of electrical energy and the light sources as argued by counsel for appellant. The most that the claim calls for in that respect is that the wiring harness is connected to the terminals of the relay and is the sole support for the housing of the relay.

We are in agreement with the statement contained in the decision of the Primary Examiner, hereinbefore quoted, that claim 4 of the Lamb patent includes supporting means and defines a "unitary assembly" which is analogous "to details providing support by the wiring harness in" quoted claim 9, and we think it is evident that the subject matter of claim 9 belongs to the same class of invention as that claimed in the Lamb patent.

Counsel for appellant states in his brief that the third group of claims calls for "the particular type of relay and supporting means therefor." No contention is made by counsel that claims 10, 11, and 12 of that group differ in any material respects from the subject matter called for by quoted claim 9.

It is unnecessary that we refer to other arguments presented here by counsel for appellant, as it is evident from the facts of record that the three groups of claims are for separate and distinct inventive subject matter, and that the mechanisms defined by the subcombination claims in groups II and III are not so co-related or interdependent, either in design or operation, to each other or to the signalling system for vehicles defined by the combination claims in group I as to entitle the subcombination claims to be claimed in the same application or in an application with the combination claims.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

WASBERG *v.* DITCHFIELD

DITCHFIELD *v.* WASBERG

Nos. 5,158 and 5,159. Decided May 7, 1946

[155 F.(2d) 408; 69 USPQ 538]

1. INTERFERENCE—COUNTS—LIMITATION.
   "Each of the involved counts contains an express limitation which must be considered as material in determining the right of each of the parties to make the claims constituting the counts in issue."
2. APPLICATION—DISCLOSURE—INHERENCY.
   In determining whether the limitation, in claims to a box-car door, of "an opening in the inner pocket" was inherently disclosed in the application of Ditchfield, which did not show or describe such an opening, *Held* that the "issue is simply whether one skilled in the art, in constructing the device from the disclosure in Ditchfield's application, would necessarily provide an opening in the inner pocket."
3. SAME—SAME—SAME.
   "Inherency requires certainty and cannot be established by possibilities or mere probabilities. * * * It is not sufficient, therefore, that one skilled in the art, in an attempt to follow the Ditchfield disclosure, might provide an opening such as that called for by the counts in issue."
4. SAME—SAME—SAME—EVIDENCE.
   "It is immaterial what Ditchfield intended to disclose in his application, or what disclosure he made to his attorney, and no weight can be given to the evidence presented by him on such matters."

5. SAME—SAME—ACCIDENTAL OPERATION.

Accidental leakage past a sealing member *Held* to form no proper basis for claims to a box-car door calling for "an open-ended inner pocket."

APPEAL from the Patent Office. Modified.

Mr. Rodney Bedell (*Mr. Joseph H. Milans* of counsel) for Wasberg.

Mr. Samuel Reese (*Mr. Lee L. Townshend* of counsel) for Ditchfield.

HATFIELD, *J.:*

These are cross-appeals in an interference proceeding from the decision of the Board of Interference Examiners awarding priority of invention of the subject matter defined by counts 1 to 4, inclusive, 7, 9, 11, 12, and 13 to appellee Wasberg in appeal No. 5159, and that defined by counts 5, 6, 8, and 10 to appellee Ditchfield in appeal No. 5158.

The interference is between Wasberg's patent, No. 2,313,106, issued March 9, 1943, on an application, No. 400,234, filed June 28, 1941, and an application of Ditchfield, No. 354,709, filed August 29, 1940.

The counts originated in Wasberg's patent and were copied by Ditchfield for interference purposes.

Wasberg is the junior party and the burden was upon him to establish priority of invention by a preponderance of the evidence.

As Wasberg failed in his preliminary statement to allege a "date prior to the filing date" of Ditchfield's involved application, he was ordered to show cause why judgment on the record should not be entered against him.

In answer to the order to show cause, Wasberg moved to dissolve the interference on the ground that Ditchfield could not make the claims constituting the counts in the interference. The motion was denied by the Primary Examiner.

The party Wasberg, thereupon, moved to introduce evidence for the purpose of establishing that the device disclosed in the Ditchfield application was not constructed, and would not operate, in accordance with the structure defined by the counts in issue, and also moved that the issue be set down for hearing. Both motions were granted by the Examiner of Interferences, whereupon both parties to the interference submitted evidence on the issue presented. No other issue is involved in the case.

In this court, the party Wasberg, in appeal No. 5158, has appealed from that portion of the Board's decision holding that Ditchfield could make the claims constituting counts 5, 6, 8, and 10, and, therefore, was entitled to an award of priority of invention of the subject matter defined by those counts, and, in appeal No. 5159, the party Ditchfield has appealed from that portion of the Board's decision holding that he was not entitled to make the claims constituting counts 1 to 4, inclusive, 7, 9, 11, 12, and 13, and that Wasberg was entitled to an award of priority of invention of the subject matter defined by those counts.

The invention defined by the counts in issue relates to a sliding-door arrangement for railway box cars.

Counts 1 and 10 were considered typical by the Board. They read:

1. In combination, a car sliding door having a body panel and an auxiliary post with an exterior face secured to one of the upright marginal portions of said panel, said post having elements forming a pocket positioned inwardly of the car from the exterior face of the post and having a closed inner end and an open end facing towards the exterior of the door opening, and another door having an upright marginal portion movable into cooperative relation with said post to close the door opening and provided with a member overlying said pocket open end when the doors are in closed position.

10. In combination, a pair of sliding doors movable into closed position with their adjacent edges abutting each other, each of said doors comprising a body panel and framing members at the margins thereof, the framing on the adjacent margins of the two doors including overlapping elements forming successive pockets closed from the space at the inner side of the doors, each having a relatively small opening directed outwardly from said space whereby air and matter carried thereby tending to pass from the space at the outer side of the doors to the space at the inner side of the doors is trapped, the body panels of the doors lying in the same general plane and one of the pockets resulting from the pocket forming elements being positioned inwardly of said plane and the other pocket being positioned outwardly of said plane.

Counts 5, 6, and 8, which together with count 10 were awarded Ditchfield, read:

5. In combination, a pair of sliding doors movable edgewise into closed position with respective members on their adjacent edges abutting each other, there being elements on said edges overlapping and cooperating with said members to form successive pockets facing in opposite directions longitudinally of the doors and each having a closed inner end and sides flaring towards an open end facing towards the exterior of the door opening and baffling the admission of air and matter carried thereby to the interior of the doors.

6. A structure as described in count 5 in which the pockets are abreast of each other transversely of the doors.

8. In combination, a pair of sliding doors movable edgewise into closed position with respective members on their adjacent edges abutting each other, there being elements on said edges overlapping and cooperating with said members to form successive pockets, the inner end and sides of each pocket being closed from the space at the inner side of the doors and the sides of the pockets flaring towards an open end facing towards the exterior of the doors and baffling the admission of air and matter carried thereby to the space at the interior of the doors.

The Wasberg patent discloses two doors, a main door and an auxiliary door, movable horizontally into and out of engagement with each other. The auxiliary door, which is ordinarily in closed position, carries a vertical post at the edge which engages the main door. The post may be locked to the car sill. A sealing structure is provided adjacent the post which is designed to form a tight fit with the edge of the main door when the doors are in engagement. The sealing structure comprises two rigid vertical flanges which are flared in opposite directions to form a groove adapted to receive the vertical edge of the main door, so that, when the doors are closed, one flange is within the car and the other is on the outside. A flexible vertical strip is attached to the end of the flange which lies within the car and extends outwardly to a point where it engages the edge of the main door throughout its entire length when the doors are in closed position. The flexible strip is bent at its edge and the bent portion also engages the main door throughout its entire length. The flexible strip and the inner flange form a pocket, the width of the strip being such that the pocket has an open mouth which faces outwardly to trap cinders, dirt, etc., which might otherwise enter the car. When the doors are closed, the edge of the main door and the outer flange of the auxiliary door cooperate to form a second pocket which opens outwardly. It will thus be seen that there are provided two pockets, one inside the car and the other outside, both pockets opening outwardly.

The Ditchfield structure is generally quite similar to that of Wasberg and, so far as the outer pocket is concerned, there is no difference between the two which is of importance here. In the Ditchfield structure, the inner flange of the auxiliary door is bent to form a vertical channel which, when the doors are closed, extends opposite and close to, but not in contact with, the edge of the main door. One edge of flexible weather strip is secured along the bottom of the channel, the free edge of the strip extending outwardly, so that, when the doors are closed, the free edge is bent back along the edge of the main door. In the Ditchfield drawing, the free edge of the weather strip is shown as contacting the auxiliary door and completely closing the mouth of the pocket formed by the strip and the channel when the doors are closed.

It is conceded in Ditchfield's brief that all of the "counts call for the doors being *closed* or *closed and in abutment.*" [Italics quoted.]

[1][2][3][4] Each of the counts is limited to a structure in which the pocket which lies within the car is open at one portion, although the language of the counts differs to some extend. Count 5, for example, which is one of the counts awarded Ditchfield, calls for each pocket "having a closed inner end and sides flaring towards an open end." Each of the involved counts contains an express limitation which must be considered as material in determining the right of each of the parties to make the claims constituting the counts in issue. *Bijur* v. *Rushmore*, 46 App. D. C. 395, 1918 C. D. 122, 246 O. G. 301; *Potts* v. *Kimball et al.*, 30 C. C. P. A. (Patents) 847, 134 F.(2d) 327, 56 USPQ 556, 553 O. G. 559, and cases therein cited. Accordingly, unless Ditchfield fairly discloses an opening in the inner pocket he is not entitled to make the counts.

Ditchfield's drawing does not disclose any opening in the inner pocket, and his specification does not mention such an opening. Accordingly, he could be held entitled to make the counts only on the theory that such an opening, although neither shown nor described, is inherent in his disclosure.

Inherency requires certainty and cannot be established by possibilities or mere probabilities. See *Brand* v. *Thomas*, 25 C. C. P. A. (Patents) 1053, 96 F.(2d) 301, 37 USPQ 505, 496 O. G. 561; *Hansgirg* v. *Kemmer*, 26 C. C. P. A. (Patents) 937, 102 F.(2d) 212, 40 USPQ 665, 505 O. G. 514; *Temple* v. *Littlehale*, 29 C. C. P. A. (Patents) 869, 125 F.(2d) 730, 52 USPQ 489, 539 O. G. 491. It is not sufficient, therefore, that one skilled in the art, in an attempt to follow the Ditchfield disclosure, might provide an opening such as that called for by the counts in issue.

It is immaterial what Ditchfield intended to disclose in his application, or what disclosure he made to his attorney, and no weight can be given to the evidence presented by him on such matters. The issue is simply whether one skilled in the art, in constructing the device from the disclosure in Ditchfield's application, would necessarily provide an opening in the inner pocket.

The evidence introduced by the parties consists largely in speculation and opinion as to whether there will necessarily be an opening in the inner pocket of the Ditchfield device. It is urged here by counsel for Ditchfield that, because of practical reasons, the Ditchfield weather strip could not form a tight closure at the mouth of the pocket.

We have considered all of the evidence introduced on behalf of Ditchfield, but deem it unnecessary to discuss it here.

It is true, as held by the Board of Interference Examiners, that, although the evidence introduced by Ditchfield indicates that gaps and leakage might occur in his device, it does not establish that the inner pocket of the Ditchfield structure has an open portion within the meaning of the counts, or that his structure would inherently operate in the manner contemplated by the counts.

[5] The weather strip in the Ditchfield structure is a sealing member and is disclosed as completely bridging the mouth of the pocket when the doors are in closed position. It was intended, so far as the Ditchfield disclosure is concerned, to effect as tight a closure as possible, and it is clear that any leakage which might take place would be merely accidental. If any such leakage occurs, it could not properly form a basis for the counts here involved. *In re Ratigan*, 32 C. C. P. A. (Patents) 904, 147 F.(2d) 1021, 64 USPQ 567, 575 O. G. 6.

The Board of Interference Examiners held that Ditchfield could not make the claims constituting counts 1 to 4, inclusive, 7, 9, 11, 12, and 13, because he did not show an open-ended inner pocket, but that he could make the claims constituting counts 5, 6, 8, and 10, because they "are broader and set forth the function of the inner pocket in baffling the admission of air and matter carried thereby."

It will be observed that count 5 calls for "successive pockets," and states that each pocket has "a closed inner end and sides flaring towards an open end facing towards the exterior of the door opening." That language clearly requires that the inner pocket shall be open at its outer end. Accordingly, Ditchfield cannot make that count for the reasons hereinbefore stated. Count 6 is dependent on count 5 and contains the same limitations. Count 8 contains substantially the same language as count 5, so far as the open ends of the pockets are concerned. Count 10 calls for successive pockets "each having a relatively small opening directed outwardly" which requires an opening in the inner pocket.

We are of opinion, therefore, that the Ditchfield application does not disclose the subject matter defined by any of the counts in issue, and that the Board erred in awarding priority of invention of

the subject matter defined by counts 5, 6, 8, and 10 to the party Ditchfield.

For the reasons stated, the decision of the Board of Interference Examiners is modified, being affirmed so far as it holds that the party Wasberg is entitled to an award of priority of invention of the subject matter defined by counts 1 to 4, inclusive, 7, 9, 11, 12, and 13, and reversed so far as it holds that the party Ditchfield is entitled to an award of priority of invention of the subject matter defined by counts 5, 6, 8, and 10.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE BROGDEN ET AL.

No. 5,147. Decided June 11, 1946

[— F.(2d) —; 70 USPQ 187]

1. PATENTABILITY—SPECIES CLAIMS.

Claim 5 of appellants' application *Held* to define a patentable species under the genus defined by allowed claim 3; and *Held* that "claim 5 may be allowed as a reasonable and advantageous protection of appellants' invention."

2. SAME—SAME—IMMATERIAL LIMITATIONS.

"Claims 6 and 7 are successively narrower in scope than claim 5. There is nothing added in claims 6 and 7, however, that is not necessarily provided for in both claims 3 and 5. For that reason such claims are unnecessary and are not allowable on the ground that they contain immaterial limitations."

3. SAME—OLD COMBINATION.

Certain claims directed to a bottle carrier in combination with the bottles to be carried thereby *Held* properly rejected as defining a combination broadly old in the art.

4. APPEAL—RECORD—BRIEF.

"No useful purpose ever can be served by the incorporation of extrinsic or immaterial matter in the transcript of a record on appeal or in the brief of counsel. On the contrary, such action has a tendency not only to confuse the issue involved but also to retard the work of the court through the imposition of unnecessary and often prolix matters for its examination."

APPEAL from the Patent Office. Modified.

Mr. Roy F. Steward for Brogden et al.

Mr. W. W. Cochran (*Mr. R. F. Whitehead* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting twenty-two claims in appellants' application for a patent for certain alleged new and useful "Improvements in Bottle Carriers and Packages." The Examiner rejected all the submitted claims, 1 to 25 inclusive; but the Board allowed claims 1, 3, and 21 which are generic to the two species of the invention defined by the claims. Claims 5, 6, 7, 15, 16, 17, 22, and 23 are drawn to the elected species. Claims 8, 9, 10, 18, 19, 20, 24, and 25, drawn to the non-elected species, were not appealed and are not before the court.

Claims 4, 11, and 22 are illustrative—

4. A bottle carrier as set forth in claim 3, having a handle strip with barbed ends engaged in slots provided in said side walls, said strip being long enough to provide a handgrip loop extending above the bottle tops when the carrier is loaded and being collapsible downwardly toward the top section.

11. A merchandising package comprising the combination, with a carrier as defined in claim 1, of a plurality of bottles of the stated character contained therein and snugly engaged by said sections of the carrier in the relation specified in said claim.

22. A consumer-unit bottle package comprising a group of cylindrical bottles of uniform size and shape and having upwardly tapering neck portions, compactly arranged in a single row, in combination with a carrier therefor consisting of a strip of thin flexible paperboard having its ends overlapped and joined to form a longitudinally continuous open-ended tube providing a bottom section, opposed side wall sections and a top section, which tube extends continuously around the bottle group circumferentially under stress compelling snug conformation of said sections to the base, the opposed long sides and the shoulder portion of the bottle group respectively; said carrier being so proportioned and having its top so apertured that the tapering bottle necks project beyond the highest portion of the carrier top a distance sufficient to permit grasping any bottle neck with the hand, said highest portion being of substantial width and extending substantially parallel to the carrier base; said bottom section being approximately from three-sixteenths to about one inch narrower than the base portion of the bottle group; said side walls being provided with oppositely disposed pairs of gripping apertures adjacent their junctions with said bottom section having a width parallel to said junctions equal to at least two-fifths of the given bottle diameter and extending a substantial distance transversely into the side wall sections; and the edges of said apertures being maintained in gripping engagement with the bottle base rims by the stress aforesaid whereby to resist movement of the bottles toward either open end of the carrier; said package being substantially rigid and non-deformable under normal conditions of use.

The references are—Manteau (French), 429,591, July 22, 1911, Cunningham, 1,702,199, February 12, 1929; Cubberley, 1,968,877, August 7, 1934; Janowitz, 2,021,788, November 19, 1935; Schell, 2,036,645, April 7, 1936; Keith, 2,094,744, October 5, 1937; Seifer, 2,109,034, February 22, 1938.

The device constructed by appellants comprising a carrier and a handle is designed to be used in the sale to customers in retail stores of bottled beverages in paperboard packages containing a small number of bottles, usually six or less, of uniform size and shape, and to encourage the customer, after the beverage has been consumed, to bring the bottles back in such container to obtain the refund of the deposit for the bottles commonly required at the time of purchase.

Appellants contend that—

The allowance by the Board of generic claims 1, 3 and 21, of which 1 and 3 are the broadest claims in the application, greatly simplifies and narrows the issue of this appeal. Broad patentable novelty of appellants' invention has already been conceded by the allowance of those claims, and is therefore not in issue here. The only question remaining is whether appellants, having been adjudged entitled to broad claims, are entitled to still other and more specific claims which appellants contend should properly be allowed them for fully adequate protection of their invention, but which the Board has refused on grounds which appellants believe to be erroneous as set forth in their assignment of errors.

The argument which appellants advance here was submitted to the Board of Appeals and adversely ruled upon by it on a motion involving the reconsideration of its original decision.

It is noted in the decision of the Board that claims 2, 4, 12, and 14, directed to a combination of a bottle carrier with a handle structure, were rejected as

aggregative and lacking invention over the patent to Janowitz and others of record, and claims 5, 6, and 7 on the ground that they add nothing to claim 3 to which they are appended. Claims 11 to 17, inclusive, 22, and 23, directed to a package comprising the carrier in combination with the bottles to be carried thereby, were rejected on the ground not only that there was no patentable combination of such a structure with the bottles to be carried therein, but also that such a combination was lacking in invention over such references as Cubberley and Keith.

The patent to Manteau relates to a container for the transportation of bottles, cans or other objects which may be disposed respectively in a single row, two rows or three. The packing or container of Manteau consists essentially of a single sheet of pasteboard or other appropriate material in which a series of openings is provided for receiving the necks of bottles or other similar objects placed side by side. The dimension of this sheet is adapted so that it can be folded four times on itself about the ensemble of the bottles the necks of which are engaged in said openings.

Cubberley provides a bottle carrier constructed from a single sheet of cardboard so as to substantially enclose and lock the bottles therein against shifting. The carrier with its contents may be placed in bottle crates. The mid-portion or bottom of the carrier is described as having sides extending upwardly therefrom—

• • • the distance between the parallel lines of folding of the bottom and sides being a slight amount less than the diameter of the bottom of the bottles to be carried therein. The respective sides of the carrier, near the bottom thereof, are cut away and the bottom portion is provided with arcuate shaped tabs extending through these cutaway portions to conform to the shape of the bottle bottoms.

Furthermore, in Cubberley—

• • • Hand grips are provided in the sides near the top of the carrier by cutting out openings in opposite parts of the carrier and by folding the material cut out inwardly. • • •

Keith shows a bottle wrapper formed from a single strip of flexible material, such as paper or pasteboard, cut and creased to form either a single or double row carton with openings in the lower portions of the sides to fit the lower bulges of the plurality of carried bottles. Keith is also provided with a handle for use in transporting the bottle carrier.

Appellants provide a handle for their container which handle has its bifurcated barbed ends engaged in pairs of locking slots provided near the upper edges of the side walls and is collapsible down upon the container top.

Janowitz discloses an invention for the formation of handles from tape for carrying packages "so that when a portion of the tape is used for securing a package, a loop may be left free and a handle formed therein to facilitate carrying of the package." To accomplish the desired result, Janowitz provides "sets of slits at intervals along the tape so that the edges may be infolded at the desired points for distances sufficiently long to form a handle which will be reinforced by the infolded edges."

Schell relates to movable handles for use as a carrying medium, "the handles being adapted to be selectively raised to a position to be grasped, or pushed down into a sheathed flat-lying relationship with their supporting body."

Seifer discloses "a carrying handle for use with pasteboard or paper containers usually made from flat stock and folded into their desired shape, the handle being of a character that will permit it being readily attached to the container" and being made of the same stock as the container.

The Board of Appeals held that while Cubberley is adapted to fit snugly about a group of bottles, the patent was not anticipatory of that feature of appellants' claims which define a bottle carrier "provided with openings or apertures in the top section thereof large enough to permit the tapered neck portions of the bottles to project upwardly beyond the top section."

Keith, the Board further held, did not anticipate that feature of appellants' carrier "which is so constructed that gripping engagement of the bottle rims is compelled by the snugness with which the carrier conforms circumferentially to the top, bottom and two opposed sides of the bottle group, as set out in claim 1, for example." A similar ruling was made regarding Manteau.

For the reasons hereinbefore stated, the Board allowed claim 21, directed to the bottle carrier, and also claims 1 and 3, as defining invention over the cited references.

Cubberley and Keith show, however, that a handle structure in combination with a bottle carrier is old in the art and it would involve no patentable distinction to substitute a handle such as described in Janowitz, Schell, and Seifer for appellants' use. We therefore agree with the Board that the combination of the bottle carrier with a handle structure of the general type defined by claims 2, 4, 12, and 14 is unpatentable over the cited references.

Appellants urge that the Board erred in holding that claims 5, 6, and 7 do not "add anything to claim 3 to which they are appended," that "None of claims 5, 6, and 7 appears to have limitations which set out any structure not necessarily present in the structure of claim 3," and that "the claims are multiplied until the invention covered by allowed claim 3 becomes vague." It is noted that claim 3 is generic to the two different species of the bottle carrier disclosed by appellants; one in which the bottles are disposed in the carrier in a single row and the other in which the bottles are disposed in a double row.

Claims 5, 6, and 7 are directed to the first species and the important and material limitations which

appellants allege differentiate such claims from claim 3 are defined as follows in their brief:

> Claims 5–7 all expressly recite that the top section of the carrier has a single row of neck-receiving apertures; also that the width of the bottom section of the carrier shall be less than the bottle diameter. Claims 6 and 7 require that the neck-receiving apertures shall be spaced apart between centers a distance slightly exceeding one bottle diameter; while claim 7 additionally requires that the base rim-gripping apertures also shall be similarly spaced apart.

For the purpose of considering claims 5, 6, and 7 in their entirety, it is deemed advisable to copy claim 3, which the Board allowed. It reads—

> 3. A bottle carrier adapted to hold a plurality of cylindrical bottles of predetermined uniform size and shape with upwardly tapering neck portions, which comprises a strip of relatively thin flexible sheet material suitably bent and having its ends overlapped and joined to form an open-ended tubular container with a top section and a bottom section, both longitudinally continuous and connected together by two opposed upright side walls, said top section being provided adjacent substantially the topmost part thereof with apertures in substantially rectilinear arrangement and large enough to permit the tapered neck portions of a group of bottles placed in the carrier to project a substantial distance upwardly therebeyond, with said topmost part extending transversely between the lower portions of the bottle necks and substantially perpendicular to the bottle axes, said side walls being apertured adjacent their respective junctions with said bottom section for gripping engagement with the base edges or rims of such bottles, such base apertures each having an effective rim-gripping width equal to at least two-fifths of the given bottle diameter; the size of said apertures in the top section being so correlated with the peripheral distance between them and the respective aforesaid junctions and said sheet material being of such thinness and flexibility that, when bottles of the predetermined size and shape for which the carrier is designed are contained therein, the edges of such base apertures engage the respective bottle rims and resist movement of the bottles toward either end of the carrier, such engagement being compelled by the snugness with which the carrier conforms circumferentially to the top, bottom and two opposed sides of the bottle group, whereby the resultant package constitutes as a whole a relatively nondeformable unit of substantial rigidity.

We also deem it advisable to quote the express limitations defined by claim 5—

> 5. A bottle carrier as set forth in claim 3, wherein said top section has a single row of neck-receiving apertures, and the width of said bottom section is less than the bottle diameter.

It is noted that the Examiner in his action upon claims 5, 6, and 7 rejected them on the sole ground that they were unpatentable as lacking invention over a certain combination of the cited references and that the Board in its action distinguished appellants' claims of the type of 1 and 3 over that combination and allowed both claims. Claim 3 as hereinbefore noted is generic to the dependent claims 5, 6, and 7. Although narrower in scope than claim 3 by reason of their express limitations, the dependent claims include the subject matter of claim 3. Thus, claim 5 is limited to a bottle carrier for transporting bottles disposed in a single row, while claim 3 is not.

[1][2] It is our opinion that claim 5 defines a patentable species under the genus defined by claim 3 and that claim 5 may be allowed as a reasonable and advantageous protection of appellants' invention. Claims 6 and 7 are successively narrower in scope than claim 5. There is nothing added in claims 6 and 7, however, that is not necessarily provided for in both claims 3 and 5. For that reason such claims are unnecessary and are not allowable on the ground that they contain immaterial limitations.

[3] Claims 11, 13, 15, 16, 17, 22, and 23, directed to the bottle carrier in combination with the bottles to be carried thereby, were rejected both by the Examiner and the Board as defining a combination broadly old in the art as disclosed, for example, in the patents to Cubberley and Keith. Those patents disclose a bottle carrier formed from a single strip of flexible material having suitable creases and apertures with bottles placed within the carrier. In our opinion, this holding of the Board is amply supported by the record which discloses further that appellants' carrier does not cooperate with its load of bottles in any such manner as to produce a new, useful or unexpected result.

While appellants contend here that they have introduced in the structural factors of their bottle carrier, "a principle of construction never before utilized in this art," the record discloses and the Board correctly held that appellants merely constructed a bottle carrier which fits the bottles more closely than do the bottle carriers of the cited references. For that structure adequate claims have been allowed.

Speaking of the record, it is noted that although Cunningham is cited as a reference not only by the Examiner but also by the Board, it is not included here in the transcript of the record. On the other hand, "In order," as appellants state in their brief, "to give a more complete and accurate picture of the prior art than can be had from only the references relied upon by the Patent Office," they have incorporated in the record a reproduction of seven different patents none of which was mentioned by the tribunals of the Patent Office. Furthermore, appellants devote an important element of their brief incidental to a discussion in detail of various features of these extraneous patents.

[4] No useful purpose ever can be served by the incorporation of extrinsic or immaterial matter in the transcript of a record on appeal or in the brief of counsel. On the contrary, such action has a tendency not only to confuse the issue involved but also to retard the work of the court through the imposition of unnecessary and often prolix matters for its examination. The seven patents thus introduced by appellants and the arguments presented in their brief regarding such patents necessarily have been examined and it is found that they have no bearing whatever on the issue in this case.

In view of our conclusion it is unnecessary to discuss and pass upon other points raised by appellants. For the reasons stated, claim 5 is allowed and the action of the Board in rejecting the remainder of the appealed claims is affirmed.

Modified.

GARRETT, *P. J.*, sat during the arguments of this case, but because of illness took no part in its consideration or in the decision.

Public Law 517—79th Congress

[CHAPTER 587—2D SESSION]

[H. R. 3424]

AN ACT

To permit renewal of certain trade-mark registrations after expiry thereof, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever the President shall find that foreign proprietors of trade-marks registered in the United States Patent Office who are nationals of countries which accord substantially equal treatment in this respect to trade-mark proprietors who are citizens of the United States are or may have been temporarily unable to comply with the conditions and formalities prescribed with respect to renewal of such registrations by section 12 of an act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same, approved February 20, 1905, as amended (15 U. S. C. 92), because of the disruption or suspension of facilities essential for such compliance because of conditions growing out of World War II, he may by proclamation grant such extension of time as he may deem appropriate for the fulfillment of such conditions or formalities by such foreign proprietors: *Provided*, That the President may at any time terminate any proclamation authorized herein or any part thereof or suspend or extend its operation for such period or periods of time as in his judgment the interests of the United States may require: *Provided further*, That no such extension of time shall permit the filing of applications more than three years after the approval of this act: *And provided further*, That the benefits of this act shall not extend to nationals of any enemy country with which the United States was at war in World War II.

Approved July 17, 1946.

Public Law 690—79th Congress

[CHAPTER 910—2D SESSION]

[H. R. 5223]

AN ACT

To extend temporarily the time for filing applications for patents, for taking action in the United States Patent Office with respect thereto, for preventing proof of acts abroad with respect to the making of an invention, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the rights of priority provided by section 4887 of the Revised Statutes (U. S. C., title 35, sec. 32), as amended, for the filing of applications for patent for inventions, discoveries, and designs, which rights had not expired on the 8th day of September 1939, or which rights have arisen since the 8th day of September 1939, shall be, and the same are hereby, extended until the expiration of a period of twelve months from the passage of this act in favor of the citizens of the United States and of citizens or subjects of all countries which have extended, or which now extend or which within said period of twelve months shall extend substantially reciprocal privileges to citizens of the United States, and such extension shall apply to applications upon which patents have been granted, as well as to applications now pending or filed within the period specified herein: *Provided*, That no such extension shall apply to any patent unless a request in writing was made therefor during the pendency of the application for such patent in the United States Patent Office, or within twelve months after the passage of this act, which request must be accompanied by (1) a copy of the original foreign application, certified to by the patent office of the country in which it was filed, but if the original foreign application has been destroyed, other evidence pertaining thereto may be accepted; (2) a sworn translation of the same if it is not in the English language; and (3) if the foreign application was not made by the inventor himself, an affidavit by the applicant or patentee stating that such application was filed for his benefit or on his behalf and that such procedure is in accordance with the procedure in the foreign country: *Provided further*, That no patent granted or validated by reason of any such extension shall in any way furnish a basis of claim against the Government of the United States: *Provided further*, That such extension shall in no way abridge or otherwise affect the right of the United States, or of any person, firm, association, company, or corporation, who, before the passage of this act was bona fide in possession of any rights in or under patents or applications for patents conflicting with rights in patents granted or validated by reason of such extensions to exercise such rights by itself or himself personally, or by such agents, or licensees as derived their rights from it or him before the passage of this act, to the extent that they shall not be amenable to any action for infringement of any patent granted or validated by reason of such extension.

A patent shall not be refused on an application coming within the provisions of this section, nor shall a patent granted on such application be held invalid, by reason of the invention having been patented or described in any printed publication or in public use or on sale in the United States more than one year prior to the filing of the application in the United States, unless such patent or publication or such public use or sale was prior to the filing of the foreign application upon which the right of priority is based.

SEC. 2. Whenever, prior to the 8th day of April 1946, an invention, discovery, or a design has been communicated in writing or embodied in any article supplied to the Government of the United States or to any person, firm, or corporation in the United States at the request of said Government, pursuant to and by reason of an agreement or arrangement between the Government of the United States and the government of a foreign country for the supply or mutual exchange of information or articles for use for national defense purposes during the periods of the national emergencies declared by the President of the United States preceding World War II, or for use for war purposes during World War II—

(*a*) A patent based on an application filed by the inventor of the invention, discovery, or design so communicated or supplied shall not be refused or held invalid merely because of the fact that the invention, discovery, or design had been in public use or on sale in the United States, or described in a printed publication, if such public use or sale or publication was in consequence of and attributable to the communication or supply and subsequent to the date of the communication or supply; and

(*b*) For use in any action in a United States court or proceeding in the Patent Office involving a patent for an invention, discovery, or a design, or involving an application for patent for an invention, discovery, or a design so communicated or supplied any court of the United States for any district or Territory thereof, and the Commissioner of Patents shall have the power to call upon any department or agency of the Government of the United States to produce information or papers in its possession relating to the communication or supply or relating to the further communication of the invention, discovery, or design by said department or agency to any person, firm, or corporation in the United States: *Provided, however*, That the head of any department or agency may refuse and omit to comply with any call for information or papers when in his opinion such compliance would jeopardize the national defense.

No benefit under section 2 of this act shall be extended to any person unless (1) an application for patent for the same invention, discovery, or design which was communicated or supplied as aforesaid is filed in the United States Patent Office prior to the expiration of twelve months from the date of this act; and (2) unless sufficient information in writing and under oath as to what was communicated or supplied, the date thereof and to whom made, is furnished to the Commissioner of Patents by the owner of such application while it is pending, or prior to the expiration of twelve months from the date of this act to enable him to judge of the identity of the invention so communicated or supplied with the invention claimed in such application, which information shall be made a part of the record of such application and shall have no evidentiary value as proof of the facts stated therein; and (3) unless the country of which such person is a national extends substantially reciprocal privileges to citizens of the United States.

SEC. 3. That whenever it shall be shown to the satisfaction of the Commissioner of Patents that the time now fixed by law for the payment of any fee, or for the taking of any other action, with respect to an application for patent for an invention, discovery, or design has lapsed because of conditions growing out of World War II, which time had not expired on the 8th day of September 1939, or which commenced after the 8th day of September 1939, such time may be extended by the Commissioner to a date not later than twelve months after the passage of this act, without the payment of extension fees or other penalty, in favor of citizens of the United States and the citizens or subjects of countries which have extended, now extend, or shall extend prior to the expiration of twelve months after the passage of this act substantially reciprocal privileges to citizens of the United States: *Provided*, That no extension herein shall confer such privileges upon the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country upon the citizens of the United States, but nothing in this act shall give any right to reopen interference proceedings where final hearing before the Examiner of Interferences or the Board of Interference Examiners has taken place.

SEC. 4. That no patent granted or validated by reason of any extension of time provided for by sections 1 and 3 of this act shall abridge or otherwise affect the right of the United States, or of any person, firm, association, company, or corporation, or agent or agents, or his successor in business, to continue or to resume any manufacture, use, or sale bona fide commenced by it or him in the United States before the passage of this act, or, in the

case of an application claiming the benefits of section 8 hereof, commenced by it or him before the taking of action or the payment of any fee under that section if such action or payment was later than the passage of this act, nor shall the further manufacture, use, or sale by it or him, or its or his agents or successors in business or the use or sale of the devices resulting from such manufacture or use constitute an infringement: *Provided*, That the benefits of this section shall not apply to the manufacture, use, or sale as aforesaid if and to the extent that it is based upon or attributable to a communication of the invention, discovery, or design so manufactured, used, or sold to the United States or to any person, firm, or corporation in the United States at the request of said Government under an agreement or arrangement between the Government of the United States and the government of another country for the supply or mutual exchange of information or articles for use for national defense purposes during the periods of the national emergencies declared by the President of the United States preceding World War II, or for use for war purposes during World War II.

SEC. 5. Notwithstanding the provisions of sections 4885 and 4887 of the Revised Statutes (U. S. C., title 35, secs. 41 and 32, respectively) no patent issued subsequent to July 17, 1945, which was scheduled for issue on that date, or on July 24, July 31, or August 7, 1945, shall be held invalid because of the deferment of the issuance of such patent due to the failure to issue patents on July 17 and July 24, 1945.

SEC. 6. Notwithstanding the provisions of the Act of Congress approved July 1, 1940 (54 Stat. 710; U. S. C., title 35, sec. 42), as amended by the act approved August 21, 1941 (55 Stat. 657; U. S. C., title 35, secs. 42*a*–42*f*), and as further amended by the act of June 16, 1942 (56 Stat. 370), no person shall be debarred from receiving a patent for an invention made in the United States, nor shall any patent issued for such invention be deemed or held invalid under said act, merely because authorization to file an application for patent for such invention in any country foreign to the United States was not first obtained from the Commissioner of Patents: *Provided*, That the Commissioner subsequently authorized the filing of the application in such foreign country.

SEC. 7. That all applications for patents for inventions, discoveries, or designs officially accepted by the Patent Office and given a serial number and date of filing since the 8th day of September 1939, and prior to the passage of this act, which were executed by an agent of the applicant, and in which a duplicate copy of the specification and a new petition and oath, all duly signed and executed by the inventor or his executor or administrator has been or shall have been filed within a period of twelve months from the approval of this act, and the patents granted on such applications, shall have the same force and effect as if the papers signed and executed by the inventor, or his executor or administrator, had been filed on the date on which the papers signed by his agent were deposited in the United States Patent Office.

SEC. 8. That all applications for patents for inventions, discoveries, or designs filed since the 8th day of September 1939, in which the oath was executed before or authenticated by a consular officer, or other representative qualified to administer oaths, of a government acting in the interest of the Government of the United States, shall have the same force and effect as if said oath had been executed by the applicant before a consular officer of the United States.

SEC. 9. That in proceedings in the Patent Office and in the courts of the United States an applicant for a patent for an invention, discovery, or a design, or a patentee, shall not be permitted to establish the date of invention or discovery by reference to knowledge or use thereof, or other activity with respect thereto, in a country foreign to the United States, other than the filing in a foreign country of an application for a patent for the same invention, discovery, or design which, in accordance with the provisions of section 4887 of the Revised Statutes, as amended, or in accordance with and subject to the provisions of this act, is entitled to have the same force and effect as it would have had if filed in the United States on the date on which it was filed in such foreign country: *Provided*, That where an invention was made by a person, civil or military, during the time such person was domiciled in the United States or its possessions and was serving in a foreign country in connection with the prosecution of the war on behalf of the United States or its allies, the inventor thereof shall be entitled, in interference and other proceedings arising in connection with such invention, to the same rights of priority with respect to such invention as if the same had been made in the United States.

SEC. 10. No patent for an invention or a discovery granted under the provisions of section 1 or 3 of this act shall extend for a longer term than twenty years from the filing date of the first application regularly filed in any country disclosing the same invention, and in no event for a period in excess of seventeen years from the date of the grant of such patent.

SEC. 11. No claims for patent infringement shall be made or action brought by or on behalf of or for the benefit of any country or a national of any country against which the United States has declared the existence of a state of war, in respect to any manufacture, use, or sale since September 8, 1939.

SEC. 12. That nothing in this act shall affect any act which has been or shall be done by virtue of the special measures taken during World War II under legislative, executive, or administrative authority of the United States in regard to the rights of any enemy, or ally of an enemy, as defined by the Trading With the Enemy Act of October 6, 1917 (40 Stat. L. 411), as amended, in patents for inventions and designs.

SEC. 13. Section 10 (*a*) of the said Trading With the Enemy Act, relating to the filing and prosecution of applications for patents and the registration of trade-marks, prints, labels, and copyrights, by an enemy, or ally of an enemy, is hereby repealed.

SEC. 14. The benefits of this act shall not extend in favor of inventions, applications, or patents made by or owned by citizens of any country with which the United States shall have been at war since the 8th day of September 1939. The Alien Property Custodian shall be entitled to the benefits of this act.

SEC. 15. Nothing contained in this act shall be effective to nullify any judicial finding upon the validity of any patent for an invention, discovery, or a design heretofore made by a court of competent jurisdiction.

SEC. 16. If any clause, sentence, paragraph, or part of this act shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder thereof, but shall be confined in its operations to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.

Approved August 8, 1946.

Order No. 4094

APPLICATIONS EXECUTED AND FILED BY AGENTS

[Supplement to Order 3662, October 13, 1942]

U. S. PATENT OFFICE, *Washington 25, D. C., Sept. 9, 1946.*

1. *Legislation enacted.* Section 7 of Public Law 690, approved August 8, 1946, provides for the validation under certain conditions of agent executed applications accepted by the Patent Office under Order 3662. The section reads as follows:

"All applications for patents for inventions, discoveries, or designs officially accepted by the Patent Office and given a serial number and date of filing since the 8th day of September 1939, and prior to the passage of this act, which were executed by an agent of the applicant, and in which a duplicate copy of the specification and a new petition and oath, all duly signed and executed by the inventor or his executor or administrator has been or shall have been filed within a period of twelve months from the approval of this act, and the patents granted on such applications, shall have the same force and effect as if the papers signed and executed by the inventor, or his executor or administrator, had been filed on the date on which the papers signed by his agent were deposited in the United States Patent Office."

2. *Partial expiration of Order 3662.* Under the terms of the act only applications accepted by the Patent Office prior to August 8, 1946, can be validated. Hence agent executed applications filed on and after August 8, 1946, cannot be accepted. The first two paragraphs of Order 3662 are no longer in force insofar as acceptance of new agent executed applications is concerned.

3. *Inventions of citizens of enemy countries.* Section 14 of the act excludes inventions or applications made by or owned by citizens of enemy countries from any of the benefits of the act. Consequently, agent executed applications in which the inventor is a citizen of an enemy country cannot be validated, but this prohibition does not apply to applications vested by the Alien Property Custodian. All pending agent executed applications which cannot be validated (that is, applications in which the inventors are citizens of enemy countries and which have not been vested by the Alien Property Custodian) should be taken up immediately and a notice of abandonment mailed (see also paragraph 7 of this order). The application is then to be sent to the abandoned files the next time abandoned files are pulled. If the application is up for action by the Examiner, action on the merits should not be given.

4. *Suspended applications.* All agent executed applications which were otherwise in condition for allowance and in which action by the Office was suspended in accordance with the fourth paragraph of Order 3662 should be taken up and the following disposition made:

(*a*) If the application cannot be validated, it is to be treated as in paragraph 3 of this order.

(*b*) If properly signed and executed papers have been filed, a notice is to be written indicating that the applicant is entitled to the first filing date, and the case passed to issue or other appropriate action taken. Filing of the duplicate copy of the specification with the new petition and oath will constitute the ratification specified in the last paragraph of Order 3662.

(*c*) If papers have been filed but are defective, a notice should be written calling attention to the defects or omissions. The application remains suspended and if the papers are completed in time, it will be treated as in (*b*).

(*d*) In other cases, where the papers have not been filed, a letter is to be written calling attention to the act and to the last paragraph of Order 3662. The application remains suspended and if the papers are filed in time, it will be treated as in (*b*) or (*c*).

5. *Other pending applications.* Other pending agent executed applications which are not covered by paragraphs 3 and 4 of this order should have a notice written in them advising the applicant of the status of the application as in subparagraphs (*b*), (*c*) or (*d*) of paragraph 4. If the application is due for action by the Examiner within approximately the next two months, the notice is to be incorporated in the action when it is made. If the application will not be reached for action that soon, a notice should be sent as soon as possible, concluding with the statement that the application will be taken up for action in due course. If the application is not up for action by the Examiner, the notice should be sent immediately after the response by applicant is received. The notice is not necessarily an action in the case. No positive requirement for the papers or for correction or completion should be made. If the application is otherwise ready for allowance, the notice should so state and further action by the Office suspended as heretofore.

6. *Final roundup.* Properly signed and executed papers cannot be filed after August 8, 1947, to validate an agent executed application. A reasonable time after this date, and thereafter, all suspended applications and those up for action in which the proper papers have not been filed, or have not been filed in time, should be taken up by the Examiner and a notice of abandonment sent.

7. *Reference to Supervisors.* All applications in which a notice, or an action embodying a notice, as required by paragraphs 3, 4, 5, and 6 is being sent should be forwarded to the Supervisory Examiners, with the notice or action, before the letter is mailed. The Supervisory Examiners, in addition to reviewing the letters, will keep an index of all agent executed applications, and will forward the file to the Application Division for entry on its records and endorsement of the front of the file whenever necessary.

CASPER W. OOMS.
Commissioner.

Notice

EXTENSION OF PERIOD OF PRIORITY

PRELIMINARY NOTICE

U. S. PATENT OFFICE, *Washington 25, D. C., Aug. 30, 1946.*

1. Applicants for United States patents, or patentees, seeking an extension of the period of priority under section 1 of Public Law 690, approved August 8, 1946, are required by the act to make a specific request in writing, and to supply a certified copy of the foreign application, a sworn translation of the same if it is not in the English language, and, when necessary, proof of identity of parties.

2. Until and unless the required material is furnished, Examiners will act on applications in the usual way, that is, they will cite and use whatever references and grounds of rejection may be applicable, considering the actual filing date of the application in the United States as the only date to which it is entitled. However, where the statutory bar based on the granting of a foreign patent on an application filed more than one year prior to the filing of the application in the United States is applicable, the Examiner should, as far as possible, also apply other pertinent references and grounds so that in the event the statutory bar is subsequently removed by recourse to the act, prosecution of the application will have been advanced. Applicants must reply to Office actions within the stautory time limit and make as complete replies as are required in any other case.

3. When an application is filed with the object of obtaining the extended period of priority, the allegations in the oath with respect to patenting, publication and public use more than one year prior to the application may be modified in accordance with the last paragraph of section 1 of the act, but the customary oath will be required if the extended date is eventually refused. The customary allegation with respect to no prior foreign patenting on an application filed more than one year prior to the application in this country should, of course, be modified to correctly state the facts whenever necessary. Such applications may be filed any time before August 8, 1947, and need not be accompanied by the papers mentioned in the first paragraph hereof.

4. Persons filing the material required by section 1 and requesting the extended period of priority are not then required to prove that reciprocity exists with their particular country. The Patent Office will determine this fact in the first instance and will act accordingly. When reciprocity has been determined in connection with any country a notice will be published in the OFFICIAL GAZETTE.

5. When the required papers are filed and the extended period of priority requested in any case, the Examiner will refer the application immediately to the Supervisory Examiners for instructions as to whether reciprocity exists with respect to the particular country involved and will act accordingly. The existence of reciprocity will be determined by the Commissioner. The Examiners may be instructed to proceed with the examination of the application as to other matters pending this determination.

6. It will also be necessary for the Patent Office to determine in each case that the foreign application is "an application for patent for the same invention" as applied for in the United States (R. S. 4887). This determination will be made in the first instance by the Examiner. Attention is called to the fact that a similar and analogous requirement as to "the same invention" is in the reissue statute, R. S. 4916; mere readability of claims on the earlier case is not always sufficient to constitute "the same invention," and reissue decisions may be considered applicable in determining this question.

7. Any action taken by the Examiner granting or refusing the extended priority date should be referred to the Supervisory Examiners for review before the action is mailed.

8. Requests for extensions of time under section 3 of the act should be accompanied by the appropriate action and by a showing of the cause of the delay. These will be treated procedurally in the same manner as petitions to revive or petitions for delayed payment of a final fee, but a petition fee is not required. An applicant may apply for extensions under both section 1 and section 3 of the act.

9. No application coming under either section 1 or section 3 of the act shall be passed to issue without being first referred to the Supervisory Examiner.

10. Questions arising under the act shall be referred to the Supervisory Examiner.

CASPER W. OOMS.
Commissioner.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The Linde Air Products Company has entered the following patents on the Register of Patents, as available for licensing only, on terms set forth in their license agreements. Copies of agreements may be obtained from The Linde Air Products Company, 30 East 42d Street, New York 17, N. Y. Reg. Nos. 3,860 to 3,914 inclusive.

Reg. Nos. 3,860 to 3,873 inclusive relate to what the owners term "Unionmelt" welding process. The welding operation takes place under a blanket of welding composition of granular or powdered material in which the end of a bare welding electrode is continuously submerged. This welding composition is non-conductive when cold but conductive when molten. The inventor states that the weld is ordinarily completed in one pass, even in thick plates, and that there is scarcely any external evidence that a weld is being made. In some instances by using the welding composition as a backing for the seam, a double bead may be obtained on the front and back of the seam without the necessity of backing up the weld. Groups 35—43; 36—19.

Pat. 2,043,960. ELECTRIC WELDING. Patented June 9, 1936. Reg. No. 3,860.

Pat. 2,145,009. WELDING. Patented Jan. 24, 1939. Reg. No. 3,861.

Pat. 2,152,194. ELECTRIC WELDING. Patented Mar. 28. 1939. Reg. No. 3,862.

Pat. 2,200,737. ELECTRIC WELDING. Patented May 14, 1940. Reg. No. 3,863.

Pat. 2,269,538. ELECTRIC WELDING. Patented Jan. 13, 1942. Reg. No. 3,864.

Pat. 2,275,910. METHOD OF WELDING. Patented Mar. 10, 1942. Reg. No. 3,865.

Pat. 2,278,569. WELDING. Patented Apr. 7, 1942. Reg. No. 3,866.

Pat. 2,280,150. HEATING OF METALS. Patented Apr. 21, 1942. Reg. No. 3,867.

Pat. 2,293,163. WELDING. Patented Aug. 18, 1942. Reg. No. 3,868.

Pat. 2,294,439. METHOD OF AND APPARATUS FOR WELDING. Patented Sept. 1, 1942. Reg. No. 3,869.

Pat. 2,308,194. ELECTRIC WELDING. Patented Jan. 12, 1943. Reg. No. 3,870.

Pat. 2,326,865. ELECTRIC WELDING. Patented Aug. 17, 1943. Reg. No. 3,871.

Pat. 2,330,289. METHOD OF BUILDING UP SURFACES. Patented Sept. 28, 1943. Reg. No. 3,872.

Pat. 2,331,937. WELDING. Patented Oct. 19, 1943. Reg. No. 3,873.

Reg. Nos. 3,874 to 3,877 inclusive are offered for licensing on reasonable terms. They relate to method and apparatus for removing carbon and other combustible deposits from tubes of oil refining apparatus by burning in the presence of oxygen.

Pat. 1,901,803. METHOD OF DECARBONIZING OIL REFINING APPARATUS. Patented Mar. 14, 1933. Group 35—42—69. Reg. No. 3,874.

Pat. 1,901,804. PROCESS FOR REMOVING CARBON FROM TUBES. Patented Mar. 14, 1933. Group 35—42—69. Reg. No. 3,875.

Pat. 1,987,972. DECOKING LANCE. Patented Jan. 15, 1935. Group 35—42—69. Reg. No. 3,876.

Pat. 2,012,832. DECOKING LANCE. Patented Aug. 27, 1935. Group 35—42—69. Reg. No. 3,877.

Reg. Nos. 3,878 to 3,899 inclusive relate to what is termed by the owners as "Flame Hardening" and pertain to the treatment and hardening of a wide variety of metal bodies in which an oxyacetylene flame is employed.

Re. 21,897. PROCESS OF HEAT TREATING AND TORCH THEREFOR. Reissued Sept. 2, 1941. (Original No. 2,065,627, dated Dec. 29, 1936). Groups 35—42—43; 36—19. Reg. No. 3,878.

Pat. 1,768,159. APPARATUS FOR HARDENING METAL SURFACES. Patented June 24, 1930. Groups 35—42—43; 36—19. Reg. No. 3,879.

Pat. 1,768,160. MACHINE FOR HARDENING IRREGULAR METAL SURFACES. Patented June 24, 1930. Groups 35—42—43; 36—19. Reg. No. 3,880.

Pat. 1,924,296. HEAT TREATMENT OF CRANK SHAFTS. Patented Aug. 29, 1933. Groups 35—42—43; 36—19. Reg. No. 3,881.

Pat. 2,076,515. METHOD OF HEAT TREATING PLANE AND UNIDIMENSIONAL CURVED METALLIC SURFACES. Patented Apr. 6, 1937. Groups 35—42—43; 36—19. Reg. No. 3,882.

Pat. 2,089,014. METHOD AND APPARATUS FOR WELDING AND CUTTING. Patented Aug. 3, 1937. Groups 35—42—43; 36—19. Reg. No. 3,883.

Pat. 2,089,015. CONTROL SYSTEM FOR WELDING AND CUTTING MACHINES. Patented Aug. 3, 1937. Groups 35—42—43; 36—19. Reg. No. 3,884.

Pat. 2,092,897. BLOWPIPE NOZZLE. Patented Sept. 14, 1937. Groups 35—42—43; 36—19. Reg. No. 3,885.

Pat. 2,124,459. METHOD OF HEAT TREATING METALS. Patented July 19, 1938. Groups 35—42—43; 36—19. Reg. No. 3,886.

Pat. 2,170,876. MACHINE FOR SURFACE HARDENING METAL ARTICLES. Patented Aug. 29, 1939. Group 35—42—43. Reg. No. 3,886½.

Pat. 2,177,276. HEATING, WELDING, DESURFACING, OR CUTTING PROCESS AND APPARATUS. Patented Oct. 24, 1939. Groups 35—42—43; 36—19. Reg. No. 3,887.

Pat. 2,196,902. METHOD OF HEAT TREATING METAL BODIES. Patented Apr. 9, 1940. Groups 35—42—43; 36—19. Reg. No. 3,888.

Pat. 2,215,576. CONTROL SYSTEM FOR HARDENING AND SIMILAR OPERATIONS. Patented Sept. 24, 1940. Groups 35—42—43; 36—19. Reg. No. 3,889.

Pat. 2,232,809. MACHINE FOR SURFACE HARDENING METAL ARTICLES. Patented Feb. 25, 1941. Groups 35—42—43; 36—19. Reg. No. 3,890.

Pat. 2,254,700. HEAT TREATING APPARATUS. Patented Sept. 2, 1941. Groups 35—42—43; 36—19. Reg. No. 3,891.

Pat. 2,254,701. HEAT TREATING APPARATUS. Patented Sept. 2, 1941. Groups 35—42—43; 36—19. Reg. No. 3,892.

Pat. 2,261,624. HEAT TREATING APPARATUS. Patented Nov. 4, 1941. Groups 35—42—43; 36—19. Reg. No. 3,893.

Pat. 2,273,809. METHOD OF AND APPARATUS FOR HARDENING SURFACES OF METAL BODIES. Patented Feb. 17, 1942. Groups 35—42—43; 36—19. Reg. No. 3,894.

Pat. 2,274,005. METHOD OF AND APPARATUS FOR SURFACE HARDENING METAL ARTICLES. Patented Feb. 24, 1942. Groups 35—42—43; 36—19. Reg. No. 3,895.

Pat. 2,290,283. APPARATUS FOR HEAT TREATING METAL BODIES. Patented July 21, 1942. Groups 35—42—43; 36—19. Reg. No. 3,896.

Pat. 2,293,802. HEAT TREATING APPARATUS. Patented Aug. 25, 1942. Groups 35—42—43; 36—19. Reg. No. 3,897.

Pat. 2,295,522. BLOWPIPE HEAD. Patented Sept. 8, 1942. Groups 35—42—43; 36—19 . Reg. No. 3,898.

Pat. 2,297,293. FLAME HARDENING APPARATUS. Patented Sept. 29, 1942. Groups 35—42—43; 36—19. Reg. No. 3,899.

Reg. Nos. 3,900 and 3,901 relate to what the owners term "Powder Scarfing and/or "Powder Cutting" processes in which defective or excess metal is removed from metal bodies such as billets, blooms, slabs, etc., by the use of an oxyacetylene torch. The method includes depositing of a molten globule of metal at the starting point to reduce the starting time of the cutting operation.

The terms and conditions under which the owners will grant licenses are contained in their standard license agreement.

Pat. 1,957,351. METHOD OF REMOVING METAL FROM METAL ARTICLES. Patented May 1, 1934. Group 35—42—43. Reg. No. 3,900.

Pat. 2,205,890. METHOD OF CUTTING OR FLAME-MACHINING METAL. Patented June 25, 1940. Group 35—42—43. Reg. No. 3,901.

Reg. Nos. 3,902 to 3,908 inclusive relate to what the owner terms "Pressure Welding Process." They cover processes, machines and apparatus for butt welding rails or hollow cylindrical members, the heating being preferably done with oxyacetylene flame. The terms and conditions under which the owners will grant licenses are contained in their standard license agreement.

Pat. 1,856,560. TORCH HEAD. Patented May 3, 1932. Groups 35—42—43; 36—19. Reg. No. 3,902.

Pat. 2,047,305. WELDING MACHINE. Patented July 14, 1936. Groups 35—42—43; 36—19. Reg. No. 3,903.

Pat. 2,047,306. BUTT WELDING. Patented July 14, 1936. Groups 35—42—43; 36—19. Reg. No. 3,904.

Pat. 2,231,014. WELDING PROCESS AND APPARATUS. Patented Feb. 11, 1941. Groups 35—42—43; 36—19. Reg. No. 3,905.

Pat. 2,354,267. METHOD OF WELDING. Patented July 25, 1944. Groups 35—42—43; 36—19. Reg. No. 3,906.

Pat. 2,356,854. METHOD FOR TREATING WELDS. Patented Aug. 29, 1944. Groups 35—42—43; 36—19. Reg. No. 3,907.

Pat. 2,363,089. WELDING PROCESS AND APPARATUS. Patented Nov. 21, 1944. Groups 35—42—43; 36—19. Reg. No. 3,908.

Pat. 1,751,435. NECK RING FOR COMPRESSED-GAS CONTAINERS. Patented Mar. 18, 1930. Cap for protecting the valve of compressed gas containers, also serves as a means for handling or lifting the container. Group 33—73. Reg. No. 3,909.

Pat. 1,798,190. METHOD OF BUILDING WELDED TANKS AND OTHER MULTIPLATE STRUCTURES. Patented Mar. 31, 1931. Welding is accomplished without excessive buckling or other troublesome distortion of the plates. Groups 35—43; 36—19. Reg. No. 3,910.

Pat. 1,940,262. WELDING FLUX FOR NONFERROUS ALLOYS. Patented Dec. 19, 1933. Flux is particularly suitable for welding copper alloys which contain silicon. Groups 28—89; 34—31; 35—43. Reg. No. 3,911.

Pat. 1,961,117. METHOD OF WELDING COPPER ALLOYS, PARTICULARLY WROUGHT COPPER ALLOYS. Patented May 29, 1934. Method, particularly applicable for fabrication of containers for liquefied gases, in which welding of the thick-walled outer vessel may be accomplished in close proximity to a thin-walled inner vessel or lining without damaging the inner vessel. Groups 34—31; 35—43; 36—19. Reg. No. 3,912.

Pat. 2,087,678. REPRODUCING MACHINE. Patented July 20, 1937. Machine is adapted for simultaneously performing a plurality of cutting and shaping operations progressively along a line of travel. Group 35—41—43. Reg. No. 3,913.

Pat. 2,130,261. APPARATUS FOR WELDING. Patented Sept. 13, 1938. The puddle of molten metal is protected from exposure to air to produce a ductile or normalized weld, by directing upon the extended puddle in rear of the welding point a gas flame, of lower heat intensity than applied to the weld. Groups 35—43; 36—19. Reg. No. 3,914.

The following patents cover inking mechanisms with ink reservoirs for attachment to typewriting, adding, or similar machines, for continuously applying ink to the ribbon while machine is in use. The following are among numerous features of the inventions. The inking medium may be a secondary ribbon interwound with the usual ribbon around the same spools, or on separate spools; an endless belt, a disc, or a combination of rollers and discs. Ink may be supplied to the inking medium by a pad; a wick submerged in a reservoir; or flow under pressure or by gravity from a reservoir. The ink may be applied in a narrow thin line to different parts of the ribbon, thus permitting the re-inking of multi-colored ribbons. Patent No. 2,322,737 shows the mechanisms replacing part of a conventional typewriter with the inking medium and reservoir approximately where the ribbon and spools usually are. The ribbon and spools are vertically positioned on the face of the typewriter above the keyboard with driving gears associated with the spools for facilitating ease of operation. The inventor states that by using his mechanism, ribbons 80 to 90 yards long, which are initially lightly inked, may be used and continuously re-inked so that uniform typewritten matter of neat, clean, and attractive appearance will result throughout the life of the ribbon, which may be as long as three years. He also states that the mechanism does not burden normal operation of machine. (Owner) George E. Pelton. Address correspondence to W. R. Taylor, 166 East Ave., Hampton, Va. Group 35—71—72.

Pat. 1,826,568. SUPPLYING INK TO INKING RIBBONS. Patented Oct. 6, 1931. Reg. No. 3,915.

Pat. 2,005,503. SUPPLYING INK TO INK TRANSFER MEMBERS. Patented June 18, 1935. Reg. No. 3,916.

Pat. 2,074,969. SUPPLYING INK TO INK TRANSFER MEMBERS. Patented Mar. 23, 1937. Reg. No. 3,917.

Pat. 2,074,970. SUPPLYING INK TO INK TRANSFER MEMBERS. Patented Mar. 23, 1937. Reg. No. 3,918.

Pat. 2,074,971. INK CONVEYER RIBBON. Patented Mar. 23, 1937. Reg. No. 3,919.

Pat. 2,102,216. SUPPLYING INK TO INK TRANSFER MEMBERS. Patented Dec. 14, 1937. Reg. No. 3,920.

Pat. 2,104,469. SUPPLYING INK TO INK TRANSFER MEMBERS. Patented Jan. 4, 1938. Reg. No. 3,921.

Pat. 2,158,944. INK FOUNTAIN TYPING MACHINE. Patented May 16, 1939. Reg. No. 3,922.

Pat. 2,226,347. INK FOUNTAIN TYPING MACHINE. Patented Dec. 24, 1940. Reg. No. 3,923.

Pat. 2,322,737. INK FOUNTAIN TYPING MACHINE. Patented June 22, 1943. Reg. No. 3,924.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING AUGUST, 1946

EX PARTE DIXIE MEDICINE CORPORATION, Serial No. 481,616.

In a decision rendered August 1, 1946 (169 Ms. Dec. 104, 70 USPQ 366), *First Assistant Commissioner* Frazer reversed the action of the Examiner of Trade-Marks refusing to register to the Dixie Medicine Corporation, of Charlotte, N. C., a composite trade-mark comprising a geometrical design against which are displayed the letters "DMC", appropriated to a compound for the relief of muscular aches and pains and for a vitamin preparation on the ground that the mark is dominated by matter descriptive of the vitamin preparation.

After noting that information has been elicited that all the letters of the alphabet, except O, Q, and V, are now appropriated as vitamin designations, and that the particular letters "DMC" here involved are listed as being so appropriated; and further noting that applicant has agreed to disclaim the letters "D" and "C", it was held that upon the record presented, it appears that the public would have no occasion to attribute vitamin significance to the letter "M", even when standing alone and that a disclaimer of the letters "D" and "C" will be required before the mark is published for opposition.

After noting that applicant owns a registration issued June 2, 1925, and still subsisting when the instant application was filed of the letters "DMC" arranged in monogram style for a long list of medicinal preparations, it was held that it follows that applicant is entitled to the benefit of any reasonable doubt as to the registrability of the same or a closely similar mark upon a subsequent application to register, and that there appears to be sufficient doubt to warrant the proposed registration.

SILENT HOIST WINCH & CRANE CO. *v.* WILLAMETTE HYSTER COMPANY, Cancellation No. 4317.

In a decision rendered August 2, 1946 (169 Ms. Dec. 105, 70 USPQ 423), *First Assistant Commissioner Frazer* denied the request of Silent Hoist Winch & Crane Co., of Brooklyn, N. Y., for reconsideration of the decision of June 6, 1946 (588 O. G. 681, 69 USPQ 469) or, in the alternative, that the case be reopened for the taking of further testimony showing confusion between the trade-marks "Krane Kar" and "Karry Krane" since the testimony was taken in this case.

It was held that the grounds upon which reconsideration is sought were all carefully considered in reaching the decision and the arguments now advanced are not convincing that the decision was erroneous.

It was held that petitioner's rights in its "Krane Kar" mark have not been questioned nor was there any adjudication of respondent's right to use the "Karry Krane" mark, registration of which does not affect that right, and that all that was decided was that petitioner is not damaged by respondent's registration.

It was further held that the request to reopen might well be disposed of on the ground that there is no adequate showing to warrant such extraordinary relief, since to grant new trials seriatim as additional evidence develops would lead to perpetuity in litigation and petitioner's request contemplates a first step in that direction although, even were that step taken, it would not strengthen petitioner's case because the further testimony proposed to be adduced is nothing more than cumulative documentary evidence of precisely the same character as that which was held did not establish trade-mark confusion.

TINNERMAN PRODUCTS, INC., *v.* SPEED PRODUCTS COMPANY, Opposition No. 22,844.

In a decision rendered August 7, 1946 (169 Ms. Dec. 106, 70 USPQ 423), *First Assistant Commissioner Frazer* denied a petition for reconsideration of his decision rendered July 1, 1946 (589 O. G. 501, 70 USPQ 39), affirming the action of the Examiner of Interferences sustaining the opposition of Tinnerman Products, Inc., of Cleveland, Ohio, to the application of Speed Products Company, of Long Island City, N. Y., for registration of the word "Speed," and a design as a trade-mark for machine staples.

After noting that applicant petitions for rehearing on the rather broad ground that the decision is against the weight of the evidence and is not correct, in response to applicant's argument that use by its alleged predecessor of the registered mark "Speed Fastener," on stapling machines, constituted use of that mark on staples because staples always are sold with the machines, it was held that there is no evidence that the mark was ever affixed to staples within the meaning of the Trade-Mark Act and there was thus no trade-mark use in relation to such goods.

BROOKS CLOTHES *v.* BROOKS BROTHERS, Cancellation No. 4705.

In a decision rendered August 7, 1946 (169 Ms. Dec. 107, 70 USPQ 424), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of

Interferences denying the motion of Brooks Brothers, of New York, N. Y., to dismiss the petition of Brooks Clothes, of Baltimore, Md., to cancel trade-mark registration No. 103,889, issued April 20, 1915, and renewed, under the ten-year proviso of section 5 of the act of February 20, 1905, the registered mark being the notation "Brooks Brothers," which is appropriated to boys' and men's clothing—namely, hats, caps, gloves, hosiery; underwear of knit and textile material—namely, shirts, drawers and union suits, collars, mufflers, outer and negligee shirts, night shirts, pajamas; leather shoes and outer clothing—namely, overcoats, raincoats, coats, vests, and trousers.

After noting that the petition to cancel is predicated upon the proposition that the registrant did not enjoy exclusive use of the mark during the ten years next preceding February 20, 1905, as required by the statute and further noting that the ground of the motion is that the petition fails to allege use by petitioner of a similar mark prior to January, 1934, it was held that one opposing a registration under the ten-year proviso need only prove that strangers to the proceeding had used the mark sought to be registered during the critical period and that the applicant's use was therefore nonexclusive.

It was further held that the statute does not differentiate between mere names on the one hand and descriptive or geographical terms on the other hand, but forbids registration of all, save under the ten-year proviso, in precisely the same language.

It was held that manifestly one who is qualified to oppose a registration may seek its cancellation; in either case, he must prove damage, actual or prospective; whether or not that can be done in the instant case remains to be seen; and the denial of the motion to dismiss means nothing more than that the petition to cancel states a claim upon which relief can be granted.

EX PARTE ALPHONSE L. LUSSIER, Serial No. 473,995.

In a decision rendered August 9, 1946 (169 Ms. Dec. 109, — USPQ —), *First Assistant Commissioner Frazer* affirmed the ruling of the Examiner of Trade-Marks that the showing submitted by applicant, Alphonse L. Lussier, of Schenectady, N. Y., was insufficient to warrant the withdrawal of a reference on the ground of prima-facie abandonment. Applicant relied upon a title report from the Assignment Division of the Patent Office, from which it appears that the registrant is still the record owner of the cited registration, and a registered letter directed to the registrant and returned unclaimed by the post office.

After noting that applicant declined to supplement this showing by a report from a mercantile agency as required by the Examiner, insisting that the returned letter is prima-facie evidence of the strongest and most conclusive kind, it was held that the letter should not be accepted for any purpose, because the envelope does not bear the street address of the registrant as set forth in the registration; but in any event, it would prove nothing more than that the registrant is no longer doing business at that particular address.

It was further held that while registrant's present location may or may not be ascertainable by a reliable mercantile agency, nevertheless the report of such an agency would serve prima facie to establish present use or nonuse of his trade-mark; and there is no other convenient means of procuring that essential information; so that the Examiner's ruling was clearly right.

A. D. JUILLIARD & CO., INC., *v.* KLUGER, A LIMITED PARTNERSHIP, Opposition No. 23,211.

In a decision rendered August 9, 1946 (169 Ms. Dec. 110, 70 USPQ 425), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of A. D. Juilliard & Co., Inc., of New York, N. Y., to the application of Kluger, a Limited Partnership, also of New York, N. Y., for registration of the notation "Great Masters" as a trade-mark for rayon piece goods. Opposer relied upon its ownership of the trade-mark "Master Fabrics," which was registered nearly thirteen years prior to applicant's claimed date of first use, for woolen and worsted fabrics for coats and dresses for women's wear, the descriptive word "Fabrics" being disclaimed in the registration.

It was held that since the Examiner's conclusion that the goods of the parties are of the same descriptive properties is not challenged, the sole question for determination is whether the two marks, as applied to such goods, are confusingly similar.

In response to applicant's argument ascribing a distinctive meaning to the mark as related to the character of rayon print materials, because of its alleged genesis, it was held that the intended special significance of applicant's mark might well be unknown to many prospective purchasers, even as applied to these particular prints; and manifestly it would lack such significance if used upon conventional rayon fabrics, which of course fall within the broad description of goods as set forth in the application; so that the Examiner was right in ruling that the term "Master," in singular or plural form, would normally possess substantially the same meaning as applied to the respective goods; and that the marks of both parties are so dominated by this term as to be likely to cause confusion in trade and deception of purchasers.

EX PARTE AMERICAN TAR COMPANY, Serial No. 451,997.

In a decision rendered August 13, 1946 (169 Ms. Dec. 112, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-marks rejecting, on the ground of res adjudicata, the application of American Tar Com-

pany, of Spokane, Wash., to register a trade-mark where the application as originally filed was for copper oleate, coperlineum, specification creosote, commercial creosote oil, light creosote oil, benzol, toluol and solvent naphtha, but after an opposition to the application was sustained by the Examiner of Interferences, and on appeal by the Assistant Commissioner, applicant then amended its description of goods to cover copper oleate in paste or solution form, specification creosote, commercial creosote oil, and light creosote oil. In the opposition proceeding the opposer relied upon two registrations of marks for various petroleum oils and greases, that were held to be confusingly similar to applicant's mark. It also proved the use of these marks in connection with gasoline, which was held to be of the same descriptive properties as applicant's benzol, toluol and solvent naphtha.

It was held that the goods now remaining in the application do not have the same descriptive properties as any of the goods on which use of the opposer's marks was established, and the Examiner's ruling to the contrary was disapproved.

However, it was held that the proposed registration was properly refused on the ground of res adjudicata, since opposer had the right to assume that the opposition would be sustained or dismissed against the application as a whole; it would be an undue hardship and burden on an opposer to be obliged to make out a case with respect to each and every designation of goods named in the application opposed in order to successfully prevent the issuance of a registration on that application as to one or more of the goods named therein and to avoid successive opposition proceedings against the one application; if applicant disagreed with the Assistant Commissioner it was at liberty to appeal from his decision; and having failed to do so, it is estopped to relitigate the questions decided.

EX PARTE LASKIN BROTHERS, INC., Serial No. 445,060.

In a decision rendered August 14, 1946 (169 Ms. Dec. 117, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Laskin Brothers, Inc., of Philadelphia, Pa., the word "Nylonettes," under the provisions of the act of February 20, 1905, as a trade-mark for women's, misses', and girls' panties, slips, nightdresses, pajamas, combinations which are garments comprising a brassiere portion, an abdominal portion and a pantie portion, and petticoats, all made of nylon, on the ground that the mark is descriptive of the goods.

GENERAL MOTORS CORPORATION *v.* THE B. A. WESCHE ELECTRIC COMPANY, Opposition No. 23,307.

In a decision rendered August 14, 1946 (169 Ms. Dec. 114, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of General Motors Corporation, of Detroit, Mich., to the application of The B. A. Wesche Electric Company, of Cincinnati, Ohio, for registration of the word "Welco" as a trade-mark for electric motors of all kinds and thrusters—i. e., units comprising an electric motor having mechanical means associated therewith for applying movement. Opposer owns the well-known trade-mark "Delco," which has been registered for numerous articles of electrical equipment; but none of its registrations antedates applicant's first use of the "Welco" mark on motors.

It was held that it is clearly established by the evidence that prior to applicant's adoption of this mark opposer had been manufacturing and selling starting, lighting and ignition systems to automobile companies, and the word "Delco" was the trade-mark for these systems; and that opposer's starting system necessarily includes an electric motor as one of its essential parts.

After noting that applicant does not question the close similarity of the marks, but argues that there is no likelihood of confusion in their use, it was held that nevertheless applicant's goods are described as electric motors of all kinds, which description obviously embraces automobile engines; applicant's definition of "thrusters" aptly describes opposer's starting system; and even if the motor of the starting system be ignored, an automobile motor and its starter are so closely related as to be merchandise of the same descriptive properties.

In response to applicant's argument that opposer is estopped by laches to maintain this proceeding because applicant has used the trade-mark in the sale of its motors since June, 1918, without protest from the opposer, it was held that while it may well be that the opposer has lost the right to prevent applicant's use of its mark, the doctrine of laches is inapplicable to opposer's statutory right of opposition; manifestly the application to register could not be opposed until filed, nor could opposer be damaged by the proposed registration unless it issued; and applicant's right to use the mark is not here in question, since all that is decided is that applicant's ownership is not exclusive, and that opposer would be damaged were the registration granted, which constitutes a prima-facie evidence of ownership.

EX PARTE CARBONELL Y COMPANIA DE CORDOBA, S. A., Serial No. 458,388.

In a decision rendered August 15, 1946 (169 Ms. Dec. 115, — USPQ —), *First Assistant Commissioner Frazer* reversed the action of the Examiner of Interferences refusing to register to Carbonell y Compania de Cordoba, S. A., of Cordoba, Spain, a composite trade-mark on the ground that it comprises scandalous matter and includes a surname not distinctively displayed. The mark is appropriated to olive oil on which it is claimed to have been used since 1867. It was registered in Spain in 1906 which registration has been renewed. It was also registered in the United States in 1922 but that registration was inadvertently allowed to lapse. Its objectionable features, in the Examiner's opinion, were the representation of a bearded patriarchal figure floating in the air with hands extended and the Spanish words "La Providencia" so that, in the Examiner's opinion, the mark thus purports to be the name and picture of the Deity.

After noting that applicant has now agreed to disclaim the name, it was held that that ground of rejection need not be considered.

After noting that consultation with the Patent Office linguists reveals that the term "La Providencia" has no religious significance since the Spanish equivalent of our reference to the Supreme Being is "La Divina Providencia" which requires the second word to convey that meaning, it was held that viewed as a whole the mark is not scandalous within the meaning of the statute; and upon the filing of an appropriate disclaimer of applicant's name, should be passed for publication.

CHICAGO FLEXIBLE SHAFT COMPANY *v.* AMERICAN GAS MACHINE COMPANY, Cancellation No. 4362.

In a decision rendered August 19, 1946 (169 Ms. Dec. 117, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the petition of Chicago Flexible Shaft Company, of Chicago, Ill., to cancel trade-mark registration No. 341,639, issued December 15, 1936, under the provisions of the act of February 20, 1905, to American Gas Machine Company, of Albert Lea, Minn. The mark of the registration sought to be canceled is the notation "Sunflame," and the goods to which it is appropriated are described as oil burning heaters. Petitioner owns the trade-mark "Sunbeam," separately registered in 1929 and 1934, respectively, for portable electric radiant heaters for general use and electrically operated devices consisting of room and space heaters.

After noting that respondent appears to concede that the goods of the parties possess the same descriptive properties, but argues that because they are specifically different, and the marks are not identical, its registration should not be disturbed, it was held that the only distinction between respondent's oil burning heaters and petitioner's electrically operated room and space heaters resides in the fact that one is operated by oil and the other by electricity, and for trade-mark purposes that is a distinction without a difference; and that the marks of the parties are confusingly similar as applied to merchandise of the same descriptive properties.

After noting that petitioner took no testimony, so that there is no evidence of actual confusion, and presumably none has occurred, in response to respondent's contention that petitioner has failed to prove itself injured by the registration sought to be canceled, it was held that all that petitioner was required to show was that the marks are confusingly similar and therefore their concurrent use is likely to deceive purchasers.

EX PARTE THE RAY EWING COMPANY, Serial No. 478,707.

In a decision rendered August 20, 1946 (169 Ms. Dec. 120, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to The Ray Ewing Company, of South Pasadena, Calif., the notation "Vita-Mino-Mix," under the act of February 20, 1905, as a trade-mark for vitamin and amino acid supplement for poultry and animal feeds on the ground that the mark is descriptive of the goods, the word "Mix" being disclaimed.

After noting that it was the Examiner's opinion that the syllable "Min" is but a part of the word "Vitamin" in the expression, and that the word "Vita" as applied to a vitamin product has no trade-mark force it was held that the Examiner was unwarrented in holding that no one has any right in a composite mark to the combination of "Vita" with other matter, but that the Examiner was correct in finding applicant's mark to be descriptive, since its undisclaimed portion, "Vita-Mino," is nothing more than the word "vitamin" with the interposition of a hyphen and the addition of an "o"; without the "o" it would be clearly nonregistrable, and the addition of this letter is not significant.

EX PARE THE MARLIN FIREARMS COMPANY, Serial No. 461,378.

In a decision rendered August 20, 1946 (169 Ms. Dec. 121, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to The Marlin Firearms Company, of New Haven, Conn., the word "Marlin," claimed to have been used since on or about the 27th day of May, 1943, as a trade-mark for talcum powder, after-shave lotion, and deodorants.

After noting that the application was filed under a proviso of section 5 of the act of February 20, 1905, and that it was rejected in view of a registration of the trade-mark "Marlene," for liquid wave set, wave set powder, hair oil, brilliantine, and hand lotion, issued January 26, 1937, it was held that if these goods are of the same class as applicant's, and the two marks are so similar as to be likely to deceive, then manifestly the proposed registration is expressly forbidden.

It was held that it is clear beyond doubt that the goods are all of the same descriptive properties.

It was held that the Examiner was right in ruling that the trade-mark in question are confusingly similar.

After noting that applicant attempted to make a prima-facie showing that the registered mark is abandoned it was held that the Examiner was right in refusing to accept the showing, since the most that can be said of the showing presented is that it indicates present nonuse of the mark, and that is clearly insufficient.

AIR KING PRODUCTS COMPANY, INC., *v.* SAMUEL M. BERNSTEIN, Opposition No. 23,299.

In a decision rendered August 21, 1946 (169 Ms. Dec. 122, — USPQ —) *First Assistant Commissioner Frazer* reversed the action of the Examiner of Interferences who had dismissed the opposition of Air King Products Company, Inc., of Brooklyn, N. Y., to the application of Samuel M. Bernstein, of Chicago, Ill., for registration of a trade-mark for electric fans, the mark comprising the surname "Berns," which is disclaimed; the notation "Air King"; and certain more or less conventional design features. One ground of opposition was that applicant's mark constitutes an appropriation of opposer's corporate name.

It was held that applicant's mark is plainly dominated by the words "Air King."

In response to applicant's contention that his composite mark is not merely the name of a corporation it was held that the inclusion of additional features in a mark dominated by a name does not render such a mark registrable; and it is immaterial that opposer's goods and applicant's are of different descriptive properties, so that the opposition should have been sustained.

EX PARTE STEPHEN JANIK, Serial No. 461,851.

In a decision rendered August 23, 1946 (169 Ms. Dec. 126, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Stephen Janik, of Niagara Falls, N. Y., the word "Cherioca" as a trade-mark for a nonalcoholic, noncereal, maltless beverage, sold as a soft drink and sirup and extract for making the same, in view of a prior registration of the notation "Cherri-O" for identical goods.

It was held that the two marks are confusingly similar seems obvious, particularly in view of the kind of merchandise with which they are used.

In response to applicant's argument that the "Cherri" portion of the registered mark is descriptive it was held that be that as it may, the registration was effected under the provisions of the act of February 20, 1905; hence its validity may not be questioned in this ex parte proceeding; neither is it important that the "Cheri" portion of applicant's own mark is nondescriptive, and when correctly pronounced differs slightly in sound from "Cherri," for the fact remains that the two marks as spoken, regardless of pronunciation, are so nearly the same as to be practically indistinguishable; and that is the manner in which they are most likely to be used by the public.

EX PARTE AUGUST WALTER GUSTAFSON, Serial No. 468,513.

In a decision rendered August 23, 1946 (169 Ms. Dec. 129, — USPQ —) *First Assistant Commissioner Frazer* reversed the action of the Examiner of Trade-Marks refusing to register to August Walter Gustafson, of Corpus Christi, Tex., the notation "Choke-Proof," under the provisions of the act of March 19, 1920, as a trade-mark for dusting machines used in applying insecticidal powders to vegetation.

After noting that the Examiner's position is that the mark merely describes a desirable characteristic of applicant's dusting machines and therefore is incapable of indicating origin it was held that since applicant has submitted evidence tending to establish that the mark has been recognized by the trade as identifying his machines, and its registration will not deprive competitors of access to descriptive expressions of equivalent import, the mark is registrable under the liberal terms of the 1920 act, where descriptiveness is no bar to the registration of a mark that has acquired trade-mark significance.

OAKITE PRODUCTS, INC., *v.* WILLIAM C. HAUSER, Opposition No. 23,770.

In a decision rendered August 23, 1946 (169 Ms. Dec. 125, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of Oakite Products, Inc., of New York, N. Y., to the application of William C. Hauser, of Toledo, Ohio, for registration of a trade-mark for a cleaning preparation on the ground that applicant's mark, the word "Organite," is confusingly similar to opposer's trade-mark "Oakite," registered and in use by opposer for many years before applicant entered the field.

After noting that it is stipulated that opposer's mark is used on liquid cleaning preparations recommended for all of the purpose for which applicant's liquid "Organite" cleaning preparation is recommended it was held that "Oakite" and "Organite" are both coined words, having no other meaning than as trade-marks; they are somewhat similar in appearance, and do not differ greatly in sound, so that in view of the character and the substantial identity of the goods to which they are applied, and resolving doubts in opposer's favor, their concurrent use would be reasonably likely to cause confusion in trade.

MCKESSON & ROBBINS, INCORPORATED, *v.* ORMONT DRUG & CHEMICAL CO., INC., Opposition No. 23,727.

In a decision rendered August 23, 1946 (169 Ms. Dec. 127, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences dismissing the opposition of McKesson & Robbins, Incorporated, of New York, N. Y., to the application of Ormont Drug & Chemical Co., Inc., of Long Island City, N. Y., for registration of the word "Nebudrin" as a trade-mark for bacteriostatic preparations for the treatment of congestion in the membranes of nose and throat. The opposition was based upon opposer's ownership of the trade-mark "Aqua-Drin," previously registered for nose drops and nose spray.

After noting that the sole question raised on the appeal is whether the marks, as applied to the goods described, are confusingly similar, and that the Examiner was of the opinion that they are not, it was held that the ruling of the Examiner was correct since, although the marks have the same final syllable, viewed as a whole they are unlike in appearance, sound and significance.

MCKESSON & ROBBINS, INCORPORATED, *v.* PALMO PRODUCTS CO., INC., Opposition No. 23,673.

In a decision rendered August 23, 1946 (169 Ms. Dec. 128, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of McKesson & Robbins, Incorporated, of New York, N. Y., to the registration of a trade-mark applied for by Palmo Products Co., Inc., of Hartford, Conn., for soap—namely, soap and bar type soap—but not limited thereto. Applicant's mark includes the word "Palmo," reversely printed in capital letters that diminish in height from each end to accommodate a circle in which are depicted a hand showing the palm upwards, a number of palm trees and the representation of a face in a circle simulating the sun. Opposer relied upon two registrations, renewed in its name, respectively covering the notation "Royal Palm" and the representation of a palm tree. Both certificates list numerous articles of merchandise, including green soap (soft soap U. S. P.).

It was held that applicant correctly states that the only issue involved is that of similarity of marks.

In response to applicant's assertion that the word "palm" in the soap art is publici juris, it was held that neither the argument nor the registrations cited to sustain the point may be considered in this proceeding. Moreover, if the word "Palm" or its pictorial equivalent in opposer's marks is descriptive as applicant insists, then so also is the word "Palmo" in the mark it seeks to register; for the addition of the letter "o" is not significant, so that applicant in effect argues that its own mark is nonregistrable.

After noting that applicant concedes that its goods would be called for by the word "Palmo" it was held that that word is undoubtedly the dominant feature of its mark so that the Examiner of Interferences rightly ruled that the similarities of the marks are such that confusion in trade is reasonably likely to occur, particularly inasmuch as in applicant's mark the palm is emphasized by being repeated in pictorial form in the representation of the palm of the human hand and in the palm tree.

NOXON, INC., *v.* NOX-RUST CORPORATION, Cancellation No. 4425.

In a decision rendered August 27, 1946 (169 Ms. Dec. 130, — USPQ —) *First Assistant Commissioner Frazer* reversed the action of the Examiner of Interferences who had sustained the petition of Noxon, Inc., of Ozone Park, N. Y., to cancel trade-mark registration No. 405,747, issued February 22, 1944, under the provisions of the act of February 20, 1905, to Nox-Rust Corporation, of Chicago, Ill. The mark of the registration sought to be canceled is the notation "Nox-Rust," which is appropriated to rust inhibiting protective coating in the nature of ready mixed paint for metallic surfaces. It has been in use since 1937. Petitioner relied upon its ownership of the trade-mark "Noxon," previously registered for metal polish, for cleaner polish for metals, glass, and porcelain, and for finishes for floors and other furniture surfaces—namely, waxes in solid and liquid form, tire paint, and paint enamels.

After noting that in recent years none of these goods except the cleaner polish have been manufactured, and that respondent thus argues that they should be disregarded, it was held that the Examiner of Interferences properly overruled this contention.

After noting that it was the Examiner's opinion that while petitioner's goods and respondent's are specifically different and are neither competitive nor substitutable one for the other, they are nevertheless quite generally related, and are of the same descriptive properties within the meaning of the Trade-Mark Act, it was held that broadly speaking, the Examiner's holding in this respect is right, but nevertheless the specific differences between the goods are such as to insure against confusion in their sale under the partially similar trade-marks here in question, so that the petition should have been dismissed.

EX PARTE PIPE COUPLINGS, INC., Serial No. 482,115.

In a decision rendered August 27, 1946 (169 Ms. Dec. 132, — USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Pipe Couplings, Inc., of New York, N. Y., a mark for pipe coupling gaskets composed of rubber, synthetic rubber, and plastics or combinations thereof. The mark consists of the letter "V" projecting into a cross section of a pipe coupling gasket, such as applicant sells. The application was rejected in view of a prior registration of the letter "V" for gaskets.

After noting that applicant concedes that the goods in question, broadly speaking, are of the same descriptive properties, it was held that the goods may even be closely related, but even if the goods are specifically different, the proposed registration was properly refused, since applicant has appropriated the entire mark of the reference as the dominant portion of the mark it seeks to register, so that concurrent use of the two marks upon goods only broadly of the same descriptive properties would inevitably result in confusion.

After noting that, apparently unknown to the Examiner, the device into which the letter "V" of applicant's mark projects is now admitted to be a

representation of applicant's goods, it was held that the mark appears to be nonregistrable under the act of 1905 for the additional reason that it is descriptive.

CELANESE CORPORATION OF AMERICA *v.* AMERICAN VISCOSE CORPORATION, Cancellation No. 4321.

In a decision rendered August 30, 1946 (169 Ms. Dec. 133, — USPQ —.) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences dismissing the petition of Celanese Corporation of America, of New York, N. Y., to cancel trade-mark registration No. 403,937, issued October 26, 1943, under the provisions of the act of February 20, 1905, to American Viscose Corporation, of Wilmington, Del. Petitioner took no testimony but served notice under rule 154 (*e*) that at final hearing it would rely upon a pleaded assignment which was recorded in the Patent Office. The Examiner of Interferences dismissed the petition without regard to the merits of the case because petitioner failed to produce and file the assignment.

It was held that when petitioner learned of its apparently inadvertent failure to make of record a copy of the recorded assignment, its obvious remedy was by motion to reopen; having failed to avail itself of that remedy, it must abide by the consequences.

It was held that presumably petitioner owns the registration upon which it relies, but mere surmise cannot take the place of proof; and under the rules of evidence there can be no doubt but that the Examiner of Interferences correctly dismissed the petition for cancellation.

However, the First Assistant Commissioner stated that it seems proper to say that in his opinion, had petitioner proved its alleged ownership, the petition should have been sustained. The goods named in the two registrations are identical plastic materials. The marks are "Acwalite" and "Avcolite," both of which are coined expressions that would have no significance to the public other than as trade-marks. And in sound and appearance they are practically indistinguishable. Were this an opposition proceeding involving respondent's application to register, resort could be had to the prior registration regardless of ownership; but in a cancellation proceeding such practice is not permissible.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 24, 1946

[VOL. 590. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 488,416. PLYMOUTH WHOLESALE DRY GOODS CORPORATION, New York, N. Y. Filed Sept. 13, 1945.

Hearthstone

FOR FLOWER SEEDS, VEGETABLE SEEDS AND GRASS SEEDS.
Claims use since Feb. 13, 1945.

Ser. No. 492,433. THE FIRESTONE TIRE & RUBBER COMPANY, Akron, Ohio. Filed Nov. 30, 1945.

FOAMEX

FOR PARTLY PREPARED SPONGE RUBBER PADDING, SHEETS, AND BLOCKS OF SPONGE RUBBER, AND RUBBER SUBSTITUTES (USED IN THE FURTHER FABRICATION OF COMPLETED ARTICLES).
Claims use since July 28, 1943.

Ser. No. 492,436. THE GRIESS-PFLEGER TANNING CO., Waukegan, Ill. Filed Nov. 30, 1945.

COMBOTAN

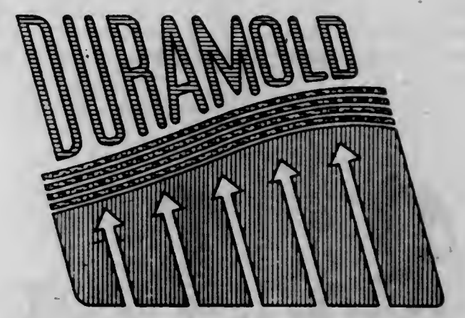
FOR SHOE SIDE UPPER LEATHER.
Claims use since Nov. 1, 1945.

Ser. No. 495,385. J. M. HUBER, INC., New York, N. Y. Filed Jan. 25, 1946.

LIPOL

FOR VULCANIZABLE COMPOSITION HAVING RUBBER-LIKE QUALITIES IN GRANULAR OR SHEET FORM FOR MECHANICAL RUBBER GOODS SUCH AS SOLES AND SLABS.
Claims use since Jan. 8, 1946.

CLASS 2



RECEPTACLES

Ser. No. 488,417. PLYMOUTH WHOLESALE DRY GOODS CORPORATION, New York, N. Y. Filed Sept. 13, 1945. Under the act of February 20, 1905, as amended June 10, 1938.

Hearthstone

FOR HOSE REELS, CLOTHES HAMPERS, VACUUM BOTTLES, AND VACUUM JUGS.
Claims use since Feb. 13, 1945.

Ser. No. 490,013. DURAMOLD AIRCRAFT CORPORATION, New York, N. Y. Filed Oct. 16, 1945.

In the mark the word "Duramold" appears in blue, the four stripes underneath the word are orange, and the field into which the arrows extend is red.

FOR MOLDED LAMINATED RECEPTACLES—NAMELY, PLYWOOD BOXES AND PLYWOOD GASOLINE TANKS FOR AIRCRAFT.
Claims use since Nov. 22, 1942.

Ser. No. 496,100. PAPER PACKAGE COMPANY, Indianapolis, Ind. Filed Feb. 6, 1946.

C-PAX

The word "Pax" is disclaimed apart from the mark.
FOR TRANSPARENT BOXES COMPOSED OF CELLULOSE ACETATE EITHER ALONE OR IN COMBINATION WITH CARDBOARD.
Claims use since Jan. 31, 1946.

Ser. No. 502,092. HERMAN H. WEHRINGER, Upper Montclair, N. J. Filed May 14, 1946.

CORDTAINER

FOR REELS FOR ELECTRIC CORD, CABLE, AND OTHER FLEXIBLE LINEAR MATERIAL.
Claims use since Apr. 30, 1946.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 485,407. A. GALEWSKI & SONS, INC., New York, N. Y. Filed July 3, 1945.

TRAVEL MORE

The word "Travel" is disclaimed apart from the mark.
FOR TRUNKS, SUITCASES, VALISES, TRAVELLING CASES, AND HANDBAGS.
Claims use since Mar. 1, 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 496,849. DUNCAN R. MACKENZIE, doing business as Duncan Mackenzie Company, New York, N. Y. Filed Feb. 18, 1946.

Baa-Baa

FOR COMPOUND FOR WASHING WOOLENS.
Claims use since Mar. 13, 1945.

Ser. No. 496,911. HOOD CHEMICAL COMPANY, INC., New York, N. Y. Filed Feb. 19, 1946.

FOR HOUSEHOLD CLEANER.
Claims use since Jan. 4, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 472,191. MORRIS E. ELLIOTT, doing business as Elliott-Drugs, Connersville, Ind. Filed July 13, 1944.

OROLAVE

FOR MOUTH WASH AND GARGLE.
Claims use since July 1, 1934.

Ser. No. 484,190. SANDER BRICHTA, doing business as Sander B Company, Phoenix, Ariz. Filed June 6, 1945.

FLEETICK

FOR ANT EXTERMINATOR PREPARATIONS.
Claims use since May 9, 1945.

Ser. No. 487,821. BON JOHNS BERWALD, Bay Shore, Long Island, N. Y., assignor to Robert T. Plate, Detroit, Mich. Filed Aug. 31, 1945.

VISTA LIPS

No claim is made to the word "Lips" apart from the mark as a whole.
FOR MIRROR AND LIPSTICK ALL IN ONE.
Claims use since Apr. 21, 1941.

Ser. No. 488,084. HENRIETTE HOTTERMANS FIEULLIEN, Brussels, Belgium. Filed Sept. 7, 1945.

ROBYMONA

FOR PERFUMERY.
Claims use since January 1945.

Ser. No. 490,722. WETHERBOLT'S PERFUME CO. Chicago, Ill. Filed Oct. 29, 1945.

RED LOVELY and *Dangerous*

No claim is made to the word "Red" apart from the mark.
FOR PERFUME AND COLOGNE.
Claims use since Apr. 26, 1945.

Ser. No. 492,098. ROYCEMORE TOILETRIES, INC., Chicago, Ill. Filed Nov. 23, 1945.

TRELLIS

FOR COLOGNE AND SHAMPOO.
Claims use since Sept. 14, 1940.

Ser. No. 492,713. FRANZ KLEIN, doing business as Coeur Dame Laboratories, Newark, N. J. Filed Dec. 5, 1945.

CD

Coeur dame

FOR NIGHT SKIN CREAM, COLD CREAM, CLEANSING CREAM, HAND CREAM, AND OTHER CREAMS FOR APPLICATION TO THE SKIN; LOTIONS FOR THE SKIN AND HAIR; LIPSTICKS; MAKE-UP CREAMS AND LOTIONS; BATH SALTS AND BATH OILS; FACE AND TOILET POWDERS.
Claims use since Oct. 2, 1945.

Ser. No. 492,947. NOVOCOL CHEMICAL M'F'G. CO. INC., Brooklyn, N. Y. Filed Dec. 8, 1945

Therapules

FOR MEDICAMENTS—NAMELY, ESTROGENIC SUBSTANCE AND NIKETHAMIDE, USEFUL FOR SUPPLYING DEFICIENCY IN HORMONES AND FOR A RESTORATIVE IN CASE OF SHOCK, RESPECTIVELY.
Claims use since Nov. 9, 1945 on estrogenic substance, and on Nikethamide since Nov. 28, 1945.

Ser. No. 493,152. TEEN TIMER LABORATORIES CO., INC., New York, N. Y. Filed Dec. 12, 1945.

Teentimer

FOR PERFUMES, COLOGNES, DEODORANTS, HAND LOTIONS, SHAMPOOS, FACE AND HAND CREAMS, AND FACE AND BODY DUSTING POWDERS.
Claims use since Apr. 30, 1945.

Ser. No. 493,306. ABBOTT LABORATORIES, North Chicago, Ill. Filed Dec. 15, 1945.

PYRAHEXYL

FOR PRODUCT FOR USE IN THE TREATMENT OF NEUROSIS, AS FOR EXAMPLE ADDICTION TO ALCOHOL OR NARCOTICS, AND TO BE USED ONLY UNDER THE DIRECTION OF A PHYSICIAN.
Claims use since Oct. 28, 1942.

Ser. No. 493,564. MILES LABORATORIES, INC., Elkhart, Ind. Filed Dec. 19, 1945. Under 10-year proviso.

MILES

FOR SEDATIVE IN EFFERVESCENT AND/OR LIQUID FORM FOR NERVOUS HEADACHE, SLEEPLESSNESS AND RESTLESSNESS, NERVOUS IRRITABILITY AND EXCITABILITY.
Claims use since 1880.

Ser. No. 495,859. BRISTOL LABORATORIES INC., Syracuse, N. Y. Filed Feb. 2, 1946.

BRISLAB

FOR PHARMACEUTICAL PREPARATIONS—NAMELY, PENICILLIN, LIVER EXTRACT, ESTROGENIC SUBSTANCE IN OIL, IRON CACODYLATE, AND EMETINE HYDROCHLORIDE.
Claims use since Nov. 29, 1945.

Ser. No. 496,449. THE KNOX COMPANY, Los Angeles, Calif. Filed Feb. 12, 1946.

The letter "I" is disclaimed apart from the mark.
FOR PREPARATION INDICATED IN AND FOR THE CARE, COMFORT, HYGIENE AND TREATMENT OF THE EYES.
Claims use since Oct. 5, 1945.

Ser. No. 496,650. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Feb. 15, 1946.

THERA-CONCEMIN

FOR VITAMIN CAPSULE FOR USE IN VITAMIN DEFICIENCIES.
Claims use since Jan. 24, 1946.

Ser. No. 496,688. CONSOLIDATED COSMETICS, Chicago, Ill. Filed Feb. 16, 1946.

A DROP HERE-AND THERE

No claim is made to the word "Drop" alone.
FOR PERFUME, HAND LOTION, LIQUID BRILLIANTINE, AND HAIR TONIC.
Claims use since Feb. 13, 1946.

Ser. No. 496,763. LOUIS H. BURNS, Kansas City, Mo. Filed Feb. 18, 1946.

FOLAMIN

FOR PROTEIN HYDROLYSATE OBTAINED FROM PRIMARY YEAST, AND DEXTROSE, USED PRINCIPALLY AS A BLOOD BUILDER AND FOOD SUPPLEMENT FOR THE HUMAN BODY.
Claims use since Dec. 8, 1945.

CLASS 7
CORDAGE

Ser. No. 501,281. RIVERSIDE & DAN RIVER COTTON MILLS, INC., doing business as Dan River Mills, Danville, Va. Filed May 1, 1946.

FLORABOND

FOR FLORISTS' TWINE.
Claims use since Mar. 30, 1946.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 502,864. PHILLIP W. BAILEY, doing business as West Coast Stained Shingle Co., Seattle, Wash. Filed May 27, 1946.

OLYMPIC

FOR STAINED WOOD SHINGLES.
Claims use since April 1938.

CLASS 13
HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 474,081. CLAYTON MARK & COMPANY, Evanston, Ill. Filed Sept. 11, 1944.

HYDRO

FOR UNIONS FOR CONNECTING PIPES OR RODS AND UNION CHECK VALVES.
Claims use since Mar. 3, 1930.

Ser. No. 494,566. MARKWELL MFG. CO., INC., New York, N. Y. Filed Jan. 10, 1946.

MASTER

Applicant is the owner of Reg. No. 384,872.
FOR STAPLES USED IN STAPLING MACHINES FOR FASTENING PAPERS, CARDBOARD, FABRICS, METAL, TOGETHER, ALSO FOR FASTENING PAPERS, CARDBOARD, METAL, ON TO WOOD.
Claims use since Dec. 27, 1940.

Ser. No. 496,999. WELLS MANUFACTURING COMPANY, Dayton, Ohio. Filed Feb. 20, 1946.

The word "Mist" is disclaimed apart from the mark.
FOR LAWN SPRINKLERS.
Claims use since Dec. 6, 1945.

CLASS 16
PAINTS AND PAINTERS' MATERIALS

Ser. No. 492,973. U. S. PAINT, LACQUER & CHEMICAL CO., St. Louis, Mo. Filed Dec. 8, 1945.

VITRONAL

FOR READY-MIXED PAINTS.
Claims use since Nov. 1, 1945.

Ser. No. 496,668. SAPOLIN CO. INC., New York, N. Y. Filed Feb. 15, 1946.

RUSTROL

FOR ALUMINUM PAINTS AND OTHER RUST INHIBITING PAINTS FOR INDOOR AND OUTDOOR USE.
Claims use since Feb. 1, 1946.

Ser. No. 496,698. THE GRAND UNION COMPANY, New York, N. Y. Filed Feb. 16, 1946.

GRAND UNION

FOR FURNITURE POLISH AND FLOOR WAX.
Claims use since 1895 on furniture polish and since 1935 on floor wax.

CLASS 17
TOBACCO PRODUCTS

Ser. No. 481,894. RAMON GONZALEZ Y GUTIERREZ, doing business as Ramon Gonzalez & Co. (Sociedad en Comandita), Habana, Cuba. Filed Apr. 9, 1945.

Applicant disclaims the word "Havana" apart from the mark.
FOR CIGARS.
Claims use since 1944.

CLASS 21
ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 487,281. SHELDON ELECTRIC CO., INC., Irvington, N. J. Filed Aug. 18, 1945.

ATOMIC

FOR FLUORESCENT STARTER SWITCHES, ELECTRIC RECTIFIER BULBS AND RADIO TUBES.

[ACT OF FEBRUARY 20, 1905]

SEPTEMBER 24, 1946

424,133. WATERPROOF FABRICS. MOISTURE PROOF FABRICS, INC., New York, N. Y.
Filed November 20, 1937. Serial No. 399,975. PUBLISHED FEBRUARY 8, 1938. Class 42.

424,134. UMBRELLAS. SEARS, ROEBUCK AND CO., Chicago, Ill.
Filed June 9, 1944. Serial No. 471,105. PUBLISHED JULY 2, 1946. Class 41.

424,135. WHEAT FLOUR. INTERNATIONAL MILLING COMPANY, Wilmington, Del.
Filed June 27, 1944. Serial No. 471,703. PUBLISHED AUGUST 28, 1945. Class 46.

424,136. PANCAKE FLOUR, BUCKWHEAT, WHEAT AND CORN PANCAKE FLOUR, ENRICHED FARINA, HOMINY GRITS, CAKE FLOUR, AND CORN MEAL. PILLSBURY FLOUR MILLS COMPANY Minneapolis, Minn., now by merger Pillsbury Mills, Inc.
Filed September 18, 1944. Serial No. 474,354. PUBLISHED JULY 9, 1946. Class 46.

424,137. HANDKNITTING YARNS. McCOY, JONES & COMPANY, INC., Chicago, Ill.
Filed October 18, 1944. Serial No. 475,434. PUBLISHED JULY 2, 1946. Class 43.

424,138. WORSTED AND WOOLEN PIECE GOODS. A. D. JUILLIARD & CO., INC., New York, N. Y.
Filed November 18, 1944. Serial No. 476,616. PUBLISHED APRIL 3, 1945. Class 42.

424,139. INCENSE. JAMIL AKHTAR, doing business as Taj Perfume Company, Detroit, Mich.
Filed November 27, 1944. Serial No. 476,897. PUBLISHED JULY 2, 1946. Class 6.

424,140. BAG PULLS AND CLIPS, NOT MADE OF PRECIOUS METAL FOR WOMEN'S HANDBAGS. DRITZ-TRAUM COMPANY, INC., New York, N. Y., now by change of name Daird Traum Company, Incorporated.
Filed February 3, 1945. Serial No. 479,381. PUBLISHED JULY 2, 1946. Class 40.

424,141. PREPARATION FOR THE CARE AND TREATMENT OF THE HAIR AND SCALP. BRISTOL-MYERS COMPANY, New York, N. Y.
Filed March 10, 1945. Serial No. 480,735. PUBLISHED JULY 2, 1946. Class 6.

424,142. PIECE GOODS WHOLLY OF WOOL OR WORSTED. THE CUMBERLAND CLOTH COMPANY LIMITED, Huddersfield and Workington, England.
Filed March 16, 1945. Serial No. 480,978. PUBLISHED JUNE 11, 1946. Class 42.

424,143. PERFUME AND COLOGNE. GEORGE BEGLEY, JR., doing business as Parfum Dalmora, Chicago, Ill.
Filed March 19, 1945. Serial No. 481,046. PUBLISHED JUNE 26, 1945. Class 6.

424,144. CANNED FOODS—NAMELY, CANNED TOMATO PUREE. R. J. QUARTAROLI, doing business as Stanislaus Canning Company, Modesto, Calif.
Filed April 28, 1945. Serial No. 482,763. PUBLISHED JULY 9, 1946. Class 46.

424,145. DITCHING OR TRENCHING MACHINES. THE PARSONS COMPANY, Newton, Iowa.
Filed June 13, 1945. Serial No. 484,497. PUBLISHED JULY 2, 1946. Class 23.

424,146. INSECT DESTROYING AND REPELLING PREPARATIONS. RENTOKIL LIMITED, London, England.
Filed June 19, 1945. Serial No. 484,758. PUBLISHED JUNE 25, 1946. Class 6.

424,147. PREPARATION FOR TREATING TENDER, TIRED, BURNING, ACHING, SWOLLEN, AND PERSPIRING FEET. AUGUST H. GISONDI, doing business as G and G Super Foot Remedy, Schenectady, N. Y.
Filed June 22, 1945. Serial No. 484,890. PUBLISHED JULY 2, 1946. Class 6.

424,148. LEATHER WRIST WATCH STRAPS. E. J. PEARSON & SONS LIMITED, London, England.
Filed July 9, 1945. Serial No. 485,591. PUBLISHED JULY 2, 1946. Class 40.

424,149. INSECTICIDES AND CHEMICAL SUBSTANCES HAVING INSECTICIDAL PROPERTIES. IMPERIAL CHEMICAL INDUSTRIES, LIMITED, Slough, England.
Filed July 27, 1945. Serial No. 486,371. PUBLISHED JUNE 25, 1946. Class 6.

424,150. MEDICINAL PREPARATION FOR KIDNEY, BLADDER, AND LIVER AILMENTS. JAMES R. DUPUY, doing business as Memphis Chemical Co., Memphis, Tenn.
Filed August 13, 1945. Serial No. 487,074. PUBLISHED JUNE 25, 1946. Class 6.

424,151. RAZOR BLADES. JACOB P. SEGELMAN, doing business as Dynamic Razor Blade Company, Los Angeles, Calif.
Filed August 17, 1945. Serial No. 487,215. PUBLISHED JULY 2, 1946. Class 23.

424,152. BIAS TAPE AND BIAS BINDING. ALICE F. WOLFF, Brooklyn, N. Y.
Filed August 21, 1945. Serial No. 487,400. PUBLISHED JUNE 11, 1946. Class 40.

424,153. AIR CONDITIONING UNITS. NATIONAL TRADING COMPANY, INC., Hickory, N. C.
Filed August 25, 1945. Serial No. 487,563. PUBLISHED JULY 9, 1946. Class 34.

424,154. CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF USED IN PHOTOGRAPHIC PROCESSES. GENERAL ANILINE & FILM CORPORATION, New York, N. Y.
Filed August 28, 1945. Serial No. 487,673. PUBLISHED JUNE 25, 1946. Class 6.

424,155. ANTIBACTERIAL PREPARATION. SHARP & DOHME, INCORPORATED, Philadelphia, Pa.
Filed October 2, 1945. Serial No. 489,287. PUBLISHED JUNE 25, 1946. Class 6.

424,156. MEDICINAL PREPARATION FOR TREATING MANGE AND CONDITIONING THE SKIN AND HAIR OF DOGS, ETC. KING A. WOODBURN, doing business as Woodburn Remedies, Jacksonville, Fla.
Filed October 2, 1945. Serial No. 489,305. PUBLISHED JUNE 25, 1946. Class 6.

424,157. PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAMS. PARFUMS NATTIER SOCIETE ANONYME, Paris, France.
Filed October 5, 1945. Serial No. 489,483. PUBLISHED JULY 2, 1946. Class 6.

424,158. PREPARATION COMPRISING WATER, PHOSPHORIC ACID AND A SODIUM SECONDARY ALCOHOL SULPHATE FOR CAUSING FORMATION OF A WATER INSOLUBLE COATING ON FERROUS METALS AND USED FOR PREPARING ALUMINUM ALLOYS FOR WELDING AND PAINTING. NEILSON CHEMICAL COMPANY, Detroit, Mich.
Filed October 8, 1945. Serial No. 489,598. PUBLISHED JULY 2, 1946. Class 6.

424,159. CHEMICAL PREPARATION FOR CLEANING AND PREPARING METAL SURFACES FOR PAINTING. NEILSON CHEMICAL COMPANY, Detroit, Mich.
Filed October 8, 1945. Serial No. 489,600. PUBLISHED JULY 2, 1946. Class 6.

424,160. THERMO-CHEMICAL POWDER FOR USE IN CUTTING AND SCARFING OF METALLIC AND NON-METALLIC BODIES. UNION CARBIDE AND CARBON CORPORATION, New York, N. Y.
Filed October 18, 1945. Serial No. 490,153. PUBLISHED JUNE 25, 1946. Class 6.

424,161. EAU DE COLOGNE. LOUEY VENN OF LONDON, INC., Washington, D. C.
Filed October 18, 1945. Serial No. 490,156. PUBLISHED JULY 2, 1946. Class 6.

424,162. TOILET WATER. LOUEY VENN OF LONDON, INC., Washington, D. C.
Filed October 18, 1945. Serial No. 490,157. PUBLISHED JULY 2, 1946. Class 6.

424,163. ELECTROLYTIC PROTECTIVE TAPE. MICHIGAN CHROME & CHEMICAL COMPANY, Detroit, Mich.
Filed October 26, 1945. Serial No. 490,543. PUBLISHED JUNE 25, 1946. Class 21.

424,164. INSECTICIDES. CHANDLER R. PARSONS, doing business as Parsons Chemical Works, Grand Ledge, Mich.
Filed October 29, 1945. Serial No. 490,693. PUBLISHED JUNE 25, 1946. Class 6.

424,165. TOY BUILDINGS, MONUMENTS, TREES, BUSES, AND AUTOMOBILES IN THE FORM OF PAPER CUT OUTS. NATIONAL BISCUIT COMPANY, New York, N. Y.
Filed November 2, 1945. Serial No. 490,958. PUBLISHED JULY 9, 1946. Class 22.

424,166. BRUSH AND COMB SETS, COMBS, ORNAMENTAL PINS, BUTTONS, BUCKLES, AND PIN CUSHIONS, ALL NOT MADE OF PRECIOUS METALS. SYRACUSE ORNAMENTAL CO., New York, N. Y.
Filed November 2, 1945. Serial No. 490,982. PUBLISHED JULY 2, 1946. Class 40.

424,167. WINDOW CURTAINS AND CURTAIN MATERIALS IN THE PIECE MADE OF COTTON, RAYON, SILK, LINEN, AND MIXTURES THEREOF. HOUSE BEAUTIFUL CURTAINS, INC., New York, N. Y.
Filed November 3, 1945. Serial No. 491,013. PUBLISHED JUNE 11, 1946. Class 42.

424,168. WINDOW CURTAINS AND CURTAIN MATERIALS IN THE PIECE MADE OF COTTON, RAYON, SILK, LINEN, AND MIXTURES THEREOF. HOUSE BEAUTIFUL CURTAINS, INC., New York, N. Y.
Filed November 3, 1945. Serial No. 491,014. PUBLISHED JUNE 11, 1946. Class 42.

424,169. WINDOW CURTAINS AND CURTAIN MATERIALS IN THE PIECE MADE OF COTTON, RAYON, SILK, LINEN, AND MIXTURES THEREOF. HOUSE BEAUTIFUL CURTAINS, INC., New York, N. Y.
Filed November 3, 1945. Serial No. 491,015. PUBLISHED JUNE 11, 1946. Class 42.

424,170. WINDOW CURTAINS AND CURTAIN MATERIALS IN THE PIECE MADE OF COTTON, RAYON, SILK, LINEN, AND MIXTURES THEREOF. HOUSE BEAUTIFUL CURTAINS, INC., New York, N. Y.
Filed November 3, 1945. Serial No. 491,016. PUBLISHED JUNE 11, 1946. Class 42.

424,171. MEDICINAL PREPARATION IN TABLET AND LIQUID FORM FOR USE AS A DIURETIC TO THE KIDNEYS. EBENEZER FRANK THOMPSON, Titusville, Pa.
Filed November 6, 1945. Serial No. 491,177. PUBLISHED JULY 2, 1946. Class 6.

424,172. PIECE GOODS OF SILK, LINEN, AND COTTON, OR COMBINATIONS THEREOF, FOR TABLECLOTHS, LUNCHEON SETS, NAPKINS, AND SHAWLS, AND SCARVES FOR USE AS FURNITURE DRAPERY OR SIMILAR PURPOSES. ABCO, INC., New York, N. Y., and San Antonio, Tex.
Filed November 8, 1945. Serial No. 491,225. PUBLISHED JULY 2, 1946. Class 42.

424,173. SODIUM CHLORIDE, PHOTOGRAPHIC FIXING BATHS AND FIXING BATH REPLENISHERS, PHOTOGRAPHIC WASHOFF BATHS, PHOTOGRAPHIC DEVELOPERS, AND PRINTING SOLUTIONS. POLAROID CORPORATION, Cambridge, Mass.
Filed November 13, 1945. Serial No. 491,503. PUBLISHED JUNE 25, 1946. Class 6.

424,174. PREPARATION USED AS AN ANTACID AND LAXATIVE. MILNESIA, INC., New York and Brooklyn, N. Y.
Filed November 14, 1945. Serial No. 491,581. PUBLISHED JUNE 25, 1946. Class 6.

424,175. DOG SHAMPOO, DOG DEODORANT, DOG FLEA POWDER, AND DOG SKIN TONIC SALVE. REX STUART CO., New York, N. Y.
Filed November 16, 1945. Serial No. 491,728. PUBLISHED JUNE 25, 1946. Class 6.

424,176. ELECTRICAL CONDENSERS AND PARTS USED IN CONNECTION THEREWITH. RADIO CONDENSER COMPANY, Camden, N. J.
Filed November 23, 1945. Serial No. 492,121. PUBLISHED JUNE 25, 1946. Class 21.

424,177. PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAM. LANSELLE PARFUMEUR (S. A. R. L.), Paris, France.
Filed November 24, 1945. Serial No. 492,146. PUBLISHED JULY 2, 1946. Class 6.

424,178. TABLECLOTHS, NAPKINS, KITCHEN TOWELS, AND TOWELING. STARTEX MILLS, Tucapau, S. C.
Filed November 26, 1945. Serial No. 492,233. PUBLISHED JUNE 11, 1946. Class 42.

424,179. PERFUME, COLOGNE, BATH POWDER, AND SACHET POWDER. ELMO SALES CORPORATION, Philadelphia, Pa.
Filed November 29, 1945. Serial No. 492,368. PUBLISHED JUNE 25, 1946. Class 6.

424,180. ELECTRIC LAMPS. PAUL ELLIOTT GREENBLAT, Brooklyn, N. Y.
Filed December 3, 1945. Serial No. 492,558. PUBLISHED JUNE 25, 1946. Class 21.

424,181. RAYON YARNS. TUBIZE RAYON CORPORATION, New York, N. Y., assignor to Celanese Corporation of America, New York, N. Y., a corporation of Delaware.
Filed December 3, 1945. Serial No. 492,595. PUBLISHED JULY 2, 1946. Class 43.

424,182. CASINGS FOR THE ELECTRICAL EQUIPMENT OF MOTORS AND SIMILAR POWER APPARATUS TO PREVENT ELECTRICAL EMANATIONS FROM LEAVING OR OUTSIDE ELECTRICAL IMPULSES FROM AFFECTING SAID EQUIPMENT, ETC. BREEZE CORPORATIONS, INC., Newark, N. J.
Filed December 4, 1945. Serial No. 492,615. PUBLISHED JUNE 25, 1946. Class 21.

424,183. SKIN FRESHENER, CLEANSING LOTION, CLEANSING CREAM, FACE POWDER, CAKE MAKE-UP POWDER, LIPSTICK, HAND CREAM, ETC. LABRATEST, INC., Long Island City, N. Y.
Filed December 4, 1945. Serial No. 492,632. PUBLISHED JUNE 25, 1946. Class 6.

424,184. TEXTILE FABRICS IN THE PIECE, OF COTTON, RAYON, PROTEIN FIBRES, AND COMBINATIONS THEREOF. MEADTEX FABRICS CO., New York, N. Y.
Filed December 5, 1945. Serial No. 492,723. PUBLISHED JULY 2, 1946. Class 42.

424,185. TABLE CLOTHS, TABLE COVERS, NAPKINS, GUEST AND KITCHEN TOWELS, AND TABLE MATS OF FABRICS COMPRISED OF LINEN, COTTON, RAYON, AND COMBINATIONS THEREOF. ELLISON & SPRING, INC., New York, N. Y.
Filed December 7, 1945. Serial No. 492,828. PUBLISHED JULY 2, 1946. Class 42.

424,186. MACHINES FOR APPLYING METAL CLOSURES TO GLASS OR METAL CONTAINERS. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md.
Filed December 11, 1945. Serial No. 493,046. PUBLISHED JUNE 25, 1946. Class 23.

424,187. ART NEEDLEWORK YARNS. BERNHARD ULMANN CO. INC., New York, N. Y.
Filed December 12, 1945. Serial No. 493,155. PUBLISHED JULY 2, 1946. Class 43.

424,188. HEAT EXCHANGE UNITS CONSISTING OF SMALL METAL CYLINDERS CONTAINING A HEAT GENERATING CHEMICAL COMPOUND CAPABLE OF EVOLVING HEAT WHEN IGNITED. EDWIN M. SAYERS, Harrisburg, Pa.
Filed December 13, 1945. Serial No. 493,224. PUBLISHED JULY 2, 1946. Class 6.

424,189. INSECTICIDES. CONSOLIDATED COSMETICS, Chicago, Ill.
Filed December 15, 1945. Serial No. 493,326. PUBLISHED JUNE 25, 1946. Class 6.

424,190. HOUSEHOLD INSECTICIDE AND FOR FARM AND INDUSTRIAL INSECTICIDE. HERESITE & CHEMICAL COMPANY, Manitowoc, Wis.
Filed December 15, 1945. Serial No. 493,354. PUBLISHED JUNE 25, 1946. Class 6.

424,191. RADIO ANTENNA, COMPLETE RADIO SETS INSTALLED IN PORTABLE CABINETS, RADIO KITS COMPRISING THE PARTS OF A KNOCKED-DOWN RADIO SET TO BE ASSEMBLED BY THE PURCHASER, ETC. LA MAGNA MFG. CO., INC., East Rutherford, N. J.
Filed December 18, 1945. Serial No. 493,497. PUBLISHED JUNE 25, 1946. Class 21.

424,192. ANTIBACTERIAL PREPARATIONS. E. R. SQUIBB & SONS, New York, N. Y.
Filed December 19, 1945. Serial No. 493,572. PUBLISHED JUNE 25, 1946. Class 6.

424,193. ANTIBACTERIAL PREPARATIONS. E. R. SQUIBB & SONS, New York, N. Y.
Filed December 20, 1945. Serial No. 493,631. PUBLISHED JULY 2, 1946. Class 6.

424,194. ESTROGENIC HORMONE SKIN CREAM. BAILEY, PRIHODA & COMPANY, Kalamazoo, Mich.
Filed December 22, 1945. Serial No. 493,724. PUBLISHED JULY 2, 1946. Class 6.

424,195. EAU DE COLOGNE. GEORGE GORDON, doing business as Bergere Company, New York, N. Y., assignor to Bergere, Inc., New York, N. Y., a corporation of New York
Filed December 22, 1945. Serial No. 493,765. PUBLISHED JUNE 25, 1946. Class 6.

424,196. RADIO AND TELEVISION RECEIVING SETS AND PARTS THEREOF, RADIO ANTENNA AND TRANSMISSION LINE EQUIPMENT, ETC. RADIO DEVELOPMENT & RESEARCH CORP., New York, N. Y.
Filed December 29, 1945. Serial No. 494,122. PUBLISHED JUNE 25, 1946. Class 21.

424,197. CHEMICAL COMPOUND FOR USE IN THE TREATMENT OF OIL WELL DRILLING MUDS. CHICAGO COPPER & CHEMICAL COMPANY, Blue Island, Ill.
Filed January 5, 1946. Serial No. 494,306. PUBLISHED JULY 2, 1946. Class 6.

424,198. DOMESTIC SEWING MACHINES. GELLMAN MANUFACTURING COMPANY, Rock Island, Ill.
Filed January 5, 1946. Serial No. 494,322. PUBLISHED JULY 2, 1946. Class 23.

424,199. ELECTROLYTIC PROTECTIVE TUBING. MICHIGAN CHROME & CHEMICAL COMPANY, Detroit, Mich.
Filed January 5, 1946. Serial No. 494,347. PUBLISHED JUNE 25, 1946. Class 21.

424,200. STEEL DIES AND MACHINE PARTS USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR SHAPING METAL PRODUCTS. A. FINKL & SONS COMPANY, Chicago, Ill.
Filed January 9, 1946. Serial No. 494,491. PUBLISHED JUNE 25, 1946. Class 23.

424,201. STEEL DIES AND MACHINE PARTS USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR SHAPING METAL PARTS. A. FINKL & SONS COMPANY, Chicago, Ill.
Filed January 9, 1946. Serial No. 494,492. PUBLISHED JUNE 25, 1946. Class 23.

424,202. HARDENED AND TEMPERED STEEL DIES AND MACHINE PARTS USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR SHAPING METAL PARTS. A. FINKL & SONS COMPANY, Chicago, Ill.
Filed January 9, 1946. Serial No. 494,493. PUBLISHED JUNE 25, 1946. Class 23.

424,203. ANTISEPTIC SOLUTION. INTERNATIONAL PHARMACEUTICAL CORPORATION, Boston, Mass.
Filed January 10, 1946. Serial No. 494,559. PUBLISHED JULY 2, 1946. Class 6.

424,204. MEDICINE IN THE TREATMENT OF GUMMOSIS AND SCALEBARK ON CITRUS TREES. EBEN BEST, Edinburg, Tex.
Filed January 11, 1946. Serial No. 494,594. PUBLISHED JUNE 25, 1946. Class 6.

424,205. TEXTILE FABRICS IN THE PIECE OF COTTON, RAYON, WOOL, WORSTED, AND COMBINATIONS THEREOF. SHIRLEY FABRICS CORP., New York, N. Y.
Filed January 11, 1946. Serial No. 494,637. PUBLISHED JUNE 25, 1946. Class 42.

424,206. FLUID RESISTOR COMPOUND FOR COATING ELECTRICAL APPARATUS. WESTINGHOUSE ELECTRIC CORPORATION, East Pittsburgh, Pa.
Filed January 15, 1946. Serial No. 494,881. PUBLISHED JULY 2, 1946. Class 21.

424,207. ELECTRIC PHONOGRAPHS. LINCOLN ELECTRONICS CORPORATION, New York, N. Y.
Filed January 16, 1946. Serial No. 494,853. PUBLISHED JULY 2, 1946. Class 21.

424,208. PROTECTIVE FACIAL CREAM. EDITH IMRE AND COMPANY, New York, N. Y.
Filed January 22, 1946. Serial No. 495,171. PUBLISHED JULY 2, 1946. Class 6.

424,209. MEDICINAL PREPARATION USED FOR AMEBACIDAL INFECTION. ENDO PRODUCTS INC., New York, N. Y.
Filed January 24, 1946. Serial No. 495,281. PUBLISHED JUNE 25, 1946. Class 6.

424,210. VETERINARY LINIMENT AND ANTISEPTIC PREPARATION. HOOVER LINIMENT COMPANY, INCORPORATED, Carlisle, Ind.
Filed January 25, 1946. Serial No. 495,384. PUBLISHED JUNE 25, 1946. Class 6.

424,211. AFTER-SHAVE LOTION. HUNTLEY, LTD., Brooklyn, N. Y.
Filed January 26, 1946. Serial No. 495,476. PUBLISHED JUNE 25, 1946. Class 6.

424,212. FACIAL CREAM. E. R. LAMBERTSON, doing business as Secrets of The Nile Cream Company, Los Angeles, Calif.
Filed January 26, 1946. Serial No. 495,480. PUBLISHED JUNE 25, 1946. Class 6.

424,213. EMULSION FOR WATERPROOFING AND STAINPROOFING FABRICS COMMONLY KNOWN AS A STAIN AND WATER REPELLENT COMPOUND. STAINPRUF PROCESS LAUNDRY, also doing business as Stainpruf Manufacturing Company, Los Angeles, Calif.
Filed January 26, 1946. Serial No. 495,522. PUBLISHED JUNE 25, 1946. Class 6.

424,214. OIL BURNERS FOR HEATING EQUIPMENT. THE AMERICAN OIL COMPANY, Baltimore, Md.
Filed January 29, 1946. Serial No. 495,563. PUBLISHED JULY 9, 1946. Class 34.

424,215. CALCIUM HYPOCHLORITE. THE COWLES DETERGENT COMPANY, Cleveland, Ohio.
Filed February 2, 1946. Serial No. 495,867. PUBLISHED JULY 2, 1946. Class 6.

424,216. MEDICAL PREPARATIONS TO RELIEVE HEADACHES AND NEURALGIA. MORRIS BIOLOS, doing business as C-X Laboratories, New York, N. Y.
Filed February 4, 1946. Serial No. 495,951. PUBLISHED JUNE 25, 1946. Class 6.

424,217. PEST INHIBITING COMPOSITIONS. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio.
Filed February 4, 1946. Serial No. 495,994. PUBLISHED JUNE 25, 1946. Class 6.

424,218. AMINO ACIDS AND AMINO ACID MIXTURES USED MEDICINALLY AND NUTRITIONALLY AS A SUPPLEMENT TO OR SUBSTITUTE FOR PROTEINS IN FOOD. PUROCAINE, INC., Philadelphia, Pa.
Filed February 7, 1946. Serial No. 496,155. PUBLISHED JULY 2, 1946. Class 6.

424,219. AMINO ACIDS AND AMINO ACID MIXTURES USED MEDICINALLY AND NUTRITIONALLY AS A SUPPLEMENT TO OR SUBSTITUTE FOR PROTEINS IN FOOD. PUROCAINE, INC., Philadelphia, Pa.
Filed February 7, 1946. Serial No. 496,156. PUBLISHED JULY 2, 1946. Class 6.

424,220. INSECTICIDE PREPARATION FOR REPELLING AND KILLING FLIES, MOSQUITOES, MOTHS, ROACHES, BEDBUGS, AND MANY OTHER HOUSEHOLD INSECTS. B. HELLER & COMPANY, Chicago, Ill.
Filed February 8, 1946. Serial No. 496,238. PUBLISHED JULY 2, 1946. Class 6.

424,221. LAMP AND CANDLE WICKS. INTERNATIONAL BRAID COMPANY, Providence, R. I.
Filed February 8, 1946. Serial No. 496,241. PUBLISHED JULY 9, 1946. Class 34.

424,222. INSECTICIDES. MAGNOLIA CHEMICAL COMPANY, INC., Jackson, Miss.
Filed February 8, 1946. Serial No. 496,250. PUBLISHED JUNE 25, 1946. Class 6.

424,223. HAIR OIL, HAIR POMADE, HAIR TONIC, AFTER-SHAVE LOTION, COLD CREAM, HAND LOTION, AND TOILET WATER. TOM UNG, doing business as United China Trading Company, Los Angeles, Calif.
Filed February 8, 1946. Serial No. 496,286. PUBLISHED JULY 2, 1946. Class 6.

424,224. NUTRITIVE PREPARATIONS CONTAINING VITAMINS AND MINERALS. ABBOTT LABORATORIES, North Chicago, Ill.
Filed February 9, 1946. Serial No. 496,293. PUBLISHED JULY 2, 1946. Class 6.

424,225. LIPSTICKS. IRRESTIBLE, INC., New York, N. Y.
Filed February 9, 1946. Serial No. 496,312. PUBLISHED JULY 2, 1946. Class 6.

424,226. MIXTURES OF TWO OR MORE SULFONAMIDE DRUGS FOR THE TREATMENT OF BACTERIAL INFECTIONS. SCHERING CORPORATION, Bloomfield, N. J.
Filed February 11, 1946. Serial No. 496,406. PUBLISHED JUNE 25, 1946. Class 6.

424,227. PERFUMES, TOILET WATERS, AND COSMETIC CREAMS. LENTHERIC, INCORPORATED, New York, N. Y.
Filed February 15, 1946. Serial No. 496,643. PUBLISHED JULY 2, 1946. Class 6.

424,228. PERFUMES, TOILET WATERS, AND COSMETIC CREAMS. LENTHERIC, INCORPORATED, New York, N. Y.
Filed February 15, 1946. Serial No. 496,644. PUBLISHED JULY 2, 1946. Class 6.

424,229. DDT CONCENTRATE SOLUTION. LEDERLE LABORATORIES, INC., New York, N. Y.
Filed February 19, 1946. Serial No. 496,915. PUBLISHED JULY 2, 1946. Class 6.

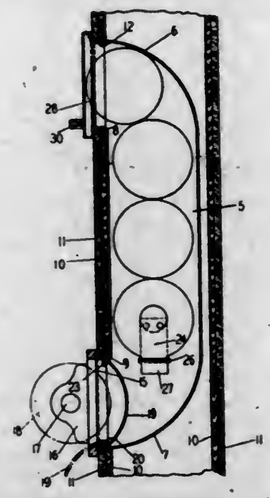
WORK INDEXING MECHANISM

William K. Andrew, Wauwatosa, and Joseph J. Lenert, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis., a corporation of Wisconsin

Application April 13, 1942, Serial No. 438,708
11 Claims. (Cl. 90—21)



1. The combination with a machine tool including a rotatable cutter and a reciprocatable work support, of a pair of indexable work holding spindles arranged on said reciprocatable work support in a manner to effect alternate movement of each work spindle toward and from said cutter, an indexing and clamping mechanism operatively associated with each work spindle, a hydraulic motor for effecting the operation of each of said mechanisms, a power source for said motors, and control means operative to energize one of said motors to effect the indexing movement of its associated work spindle and energize the other of said motors to effect the clamping operation on its associated work spindle.

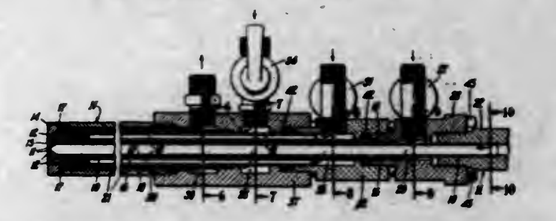
STORAGE RECEPTACLE FOR TOILET PAPER

Theodore R. Black, Tipp City, Ohio

Application April 18, 1945, Serial No. 589,075
7 Claims. (Cl. 312—113)



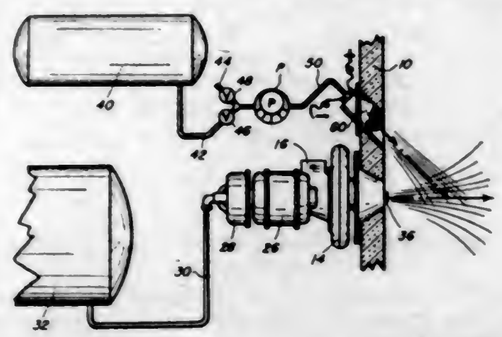
1. A storage receptacle for rolls of paper comprising a rigid vertical tubular structure substantially rectangular in cross section and adapted to be mounted in a wall between adjacent studding, the upper and lower end portions of the front and rear walls of said structure extending forwardly to engage said wall and support said tubular structure therein, means for removably supporting a roll of paper in line with and extending partially into the lower end of said structure, a closure hinged to said structure within the lower end portion thereof for forward movement to an open position, and yieldable means for retaining said closure in its closed position.

2,407,972
BLOWPIPE FOR PIERCING METAL BODIES

Robert B. Aitchison, Staten Island, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio

Application August 28, 1942, Serial No. 456,572
3 Claims. (Cl. 158—27.4)

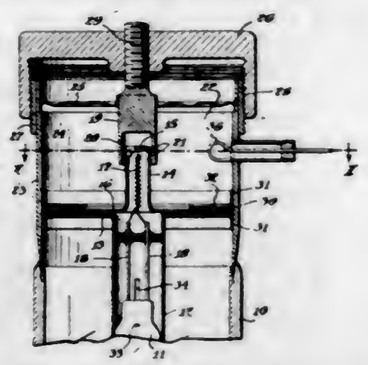
1. A blowpipe for thermochemically piercing a deep hole in a metal body comprising a long nozzle having a central tube open at one end; means for supplying metal removing oxygen to the other end of said central tube; said nozzle also having a second tube surrounding said central tube in spaced relation; means for supplying fuel gas to the space between said central tube and said surrounding tube; said nozzle also having an intermediate tube surrounding said second tube in spaced relation; means for supplying oxygen to the space between said second tube and said intermediate tube; a baffle tube surrounding said intermediate tube; means for supplying a liquid cooling medium to the space between said intermediate tube and said baffle tube; a ring-shaped nozzle block attached to one end of each of said tubes except said baffle tube, the end of said baffle tube being spaced from said block; an outer tube secured to said block, whereby cooling medium will flow from said nozzle block in the space between said intermediate tube and said baffle tube, then around the end of said baffle tube, and return through the space between said baffle tube and said outer tube; and passages formed in said nozzle block meeting at substantially common outlets spaced about said central tube, one group of passages connecting with the fuel gas supply space between said central tube and said second tube and another group of passages connecting with the oxygen supply space between said second tube and said intermediate tube.



2,407,973
METHOD AND MEANS FOR IGNITING LIQUID FUEL

Harry A. Beckstrom, Seattle, Wash., assignor to J. G. Frost, Seattle, Wash.

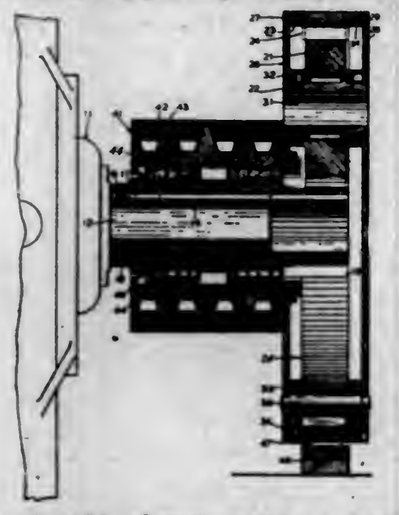
Application October 25, 1941, Serial No. 416,546
1 Claim. (Cl. 158—28)



A combustion control system including a heavy-oil main burner of the rotary atomizing

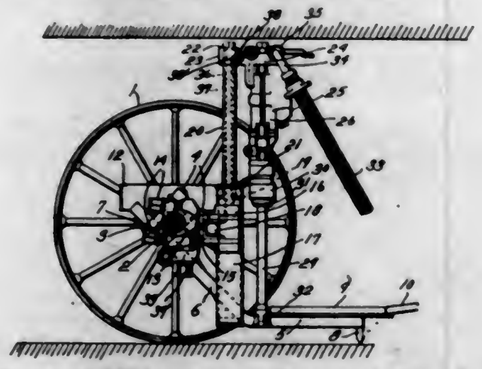
type, a burner nozzle and ignition means therefor, said burner nozzle being located to one side of and directed at an acute angle into the discharge stream of said heavy-oil main burner, a source of low flash-point fuel oil, a vane type rotary pump connected with said burner nozzle and having an air and oil inlet, fluid fuel conductor means between said source and said oil inlet, means for energizing said main burner and

means operable simultaneously therewith for rotating said vane pump to aerate and pressurize air and oil supplied thereto, means for activating said ignition means coincident with the discharge of air and fuel from said vaned pump, whereby an igniter flame is initiated having intensity and velocity to strike into and ignite the oil laden core of the discharging stream from the main burner.



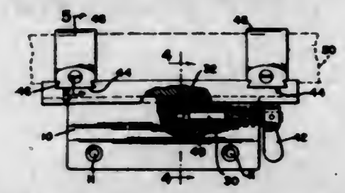
2,407,974
ULTRA HIGH FREQUENCY DEVICE
David Gordon Clifford, Palo Alto, Calif., and Ilia E. Mouromtseff, Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1942, Serial No. 470,490
4 Claims. (Cl. 250—27.5)

4. An ultra high frequency device comprising a metallic enclosure forming a resonator, a cathode and an anode in said resonator, said cathode having a flange projecting laterally therefrom and said enclosure having a plate overlapping said flange a distance substantially equal to a quarter wave-length in dielectric, and dielectric between said overlapping plate and flange.



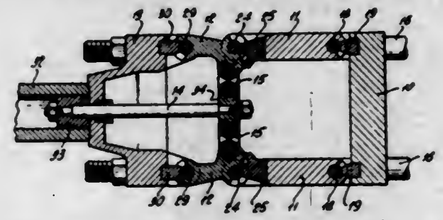
2,407,975
SPEED CHANGE UNIT
Joseph D. Christian, San Francisco, Calif.
Application September 9, 1944, Serial No. 553,358
5 Claims. (Cl. 74—305)

1. In combination, a motor having a shaft extending therefrom, a first sleeve mounted on said shaft for rotation by said shaft, a pinion gear on said first sleeve adjacent the common end of said sleeve and said shaft, a second sleeve, bearing means between said first and second sleeves supporting said second sleeve for rotation on said first sleeve, a plurality of planet gears mounted for rotation about and in mesh with said pinion gear, a first plate mounted on an end of said second sleeve and supporting said planet gears on



one side of said planet gears, a second plate mounted on and supporting said planet gears on the other side thereof, a ring gear positioned between said plates and surrounding said planet gears in mesh therewith, means for sealing said ring gear to each of said first and said second plates, and means for retaining said ring gear against rotation.

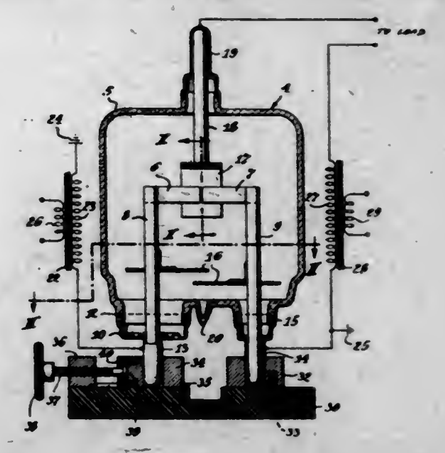
2,407,976
DRILLING APPARATUS
John C. Curtis and Elmer G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company, a corporation of Pennsylvania
Application September 28, 1944, Serial No. 556,259
7 Claims. (Cl. 255—51)



1. In a drilling apparatus, a pair of wheels adapted to run along a supporting surface and having a transverse axle on which said wheels are journaled, a support secured to said axle and adapted to support a drilling tool, and an additional support secured to said axle and engaging the supporting surface at its outer end remote from said wheels, said additional support near its point of engagement with the supporting surface being disposed in a relatively low horizontal position close to the supporting surface and having thereon means to receive the weight of the drill operator at a point between the point of engagement of said additional support with the supporting surface and the points of contact of said wheels with the supporting surface to hold the drill support against turning with said axle relative to said wheels or lifting of said wheels.

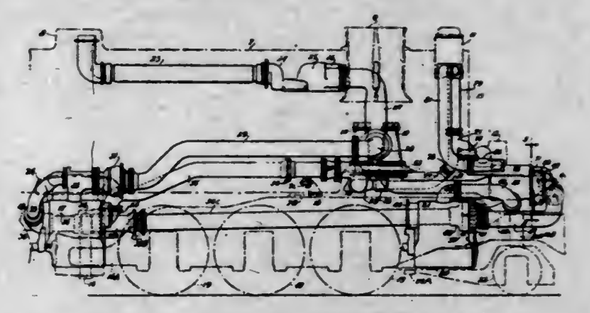
2,407,977
MOUNT FOR TELESCOPIC SIGHTS
William H. English, Seattle, Wash.
Application April 3, 1944, Serial No. 529,306
2 Claims. (Cl. 33—50)

1. In a mount for telescopic sights, comprising: a base plate adapted to be secured to firearm, a dovetail rib on said base plate, a slider having a groove shaped to fit said dovetail rib and mounted thereon, means on said slider for securing a telescopic sight tube thereto, a section of said dovetail being depressible, crank means for depressing said depressible section, and means in said base plate extending through an end edge thereof for operating said crank means to depress said section whereby the slider is locked to the base plate.



2,407,978
TOGGLE SYSTEM FOR INJECTION MOLDING MACHINES
Thomas H. Eyles, Leominster, Mass., assignor to Fosgood Corporation, Leominster, Mass., a corporation of Massachusetts
Application February 24, 1945, Serial No. 579,612
4 Claims. (Cl. 74—110)

1. In an injection molding machine, a toggle system comprising a fixed member, a movable member, toggle-joints connecting said members, means for actuating the toggle-joints, each toggle-joint having two links formed with forked ends, toggle pins passing through the forked ends for hinging the links to the fixed and movable members and to each other, and lugs bearing against the portion of the pins that extends between the forks to resist the bending moment that the reaction force of the injection pressure tends to create in the pins and to prevent deformation of the pins.

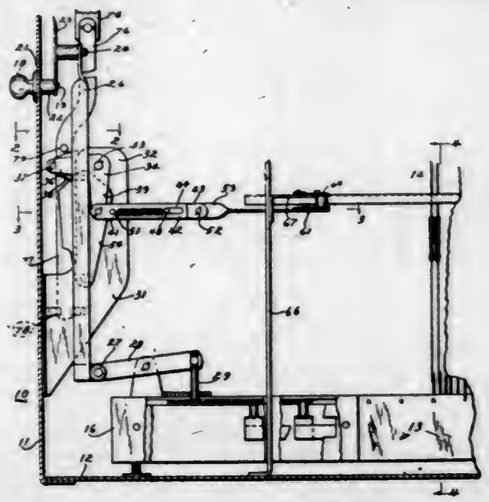


2,407,979
CONTROLLED ELECTRODE FOR FIELD EMISSION DISCHARGE DEVICES
John H. Findlay, Upper Montclair, and Clarence E. Dawley and Andrew Pfeiffer, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 26, 1942, Serial No. 459,776
7 Claims. (Cl. 250—27.5)

1. A discharge device wherein operation is initiated by field emission of electrons comprising a pair of oppositely disposed spaced electrodes between which a field emission arc discharge occurs upon the application of a potential thereto and subject to deterioration tending to increase the gap therebetween during operation, an anode in juxtaposition to said pair of electrodes for supporting an electron discharge with one of the electrodes of said pair immediately following the field emission arc discharge between said pair of

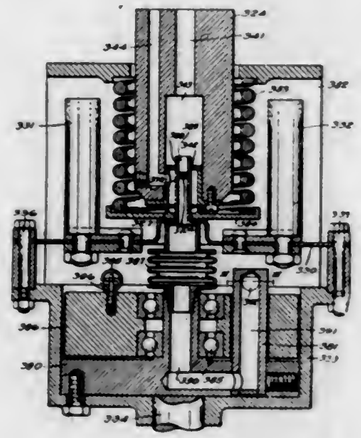
electrodes, and means disposed exteriorly of said device and operable by an operator at will to cause relative movement between said pair of electrodes to maintain the spacing therebetween substantially constant during the useful life of said device.

2,407,980
MULTIPLE-CYLINDER STEAM LOCOMOTIVE
Fred W. George, Jr., Lima, Ohio
Application December 8, 1942, Serial No. 468,272
32 Claims. (Cl. 105—47)



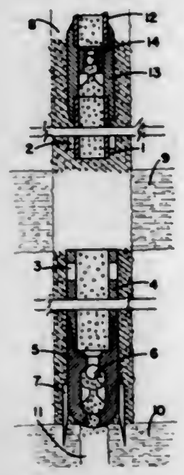
1. In a steam locomotive having a boiler and pairs of cylinders at longitudinally spaced-apart zones, each pair having intervening saddle structure, a steam piping system including means conducting the steam supply for two pairs of cylinders from the boiler to the zone of one of said pairs of cylinders, conduit means connected to receive part of said supply and extending from the saddle structure of said one pair to and through the saddle structure of the other of said pairs, and pipe means connected to said conduit means beyond said latter pair and doubled back for connection thereto.

2,407,981
VOTING MACHINE
Alvin N. Gustavson, Bemus Point, N. Y., assignor to Automatic Voting Machine Corporation, Jamestown, N. Y., a corporation of Delaware
Application May 27, 1942, Serial No. 444,640
2 Claims. (Cl. 235—54)



1. In a voting machine having a manually operable control member and a plurality of operable straps having offset portions, a mechanism for securing said straps against movement from either operated or inoperated position, said mech-

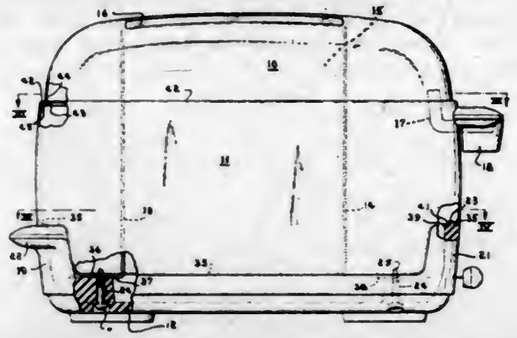
anism comprising a bar movable to engage the offset portions in either position of said straps, a rod joined to said control member, yieldable means operably connecting said bar with said rod,



further means connecting said bar with a further bar, said further bar being operable to move said yieldable means and at least momentarily withdraw said bar from engagement with said offset portions without affecting said control member.

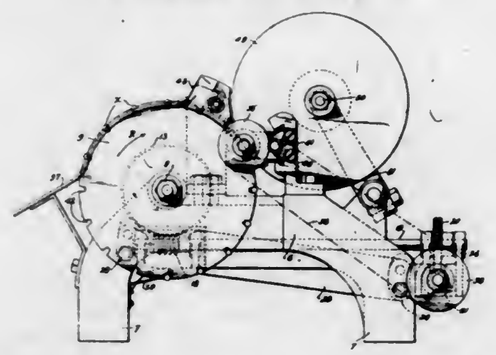
2,407,982
ACCELERATION-RESPONSIVE GOVERNOR SYSTEM
Clinton R. Hanna, Pittsburgh, and Stanley J. Mikina, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 15, 1943, Serial No. 502,490
1 Claim. (Cl. 264—7)

In a governing system for controlling the admission of motive fluid to a prime mover in response to pressure of controlling liquid, means providing a first space in which liquid under pressure is maintained and a second space for the controlling liquid; means for maintaining controlling liquid under pressure in said second space; said last-named means including a metering orifice for supplying liquid thereto from the first space, an escape port for the second space, and a control valve cooperating with the discharge end of the port to define an escape orifice; said valve presenting an area exposed to pressure of said second space so that force dependent on such pressure is applied thereto; means providing a force which varies in response to speed and for directly applying the second-mentioned force to the control valve; means providing a third space; means for maintaining a liquid under pressure in the third space including a metering orifice for supplying liquid thereto from said first space, an escape port for the third space and formed in a rotating part, an inertia member journaled on the rotating part and provided with a valve element cooperating with the discharge end of the port to define an escape orifice, and a spring coupling the rotating part and the inertia member and exerting torque on the latter opposing torque exerted thereon and due to the force of liquid pressure applied to the area of the valve element exposed to pressure in the third space; and means responsive to pressure in said third space for applying force to said control valve.



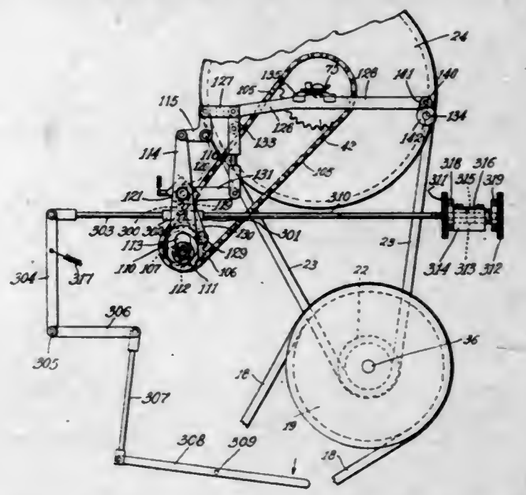
2,407,983
COMPLETION OF WELLS
Orvie D. Harper, Vandalia, Ill., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 19, 1942, Serial No. 462,552
5 Claims. (Cl. 166—21)

1. A method for completing a well having a plurality of producing horizons which comprises lowering into the well a casing having separable sections corresponding in number to the producing horizons into a position where the lowermost section is just above the lowermost producing horizon, cementing the lowermost section of the casing in place, disengaging the remainder of the casing from the lowermost section and raising it until its lower end is adjacent the upper end of the next higher producing horizon, cementing the new lowermost section in place, repeating these operations to the extent required by the number of producing sections and drilling out residual cement from the several sections.



2,407,984
TOASTER CASING STRUCTURE
Joseph R. Heilman, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 11, 1944, Serial No. 553,499
6 Claims. (Cl. 99—401)

1. In a casing structure for an electric toaster mechanism including a handle movable upwardly and downwardly between toasting and non-toasting positions, the combination of a base for supporting the toaster mechanism, a top wall spaced above the base and having an opening therein for the passage of bread to and from the toaster mechanism, a side wall structure carried by the base and engaging said top wall, said side wall structure encompassing the toaster mechanism and formed as a unit with its opposed ends disposed adjacent each other, said opposed ends of the side wall structure having respective clamp-

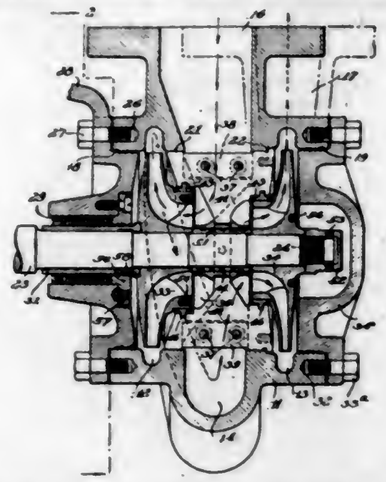


ing members formed thereon and extending inwardly of the casing structure and at least a portion of the opposed ends of the side wall structure being spaced to define a slot through which said handle projects, a keeper having spaced-apart legs engaging said clamping members and preventing separation of the casing ends and means for retaining the keeper in engagement with the clamping members.

2,407,985
MACHINE TOOL
Frederick W. Henke, Philadelphia, Pa., assignor to Fox Products Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 13, 1943, Serial No. 498,513
4 Claims. (Cl. 90—20)

1. In a machine tool having a cutter or other working element, a carrier wheel having a plurality of stations adjacent the periphery thereof for the reception of work pieces to be carried past the cutter, and drive mechanism for the carrier wheel including a power shaft carrying a worm, an adjustable shaft carrying a worm wheel cooperating with said worm, the adjustable shaft being mounted for swinging movement about the axis of the power shaft with said worm and worm wheel interengaged, a second worm carried by the free end of the adjustable shaft, and a second worm wheel operatively connected with the carrier wheel, and adjustable means for mounting the free end of said adjustable shaft in different positions with reference to the axis of said second worm wheel, whereby to accommodate worm wheels of different diameter in the position of said second worm wheel and thereby provide for variation in the rate of drive of the carrier wheel.

2,407,986
STITCH LENGTH ADJUSTING MECHANISM
Carl W. Johnson, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a corporation of New Jersey
Original application August 12, 1939, Serial No. 289,907. Divided and this application August 11, 1942, Serial No. 454,353
4 Claims. (Cl. 112—210)



1. In a sewing machine, a work support, means for feeding work to be sewed along said support including a work feed bar, and mechanism for varying the amount of movement of said means, said mechanism comprising a lever associated with said bar, a second lever pivoted on said first-named lever, means for oscillating said second lever, a follower carried by said second lever, a slotted member normally engaging said follower, an adjusting rod secured to said member, adjusting means connected to said rod for setting the length of stitch to be made at a predetermined length, a manually operated device attached to said member for shifting said member to change the stitch from one length to another at the will of the operator while maintaining the adjustment of said adjusting means undisturbed, and means for automatically moving said device in the opposite direction to reset said member in its original adjusted position.

2,407,987
MULTISTAGE CENTRIFUGAL PUMP
Erik G. Landberg, Seneca Falls, N. Y., assignor to Goulds Pumps, Inc., Seneca Falls, N. Y., a corporation of New York
Application April 3, 1942, Serial No. 437,574
3 Claims. (Cl. 103—109)

1. A multi-stage centrifugal pump comprising, in combination, a casing having a bore forming an interior wall which is continuous and unbroken in a direction about the axis of the bore, suction and discharge connections for said casing, a drive shaft extending through one end of said casing, a pair of impellers mounted on said shaft, a member forming a partition between said impellers, said member having a pair of openings each communicating with the inlet of one of said impellers, the margins of said openings registering with the casing in such manner as to determine the amount of liquid flowing to said impellers, means for releasably locking said member in said casing, said member being shiftable in said casing about the axis of said shaft to vary the amount of liquid flowing to said impellers, said casing having a normally closed opening at the end thereof opposite to that through which

the shaft extends and the minimum bore of said casing being at least greater than the diameter of said impellers and said member whereby said impellers and member may be withdrawn through

said opening in the casing, said casing and member having cooperating shoulders which are pressed against each other by the liquid pressures developed within the casing.

2,407,988

PROCESS FOR TREATING CELLULOSE MATTER WITH TERPENE DIHYDROCHLORIDE

Christopher Luckhaupt, Jamaica, N. Y., assignor to Luckite Processes, Inc., Delawanna, N. J., a corporation of New Jersey

No Drawing. Application February 14, 1942, Serial No. 430,944

1 Claim. (Cl. 117—143)

The method which comprises impregnating porous cellulosic material by immersing the same in a mixture of terpene dihydrochloride and cellulose acetate heated to a temperature at or above the melting temperature of the terpene dihydrochloride.

2,407,989

PROCESS FOR TREATING CELLULOSE MATTER WITH TEREBENE

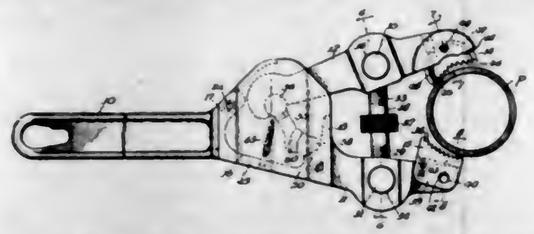
Christopher Luckhaupt, Jamaica, N. Y., assignor to Luckite Processes, Inc., Delawanna, N. J., a corporation of New Jersey

No Drawing. Application February 17, 1942, Serial No. 431,288

1 Claim. (Cl. 117—143)

The process of treating cellulose material to render the same water and oil-resistant, which process comprises impregnating the same by immersion in a closed container in a bath of terebene and cellulose acetate heated to between 220° and 310° F.

2,407,990



PIPE WRENCH

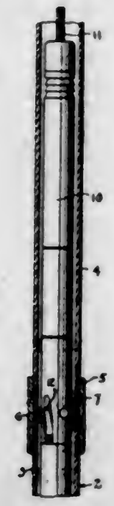
Benjamin L. Lurie, Chicago, Ill.

Application May 17, 1943, Serial No. 487,265

4 Claims. (Cl. 81—118)

1. A pipe wrench comprising a handle, an arm having one end thereof connected fixedly to one end of the handle, a laterally disposed jaw pivotally mounted on the outer end of the arm to swing to and from said arm and having on the outer portion thereof a concave pipe engaging face with transverse teeth thereacross, spring means for urging said jaw away from the arm, a second arm disposed in opposed relation with the first mentioned arm and having its outer end projecting a short distance beyond the outer end of said first mentioned jaw and provided with a longitudinal arcuate recess facing the jaw, a substantially semi-circular jaw seated and rotatably mounted in the recess and having exteriorly of said recess a reentrant V-shaped pipe engaging face with transverse teeth thereacross, an adjusting screw adapted to move the second arm to and from the first mentioned arm and having the ends thereof pivotally connected to the central portions of said arms, respectively, and means operative automatically in response to swinging of

the handle in a direction away from the second arm after application of the jaws to the pipe to move the second arm outwards away from the handle and also to swing or tilt said second arm in such direction as to cause the jaw thereon to move towards the jaw on the first mentioned arm, and embodying an angularly disposed toggle link having one end thereof pivotally connected to the inner end of said second arm and its other end in pivotal relation with said one end of the handle, and so arranged or inclined that said one end thereof extends away from the adjusting screw and its said other end extends towards the adjusting screw.



2,407,991

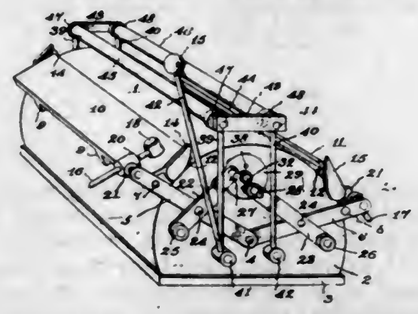
PIPE RELEASING DEVICE

Otis J. McCullough, Houston, Tex., assignor to McCullough Tool Company, Houston, Tex.

Application July 26, 1943, Serial No. 496,140

1 Claim. (Cl. 166—1)

Apparatus for use in well tubing within a well bore to facilitate unthreading of sections of well tubing at a joint formed by an internally threaded female coupling member surrounding and threadedly connected to externally threaded ends of tubing sections with the tubing section ends spaced from each other, comprising a housing arranged to be lowered into the well tubing and having an explosion chamber therein, a charge of explosive in said chamber, a plurality of pressure outlet ports in said housing extending from said chamber radially outward in a single substantially horizontal plane to discharge the products of detonation of the explosive in a plurality of substantially horizontally and radially directed jets, means on said housing arranged to contact the end of one of the tubing sections for positioning the housing with said outlet ports and the jets of explosive products directed at circumferentially spaced portions of the interior surface of said female coupling member between the spaced ends of the tubing sections, and means for detonating said explosive.



2,407,992

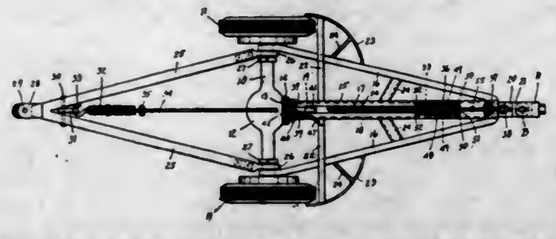
PLAN FOLDING MACHINE

Edwin C. McFarlane, Brooklyn, N. Y.

Application March 11, 1944, Serial No. 526,097

3 Claims. (Cl. 270—73)

1. A plan folding machine comprising: a folding platform, right hand and left hand creasing bars extending transversely of said platform and normally impelled into contact therewith, right hand and left hand folding bars arranged in parallel relation to one another and to the creasing bars, means for mounting said folding bars for conjoint movement back and forth over the platform in a direction normal to both the creasing and folding bars to alternately bring the left hand folding bar between the right hand creasing bar and the platform and the right hand folding bar between the left hand creasing bar and the platform, means for so moving said folding bars, cam members associated with the creasing bars, and rollers movable with the folding bars to lift the creasing bars from engagement with the platform and permit such folding bars to enter between, said creasing bars and the platform.



2,407,993

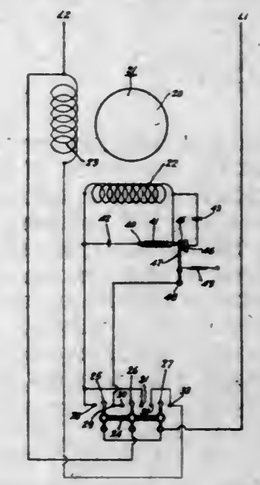
HOIST AND TRANSPORTING DEVICE

Halbert McKee, Nineveh, Ind., assignor of two-thirds to Hill Brothers Veneer Co., Edinburg, Ind., a copartnership comprised of Harry D. Hill, Howard T. Hill, and Jack H. Hill

Application June 19, 1944, Serial No. 540,915

11 Claims. (Cl. 214—65.3)

1. A load elevating and transporting device including a wheeled base, a drawbar projecting forwardly thereof and slidable thereon and arranged for tractive connection, a boom pivoted on the base and always directed rearwardly from the pivotal connection to the base, the free and rearward end of the boom being adapted for load support remote from the pivotal support, and a reeving structure operatively connected between the forward portion of the base, the free end of the boom and the forward portion of the slidable drawbar for raising and lowering of the rearwardly directed boom by extension and collapse of the drawbar upon the base.



2,407,994

REVERSIBLE SINGLE-PHASE CAPACITOR MOTOR

William E. Menzies, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application October 16, 1943, Serial No. 506,467

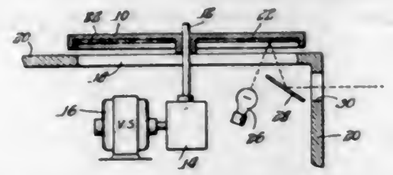
4 Claims. (Cl. 172—279)

1. A control device for a reversible, single phase capacitor motor having a stator provided with starting and running windings adapted to be connected to power lines; a condenser in circuit with the starting winding; a starting switch movable from a neutral into one or another circuit closing position in which the motor windings are connected to the power lines for operating the motor in one or the other directions respectively; an electromagnetic control switch comprising an electromagnet winding, a condenser of low impedance connected in series with said electromagnet winding for stabilizing the control switch, both low impedance condenser and electromagnet winding being connected in parallel with the starting winding, said control switch comprising also a pair of normally closed contacts connected in series with said starting winding, the control switch being energized to open its contacts and maintain them open by voltage generated in the starting winding in response to the motor operation at a predetermined speed, the control switch being deenergized to permit its contacts to engage in response to the operation of the starting switch out of either of its circuit making positions.

2,407,995

METHOD OF PRODUCING FILLETS

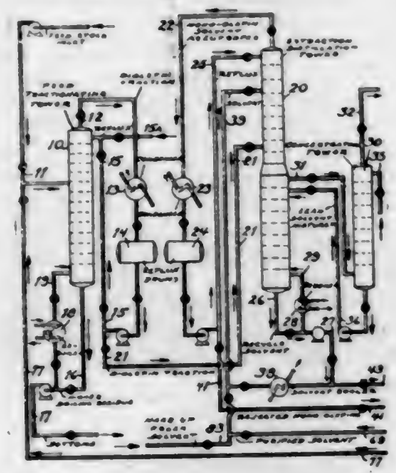
Harris P. Moyer, Toledo, Ohio, assignor to The Aviation Corporation, New York, N. Y., a corporation of Delaware



No Drawing. Application July 30, 1943, Serial No. 496,779

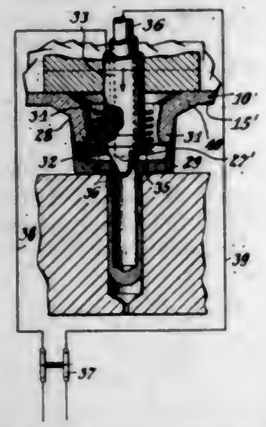
5 Claims. (Cl. 117—22)

1. That improvement in forming a fillet in an element of ferrous metal, which comprises: applying a suitable flux and an alloy containing from 82 to 90% copper, 10 to 18% manganese and having a melting point substantially over 1550° F.



to the surface to be filleted, and melting the alloy on said surface in a constantly maintained reducing atmosphere to prevent oxidation and in such manner that said alloy will become alloyed with the ferrous metal and form the fillet.

2,407,996
STROBOSCOPIC APPARATUS FOR PHONOGRAPHS
William L. Nies, Wheaton, Ill.
Application February 7, 1945, Serial No. 576,630
4 Claims. (Cl. 88—14)

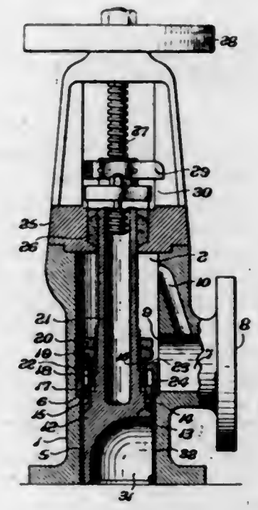


1. A stroboscopic apparatus for use in connection with regulating the speed of a phonograph, comprising in combination a turntable having a stroboscopic scale on its bottom face, housing means shielding said scale from the light of the room, and an electric lamp mounted within said housing in position to illuminate said scale to the exclusion of other light, a window in said housing, means reflecting the image of said scale for observation through said window, said lamp being adapted to be energized by alternating current of a frequency to cause the scale markings to appear to the eye to remain stationary when the scale is rotated at a predetermined selected speed.

2,407,997
SEPARATION AND PURIFICATION OF ISOPRENE
John A. Patterson, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 17, 1943, Serial No. 498,944
2 Claims. (Cl. 202—41)

1. A process for separating isoprene from a refinery cracked stock containing isoprene which comprises subjecting said refinery cracked stock to distillation in the presence of aqueous acetone to obtain an azeotropic mixture containing isoprene as distillate material, subjecting said distillate material to an extractive distillation in the presence of a solvent comprising acetone, separating a distillate fraction containing isoprene in high concentration and fractionally distilling the resultant material to obtain isoprene.

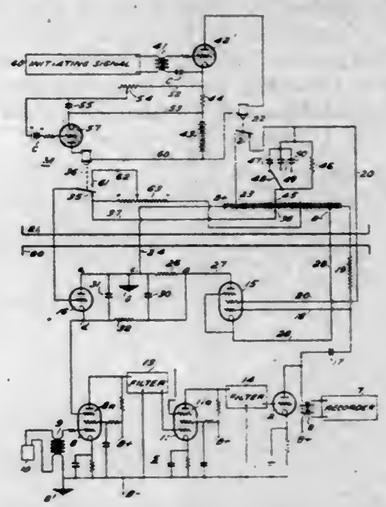
2,407,998
LAMP BASE
Henry K. Richardson, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 25, 1937, Serial No. 132,956
14 Claims. (Cl. 176—32)



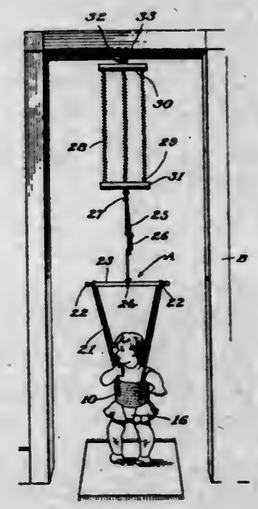
1. An electrical device comprising a glass vessel, an aperture leading from said vessel and defined by a hollow tapered boss extending from a wall thereof, and a metal contact member secured to said boss, said member comprising a hollow, cylindrical portion closed at its outer end, shouldered at its inner end, serving as the contact proper, and adapted to receive a lead-in wire from said vessel through said aperture, and an enlarged portion extending toward said vessel from said shouldered portion, the sides of said enlarged portion decreasing in thickness from said shouldered portion to a sharp edge, said enlarged portion flaring toward said vessel, fitting over said tapered boss and sealed only to the exterior thereof, the sharp edge of said enlarged portion engaging said wall which is continued outwardly therefrom at an angle to said contact member so as to effect a gas-tight seal.

2,407,999
VEHICLE DOOR LATCH
Holden W. Rightmyer, Toledo, Ohio, assignor to The American Swiss Company, Toledo, Ohio, a corporation of Ohio
Application April 30, 1942, Serial No. 441,108
3 Claims. (Cl. 292—335)

1. In a device of the class described, an automobile door latch having a case plate, a selvage plate at one edge of said case plate, a spring tensioned latch bolt slidable over said case plate and projectable through said selvage plate when in latching position, a spring tensioned catch lever pivotally mounted on the inner side of said selvage plate and adapted to block movement of said latch bolt when in retracted position, and hold same from movement to latching position, a releasing arm on said catch lever projecting through said selvage plate, a male dovetail member on the outer side of said selvage plate into the inside of which said releasing arm extends, a female dovetail member with which said male dovetail member cooperates, an abutment on said female dovetail member engageable by said releasing arm for rocking said catch lever thereby to release said latch bolt, keeper means for said latch bolt associated with said female dovetail member and engageable by said latch bolt when the same is released by said catch lever.



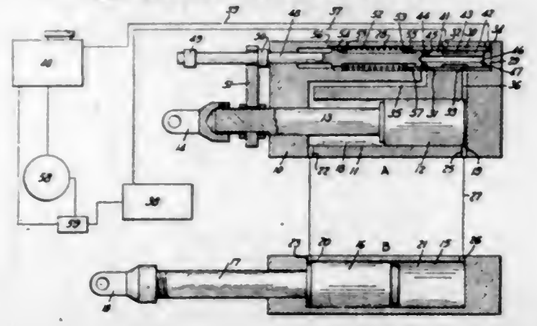
2,408,000
VALVE
Joseph F. Schiller, Drexel Hill, Pa., assignor to Schade Valve Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 23, 1944, Serial No. 527,778
9 Claims. (Cl. 277—29)



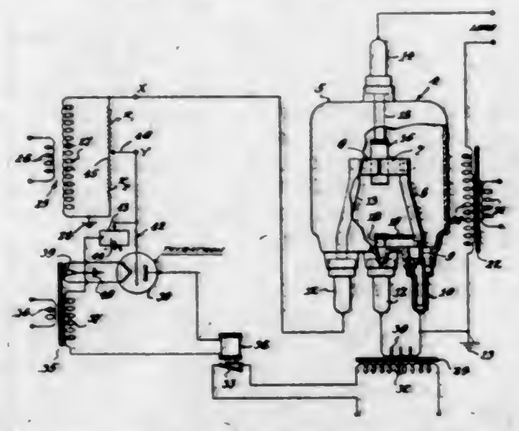
1. A valve comprising complementary body and closure members having complementary engaging sealing surfaces, and a shield for one of said sealing surfaces and movable relatively thereto for engagement of said sealing surfaces, and a seat for supporting said shield when said sealing surfaces are in engagement with one another, said closure member having an apertured portion shielding said seat when said sealing surfaces are disengaged from one another.

2,408,001
GAIN-CONTROL SYSTEM FOR SEISMIC AMPLIFIERS
Edwin J. Shimek and William B. Hemphill, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application April 14, 1945, Serial No. 588,350
9 Claims. (Cl. 177—352)

2. In a seismic prospecting system having means for producing electrical signals representative of seismic waves, an amplifier for said signals, and a recorder for recording said signals, the combination of an electric valve having an input circuit responsive to said signals and an output circuit including a load resistor, a filter having resistance and capacitance, a second electric valve in shunt with said filter to form a variable resistance, said second valve having a cathode, an anode and a control electrode, means including said filter for varying the bias between said cathode and said grid to change the resistance of said second valve so as to maintain constant the potential difference produced across that valve, and means for applying said potential difference to said amplifier to control the gain thereof.

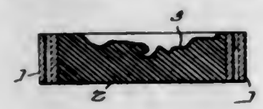


2,408,002
BABY JUMPER
Alfred J. Shurtliff, Pocatello, Idaho
Application January 29, 1944, Serial No. 520,295
2 Claims. (Cl. 155—20)



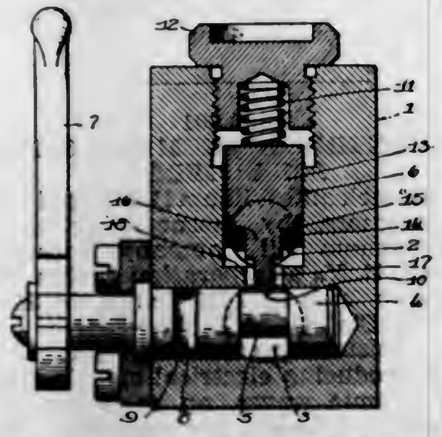
1. A device of the kind described, comprising a body harness having a broad adjustable body band, a crotch piece fixedly attached to the band in front and adjustably connected to the lowermost portion of said band at the back, looplike hangers connected to the uppermost portion of the band at each side thereof, a suspension bar with which said hangers are adapted to be engaged having knobbed ends thereon to retain said hangers on said bar, a jumper spring set-up means, comprising oppositely opposed upper and lower ring members having a plurality of spring members connected thereto in concentric arrangement, a plurality of hanger members connected to said upper member at points intermediate said spring members, said hanger members being connected at their upper end to a circular block having an eye at the medial point thereof for connection to a support at an elevated point, a second set of said hanger members connected to said lower ring member and said suspension bar.

2,408,003
LIQUID PRESSURE REMOTE CONTROL SYSTEM
John Keith Simpson, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England
Application January 3, 1944, Serial No. 516,863
In Great Britain November 12, 1942
16 Claims. (Cl. 60—54.5)



1. A liquid pressure remote control system of the type described comprising a transmitter unit including a cylinder having a piston therein, a source of liquid under pressure, a motor unit including a cylinder having a piston therein, means connecting the transmitter unit to the motor unit, said connecting means and the transmitter and motor units forming a normally closed hydraulic system, manual means for operating said transmitter to put said closed hydraulic system under pressure, and a valve for controlling the liquid source to said transmitter and motor units, said valve being responsive to the movement of the transmitter piston to at least one end of the transmitter cylinder to cause said valve to open to connect that end of the transmitter cylinder to said pressure source, whereby the stroke of the motor piston if not completed by the movement of the transmitter piston is completed by liquid pressure from said source.

2,408,004
CONSTANT VOLTAGE FIELD EMISSION ARC DISCHARGE DEVICE
Charles M. Slack, Glen Ridge, and Clarence E. Dawley and Andrew Pfeiffer, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 26, 1942, Serial No. 459,777
9 Claims. (Cl. 315—357)

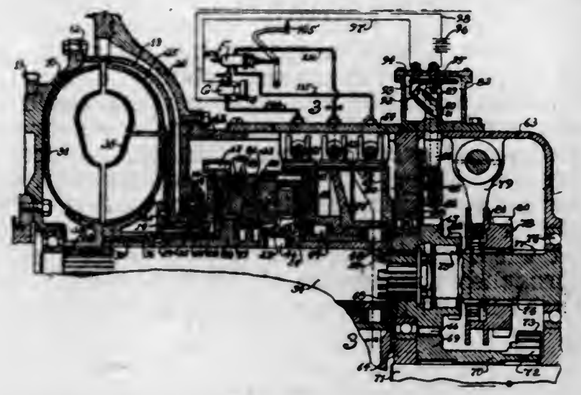


1. A discharge device wherein operation is initiated by field emission of electrons comprising a pair of oppositely disposed spaced electrodes between which a field emission arc discharge occurs upon the application of a potential thereto and subject to deterioration tending to increase the gap therebetween during operation, an anode positioned adjacent said pair of electrodes for supporting an electron discharge with one of the electrodes of said pair immediately following the field emission arc discharge between said pair of electrodes, and means automatically operable in response to the voltage across said pair of electrodes to cause controlled movement between the latter and maintain the spacing between said pair of electrodes substantially constant during the useful life of said device.

2,408,005
SHELL PATTERN AND METHOD OF CASTING THEREWITH
Abraham Slatis, Chicago, Ill.
Application June 10, 1943, Serial No. 490,344
3 Claims. (Cl. 22—196)

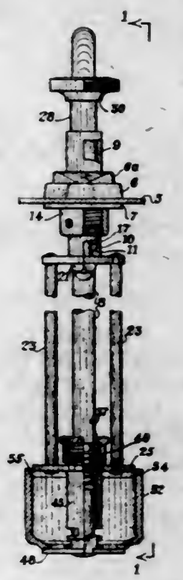
1. The method of casting articles having undercuts therein, which comprises forming a pair of flexible half-molds around a rigid pattern, separating said flexible half-molds from said rigid pattern, spray coating each of said flexible half-molds with metal, reenforcing the metallic shells thereby formed with a backing removable by heating, separating said shells from their respective flexible half-molds, tamping molding sand or the like against each of said shells to form a pair of casting molds, suspending the assemblies thereby formed with said shells below said casting molds, and heating said assemblies sufficiently to remove said backings, melt away said shells, and bake said casting molds.

2,408,006
HYDRAULIC VALVE CONSTRUCTION
Thomas B. Smith, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a corporation of Delaware
Application December 17, 1943, Serial No. 514,645
5 Claims. (Cl. 251—27)



1. In a valve construction, a valve body having an inlet for hydraulic fluid under pressure and a flat valve seat provided with an outlet for passage of the fluid, a valve plunger longitudinally movable in the body and provided with a reduced part with a portion thereof conforming to and adapted to enter the outlet to substantially restrict the flow of fluid therethrough when the plunger is moved toward closed position, a resilient sealing ring carried by the plunger and provided with an annular flexible sealing lip adapted to contact and seal against the seat after the reduced part enters the outlet, a part encompassing the sealing ring and providing a stop adapted to engage the seat after the sealing lip contacts therewith and means for moving the plunger to operate the valve.

2,408,007
METHOD FOR RECOVERY OF LOW-TEMPERATURE POLYMERIZATION PRODUCTS
Robert M. Thomas, Union, and Donald C. Field, Linden, N. J., assignors, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
No Drawing. Application August 30, 1941, Serial No. 408,994
9 Claims. (Cl. 260—93)

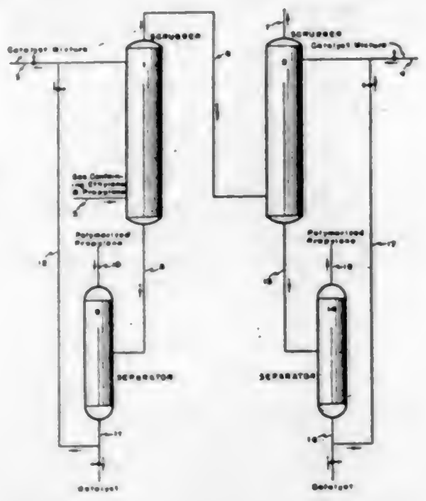


1. Process for preparing improved polymerization products comprising polymerizing at a temperature between —50° C. and —150° C. a mixture containing from 70 to 99 parts of isobutylene and from 30 to 1 parts of a conjugated diolefin of 4 to 8 carbon atoms per molecule in the presence of a catalyst solution of aluminum chloride dissolved in an inert solvent which is liquid at the reaction temperature to form a solid polymer product containing occluded catalyst therein, then bringing this solid polymer product without substantial rise in temperature into contact with a volatile hydrocarbon solvent containing an alcoholic catalyst quenching agent, thereby dissolving the said polymer in said solvent and destroying the activity of the said occluded catalyst, then washing the polymer solution to remove the aluminum compounds present therein.

2,408,008
HYDRODYNAMIC TRANSMISSION
William D. Tipton, Stoneleigh, Md.; Elizabeth B. Tipton executrix of said William D. Tipton, deceased
Application February 17, 1944, Serial No. 522,735
7 Claims. (Cl. 74—189.5)

1. In a fluid power transmission having a driving structure and a driven structure, a runner wheel carried by the driven structure; a second vaned wheel arranged in series relation with the runner wheel and adapted to act either as a runner wheel or as a guide wheel; a vaned impeller wheel arranged in series relation with the aforesaid wheels; differential gear means for coupling said second wheel and said impeller to the driving structure, said gear means being constructed and arranged such that the rotational speed of said second wheel and said impeller varies in accordance with the fluid reaction imposed on said second wheel as a consequence of torque demand on said driven structure; and means operably associated with said gear means for coupling said second wheel to said driven structure in response to equalization of torque demand on said runner and said second wheel.

2,408,009
FOUNTAIN PUMP
Thomas L. Titus, Cheyenne, Wyo., assignor to The Wyott Manufacturing Company, Cheyenne, Wyo., a corporation of Wyoming
Application September 24, 1945, Serial No. 618,229
7 Claims. (Cl. 103—163)

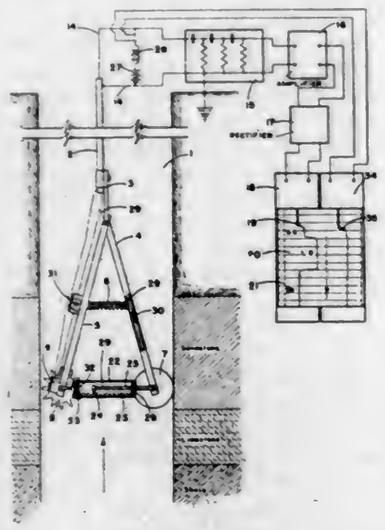


1. A liquid dispensing pump, in combination, a stay plate having an opening, an upwardly ranging discharge tube passing through the stay plate and rigidly attached thereto, a cupped cylinder connected with the lower end of the discharge tube for a limited free longitudinal and tilting movement, the bottom of the cylinder having an opening for the entrance of liquid, a cylinder seal plate for periodically closing the opening in the cylinder, connected with the lower end of the discharge tube for a limited longitudinal movement relative thereto, the seal plate having a member rigidly connected therewith provided with an upwardly facing valve surface, resilient means urging the valve surface against the lower end of the discharge tube to seal the entrance thereto, a piston, means comprising a member slidably connected with the stay plate for limited vertical movement, for reciprocating the piston within the cylinder, resilient means for normally holding the piston in elevated position adjacent the top of the cylinder, in unsealing relation thereto, and means for adjusting the extent of downward movement of the piston in the cylinder.

2,408,010
PURIFICATION OF ETHYLENE
Edward F. Wadley and Joseph T. Horeczy, Baytown, Tex., assignors to Standard Oil Development Company, a corporation of Delaware
Application November 4, 1944, Serial No. 562,021
5 Claims. (Cl. 260—677)

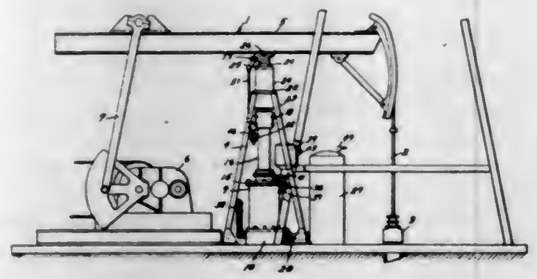
1. A method for separating propylene from ethylene which comprises scrubbing a gas containing the two with a boron fluoride-sulfuric acid catalyst mixture under conditions suitable

for the selective polymerization of the propylene including a temperature between about 60° F. and



125° F. and a pressure not substantially in excess of about 150 lbs./sq. in.

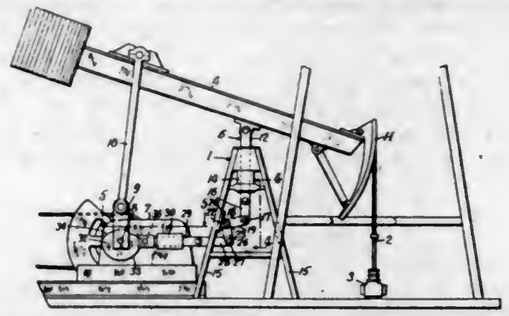
2,408,011
METHOD FOR PREVENTING THE CORROSION OF DISTILLATION EQUIPMENT
David C. Walsh, Jr., and Elza Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 27, 1944, Serial No. 533,064
4 Claims. (Cl. 196—35)



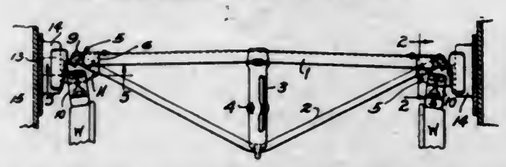
1. In the distillation of hydrocarbons which have been contacted with sulfuric acid, the step of adding to said hydrocarbons, immediately prior to their distillation, a small amount of an alkali metal salt of a phenol.

2,408,012
WELL LOGGING
Philip S. Williams, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 10, 1942, Serial No. 454,242
8 Claims. (Cl. 73—152)

1. A method of logging formations traversed by a bore hole, which comprises delivering sharp hammer-like blows directly against said formations along the wall of said bore hole, generating in the bore hole electrical impulses which are a function of the resistance of said formations to said blows, transmitting said electrical impulses to the surface, segregating high frequency components of said impulses, and recording them as a function of the resistance of said formations to said blows.



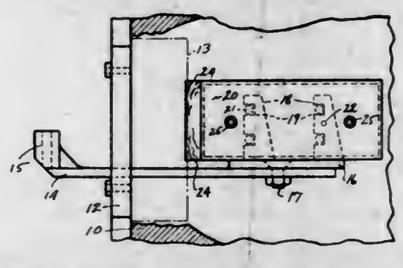
2,408,013
PUMPING APPARATUS
Wade H. Wineman, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application October 22, 1943, Serial No. 507,265
17 Claims. (Cl. 255—16)



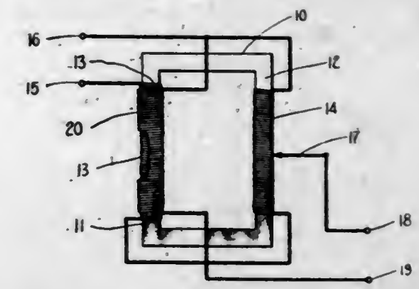
1. A yieldable supporting structure adapted for association with a well pumping apparatus of the kind embodying a walking beam, comprising, in combination, means adapted to yieldingly support the walking beam and including a cylinder containing a reciprocatory piston, means for supplying to the lower end of said cylinder a pressure fluid at a relatively high pressure, a vent opening into said cylinder at a point spaced from its upper end for connecting said cylinder to atmosphere, said piston moving upwardly on reduction of the load on the walking beam, covering said vent and compressing fluid within the upper portion of said cylinder, and a pump mechanism for delivering fluid from the upper to the lower end of said cylinder, said pump mechanism including relatively reciprocable cylinder and piston elements, means including an inlet valve for connecting said cylinder element in communication with the upper portion of said cylinder, means including a discharge valve for connecting said cylinder element in communication with the lower portion of said cylinder, and means for effecting relative reciprocation of said cylinder and piston elements in such a manner that the working space in said cylinder element approaches a maximum at the time fluid is compressed in the upper portion of said cylinder.

2,408,014
PUMPING APPARATUS
Wade H. Wineman, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application November 20, 1944, Serial No. 564,246
18 Claims. (Cl. 74—41)

1. In a pump actuating mechanism, in combination, a walking beam, power actuated means operatively connected to one end of said walking beam for swinging the latter, means for connecting the other end of said walking beam to a pump, adjustable means for pivotally supporting said walking beam between its ends, and power actuated means for adjusting said supporting means so that the pivotal axis of said walking beam moves in a vertical plane in a predetermined manner during swinging of said walking beam.

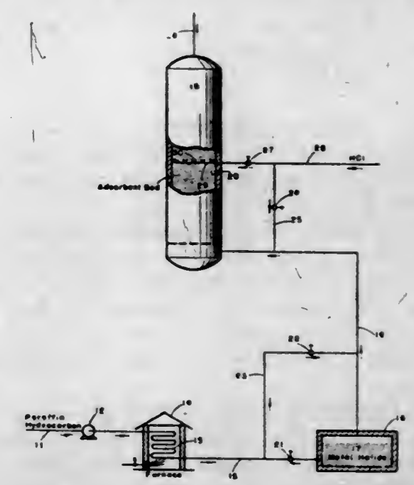


2,408,015
RAILWAY BRAKE BEAM
Edwin G. Busse, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application January 31, 1944, Serial No. 520,459
14 Claims. (Cl. 188—226)



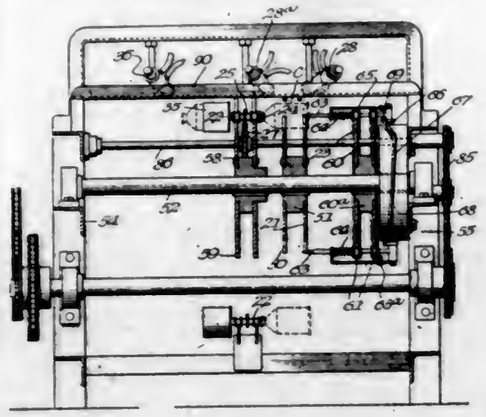
1. In a railway truss type brake beam having a compression member and a tension member converging at the end of the beam with the tension member extending diagonally through the end portion and beyond the end of the compression member, an end device having a pocket receiving the end portions of said members, a tensioning device on the tension member holding the same and the device and the compression member in assembled relation with each other and having a structure projecting beyond said pocket to form a seat for a brake head and extending longitudinally and transversely of the beam beyond said seat and arranged to slidably engage a support on an adjacent truck part.

2,408,016
OPEN-HEARTH FURNACE REPAIR UNIT
John J. Cain, Jr., Youngstown, Ohio
Application January 30, 1945, Serial No. 575,289
4 Claims. (Cl. 266—43)



1. Mechanism for repairing an open hearth furnace wall and including a charging arm having a bracket pivoted to one end thereof, the said charging arm adapted for mounting on a conventional charging machine, means formed on said bracket for carrying a repair piece, said bracket so formed as to pivot the repair piece into upright position upon the charging arms being turned 90 degrees as by the charging machine.

2,408,017
ELECTRICAL CIRCUIT ARRANGEMENT
Harry Douglas Garretson, Whitestone, N. Y., assignor to Philips Metalix Corporation, New York, N. Y.
Application May 5, 1943, Serial No. 485,769
5 Claims. (Cl. 171—119)

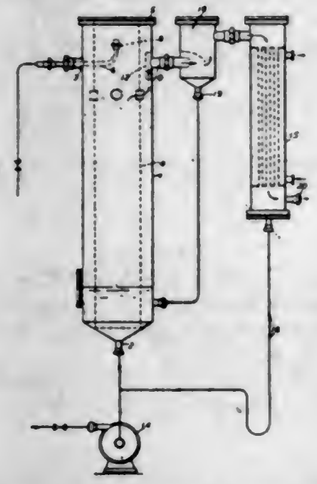


1. An electrical transformer comprising a magnetic core, two magnetically coupled windings on said core and so positioned with respect to each other that a substantial amount of leakage reactance exists between the windings, and a tertiary winding on said core tightly coupled magnetically to one of said two windings and connected in shunt with the other of said two windings.

2,408,018
ISOMERIZATION PROCESS
Otto Gerbes, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 23, 1944, Serial No. 564,809
3 Claims. (Cl. 260—683.5)

1. In a continuous isomerization process in which a normal paraffin of at least four carbon atoms per molecule in admixture with promotional amounts of hydrogen halide are contacted under isomerization reaction conditions with a catalyst bed comprising anhydrous aluminum halide adsorbed on a porous support, the steps of replacing, at intervals indicated by decreased activity of the catalyst bed, the hydrogen halide in the feed mixture with anhydrous aluminum halide without substantially altering conditions of operation, and introducing during said replacement hydrogen halide to the catalyst bed at a point where the aluminum halide vapors are substantially in equilibrium with aluminum halide adsorbed on the porous support, the replacement in each instance being of sufficient duration to effect a substantial restoration of the activity of the catalyst bed.

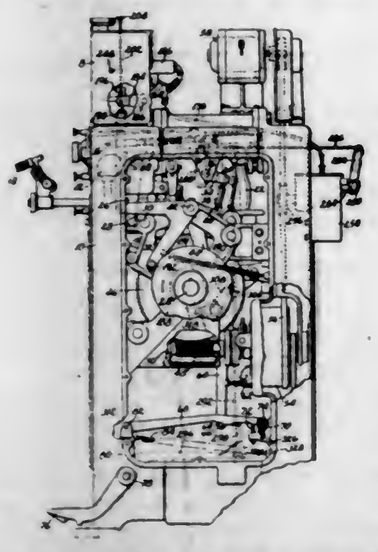
2,408,019
ARTICLE HANDLING APPARATUS
George Goebel, deceased, late of Baltimore, Md., by Helene Goebel, administratrix, Baltimore, Md., and Harry A. Rau, Baltimore, Md., assignors to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Original application October 17, 1938, Serial No. 235,496. Divided and this application November 12, 1942, Serial No. 465,380
7 Claims. (Cl. 198—24)



1. In combination, a conveyor, means extending laterally from said conveyor to support an article, a rotary article supporting members spaced laterally from said conveyor, a moving element positioned at the opposite side of said member from said conveyor, plungers reciprocable in said last-named element adapted to engage articles carried by said member, and means to reciprocate said plungers to engage an article carried by said article supporting member and move it into engagement with the article supporting means on said conveyor.

2,408,020
PYRIDINE-3-ACETIC ACID AND DERIVATIVES THEREOF AND PROCESS OF PREPARING THE SAME
Max Hartmann and Karl Miescher, Riehen, Hans Kaegi, Basel, and Werner Bosshard, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products, Incorporated, Summit, N. J.
No Drawing. Application March 9, 1942, Serial No. 434,006. In Switzerland December 23, 1940
7 Claims. (Cl. 260—295.5)

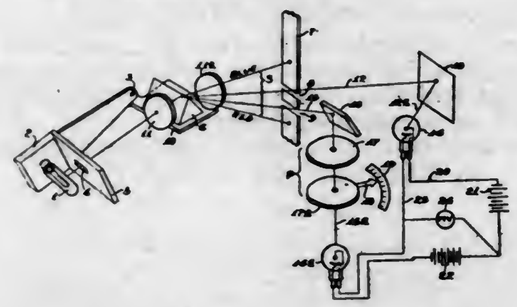
1. A process for the preparation of a pyridine-3-acetic acid, which comprises reacting a pyridine-2-carboxylic acid ester-3-carboxylic acid halide with diazomethane, reacting the resulting diazoketone with an alcohol, treating the reaction product thus obtained with a hydrolyzing agent, partially decarboxylating the resultant dicarboxylic acid, and recovering the resultant pyridine-3-acetic acid.



2,408,021
TREATMENT OF LIQUIDS
Ronald Arthur Hill, Wandsworth, London, England, assignor to The Aluminium Plant & Vessel Company Limited, London, England, a British company
Application February 16, 1945, Serial No. 578,173
In Great Britain January 17, 1944
3 Claims. (Cl. 261—112)

1. Apparatus for incorporating gas in liquid and for degasifying liquids containing gas comprising a closed treating vessel, a vertically disposed open-ended tubular member mounted within said vessel in spaced relation to the side walls thereof, means for supplying a liquid to be treated to the surface of said tubular member including an upwardly directed liquid flow conduit positioned with its discharge end in the upper portion of said tubular member, said tubular member having a series of perforations provided there-

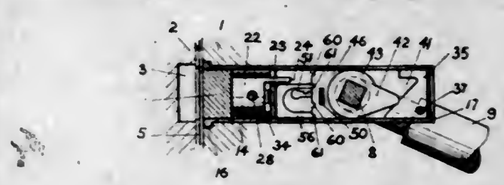
in across which the liquid is caused to flow in the form of a thin film to effect continuous agitation of the liquid as it passes downwardly along the wall of said tubular member from the top to the bottom thereof, and a flat plate positioned above the upper portion of said tubular member to receive a stream of liquid from the upwardly directed conduit and cause said stream to spread and flow outwardly to the wall of the perforated tubular member.



2,408,022
MACHINE FOR SHAPING UPPERS OVER LASTS
Bernhardt Jorgensen, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 12, 1945, Serial No. 615,806
37 Claims. (Cl. 12—14)

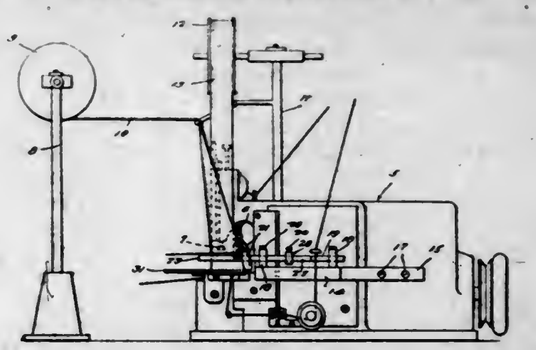
1. In a machine for shaping uppers over lasts, upper-gripping means for gripping the margin of an upper on a last and for pulling the upper, fluid-operated means for closing said upper-gripping means on the upper, a pump for delivering operating fluid, means providing a constantly

open passage for the fluid from the pump to said fluid-operated means, a valve arranged to be opened by the fluid delivered by said pump and to permit normally such escape of the fluid as to prevent the development of sufficient fluid pressure to close the upper-gripping means on the upper, and means for causing such closure of the upper-gripping means by applying to said valve force tending to close it.



2,408,023
SPECTROPHOTOMETRIC SYSTEM
Andrew P. Kruper, Waterbury, Conn., assignor to Fisher Scientific Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 1, 1943, Serial No. 485,392
13 Claims. (Cl. 88—14)

1. In a spectrophotometric method, the combination of steps comprising passing a narrow wave length band of light as a sample beam to a sample and thence to a light-sensitive device the output of which is a flow of current related to light impinged on said device, passing another narrow wave length band of light as a comparison beam through a light-varying means comprising a polarizer and an analyzer formed of sheet material which does not effect complete polarization throughout the visible spectrum to a second light-sensitive device, and by adjustment of said light-varying means to regulate the proportion of said comparison beam passed by it balancing the outputs of said devices, said comparison and sample beams being separated spectrally between adjacent edges of said bands by at least the difference between the shortest wave length at which said polarizing material produces substantially complete polarization and the shortest wave length used for the sample beam during scanning of the sample, and said separation being not substantially greater than the difference between the longest wave length at which said material produces substantially complete polarization and the longest wave length used for said sample beam, and scanning said sample over at least that portion of the spectrum over which said light polarizing material does not effect complete polarization while maintaining said separation between the sample and comparison beams and while maintaining the comparison beam within the portion of the spectrum in which polarization is substantially complete.

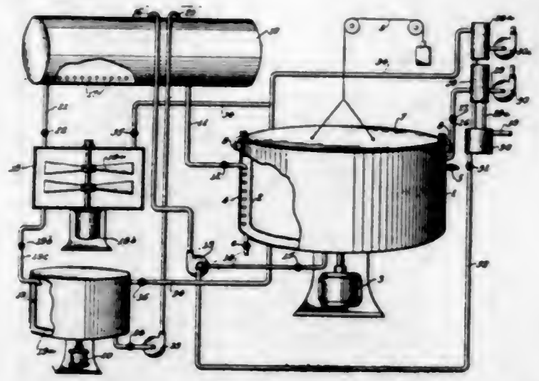


2,408,024
LOCKING MECHANISM
Sven Larsson, Ekeby, Almby, Sweden
Application January 15, 1945, Serial No. 572,942
In Sweden November 16, 1943
10 Claims. (Cl. 70—150)

1. A locking mechanism comprising a tubular lock casing mounted in a door; a bolt slidably mounted within the lock casing; a member connected to the bolt and extending into the lock casing; a spring adapted to retain the bolt in protruded position; a plate fixedly mounted on the inner end of the member extending into the lock casing and provided with a cam track, means for rigidly securing said plate in position against movement, a fixed bearing element intermediate

the bolt and the plate; a disk having an inwardly directed cam portion, the disk bearing on the fixed bearing member, the cam portion of the disk being in actuating engagement with the cam track, a spindle extending into the casing and operatively connected to the disk, and a handle mounted on the spindle.

2,408,025
SEWING MACHINE ATTACHMENT
Charles W. Martin, Chattanooga, Tenn.
Application June 7, 1944, Serial No. 539,090
6 Claims. (Cl. 112—147)

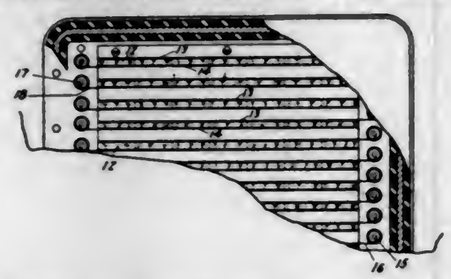


2. A sewing machine attachment of the character described comprising a cross bar having a pair of transverse openings therethrough, an elongated U-shaped strip folding rod having its legs slidably disposed through said openings, and set screws threaded through said bar impinging the legs of said folding rod, a reinforcing strip guide bar interposed between the legs of said folding rod and having a longitudinally slotted end portion disposed between the inner portions of the legs of said folding rod for reception of a reinforcing strip for the strip of material folded by said folding rod, and a set screw threaded through the bar in position to impinge the guide bar, said folding rod and said guide bar being longitudinally adjustable through the bar relative to each other to accommodate strips of varying widths.

2,408,026
PROCESS FOR TREATING SYNTHETICALLY SHAPED PROTEIN BASE MATERIALS
Francis Clarke Atwood, Newton, Mass., assignor, by mesne assignments, to National Dairy Products Corporation, New York, N. Y., a corporation of Delaware
Application January 23, 1942, Serial No. 427,940
4 Claims. (Cl. 8—127.6)

1. A method of improving the dyeing properties of a synthetic protein-base material formed by shaping an alkali-soluble acid-coagulable protein comprising casein and treating it with formaldehyde, which comprises subjecting said protein-base material to a treating liquid at a tem-

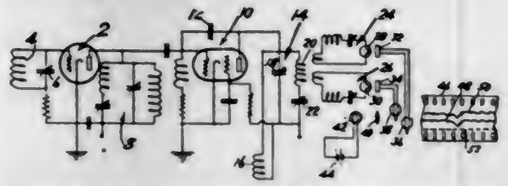
perature above 150° F., said treating liquid comprising an inert diluent in which is dissolved from



3 to 50% of the anhydride of a carboxylic acid in admixture with 1 to 10 parts of a free carboxylic acid for each 10 parts of the anhydride.

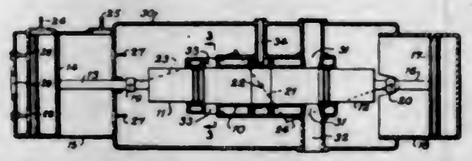
2,408,027
METHOD OF TREATING SYNTHETIC PROTEINACEOUS FIBERS
Francis Clarke Atwood, Newton, Mass., assignor to National Dairy Products Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 11, 1943, Serial No. 513,952
2 Claims. (Cl. 8—127.6)

1. A process of treating a synthetically formed protein-base fiber produced by shaping into fiber form an alkali-soluble acid-coagulable protein comprising casein and treating it with formaldehyde, which process comprises treating said fiber while having a moisture content of about 3 to 6% in a treating liquid at a temperature within the range of 150° to 225° F., said treating liquid comprising an organic solvent inert with reference to the fiber and the ingredients contained in the liquid and containing about 5 to 15% acetic anhydride and about 5 to 7% of acetic acid, the temperature and the amount of acetic anhydride within the above ranges being selected with reference to each other and to the fiber being treated so as to impart more desirable chemical properties to the fiber without undue yellowing thereof, and removing the fiber from the treating liquid having absorbed therein substantially the amount of acetic acid formed by reaction of the moisture in the fiber with the acetic anhydride in the treating liquid as a result of the specified moisture content of the fiber and the acid content of the bath.



2,408,028
MEANS FOR SENDING AND RECEIVING COMPRESSIONAL WAVES
Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application January 19, 1934, Serial No. 707,284
7 Claims. (Cl. 177—386)

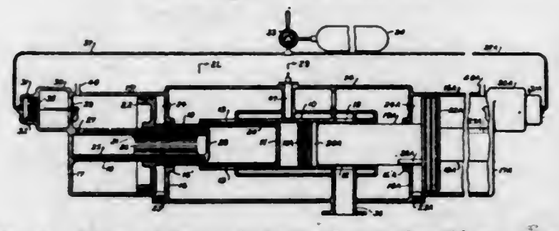
1. In a means for sending or receiving a beam of compressional waves of a chosen high frequency in a desired direction, a transmitter comprising a plurality of rows of oscillatory crystals including oscillatory surfaces having long and short dimensions, means spacing apart said rows and insulating them from each other, said crystals presenting oscillatory surfaces having their long dimension aligned in the direction of the row and their short dimension transverse thereof, said rows being spaced apart a distance slightly less than a half wave length of the compressional



wave desired to be received and having a width smaller than the half wave length.

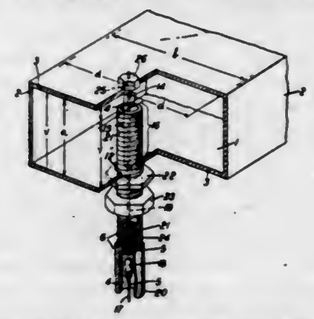
2,408,029
ELECTRICAL PROSPECTING APPARATUS
Charles B. Bazzoni, Wallingford, Pa., and John W. Millington, Beaumont, Tex., assignors to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware
Application July 6, 1940, Serial No. 344,192
3 Claims. (Cl. 175—182)

2. Means for determining the location and character of strata penetrated by a bore hole comprising a circuit including a coil, a condenser in parallel with the coil, and also in parallel therewith a circuit branch including a second coil and second condenser in series, one of said coils being an exploratory coil movable along said bore hole, and means for establishing through said circuit and exploratory coil in the strata adjacent the bore hole a high frequency alternating current.



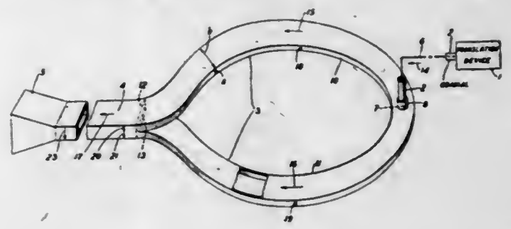
2,408,030
TWO-STROKE PISTON-CONTROLLED ENGINE
Evelyn Stewart Lansdowne Beale, Staines, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a British company
Application June 30, 1942, Serial No. 449,078
In Great Britain June 26, 1941
8 Claims. (Cl. 123—51)

1. A two-stroke compression-ignition internal-combustion engine of the kind having a working cylinder, opposed pistons in said cylinder which is provided with scavenge ports and exhaust ports controlled respectively by said pistons, said scavenge ports being shaped to give a swirl to the charge admitted by them, synchronizing linkage connecting said pistons together for constraining them to move equally and oppositely, a reciprocating compressor having a compressor piston connected to one of said working pistons for reciprocation in unison therewith through strokes which vary with variation in working conditions so as to vary the outer dead points of said working pistons and in consequence the



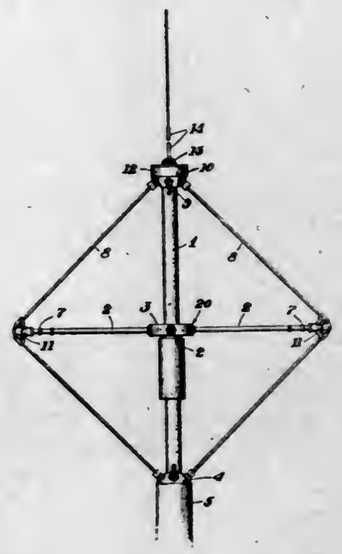
maximum depth of port opening of said scavenge ports, wherein said scavenge ports are so shaped that the mean direction of the charge fluid flowing through any one of said scavenge ports is nearer to the radial direction from the axis of said working cylinder at small port openings than at large port openings.

2,408,031
FREE PISTON INTERNAL-COMBUSTION ENGINE
Evelyn Stewart Lansdowne Beale, Staines, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a company of Great Britain
Application February 16, 1943, Serial No. 476,041
In Great Britain February 2, 1942
14 Claims. (Cl. 123—46)



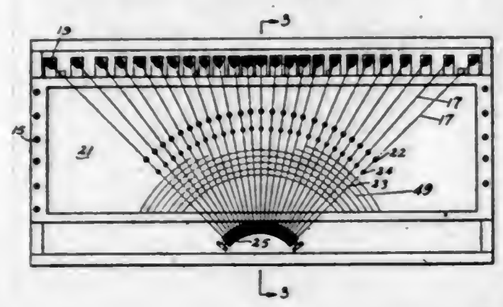
9. A free-piston internal-combustion engine having a power cylinder, a cushion cylinder coaxial with and having a diameter larger than that of said power cylinder, a cover closing the end of said cushion cylinder farther from said power cylinder, a hollow cylindrical guide extending coaxially within said cushion cylinder from said cover and provided with a jacket for a cooling fluid, said guide having an inner end wall provided with an orifice and said guide having a restricted passage opening out of the outer part of the space within it and leading to the outer part of said cushion cylinder, a free-piston assembly including a power piston co-operating with said power cylinder, an annular cushion piston co-operating with said cushion cylinder and said guide, and a sleeve rigidly connecting said pistons together, the space between said annular piston and said cover constituting a first cushion compartment and the space contained by said guide, said sleeve and said power piston constituting a second cushion compartment, said orifice being placed to direct a jet of gas on the under side of the head of said power piston, and means for admitting a charge of starting air under pressure to said first compartment.

2,408,032
COUPLING ARRANGEMENT
Alfred C. Beck, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 3, 1942, Serial No. 429,358
9 Claims. (Cl. 178—44)



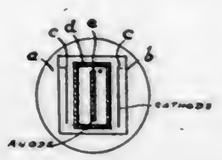
3. In combination, a wave guide, a coaxial line comprising a pair of conductors projecting transversely into the interior of said guide unequally and for a distance greater than one-half of a transverse dimension of said guide.

2,408,033
COUPLING SYSTEM
Alfred C. Beck, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 17, 1942, Serial No. 435,016
4 Claims. (Cl. 178—44)



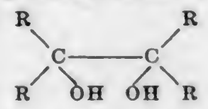
1. A dielectric channel-transmission line coupling device comprising a rectangular wave-guide section for conveying wave components polarized in the plane of one transverse dimension, said section being looped or curved in the plane of the other transverse dimension and having superimposed apertures, the section being connected at its mid-point to said line and at its super-imposed apertures to said channel.

2,408,034
DIRECTION FINDER ANTENNA
David Bellare, Brooklyn, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 14, 1945, Serial No. 593,604
8 Claims. (Cl. 250—33)

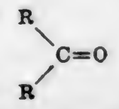


1. A wave collector comprising a vertical supporting member, a pair of antenna loops positioned substantially at right angles to each other and having the common axis thereof in common with the vertical axis of said member, a plurality of arms extending radially of said member at a location within the area of said loops, a vertical sensing antenna extending upwardly from said member from a point adjacent said arms, and means for coupling said arms as a counterpoise to said sensing antenna.

2,408,035
OBSERVATION SYSTEM
Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application October 22, 1941, Serial No. 416,111. Divided and this application October 9, 1942, Serial No. 461,642
4 Claims. (Cl. 234—64)

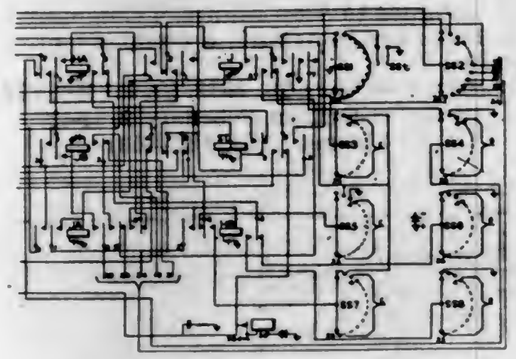


1. In a system for surveying an area with the use of compressional waves, an exhibiting device for use therewith comprising a casing having an exhibiting surface, a plurality of flexible wires having each a recording bead carried thereon, means for drawing said beads by means of said wires over said exhibiting surface, and means completing an electrical circuit through said wires and said beads across said exhibiting surface.

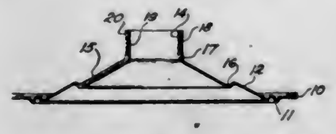


2,408,036
ELECTROLYTIC PINACOL PRODUCTION
Charles R. Boettger, Jr., Roselle, Thomas S. Chambers, Newark, and Ober C. Slotterbeck, Rahway, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application July 11, 1942, Serial No. 450,518
6 Claims. (Cl. 204—77)

1. In the process of producing glycols corresponding to the genefal formula

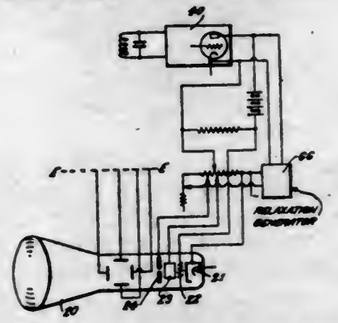


wherein R stands for a member of the group consisting of alkyl and aryl radicals and substituted alkyl and aryl radicals by the electrolytic reduction of an aqueous acid solution of a ketone of the formula



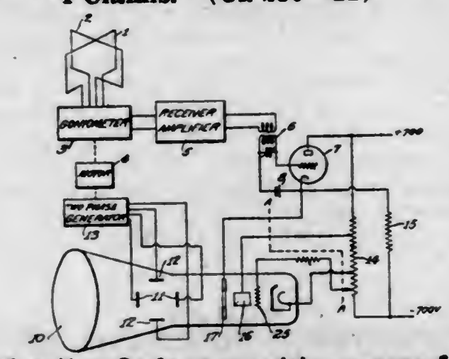
wherein R stands for a member of the group consisting of alkyl and aryl radicals and alkyl and aryl radicals substituted by a group which is not reducible under the reaction conditions employed the improvement which comprises effecting said reduction in a diaphragm cell in contact with a cathode consisting of from 60 to 80% of copper and 40 to 20% of lead at a temperature below about 25° C. and at a current density of between about 0.1 and about 4 amperes per sq. dm.

2,408,037
ELECTRICAL REMOTE INDICATING AND SUPERVISORY SYSTEM
Edward Albert Henry Bowsher, Harold Mountjoy Muschamp d'Assis-Fonseca, and Hugh Jennings Ward, London W. C. 2, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 10, 1943, Serial No. 478,680
In Great Britain March 12, 1942
4 Claims. (Cl. 177—353)



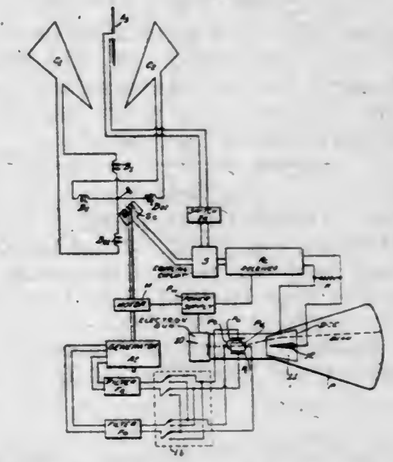
1. A substation sender adapted to be operated in a remote control system, under the control of an electrical signal, for sending a report from a substation to a central station of the condition of a plurality of apparatus units at the substation, comprising a circuit line to the central station, relay means for each unit for producing an impulse of a polarity corresponding to the actual condition of the unit, sequence switch means under the control of said signal, including two wipers sweeping corresponding banks of contacts, for connecting said relay means consecutively with said circuit line to produce a corresponding train of impulses, a sending relay connected to each wiper, said relay means including a set of change-over contacts controlled by the apparatus unit and controlling said sending relays to operate said sending relays alternatively in accordance with said set of changeover contacts completing one circuit or the other through the banks swept by the wipers, the set of change-over contacts being connected with a pair of condensers so that on the occurrence of a unit change-over, one condenser is newly charged and the other is left charged, and means, operated by the charge on the condenser which is left charged, for lengthening the corresponding impulse upon the next sweep of the wipers.

2,408,038
ARTICLE MADE OF FIBROUS MATERIAL
Joseph B. Brennan, Euclid, Ohio
Application December 10, 1941, Serial No. 422,388
2 Claims. (Cl. 181—32)



1. A hollow acoustic diaphragm comprising an integral deposit of fibrous material and a binder and having a conical portion and a supporting rim portion, the supporting rim portion being formed integrally with the conical portion and having a thickness several times as great as the major portion of the conical portion.

2,408,039
ELECTRONIC ROTATION DIRECTION FINDER
Henri G. Busignies, Forest Hills, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 5, 1941, Serial No. 381,840
3 Claims. (Cl. 250—11)

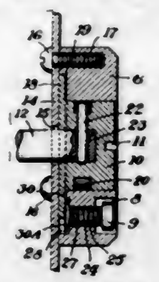


1. A direction finder comprising an aerial system means for producing an effective rotation of said aerial system to produce an indicating voltage dependent upon the effective angular position of said aerial system with respect to a source of radiation, a cathode ray tube indicator having an electrode system for producing a cathode ray beam, means for producing a rotation of said cathode ray beam in timed relation with effective rotation of said aerial system, means comprising a saw-tooth oscillation generator having a period equal to a predetermined number of rotations of said beam for causing a velocity modulation of said beam to produce a lateral deviation of said beam, and means comprising an electrode controlled by said indicating voltage for controlling the intensity of said beam for applying said indicating voltage to said cathode ray tube to obtain a direction indication.

2,408,040
DISTORTING DIRECTION FINDER RECEIVER
Henri G. Busignies, Forest Hills, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 6, 1941, Serial No. 381,936
4 Claims. (Cl. 250—11)

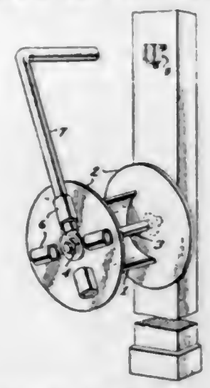
1. A direction finder comprising means for producing an effective rotation of a directive receiving antenna to produce a wave pattern envelope dependent upon the speed of rotation, a cathode ray indicator comprising means for producing an electron beam, means for rotating said beam in predetermined time relation with the effective rotation of said antenna, means for applying signals of said envelope to said indicator during substantially the entire time of each rotation of said beam to produce radial displacement of the electron beam during rotation, and means for accelerating said radial displacement with envelope amplitude changes, comprising an electron tube having a sharply rising output with change in input voltage, said tube being conductive for substantially all values of input voltage, means for coupling said effectively rotated antenna to the input of said tube, and coupling means for coupling the output of said tube to said indicator to produce said radial displacement.

2,408,041
INSTANTANEOUS VISUAL DIRECTION FINDER
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone & Radio Corporation, a corporation of Delaware
Application May 22, 1941, Serial No. 394,645
2 Claims. (Cl. 250—11)



1. A direction indicating arrangement including cathode ray tube, comprising an electron gun for producing a cathode ray beam, deflecting means for producing a rotation of said electron beam, and a pair of radial deflection electrodes arranged in the path of said beam, one of said electrodes being of hollow frusto-conical shape and the other electrode being of substantially conical shape so that the said cathode ray beam while rotating passes through the annular space between said electrodes receiver means including effectively rotating directional antenna means and means for detecting signals received by said antenna means, and means for applying a potential proportional to said detected signals between said radial deflection electrodes, whereby said beam may be deflected over the screen of said cathode ray tube to produce a relatively sharp visual direction indication thereon.

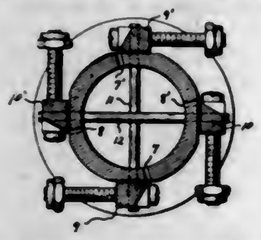
2,408,042
DIAL
Seth E. Butler, Union City, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application June 18, 1943, Serial No. 491,406
6 Claims. (Cl. 116—124.2)



5. A dial assembly comprising a substantially cylindrical dial body having a scale on the face thereof and a relatively large cylindrically-shaped central opening, a substantially cylindrical hub rotatably positioned in said opening, a pointer on said hub for association with said scale, means for permitting actuation of said hub, a panel having an opening therein, screw means securing said body to said panel so that the opening in said body is coaxial with the opening in said panel, a shaft secured to said hub and passing through the opening in said panel, a flange on said hub, within said body, and having one face thereof adjacent said panel, a ring-shaped washer of resilient material adjacent the opposite face of said flange from said panel, said body having a

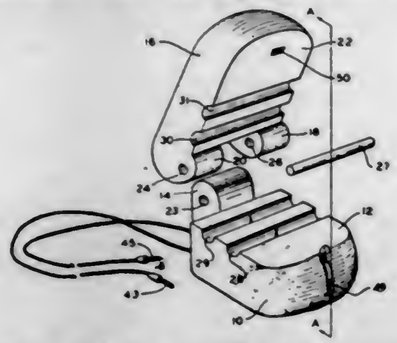
threaded second opening parallel to said first mentioned opening, a screw receivable in said threaded opening, a tab portion forming an extension of said ring-shaped washer and positioned axially of said screw, whereby selective

movement of said screw will cause the end thereof to contact the tab portion of said ring-shaped washer, thereby causing said washer to be forced against said flange to compress said flange between said washer and said panel.



2,408,043
FIRE HOSE REEL
Conlonel Charles Calabrese, Webster Groves, Mo., and John Sublett Herold, Greenwich, Conn.
Application May 15, 1944, Serial No. 535,628
1 Claim. (Cl. 242—86)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A reel comprising a spindle fixed in a horizontal position to a vertical support, a hub journalled on said spindle, said hub consisting of a pair of spaced plates joined by a transversely extending concavo-convex member, concentric with the spindle, a socket fixed to one of said plates and radially with respect to the axis of the spindle, a handle detachably inserted in said socket to effect rotation of the hub about its spindle, said handle having a lateral extension adapted when the handle is rotated about its longitudinal axis to extend transversely of the reel, means associated with the reel and fastened to said support for engaging the terminal end of the handle when positioned transversely of the reel, said terminal end of said handle being disposed in engagement with said last named means by lifting it radially with respect to the spindle and being maintained in engagement with said last named means by gravity, whereupon rotation of the reel will be prevented.

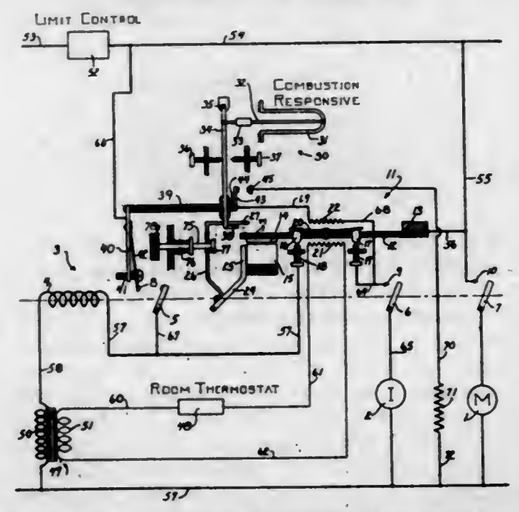


2,408,044
ERECTION DEVICE FOR GYROSCOPES
Leslie F. Carter, Leonia, N. J., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application August 6, 1941, Serial No. 405,607
11 Claims. (Cl. 74—5)

2. In a gyroscopic instrument, a rotor frame, a gimbal on which said frame is pivotally mounted with the frame and gimbal axes arranged in mutually perpendicular relation, and means responsive only to tilt of the frame about the frame axis and operable to exert a torque having two com-

ponents, one of which is exerted about the gimbal axis and the other of which is exerted about the axis of the frame in a direction that the same counteracts the effect of friction in the bearings of the instrument about such axis.

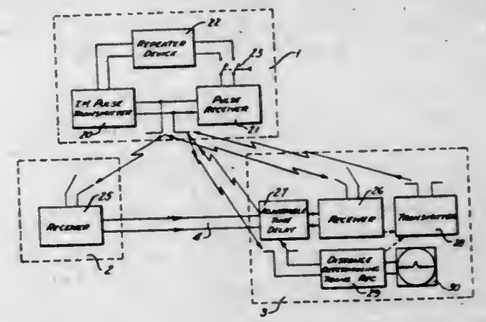
2,408,045
LINE CONNECTOR
Turner R. Cottrell, Neptune, N. J.
Application January 4, 1945, Serial No. 571,341
1 Claim. (Cl. 173—340)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An electrical line connector comprising two hinged-together jaws made of insulating material, each of said jaws having a flat surface engaging with the corresponding flat surface of the other jaw when said jaws are in closed position, two spaced, parallel semi-cylindrical grooves recessed in the body of each jaw with the axes of said grooves lying substantially in the plane of said surface, and said groove axes being parallel to the hinge axis of said connector, a removable contact pin radially disposed in each groove of one jaw with the tip of said pin terminating substantially at the axis of its groove, electrical terminals protruding from said jaw, each of said terminals being electrically connected to the respective pin, and a snap spring latch for holding said connector in closed position.

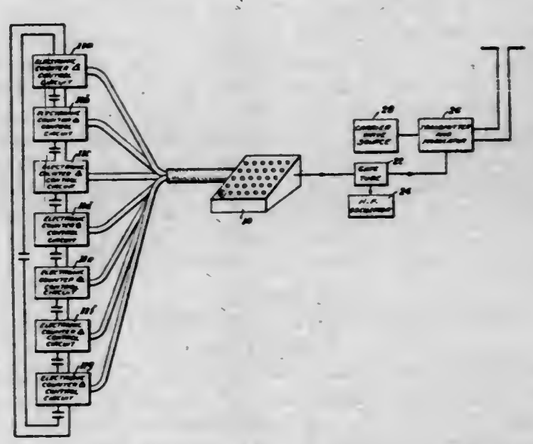
2,408,046
ELECTRICAL RESISTANCE UNIT
Howard L. Coyne, Rockville Centre, N. Y., John J. Kuhn, Elizabeth, N. J., and John E. Ross, Corona, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 21, 1943, Serial No. 507,146
11 Claims. (Cl. 201—63)

1. An electrical resistance device comprising a drum type support, a resistance element bent to follow the curve of said support, a hoop concentric with said support and pressure developing means supported by said hoop and at spaced points on said hoop and cooperating with said hoop to exert pressure on said resistance element to hold said resistance element on said support at required spaced points on said support.



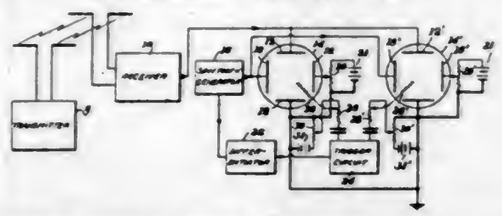
2,408,047
BURNER CONTROL APPARATUS
Lewis L. Cunningham, Glendale, Calif., assignor to Perfex Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application June 20, 1941, Serial No. 398,923
23 Claims. (Cl. 158—28)

1. In a burner control system, the combination of, control means responsive to the demand for heat for starting and stopping the burner, starting means movable from an inoperative position to a starting position, means normally preventing the burner from starting when the starting means is in said inoperative position and providing for starting of the burner when the starting means is in starting position, said starting means moving to inoperative position irrespective of combustion after starting of the burner, running means including combustion responsive means and a movable member operated thereby, said movable member being moved to running position only upon presence of combustion and serving to maintain the burner in operation independently of said starting means and under the control of said heat demand responsive means, and means responsive to failure of combustion for preventing return of the starting means to starting position irrespective of said heat demand responsive means.



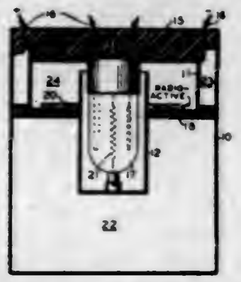
2,408,048
RADIO DIRECTION METHOD AND SYSTEM
Edmond M. Deloraine and Emile Labin, New York, N. Y., assignors to Federal Telephone and Radio Corporation, a corporation of Delaware
Application August 28, 1942, Serial No. 456,499
8 Claims. (Cl. 250—1)

1. The method of directing a craft along a given course, the craft being equipped with short wave carrier time modulated pulse transmitter and receiver equipment, and being directed by fixed radio installations of the time modulated pulse type, comprising transmitting time modulated pulses from said pulse transmitter equipment on said craft to said fixed installations to request an indication of course position, transmitting further pulses from said same pulse transmitter equipment on said craft, receiving said transmitted pulses at predetermined fixed points spaced apart at least twenty-five wavelengths at said carrier frequency, obtaining a differential of the time of receiving the first received component



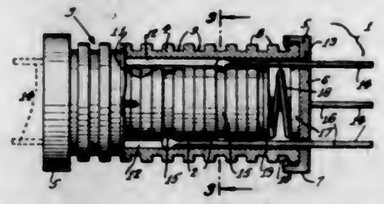
of said received pulses to determine the course position of said craft, transmitting information of said course position by time modulated pulses, and receiving said pulses on said craft whereby an accurate indication of the position of said craft relative to a desired course is obtained.

2,408,049
INTELLIGENCE TRANSMISSION SYSTEM
Louis A. de Rosa, West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application June 18, 1943, Serial No. 491,288
16 Claims. (Cl. 178—30)



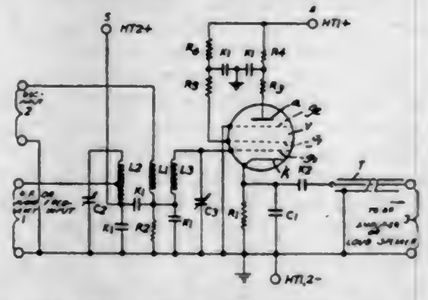
5. An intelligence transmission system utilizing pulses so related that the configurations of characters transmitted by the pulses are represented by selections therefrom arranged in successive bands, the combination of a master electronic counter circuit comprising a plurality of sequentially firing gaseous discharge tubes, said master electronic counter circuit being divided into a plurality of serially connected sub-counter circuits corresponding to the number of bands for forming the characters, and each sub-counter circuit containing a number of gaseous discharge tubes corresponding to the assigned number of pulses for each band, means deriving pulses from each gaseous discharge tube, means for transmitting pulses, means for starting and stopping said master electronic counter circuit, and controllable switch means interconnecting said pulse-deriving means to said pulse transmitting means to apply sequentially timed pulses thereto in accordance with the shape of a desired character.

2,408,050
METHOD OF AND MEANS FOR VISUALLY REPRODUCING SIGNALS
Louis A. de Rosa, West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 1, 1943, Serial No. 508,596
18 Claims. (Cl. 178—6.5)



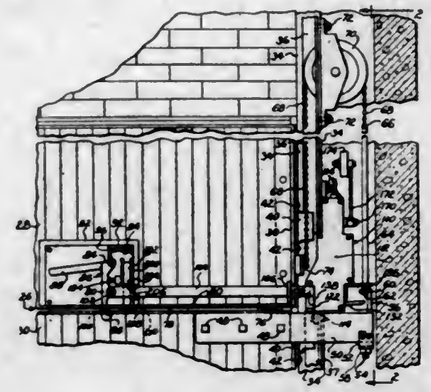
1. Stereoscopic receiving system comprising, in combination, a pair of cathode ray oscilloscopes spaced apart with their screens lying in a common plane, common stereoscopic means for simultaneously viewing the two screens, each of said cathode ray oscilloscopes having two pairs of deflecting plates, one pair positioned at right angles to the other and a control grid, a receiver, means impressing signals from said receiver simultaneously across one pair of plates of each cathode ray oscilloscope, a sweep generator, means for simultaneously impressing the output of said sweep generator across the other pair of plates of each cathode ray oscilloscope, a trigger circuit having a pair of alternatively energizable outputs, means connecting the grid of one cathode ray oscilloscope to one of said outputs and the grid of the other cathode ray oscilloscope to the other of said outputs, differentiating means connected between the output of said sweep generator and the input of said trigger circuit for applying to the latter spaced pulses of opposite polarity, whereby said grids will be alternatively energized in accordance with the spacing between said pulses, and means for laterally displacing the signal on the screen of one oscilloscope relatively to the other to such an extent as to produce a stereoscopic image when seen through said common viewing means.

2,408,051
FIRE AND SMOKE DETECTOR AND THE LIKE
Khatchik O. Donelian, New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J., a corporation of New Jersey
Application April 4, 1942, Serial No. 437,615
13 Claims. (Cl. 177—311)



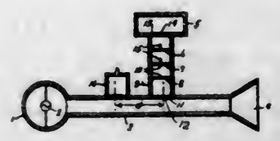
6. A detector unit for fire alarm systems comprising at least three spaced electrodes defining adjacent spaces exposed to combustion products from a fire in the space to be protected, the said product including either ionized molecules or solid particles in suspension in the form of smoke, or both ionized molecules and smoke particles, a source of potential connected to said electrodes, means for ionizing the air in the space between two of said electrodes, and means so co-acting with said electrodes as to detect jointly and severally by electroconductive effects smoke particles in suspension in the ionized air between two of said electrodes and ionized molecules in the air in another of said adjacent spaces between two of said electrodes.

2,408,052
RECTIFIER STACK MOUNTING CONSTRUCTION
Max Enderlin, Madison, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 22, 1944, Serial No. 536,690
4 Claims. (Cl. 175—366)



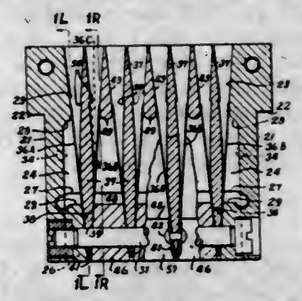
1. A rectifier stack mounting comprising a tubular body having a chamber fitting a rectifier stack, end closures for the chamber, and cooperating elements on the body and a closure for holding the latter closure in position on the body, including a circumferentially arranged ridge structure on the body, said body being made of readily severable material and having a longitudinal series of ridge structures spaced for transverse severance between adjacent ridge structures.

2,408,053
FREQUENCY CHANGING NETWORK
Charles Malton Le Grice Eyre and John Owen Gilderdale, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 12, 1944, Serial No. 517,912
In Great Britain February 1, 1943
5 Claims. (Cl. 250—20)



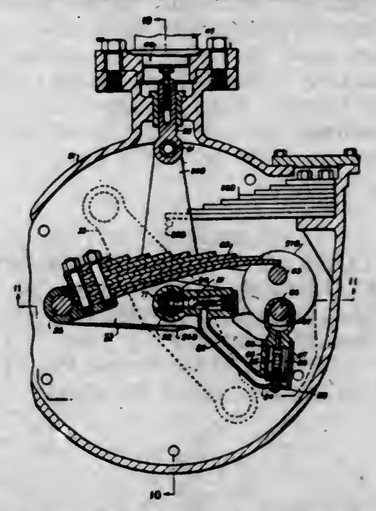
1. An electrical device for securing changes of modulation by the algebraic addition of waves of differing frequencies, including a thermionic valve having electrodes including a cathode, input and output circuits therefor, an impedance connected in series with said cathode and inserted in both the input and output circuits of said valve forming a negative feedback path between said circuits, means for simultaneously applying a signal wave and a carrier wave to the input circuit of said valve, means for predeterminedly biassing said valve with potentials so chosen that said applied waves cause the anode current of said valve to vary over a substantially curved portion of the characteristic curve thereof, and output means connected to at least a portion of said impedance for extracting the modulation products from said valve.

2,408,054
ELECTROMECHANICAL INTERLOCK FOR ELEVATOR DOORS
Emory W. Fenn, Chicago, Ill., assignor to Firecraft Corporation, a corporation of Illinois
Application May 13, 1943, Serial No. 486,765
16 Claims. (Cl. 187—31)



1. In an elevator or the like, a hoistway, a car in said hoistway, an electric motor for said car, a motor control switch under the control of the car operator, a biparting door comprising door sections associated with each floor of said hoistway, means connecting said sections for simultaneous movement, latch means including a movable latch member for each door, a motor control switch associated with each door and including a switch arm movable into closed position by said latch member when said latch member is moved to latching position, and a motor control circuit including said switches, said motor being operative only when both switches are closed, and means for preventing closure of the second switch when said door is open, said closure-preventing means being provided on said connecting means so as to be irremovable without rendering said connecting means inoperative.

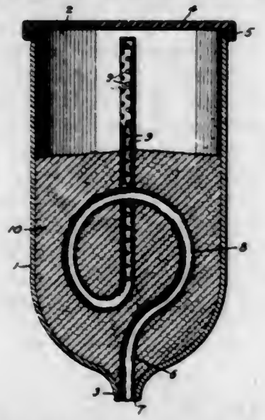
2,408,055
ULTRA HIGH FREQUENCY COUPLING DEVICE AND SYSTEM
Milan D. Fiske, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 17, 1944, Serial No. 545,314
14 Claims. (Cl. 178—44)



1. In combination with a principal hollow pipe type wave guide for transmitting electromagnetic waves dielectrically, means for transmitting high intensity waves over said guide and for reflecting low intensity waves comprising a stub section of wave guide connected to said principal guide through an aperture tuned to the frequency of said waves, said stub section having a length equal approximately to an odd multiple of a quarter wave length at said frequency, and said stub section being short circuited at its end remote from said aperture.

2,408,056
NONRETURN VALVE
Harold Oatridge Farmer, Hounslow, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a company of Great Britain
Application August 11, 1942, Serial No. 454,381
In Great Britain January 15, 1942
10 Claims. (Cl. 251—119)

8. In a non-return valve of the kind specified, seating members having two opposed plane seating faces diverging from each other in the direction of fluid flow, said faces being interrupted by ports extending from their edges nearest the inlet end of the valve, a stop plate disposed between said seating faces and having its border nearest the inlet end of the valve bevelled to conform to the angle of divergence of said seating faces, two resilient laminae disposed between said stop plate and said seating members for sealing said ports therein, means maintaining the ends of said laminae adjacent to their entry edges rigidly nipped between said seating members and said stop plate, and a V-section strip secured to and embracing the borders of said laminae intermediate their said ends.

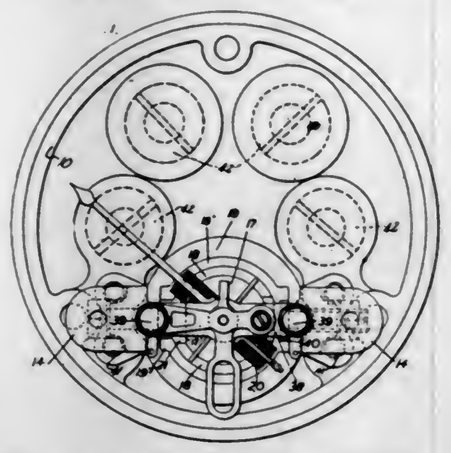


2,408,057
INTERNAL-COMBUSTION ENGINE OF THE FREE PISTON TYPE
Harold Oatridge Farmer, Hounslow, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a company of Great Britain
Application March 9, 1943, Serial No. 478,503
In Great Britain March 2, 1942
19 Claims. (Cl. 123—46)

1. An internal-combustion engine having a power cylinder, a compressor cylinder, primary moving parts including a power piston and a compressor piston co-operating with said cylinders respectively and connected together for operation in unison as a free-piston assembly capable of reciprocating through a variable stroke, such that at least one of its dead points is indeterminate, an auxiliary member for performing

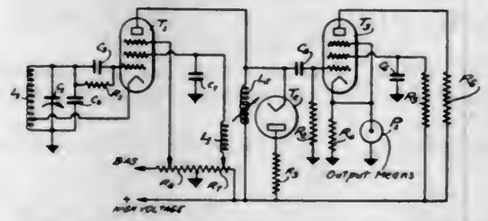
a function auxiliary to the operation of said engine, an inertia member, an operative connection between said inertia member and said primary moving parts for imparting to said inertia member an acceleration by the motion of said parts during the first part of one of their strokes that precedes their occupation of said indeterminate dead point, said connection serving to permit said inertia member to overrun said parts during a subsequent part of the same stroke, and means operatively associated with said auxiliary member and capable of co-operating with said inertia member by retarding it at a predetermined point in such overrunning motion and using the kinetic energy thereby taken from said inertia member to actuate said auxiliary member.

2,408,058
HYGROSCOPIC MATERIAL DISPENSER
William F. Gallagher, Springfield, Mass.
Application February 14, 1944, Serial No. 522,294
1 Claim. (Cl. 222—211)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



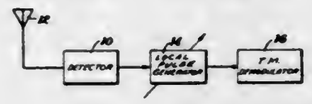
A granulated material dispenser comprising a container arranged to receive said granulated material therein, a flexible cap secured across one end of said container, a discharge opening formed in the opposite end of said container, a piece of tubing having one end connected to said discharge opening and the other end thereof extending substantially through the length of said container and perforated to permit passage of the granulated material into said tubing, said tubing being formed into at least one complete loop intermediate its said perforated end and discharge end to form a vapor trap.

2,408,059
MANUFACTURE OF DIAZODINITROPHENOL
Frederick M. Garfield and Herman W. Dreher, St. Louis, Mo., assignors to Olin Industries, Inc., a corporation of Delaware
Application July 3, 1940, Serial No. 343,706
10 Claims. (Cl. 260—141)



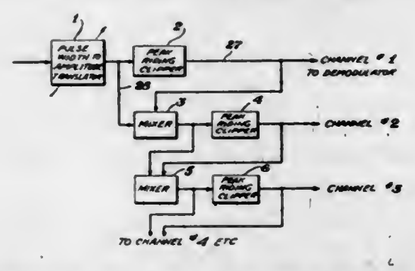
1. As a new product, free-flowing diazodinitrophenol in the form of tabular crystals containing an adsorbed triphenylmethane dye.

2,408,060
ELECTRICAL MEASURING INSTRUMENT
Bertram Barnett Grace, John Handley, and Gilbert Gilliver, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Original application June 12, 1943, Serial No. 490,627. Divided and this application November 29, 1943, Serial No. 512,176. In Great Britain July 17, 1942
6 Claims. (Cl. 171—95)



2. An electrical measuring instrument, comprising a moving coil and a permanent magnet within said coil, said permanent magnet consisting of an element rendered magnetically anisotropic during heat treatment and permanently magnetized in substantially one direction, said direction being substantially perpendicular to that of the path of said moving coil.

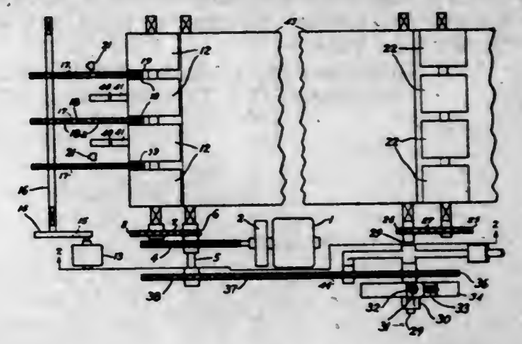
2,408,061
STABLE PULSE GENERATOR
Donald D. Grieg, New York, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application December 20, 1941, Serial No. 423,862
2 Claims. (Cl. 250—36)



1. Pulse generator comprising, in combination, a vacuum tube having control elements including an anode, a cathode and a grid, and a high internal plate resistance characteristic, a tank circuit, means interconnecting said tank circuit with elements of said vacuum tube to produce oscillations therein, an output circuit connected between the anode and cathode of said tube, means biasing an element of said vacuum tube to such a value as to produce periodically recurrent current surges in said output circuit, a tunable inductive reactor serially connected in said output circuit, said reactor having a resistance value relatively small compared with the internal resistance of said tube, a uni-directional rectifier connected in shunt with said inductive reactor, means deriving induced voltage pulses from said reactor when said current surges from said vacuum tube are impressed thereon, and means to produce the maximum voltage pulses possible from the time duration of the applied current surges, comprising means varying the bias of the vacuum tube element and means varying the tuning of said reactor.

2,408,062
SIGNAL TRANSLATOR
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application May 24, 1943, Serial No. 488,178
9 Claims. (Cl. 250—20)

1. A method of translating repetition modulated pulses into equivalent time modulated pulses comprising generating pulses according to a given time displacement and using the successive pulses of a train of repetition modulated pulses to be translated for synchronizing the generation of alternate ones of the generated pulses.

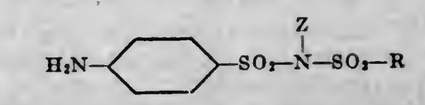


2,408,063
MULTIPLEX RECEIVER
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 29, 1944, Serial No. 547,123
11 Claims. (Cl. 179—15)

1. A method of selectively receiving a plurality of channels of communication from a multichannel train of pulses wherein the pulses of each channel differ from pulses of other channels by a different identifying width; comprising translating said pulses into a series of corresponding undulations the amplitudes of which vary substantially as the respective width of the corresponding pulses; and successively selecting the undulations of each channel in accordance with the relative values of the amplitudes thereof.

2,408,064
CONTINUOUS GLUING MACHINE
Selden H. Hall, Poughkeepsie, N. Y., assignor to James L. Taylor Mfg. Co., Poughkeepsie, N. Y., a corporation of New York
Application January 23, 1942, Serial No. 427,973
15 Claims. (Cl. 144—279)

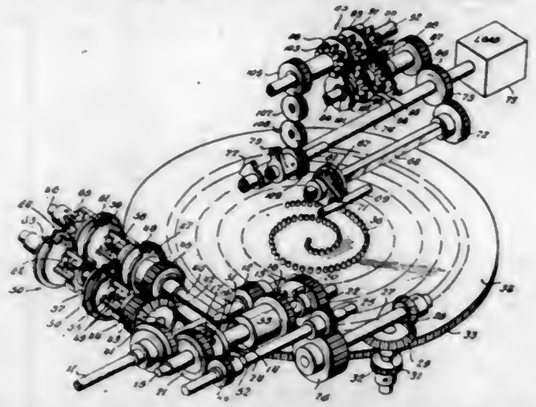
1. In a continuous gluing machine the combination with a heated glue-setting chamber, continuously driven feed rolls adapted to force a series of boards having glue coated edges into and through said chamber, wherein the glue is set and the boards cemented together, retard rolls outside of but closely adjacent the outlet from said chamber and rotatable by said boards passing in contact with them, of a preadjustable friction clutch, power transmitting mechanism between said retard rolls and clutch, said clutch being driven by said retard rolls through said mechanism and offering preadjustable yielding



resistance to rotation of said rolls, whereby preadjustable yielding resistance is offered to emergence of said boards from said chamber.

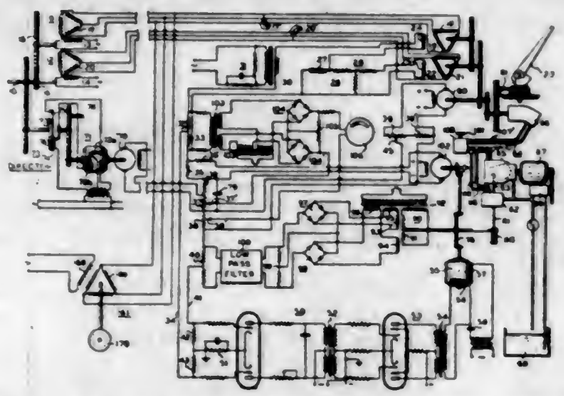
2,408,065
STARCH-MELAMINE MOLDING COMPOSITION
Donald W. Hansen, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application January 20, 1943, Serial No. 472,995
1 Claim. (Cl. 260—9)

A plastic molding composition comprising a reaction product of about 70 to 75 parts of starch and about 25 to 30 parts of a melamine-formaldehyde condensation product, said composition having a degree of alkalinity lying within the range of 7 to 11 pH and having a flow rate of from 33 to 180 mils when a preformed cylindrical pellet of such composition 3/8 of an inch in diameter and 3/8 of an inch long is placed between platen members at a temperature maintained at 150° C. when a 5 kilogram load is applied thereto; a moisture content of around 6 per cent as determined by drying approximately 2 grams in an air oven at 105° C. for 3 hours; a water absorption represented by a percentage gain in weight lying within the range of 1.01 to 2.01 when a disk 2 inches in diameter and 1/8 inch thick, molded at 5,000 pounds per square inch and 150° C. for 3 minutes, is conditioned for one hour at 105° C., immersed on an edge for 24 hours in water at 25° C. and wiped dry; and a flexural strength, when molded into an article, ranging from about 9,900 pounds to 14,195 pounds per square inch.



2,408,066
P-AMINO-BENZENE-SULPHAMIDE DERIVATIVES
Winfrid Hentrich, Rodleben, near Dessau-Rosslau, Anhalt, and Erik Schirm, Dessau, Anhalt, Germany; vested in the Alien Property Custodian
No Drawing. Application June 3, 1939, Serial No. 277,300. In Germany May 5, 1938
6 Claims. (Cl. 260—397.7)

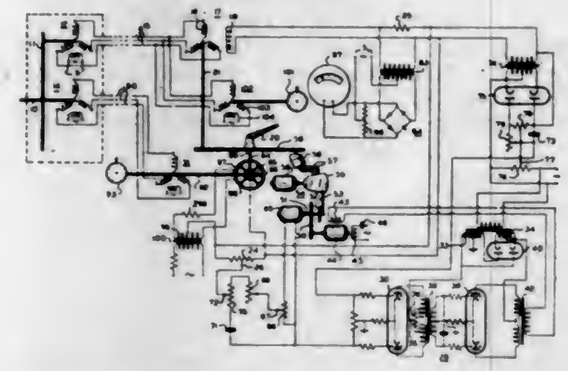
1. Compounds having the general formula



wherein R is an aliphatic radical and Z is selected from the group consisting of hydrogen and alkalis, ammonia, and organic basic forming salts in combination with the rest of the molecule.

2,408,067
INERTIA ABSORBER
Henry A. Herzig, Port Washington, N. Y., assignor to Sperry Gyroscope Company, Inc., a corporation of New York
Application November 30, 1943, Serial No. 512,319
6 Claims. (Cl. 192—4)

1. In a computing mechanism of the character described, the combination of an input member, a pin cam driven by said input member, a reversing mechanism connected between said input member and said pin cam for changing the direction of movement of said pin cam relative to said input member, an accumulator device driven by said input member for intermittently actuating said reversing mechanism to change the direction of movement of said cam, an output member driven by said pin cam, stopping means for arresting movement of said output member, and an accumulator device driven by said output member for operating said stopping means synchronously with the operation of said reversing mechanism to arrest movement of said output member during the reversing operation.

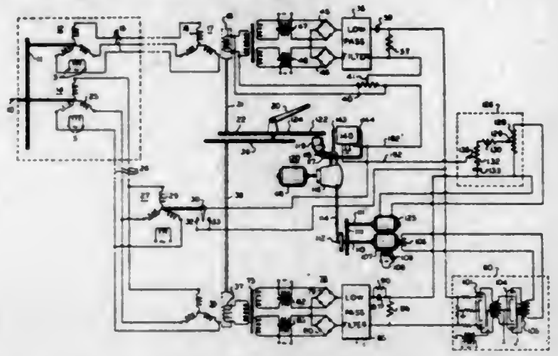


2,408,068
AUTOMATIC POSITIONAL CONTROL OF OBJECTS
Harvard L. Hull, East Williston, William S. Gorrill, Hempstead, and William F. Frost, Williston Park, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application December 31, 1941, Serial No. 425,146
10 Claims. (Cl. 60—53)

5. In an automatic system for positioning a rotatably mounted gun in positional correspondence with a remote controller, means for obtaining an electric potential measuring the positional disagreement of said gun and controller, means for rotating said gun including a variable speed hydraulic transmission having a positionable member determining the output speed thereof, means for obtaining an electrical potential proportional to the position of said member, means for deriving an electrical potential proportional to a combination of said first two potentials, and means actuated by said derived potential for positioning said member.

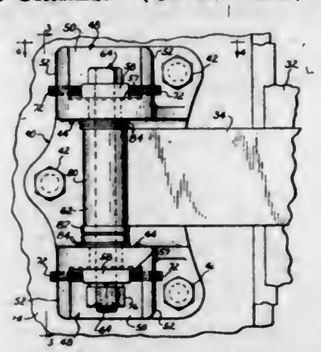
10. In a gun positioning mechanism, a variable displacement hydraulic pump, driving means for said pump, a hydraulic motor connected for driving a gun and actuated in accordance with the displacement of said pump, means controlling the output power of said pump with increase of pressure according to a desired law of variation over a selected range, said controlling means being differently responsive to increase of pressure over selected portions within said selected range, and pressure relief means limiting increase of power beyond said range.

2,408,069
GUN POSITIONING SYSTEM
Harvard L. Hull, East Williston, William S. Gorrill, Brooklyn, and William F. Frost, Williston Park, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application May 1, 1942, Serial No. 441,400
32 Claims. (Cl. 60—53)



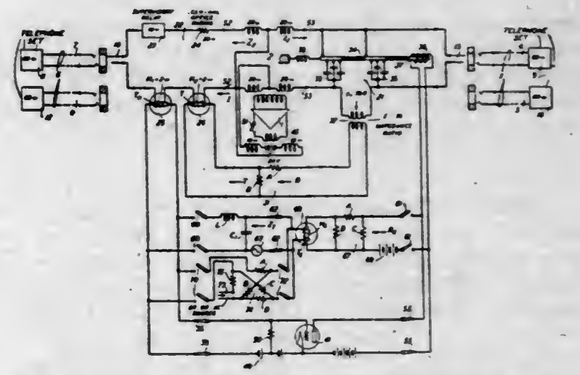
21. In a control system, a variable speed motor for driving a movable mounted body, a displaceable speed controller therefor, means for actuating said speed controller, quick-acting, slow-return means actuated by said controller-actuating means and when a displacement of said controller occurs, comprising a dashpot having a cylinder and piston and resilient means opposing relative displacement of said cylinder and piston away from a reference position, and means actuated in accordance with relative displacement of said cylinder and piston for modifying the displacement of said controller.

25. In a positional control system for continuously positioning an object in accordance with a variable primary signal, variable speed driving means for said object, means for integrating said variable signal to produce a second signal, and means for controlling said variable speed drive from the sum of said signals, whereby lag of said object is mitigated.



2,408,070
SYSTEM FOR POSITIONING HEAVY OBJECTS
Harvard L. Hull, East Williston, and David J. Munroe, Brooklyn, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application June 20, 1942, Serial No. 447,828
19 Claims. (Cl. 60—53)

3. In a positional control system, a controlled object, driving means therefor, a source of positional data, coarse and fine control channels for said driving means each including means for generating a signal proportional to disagreement between the position of said controlled object and the data of said source and for obtaining therefrom the rate of change of said signal, said two signals being proportional in different ratio to the disagreement, and means for shifting control from one of said channels to the other at a critical value of disagreement.



7. In a positional control system, a controlled object, driving means therefor, a controlling object, means furnishing a measure of the positional disagreement of said two objects and controlling said driving means in accordance therewith, and means responsive to elastic deformation of an element of said driving means for further controlling said driving means to compensate for a phase shift introduced by said deformation between an input to and an output from said driving means.

2,408,071
ADJUSTABLE HINGE
Clarence M. Jahn, Chicago, Ill., assignor to Firecraft Corporation, a corporation of Illinois
Application August 9, 1943, Serial No. 497,884
6 Claims. (Cl. 16—129)

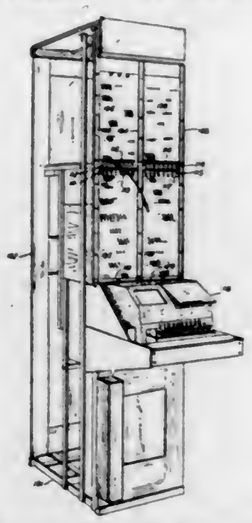
1. In an adjustable hinge, a pintle support comprising arms having substantially alined holes for receiving a pintle, means for securing said arms to a wall, said arms being spaced apart to accommodate between them the eye of a door hinge strap, said holes being oversize to permit a pintle therein to be adjusted laterally relative to its axis, each arm having corrugations about its hole at the surface thereof remote from said space, the corrugations at each surface being parallel to those at the other surface, lugs adjacent the ends of the corrugations and projecting away from said space, set screws in said lugs, and adjusting blocks having pintle-receiving holes substantially smaller than the arm holes and having corrugated surfaces engageable with the corrugated surfaces of the respective arms, each block being shorter, in the direction of the corrugations, than the space between the associated lugs, said blocks being shiftable free of said arms and transversely to said corrugations and reengageable with said arms at locations removed from the previous locations, with corrugated portions of said blocks and arms again mutually engaged, opposite portions of each block, in all adjustments thereof, being engageable by the associated screws so that each block may be held in the desired adjustment relative to the associated arm.

2,408,072
TELEPHONE REPEATER CIRCUIT
Kenneth S. Johnson, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 31, 1943, Serial No. 516,464
16 Claims. (Cl. 179—170)

1. A wave translating system comprising a line impedance which may have different values, two circuits, electric wave amplifying means having an amplifier input circuit connected to one of said two circuits and an amplifier output circuit connected to the other, means providing a balancing circuit for said line impedance and a line circuit for two-way communication with said line impedance through said two first-mentioned circuits and said amplifying means, means comprising said balancing circuit for said line impedance for connecting said two first-mentioned circuits in energy transmitting relation to said line impedance and in conjugate relation to each other, and thermistor means responsive to change in the value of said line impedance for changing the impedance of said balancing circuit in substantially the same ratio to maintain conjugacy of said two first-mentioned circuits.

14. A control circuit comprising a resistance of high temperature coefficient, a heating element therefor electrically insulated therefrom, a second resistance of high temperature coefficient of the same sign as the first coefficient, a heating element for said second resistance electrically insulated therefrom, a source of electromotive force for supplying energy to heat said first heating element, and means comprising said second resistance connecting said source to supply heating energy to said first heating element and responsive to change of current of one sense in said second heating element for producing current change of opposite sense in said first heating element.

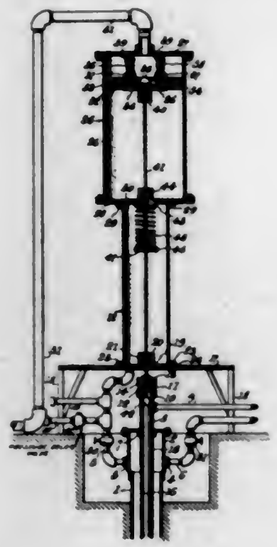
2,408,073
SUSPENDER FOR ARTIFICIAL LEGS
Clara Ilo Kickland, Aberdeen, Wash.
Application January 5, 1945, Serial No. 571,380
2 Claims. (Cl. 3—11)



1. A suspender for artificial legs having pivotally connected leg and thigh sections, pairs of

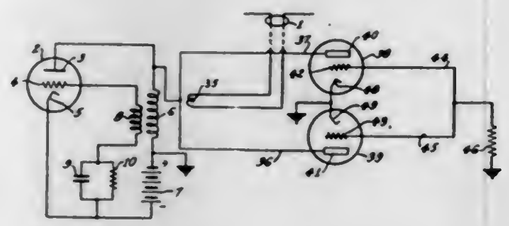
front and rear straps connected at their lower ends to inner and outer sides of the leg section forwardly of its pivot, the straps of each pair

being connected together at their upper ends, a belt and a shoulder strap connected to the upper ends of said pairs of straps and to which the opposite ends of the belt are connected.



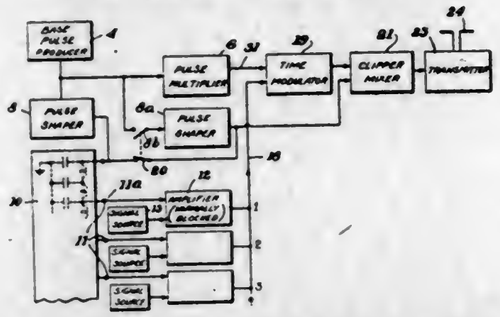
2,408,074
TELETYPEWRITER SWITCHBOARD
Paul V. Koos, Manhasset, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 30, 1943, Serial No. 485,136
17 Claims. (Cl. 178—75)

1. In a communications switchboard, a cord having a plug attached thereto, vertical stile strips having openings therebetween, a displaceable plug seat for positioning said plug when in the normal idle disengaged condition at various levels in said openings, a cord-shelf, means for attaching one end of said cord to said shelf, and means for positioning said shelf at various levels dependent upon the level at which said plug is positioned.



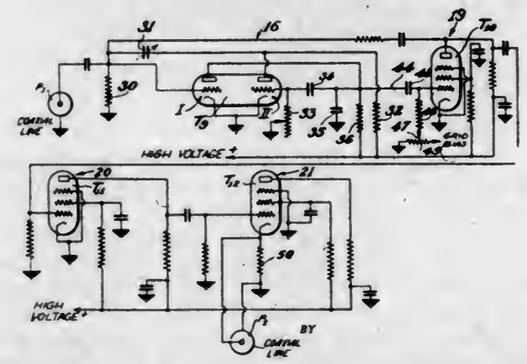
2,408,075
OIL WELL PUMP
Frank Kowalski, Jr., United States Army, Camp Chaffee, Ark., and Raymond L. Harper, United States Army, Camp Bowie, Tex.
Application May 4, 1944, Serial No. 534,124
5 Claims. (Cl. 121—123)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A gas operated motor comprising a cylinder having intake and exhaust ports, a piston adapted for movement in said cylinder between said intake and exhaust ports, a connecting rod secured to said piston and extending from said cylinder, a valve slidably mounted on said connecting rod adapted to close said intake port, means for introducing gas into said cylinder through said intake port to actuate said piston, means operably



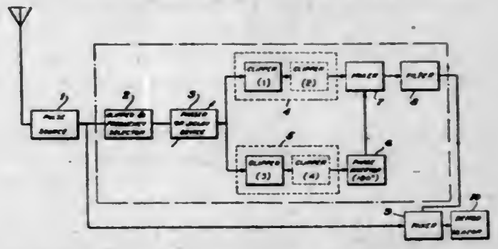
responsive to the movement of said connecting rod to close said intake port with said valve as said piston approaches the end of its power stroke and means associated with said piston and operably responsive to the movement thereof to permit the flow of gas through said piston from the intake side to the exhaust side thereof.

2,408,076
PULSE TRANSMITTER
Emile Labin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application August 12, 1941, Serial No. 406,499
10 Claims. (Cl. 250—36)



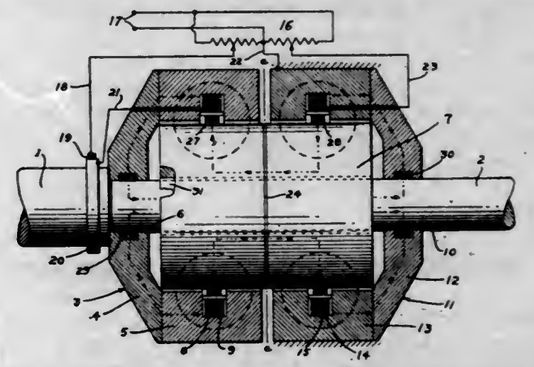
1. A pulse transmitter comprising an oscillator comprising a vacuum tube having a power electrode, an electron emissive electrode and a control electrode, an output circuit coupled to said power electrode, an input circuit coupled to said control electrode and means for feeding energy from said output to said input circuit, means for supplying operating potential to said power electrodes comprising an impulse generator comprising a vacuum tube having an anode, a control electrode and an electron emissive electrode, an output circuit coupled to said anode, an input circuit coupled to said grid and means for feeding energy from said last-mentioned output circuit to said last-mentioned input circuit, and direct current connections for coupling said last-mentioned output circuit to the power electrode of said oscillator.

2,408,077
MULTICHANNEL SYSTEM
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 25, 1944, Serial No. 551,202
15 Claims. (Cl. 179—15)



1. A method of multi-channel transmission comprising producing a train of pulses, segregating spaced segments from the signal energies of a plurality of channels, differently timing the segments of the different channels to interleave them together into a series of segments wherein each segment corresponds to a pulse of said train, and time modulating the pulses of said train according to the amplitude of the corresponding signal segments.

2,408,078
CONSTANT WIDTH SYNCHRONIZED PULSE GENERATOR
Emile Labin and Donald D. Grieg, New York, N. Y., assignors to Federal Telephone and Radio Corporation, a corporation of Delaware
Application February 3, 1942, Serial No. 429,376
2 Claims. (Cl. 250—27)

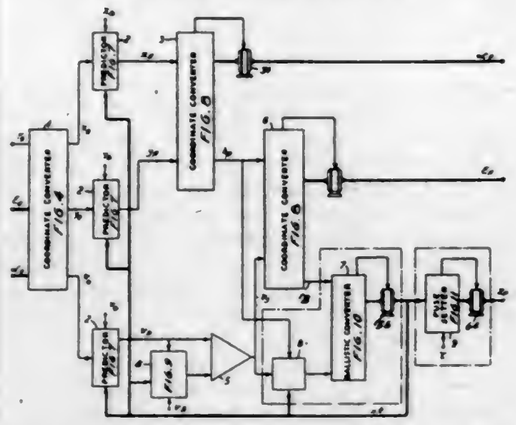


1. A device for generating periodically recurrent impulse energy characterized by impulses of accurately defined duration comprising: means for generating a regular series of relatively short accurately timed synchronized pulses, a multivibrator having two discharge sections, each having an input circuit, means to apply said synchronized pulses to one of the input circuits, first, to render in response to a synchronized pulse one of the sections conductive and the other non-conductive, and second, to effect in response to a later synchronized pulse the reverse operation, means providing a time constant for the input circuit of said one section to terminate the conduction therein upon the occurrence of a synchronized pulse a predetermined interval after initiation of conduction thereby generating an impulse of given duration, means providing a time constant for the input circuit of said other section to terminate conduction therein upon the occurrence of a synchronized pulse a selected interval after initiation of conduction to determine the frequency of the generated impulses, means to independently vary the value of said time constant means, and means to withdraw the resulting periodically recurrent accurately timed impulse energy from said multivibrator circuit.

2,408,079
PULSE DISCRIMINATOR
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation
Application June 19, 1944, Serial No. 540,998
18 Claims. (Cl. 250—27)

1. A system for segregating a pulse series having a given ratio of pulse width to pulse periodicity from a train of mixed pulse series of various ratios of pulse width to pulse periodicity comprising means tunable for producing waves of a selected frequency in response to the pulses of the different series in said train, the period of said waves being equal to or some division of the pulse periodicity of the pulse series having said given ratio and the amplitude of each wave being determined by the pulse width and periodicity of the corresponding pulse series, means for segregating from said waves, portions of the wave resulting from the pulse series of said given ratio, means for mixing said portions with the pulses of said train, and means for clipping the resulting pulse energy when pulses of said train coincide with said wave portions.

2,408,080
POWER TRANSMISSION DEVICE
Edward C. Lloyd, Takoma Park, Md.
Application February 26, 1942, Serial No. 432,453
26 Claims. (Cl. 172—284)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



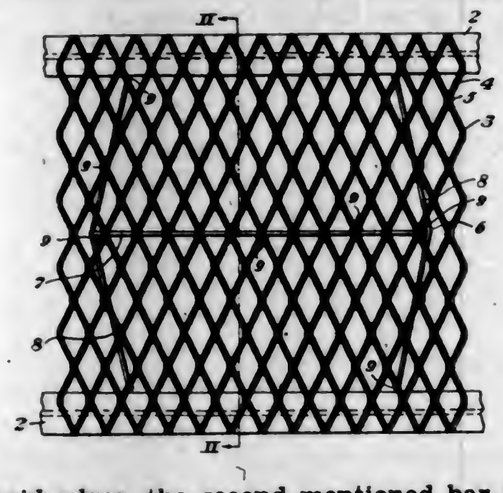
1. A combined generator-motor device of the unipolar type for transmitting power from a driving member to a driven member comprising a cylindrical member, one portion of which constitutes a generator member and the other portion constituting a motor member, said cylindrical member being connected to said driven member, an annular generator member, said generator member being connected to said driving member for rotation thereby and being disposed so that the axial portion thereof houses substantially

the generator portion of said cylindrical member, a stationary annular motor member, said motor member being disposed so that the axial portion thereof houses substantially the motor portion of said cylindrical member, a field winding disposed in one of said generator members, a field winding disposed in one of said motor members, and means for conveying current between the generator and motor sides of said device.

2,408,081
ARTILLERY PREDICTOR

Clarence A. Lovell and David B. Parkinson, Maplewood, and Karl D. Swartzel, Jr., Teaneck, N. J., and Bruce T. Weber, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application May 1, 1941, Serial No. 391,438
9 Claims. (Cl. 235—61.5)



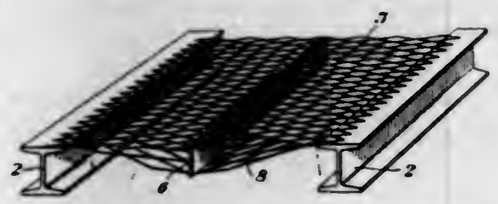
8. In a coordinate converter, a source of voltage, a network connected to said source having one grounded terminal and two free terminals, adjustable means in said network for impressing on said free terminals equal voltages of opposite polarity with respect to ground proportional to the hypotenuse of a right triangle, a winding formed in two sections, each section varying in resistance with a sinusoidal function and shaped to an arc of a circle, the ends of each of said sections being respectively connected to said free terminals and the points of maximum variation of resistance of said sections being grounded, two insulated wipers supported at right angles respectively in contact with the sections of said winding and mechanism for rotating said wipers about the center of said circle proportionally to a base angle of said triangle to respectively select voltages with respect to ground proportional to the sides of said triangle.

2,408,082
EXPANDED METAL LOAD BEARING STRUCTURE

Wayne E. Mack, Martins Ferry, Ohio, assignor, by mesne assignments, to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware

Application June 1, 1944, Serial No. 538,285
12 Claims. (Cl. 189—82)

11. An expanded metal load-bearing structure comprising a sheet of expanded metal supported at two opposed edges and disposed with the long dimensions of the diamonds transverse to said edges and reinforcing means applied to the expanded metal between said edges, the reinforcing means comprising bar means extending generally parallel to said edges and terminating closely adjacent the ends of the expanded metal sheet and bar means connected with the first-mentioned bar means and extending generally transversely

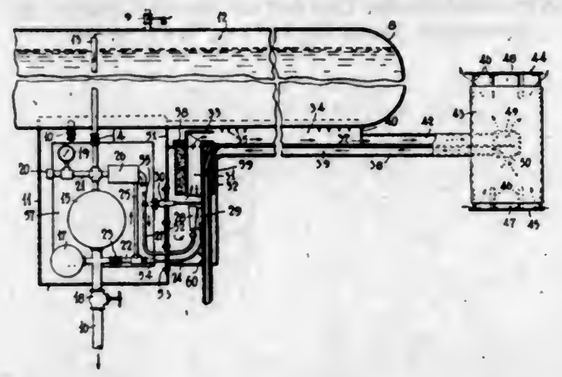


of said edges, the second-mentioned bar means crossing at least one transverse row of bonds of the expanded metal.

2,408,083
EXPANDED METAL LOAD BEARING STRUCTURE

Wayne E. Mack, Martins Ferry, Ohio, assignor, by mesne assignments, to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware

Application August 10, 1944, Serial No. 548,890
3 Claims. (Cl. 189—82)



1. An expanded metal load bearing structure comprising a sheet of expanded metal supported at two opposed edges and adapted to bear a load between said edges and reinforcing means applied to the sheet between said edges, the reinforcing means comprising a portion extending generally parallel to said edges and a portion comprising a second sheet of expanded metal extending generally transversely of the first mentioned sheet, connected with the first mentioned sheet adjacent said edges and bearing against the first mentioned portion opposite the first mentioned sheet.

2,408,084
VAPORIZING APPARATUS

James Woodward Martin, Dallas, Tex., assignor to Lone Star Gas Company, Dallas, Tex., a corporation of Texas

Application September 13, 1941, Serial No. 410,766
5 Claims. (Cl. 62—1)

1. Heating apparatus comprising: a tank adapted to contain a medium to be heated; a casing at the lower side of said tank including a burner box and an elongated heat chamber above said burner box, said casing being arranged so that the wall of said tank forms the top of said heat chamber; a flue establishing communication between said burner box and said heat chamber, said flue including a leg extending into said burner box and terminating in an inlet and a portion extending into said heat chamber and terminating in an outlet; means for admitting fresh air into said burner box; a burner in said burner box aligned with said leg of said flue,

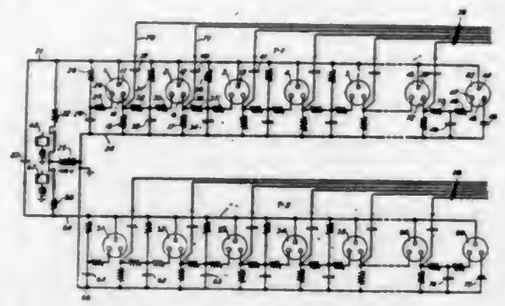
whereby the products of combustion pass directly from said burner into said inlet of said flue, and means to prevent gases from passing between said burner box and said heat chamber around the outside of said flue.

2,408,085
COMMUNICATION SYSTEM

Larned A. Meacham, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 23, 1943, Serial No. 495,867
10 Claims. (Cl. 179—15)

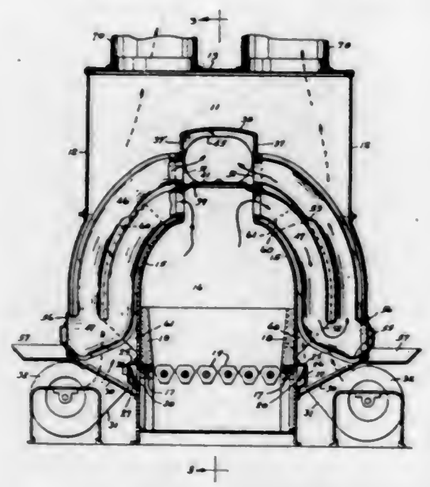
10. On a telephone system, subscribers' stations, a wide band transmission medium interconnecting said stations and constituting a plurality of carrier channels each of a different frequency, each of said stations having individually assigned thereto for use on calls to said station from any other station one of said channels as a receiving channel and one of said channels as a transmitting channel, a source of power common to said stations and connected thereto by the conductors of said common transmission medium, each of said stations comprising a telephone receiver and transmitter, means comprising a detector tube connecting said receiver to said common medium, a ringer, a busy lamp, a busy relay, means comprising a gas-filled discharge tube connecting said ringer, lamp and relay to said common medium, means normally tuning the connection between said detector tube and common medium to the frequency of the receiving channel individual thereto, means normally tuning the connection between said discharge tube and common medium to the frequency of the receiving channel individual thereto thereby to effect the breakdown of said tube responsive to the transmission over said common medium of carrier current of the frequency of said receiving channel to operate said ringer, an oscillator-modulator tube, means in the oscillatory control circuit of said oscillator-modulator tube tuned to the frequency of the individual transmitting channel, other means in the oscillatory control circuit of said oscillator-modulator tube tunable to the frequency of the individual receiving channel of any of the other stations, contacts normally short-circuiting said other means, means comprising an amplifier connecting the output of said oscillator-modulator tube to said common medium, means connecting said transmitter to said oscillator-modulator tube to modulate the oscillatory current generated in said tube, circuit means including said power source rendered effective by the operation of said ringer and by the removal of the receiver from normal for energizing said detector and amplifier and oscillator-modulator tubes, calling keys, one for each of the other stations, means individual to each of said keys and rendered effective by operation of the key to tune the connection between said common medium and the detector tube and the connection between said common medium and said discharge tube to the frequency of the transmitting channel individual to the station corresponding to the operated key and to tune said other means in the oscillatory control circuit of said oscillator-modulator tube to the frequency of the receiving channel individual to the station corresponding to the operated key, means responsive to the operation of any of said station keys for opening the operating circuit of said ringer and for connecting said lamp and relay for operation responsive to transmission over said common medium of carrier current of the frequency of the transmitting channel individual to the station corresponding to the operated key, means actuated by the energization of said relay for preventing the energization of said tubes and receiver, means responsive to the operation of any of said keys for opening said contacts normally short-circuiting said other means in the oscillator control circuit of said oscillator-modulator tube, locking mechanism common to said keys normally positioned to allow the operation of any key, and means actuating said locking mechanism responsive to the removal of the receiver from normal position to prevent the operation of any of said keys while said receiver is off-normal and to lock operated any key which is operated at the time of removal of the receiver from normal.



2,408,086
IMPULSE SYSTEM

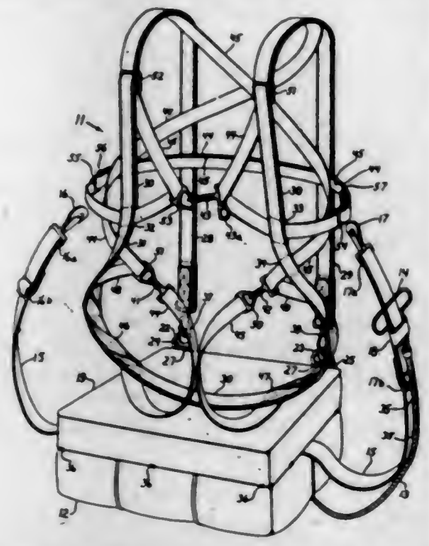
Larned A. Meacham, Summit, N. J., Milton E. Mohr, Jamaica, N. Y., and Carlyle V. Parker, Washington, D. C., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 5, 1941, Serial No. 396,688
9 Claims. (Cl. 250—27)



1. The combination in an impulse system of a series of discharge devices, a series of condensers associated respectively with said discharge devices, means for charging a first one of said condensers to the operating potential of the associated discharge device, means for charging the succeeding condensers simultaneously to an initial potential which is below the operating potential of the associated discharge devices, means effective to operate the associated discharge device when said first condenser reaches said operating potential, means effective upon the oper-

ation of said first discharge device for charging the second condenser from said initial potential to said operating potential and for operating the second discharge device when said second condenser reaches said operating potential, means effective in response to the operation of said sec-

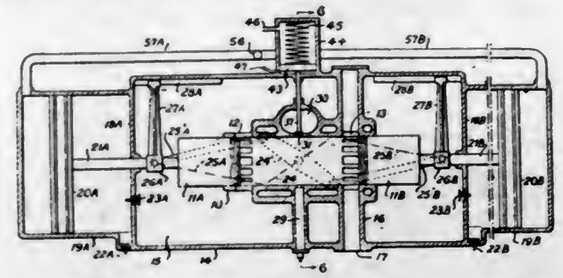


ond discharge device and each succeeding discharge device for charging the next succeeding condenser from said initial potential to said operating potential, and means for supplying an impulse in response to the operation of each succeeding discharge device.

2,408,087
HOT-AIR FURNACE
James C. Miles, Cleveland, Ohio
Application July 24, 1943, Serial No. 496,015
5 Claims. (Cl. 126—104)

1. A hot air heating furnace having a body forming a combustion chamber, and having a smoke chamber superimposed thereon, a housing forming a heating chamber on both sides of the combustion chamber, the heating chamber having an air inlet at the bottom and an air outlet at the top thereof, a plurality of fire tubes disposed within the heating chamber and being shaped substantially complementary to the sides of the combustion chamber, each fire tube having one end thereof in communication with the combustion chamber and having the other end thereof in communication with the smoke chamber and extending downwardly into the chamber for substantially the depth of the combustion chamber and thence upwardly to communicate with the smoke chamber, and each of said tubes having a cross section comprising a long and a short axis, the tubes being so positioned that at the upper ends thereof the long axis extends transversely of the furnace and adjacent the bottoms thereof the long axis extends longitudinally of the furnace.

2,408,088
PARACHUTE HARNESS
Joshua Miller, Drexel Park, Pa., and Bergie L. Kauffman, Collingswood, N. J.
Application February 8, 1944, Serial No. 521,526
6 Claims. (Cl. 244—151)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

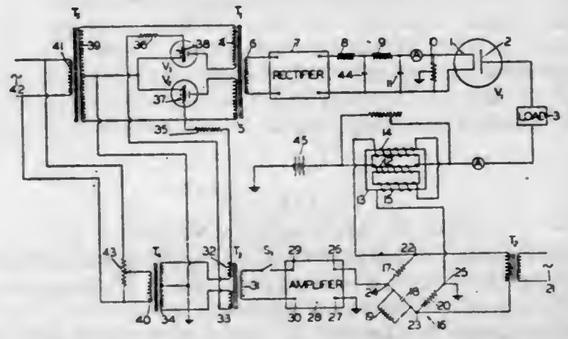


1. Parachute equipment comprising a seat type parachute and a harness therefor; the harness comprising a main web passing under the seat of the wearer, thence up his front, over the shoulders, and terminating in a first pair of lift webs passing down the back and ending adjacent the seat of the wearer; a pack containing the parachute, the parachute being confined within the pack and having a second pair of lift webs protruding therefrom at the back and spaced substantially the width of the pack; frangible means attaching said second pair of lift webs to said pack and in proper spaced relationship; separable connecting means between said first and second pairs of lift webs at the ends thereof, said separable means being the sole connection between said parachute pack and harness; a belt fastened substantially at its mid point to the pack, the ends of the belt extending sideways and adapted to pass around the sides and over the tops of the legs of the wearer; means whereby the ends of said belt can be separably fastened together in front of the wearer; and a rip cord for said parachute, said rip cord being housed in a housing which is fastened to one of the ends of said belt, the rip cord handle being in front of the wearer when the ends of said belt are fastened together.

2,408,089
INTERNAL-COMBUSTION ENGINE
Frederick Alan Irving Muntz, Hounslow, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a company of Great Britain
Application February 27, 1943, Serial No. 477,395
In Great Britain February 12, 1942
13 Claims. (Cl. 123—46)

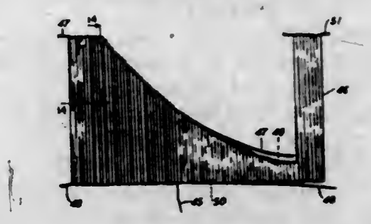
1. An internal-combustion-operated motive-gas generator having a power cylinder including a combustion chamber, an air-compressor cylinder co-axial with said power cylinder, a power piston and a compressor piston slidable in said cylinders respectively, said pistons being connected together for operation in unison in such a manner that said compressor piston performs

its delivery strokes simultaneously with the compression strokes of said power piston, a pneumatic cushion associated with said pistons for storing energy imparted to them during the expansion strokes of said power piston and returning energy to said pistons during the compression strokes of said power cylinder, means



for causing at least a part of the air compressed in said compressor cylinder to scavenge and charge said power cylinder, an auxiliary chamber capable of communicating with said combustion chamber, valve means for interrupting communication between said chambers, and control means operable for varying the volume of said auxiliary chamber.

2,408,090
LUBRICATING OILS
Sidney Musher, New York, N. Y., assignor to Musher Foundation Incorporated, New York, N. Y., a corporation of New York
No Drawing. Original application September 30, 1940, Serial No. 359,105, now Patent No. 2,339,797, dated January 25, 1944. Divided and this application January 22, 1944, Serial No. 519,379
3 Claims. (Cl. 252—51.5)



1. A process of improving lubricating oils to decrease sludge formation and also to decrease their tendency to cause corrosion of metal surfaces which comprises treating the entire body of such oil with a relatively small amount of phosphatide and a mononuclear aromatic sulfur containing compound sufficient to decrease sludge formation of the said oil.

2,408,091
ELECTRICAL REGULATING SYSTEM
Raymond C. Olesen, Altadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application May 19, 1944, Serial No. 536,379
6 Claims. (Cl. 315—101)

1. A system for maintaining a constant anode current through a vacuum tube having an anode and a cathode which when heated emits electrons, said system comprising a rectifier for supplying current for heating said cathode, a source of alternating voltage for supplying power to said rectifier, controlled regulating means for regulating the voltage from said source to the rectifier, a bridge having a pair of opposite input terminals and a conjugate pair of opposite output terminals, a source of alternating voltage connected to said input terminals, said bridge being normally maintained in balance with no output voltage at the output terminals, one of said bridge arms comprising a variable impedance element, means correlated with the impedance element and the anode circuit for producing a variation of the impedance of said impedance element in correspondence with variation of the anode current, thereby producing a corresponding unbalance and output voltage at the bridge output terminals, and means for applying to the regulating means a control voltage derived from the bridge output in the polarity which tends to decrease the voltage to the rectifier when the anode current tends to increase, and to increase the voltage to the rectifier when the anode current tends to decrease, whereby the anode current is maintained substantially constant.

2,408,092
WIRE-WOUND RESISTANCE AND METHOD OF MAKING SAME
Everett M. Patterson, Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 30, 1943, Serial No. 474,129
1 Claim. (Cl. 201—73)

A wire-wound electrical resistance device comprising a card-type support, surfaces of thermoplastic material on opposite faces of said support and formed to provide spaced ridges along edge portions of said support, a pattern of grooves formed in said surfaces and continued into said ridges, a wire helically wound on said support and having portions extending into the groove pattern in said ridges, a thread located between said ridges and extending along an edge of said support, said thread being indented by portions of said wire extending over edge portions of said support and said thread cooperating with the grooves in said ridges to prevent said wire from slipping along said support and said thread also serving as a backing for portions of said wire extending from one of said ridges to the other.

2,408,093
METHOD OF MAKING WIRE-WOUND CARD-TYPE RESISTANCE DEVICES
Everett M. Patterson, Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application January 30, 1943, Serial No. 474,129. Divided and this application January 24, 1944, Serial No. 519,462
1 Claim. (Cl. 201—60)

The method of making a wire-wound resistance of the type shown in Figs. 13 and 14 comprising making a card of the general form required to support the wire winding, said card having surfaces of thermoplastic material, placing said card between two plates having surfaces

facing said card representing a required groove pattern to be impressed in said card, heating said plates to a temperature sufficient to soften the thermoplastic surfaces on said card, pressing said heated plates against said card until said thermoplastic surfaces are impressed with the groove pattern represented on said plates and until some of the thermoplastic material in said surfaces is extruded beyond original edge portions of said card in the form of spaced ridges defining in co-

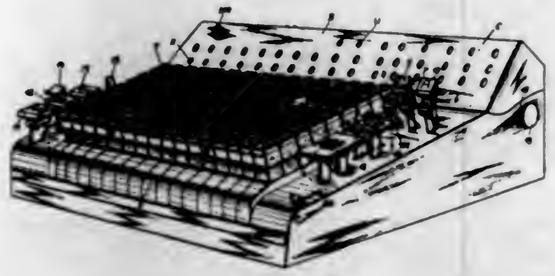
operation with the original edges of said card channels extending lengthwise along edge portions of said card, placing threads in the channels formed along the edges of said card and winding a wire around said card so that turns of the wire winding engage in the grooves formed in the extruded portions of said thermoplastic material and so that the turns of wire indent said threads where the turns of said wire extend over edge portions of said card.

2,408,094
PROCESS
Albert A. Pavlic, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 11, 1943, Serial No. 509,896
10 Claims. (Cl. 260—455)

1. A process which comprises reacting thiolacetic acid in the presence of an amine with an organic halogen compound having a halogen of atomic weight of at least 20 attached to only singly-bonded, non-aromatic carbon.

2,408,095
HIGHLY USEFUL COMPOUNDS
William Jennings Peppel, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 11, 1943, Serial No. 509,895
6 Claims. (Cl. 260—455)

1. Process for making an alpha-halogeno-beta-acetylthiopropionic compound which comprises reacting thiolacetic acid with an alpha-halogeno-acrylic compound of the class consisting of alpha-chloroacrylic acid and its methyl ester.



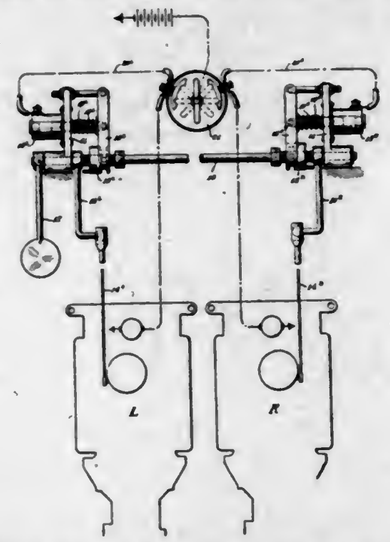
2,408,096
POLYHYDROXYAMINO COMPOUNDS
John S. Pierce, Richmond, Va., and John H. Wotiz, Pittsburgh, Pa.; said Wotiz, assignor to said Pierce
No Drawing. Application May 1, 1944, Serial No. 533,644
5 Claims. (Cl. 260—584)

1. New compounds of the structure

$$(HOCH_2)_3CNHCH_2(CHX)_zCH_2NHC(CH_2OH)_3$$

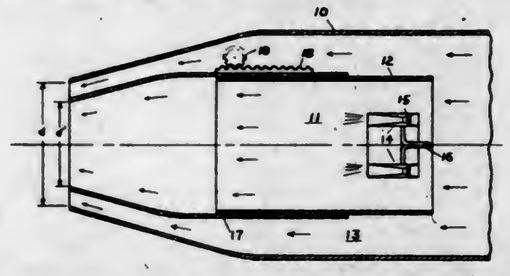
where X is taken from the group H and OH and z represents a number from zero to four, inclusive.

2,408,097
CALCULATING MACHINE FOR PERFORMING DIVISION
August Friedrich Pott, Zella-Mehlis II, Thuringia, Germany; vested in the Alien Property Custodian
Application December 19, 1939, Serial No. 310,079
In Germany December 30, 1932
16 Claims. (Cl. 235—73)



5. In a calculating machine for solving problems in division, the combination with a differential mechanism; a travelling carriage; an accumulator travelling with the carriage; a state control mechanism for the differential mechanism; and a motor; of a keyboard relatively to which the carriage travels, the keyboard being of sufficient capacity to enable the indication thereon at one time of both the dividend and the divisor; manually set mechanism, depression of which subsequently to setting up both dividend and divisor at one time, initiates repeated cycles of operation of the machine, to first simultaneously register on the accumulator, by the operation of the differential mechanism, both the dividend and the divisor; means to retain the manually-set mechanism in its effective set position; means operable near the end of the first cycle of the machine to clear the dividend only from the keyboard; means conditioned as a result of the first cycle of the machine, and operable on the second cycle to set the state control mechanism to subtract the divisor from the accumulator; means automatically operable during the next cycles of operation of the motor, to shift the carriage from its home position, and relatively to the keyboard, to position the digits comprising the dividend registered in the accumulator in predetermined denominational relation to the digits of the divisor remaining on the keyboard; said manually set mechanism under control of the accumulator, being effective to initiate a step by step return of the carriage to its home position; means to alternately effect subtraction of the divisor one or more times from the dividend, and addition of the divisor one or more times to the dividend, in the successive ordinal positions of the carriage; and means under control of the accumulator to automatically release the manually set mechanism for return to normal.

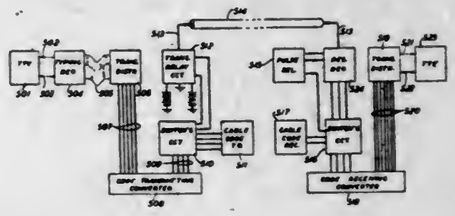
2,408,098
DUAL MOTOR CONTROL
Pierre Schon, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana
Application September 14, 1942, Serial No. 458,288
4 Claims. (Cl. 60—97)



1. Means for selectively controlling two independent power units which comprises, a shaft having means by which it may be oscillated, two arms journalled on said shaft and each connectible to control means of a power unit, two clutch

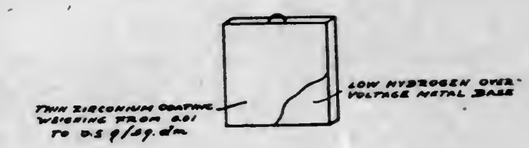
elements independently splined on said shaft, and means including a single control element by

which said clutch elements, either or both, may be selectively associated with said arms.



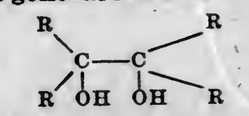
2,408,099
VARIABLE-AREA NOZZLE FOR JET-PROPELLED AIRCRAFT
Albert Sherman, Hampton, Va.
Application April 7, 1943, Serial No. 482,221
2 Claims. (Cl. 60—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A jet propulsion unit comprising, an outer cylinder-like shell for admitting and directing the flow of gaseous fluid therethrough, the exhaust end of said shell being tapered, a cylindrical shell forming a combustion chamber disposed within said outer shell and arranged concentrically therewith, said combustion chamber being open at both ends, an inner shell having a cylindrical portion and a tapered portion, said cylindrical portion being fitted upon the exhaust end of said combustion chamber shell with said tapered portion extending rearwardly for cooperation with the tapered portion of said outer shell to thereby constitute a variable area exhaust nozzle, and means for adjusting said inner shell axially to thereby vary the discharge area of said nozzle.

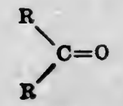


2,408,100
TELEGRAPH PERMUTATION CODE SIGNAL TRANSLATOR
Frank F. Shipley, Tenafly, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 28, 1944, Serial No. 533,106
8 Claims. (Cl. 178—3)

1. In a telegraph system, a source of five-element two-current condition permutation code telegraph signals, a telegraph signal code translator, a telegraph channel, means connected to said source for impressing said signals on said translator, means in said translator for converting certain of said five-element signals into three-element permutation code telegraph signals and



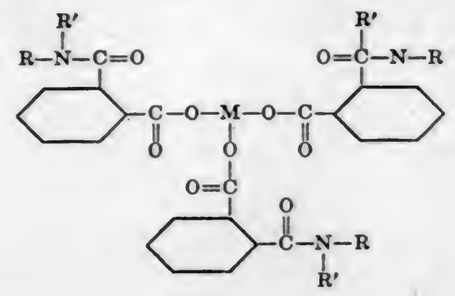
others of said five-element signals into four-element permutation code telegraph signals, and means connected to said translator for impressing said three-element signals and said four-element signals on said channel.



2,408,101
ELECTROLYTIC PRODUCTION OF PINACOLS
Ober C. Slotterbeck, Rahway, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 11, 1942, Serial No. 450,519
6 Claims. (Cl. 204—77)

1. In the process of producing glycols corresponding to the general formula

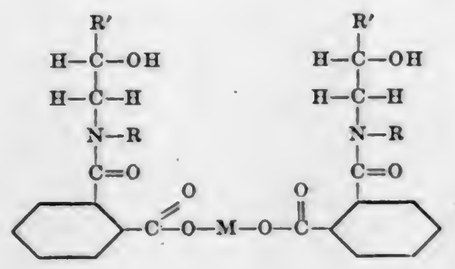
wherein R stands for a member of the group consisting of alkyl and aryl radicals and substituted alkyl and aryl radicals by the electrolytic reduction of an aqueous acid solution of a ketone of the formula



wherein R stands for a member of the group consisting of alkyl and aryl radicals and alkyl and aryl radicals substituted by a group which is not reducible under the reaction conditions, the improvement which comprises effecting the said reduction at a cathode consisting of copper coated with zirconium.

2,408,102
OIL COMPOSITIONS
Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., and John G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 19, 1945, Serial No. 583,658
8 Claims. (Cl. 252—35)

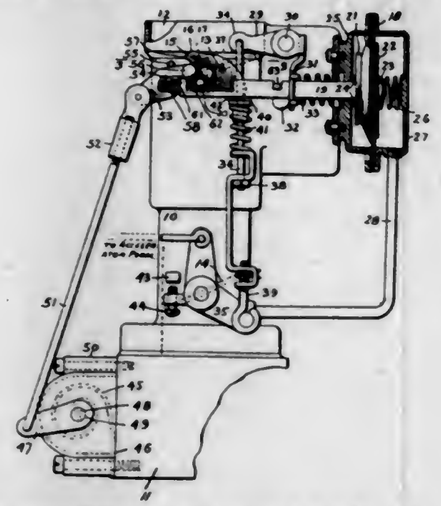
1. An improved mineral oil composition comprising a major amount of a mineral oil and a minor amount of an oil-soluble trivalent metal



salt of N-alkyl, alkylol ortho phthalamidic acid, said metal salt having the following formula

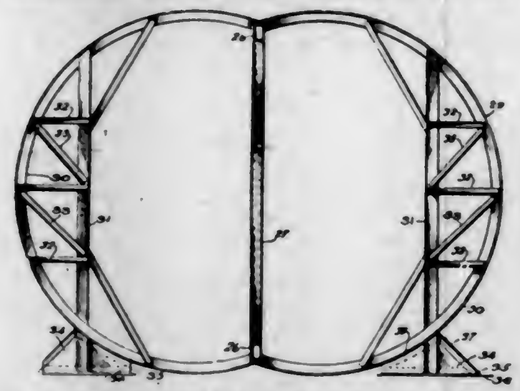
wherein M is a trivalent metal, R is an alkyl group and R' is an alkylol group, and the amount of said metal salt being sufficient to impart corrosion-inhibiting properties to the improved oil composition.

2,408,103
MINERAL OIL COMPOSITION
Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., and John G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 19, 1945, Serial No. 583,659
5 Claims. (Cl. 252—39)



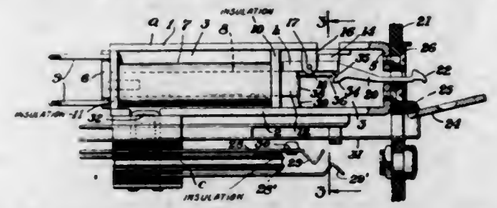
1. An improved mineral oil composition comprising a major amount of a mineral oil and a minor amount of an oil-soluble divalent metal salt of N-alkyl, alkylol ortho phthalamidic acid, said metal salt having the following formula

wherein M is a divalent metal, R is an alkyl group containing 8 to 22 carbon atoms and R' is hydrogen or an alkyl group, and the amount of said metal salt being sufficient to impart corrosion-inhibiting properties to the improved oil composition.



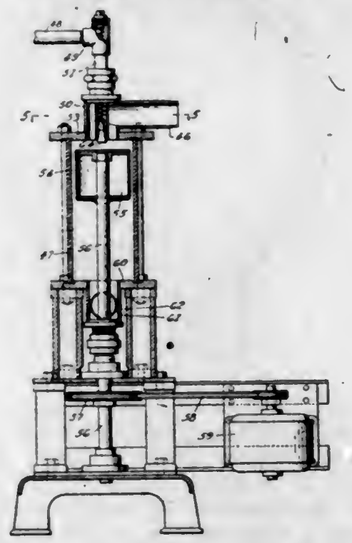
2,408,104
FUEL MIXTURE CONTROL
Warren F. Stanton, Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y., a corporation of Delaware
Application January 20, 1933, Serial No. 652,731
30 Claims. (Cl. 123—119)

1. Fuel control means for engines comprising a fuel conditioning device for delivering the conditioned fuel to the engine, two valves associated with said device in the line of flow of fuel-forming elements to and through said device, automatic valve-moving means subject to intake pressure at a point beyond said device for causing fuel conditioning movement of said valves, a yielding connection between such means and one of said valves to permit a lag in its initial movement, and temperature responsive means



acting to modify the action of said valve-moving means.

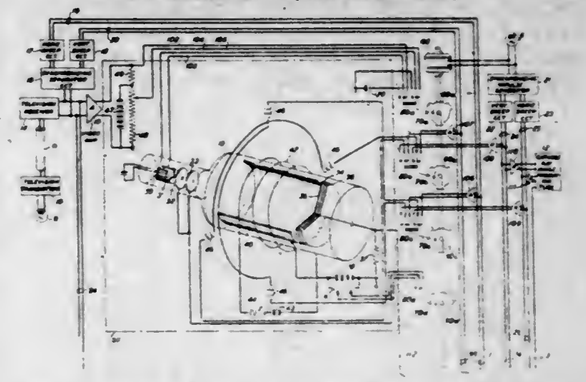
2,408,105
STORAGE TANK
Howard A. Starret, United States Army
Application October 16, 1941, Serial No. 415,229
3 Claims. (Cl. 220—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A tank for storage of pressure fluids and for mounting independently of translative movement of earth thereunder, comprising a wall skin portion having the form of two intersecting horizontal and parallel cylinders closed at the ends by wall portions each having the form of intersecting hemispheres concentric with and of the same radius as the cylinders, and a multiplicity of interior frames spaced horizontally throughout the cylindrical and spherical parts, each of said frames including identical circular truss parts abutting and conforming to the circular form of the said wall skin in a plane normal to the abutted wall skin parts, said truss parts intermediately of said ends being opposed in pairs abutting at upper and lower intersections of their circular parts at a vertical chord coincident with the intersections of said cylinders, each said truss part including a vertical compression member spaced outwardly of said chord and having supporting relation to the upper and lower parts of each said circular truss part and respective adjacent wall skin parts, each said vertical compression member having an external lower leg continuation fixed rigidly with the respective truss part and braced to prevent horizontal displacement of the leg relative to the tank, each said external leg continuation having a foot plate adapted to rest and slide on a horizontal bed and positioned to support the tank clear of subjacent earth, whereby the tank may be set up and maintained free of damage by shock waves and abrupt horizontal displacements of earth under and in relation to any of said foot plates.

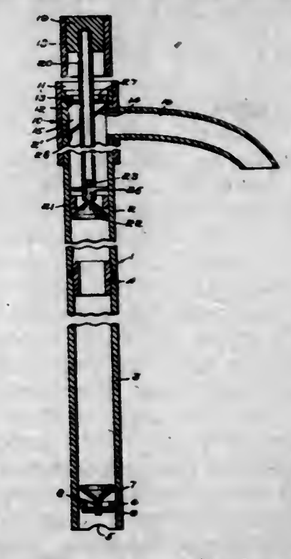
2,408,106
DROP SIGNAL WITH VIBRATION LOCK
Franklin A. Stearn, Westfield, N. J., assignor to Federal Telephone & Radio Corporation
Application May 26, 1944, Serial No. 537,518
6 Claims. (Cl. 177—329)

1. A drop signal comprising a pivotally supported drop shutter, a magnet, a movable armature latch element operatively coacting with the shutter to effect release of the shutter on energizing of the magnet and to lock the shutter when the magnet is de-energized and supplemental locking means operative normally to lock the movable armature and to effect release thereof responsive to energizing of the magnet.



2,408,107
APPARATUS FOR MIXING AND FILLING BEVERAGES
Robert J. Stewart, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application February 14, 1940, Serial No. 318,964
8 Claims. (Cl. 259—8)

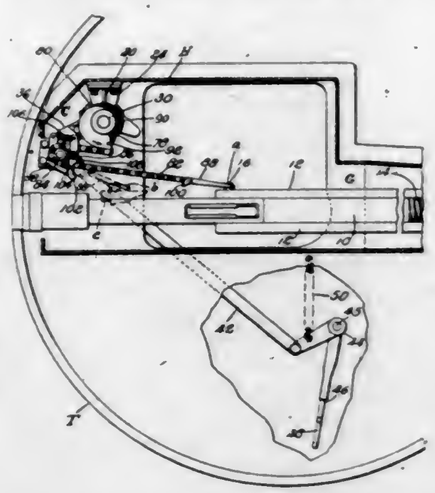
2. A device for mixing liquids comprising a cylindrical chamber, a cylinder rotatable in the chamber and spaced from each end thereof, means to rotate the cylinder, and inlets for the liquids to be mixed at one end of the chamber, at least one of the inlets being arranged to deliver liquid to the chamber at a point offset with respect to the axis of the rotatable cylinder.



4. In an apparatus for mixing liquids, a plurality of sources of liquids to be mixed, a liquid mixing means, a plurality of liquid flow lines, each flow line extending between one of said sources and said liquid mixing means, means in each line to move a liquid therethrough, a measuring means in each line, and means controlled by said measuring means to hold all of said liquid moving means at such relative speeds as to maintain a predetermined ratio of flow from said measuring means.

2,408,108
TELEVISION IMAGE PRODUCTION
Gordon K. Teal, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 11, 1943, Serial No. 486,533
20 Claims. (Cl. 178—6.8)

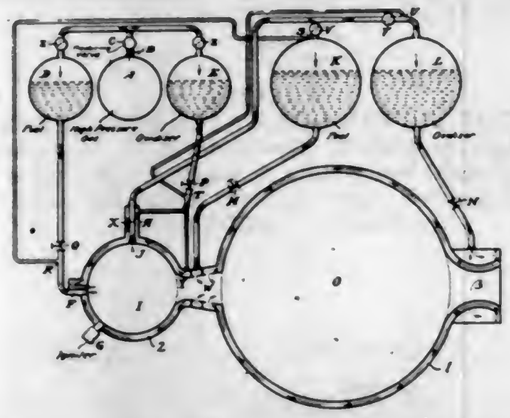
1. In a television system, the combination with means for repeatedly scanning an object field in parallel elemental lines to produce an image current, of three separate beams at a receiving point for making separate records of variations of said current and for later reading the records at twice the speed of recording, and means for causing two of said last-mentioned means to record the same variations during half of a field scanning period while the third means reads a record which was previously made by it and for causing said third one of said means to record and one of the two others to change from recording to reading at the beginning of the second half of the field scanning period.



2,408,109
PUMP
Willis F. Thompson, Portland, Maine, assignor to The Alden Speare's Sons Co., Cambridge, Mass., a corporation of Massachusetts
Application March 13, 1945, Serial No. 582,559
3 Claims. (Cl. 103—178)

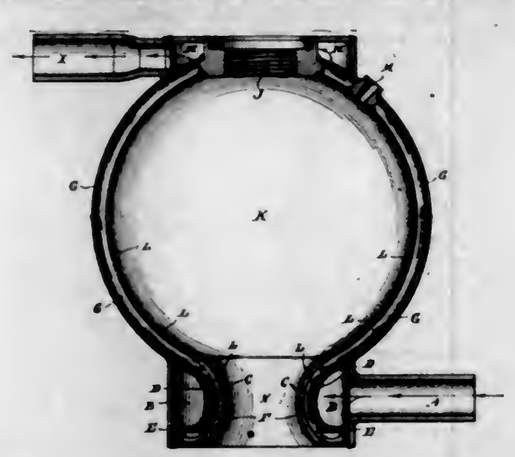
1. In a pump having a cylinder and operating mechanism which includes a reciprocating piston

and piston rod, means forming an end closure for the cylinder through which the piston rod slidably extends, and comprising a baffle plate and a deflecting plate both fixedly arranged within the cylinder and spaced from one another to form with the cylinder a chamber interposed between said plates, the deflecting plate forming the bottom of said chamber having within it a vent opening by which liquid accumulating within the chamber may be withdrawn from it during the downward reciprocation of the piston.



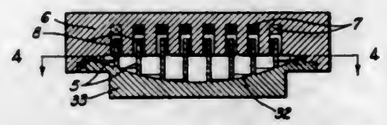
2,408,110
GUN-CHARGING MECHANISM
Frank R. Thresh, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 10, 1944, Serial No. 544,207
15 Claims. (Cl. 89—1)

1. In combination, a gun including breech mechanism and a counter-recoil-spring therefor, and means for actuation by an operator to apply to the spring a loading force, said means comprising means for increasing the applied force as the loading of the spring progresses and ratchet mechanism transmitting the applied force to the force-increasing means.



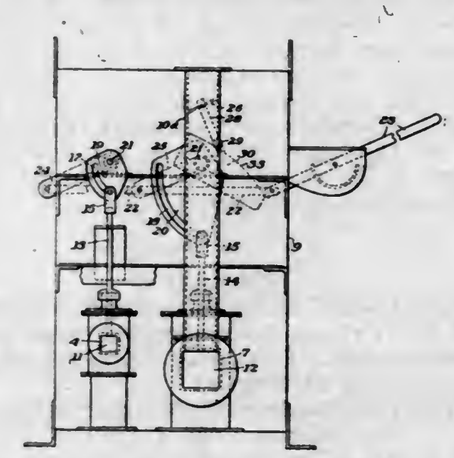
2,408,111
TWO-STAGE ROCKET SYSTEM
Robert C. Truax, Ray C. Stiff, Jr., William Schubert, and James R. Patton, Jr., United States Navy, and Robertson Youngquist, Annapolis, Md.
Application August 30, 1943, Serial No. 500,584
3 Claims. (Cl. 60—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A rocket-type internal combustion engine having a main combustion chamber with a propulsion power nozzle, a supply nozzle therefor, means for supplying combustible fluids thereto, a preliminary combustion chamber for supplying gases of combustion to said supply nozzle for atomizing, mixing and igniting the combustible fluids, a supply nozzle to said preliminary combustion chamber, cooling jackets around said main and preliminary combustion chambers and said propulsion and supply nozzles, through which one of the combustible components for each combustion chamber are passed through the respective cooling jackets for preheating and conditioning said component for more intimate mixture in the respective supply nozzles with its complementary component, main supply tanks for the combustible components for the main combustion chamber, auxiliary supply tanks for the auxiliary combustion chamber, gas pressure



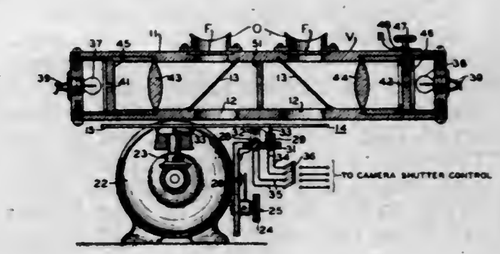
tank for supplying pressure to said auxiliary supply tanks, and connections between the auxiliary combustion-chamber and the main supply tanks for furnishing a portion of the exhaust gases from said chamber to said tanks.

2,408,112
ROCKET MOTOR COOLING SYSTEM
Robert C. Truax, Ray C. Stiff, Jr., William Schubert, and James R. Patton, Jr., United States Navy, and Robertson Youngquist, Annapolis, Md.
Application September 18, 1943, Serial No. 502,922
2 Claims. (Cl. 60—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



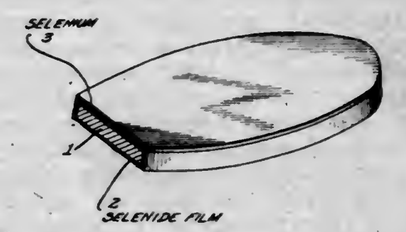
1. In a rocket type internal combustion engine having a combustion chamber and a discharge nozzle, a continuous smooth inner wall formed by a surface of revolution about the axis of the nozzle, the generatrix of said surface being a curve concave opposite its combustion chamber end and convex opposite its nozzle portion, a continuous unobstructed jacket for a cooling medium around said wall, an annular chamber around the nozzle portion of said jacket, having an inlet at one side and outlet passages to the jacket, distributed around the end of the nozzle, so as to provide a uniform delivery of the cooling medium to said end of the jacket, the centrifugal force created by the motion of the cooling medium along the convex curve of the jacket causing the cooling medium to adhere to the wall surrounding the nozzle and increasing the heat transfer and decreasing the possibility of bubbles forming on that surface.

2,408,113
APPARATUS FOR SUBMARINE SIGNALING
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application July 22, 1939, Serial No. 285,910. Divided and this application August 26, 1941, Serial No. 408,370
9 Claims. (Cl. 177—386)



1. A compressional wave signaling device having a transmitting and/or receiving member with a continuous finite transmitting and/or receiving surface adapted to contact the signaling medium, said surface having dimensions greater than the wave length of the compressional waves of the signaling frequency as measured in the signaling medium, and means for vibrating and/or producing electrical response to vibration of said surface including a plurality of electroacoustic transducer elements mounted on and distributed over the opposite side of said member, each of said elements together with that portion of the mass of said member associated therewith forming a one-half wave length vibrating system at the signaling frequency, the mass ratios of the several transducer elements varying progressively over the area of said member in accordance with a predetermined law.

2,408,114
FURNACE ATMOSPHERE CONTROL
Norman J. Urquhart, Scenery Hill, Pa., assignor to Steel Processing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 14, 1944, Serial No. 549,396
4 Claims. (Cl. 158—119)

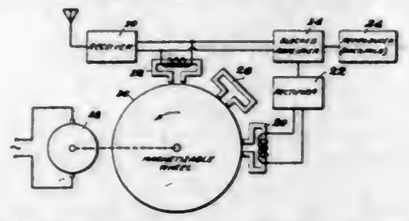


1. In combination with valved fuel and air lines arranged to convey a proportioned supply of fuel and air under controlled pressure to a furnace, and interconnected valve-operating means arranged to be actuated proportionally to open and close the valves of said fuel and air lines for different rates of air-fuel supply, a rectifying assembly comprising an air relief duct in communication with the said air line, a rectifying valve controlling air flow through said relief duct, and a rectifying control element mechanically connected with said rectifying valve and having means for moving it proportionally with movement of the said interconnected valve-operating means, said control element being calibrated to a desired furnace atmosphere with respect to related positions of the valves of the fuel and air lines and the said rectifying valve, to give at the furnace a proportion of air to fuel rectified to the desired furnace atmosphere at the different rates of air-fuel supply.

2,408,115
STEREOSCOPIC VIEWER
Russell H. Varian, Wantagh, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application March 25, 1943, Serial No. 480,575
5 Claims. (Cl. 88—2.6)

1. A unitary range finder and stereoscopic viewer for observers on vehicles traveling transversely of a line of sight to an object, comprising a non-prismatic binocular device having a pair of oculars through which the observer may view said object, shutter means operable to provide a brief exposure of the view through each ocular, adjustable speed-control means for said shutter for recurrently operating the same to provide successive exposures of each ocular and thereby give a resultant series of overlapping views simulating a stereoscopic view of the object on which the eyes of the observer may converge, and a calibrated range-measuring system in the optical system of the viewer having visual indices adjustable in the line of sight to coincidence with the said stereoscopic image and focus the same in the viewer, and simultaneously determine the range distance to said object.

2,408,116
SELENIUM COATED ELEMENTS AND METHOD OF MAKING THEM
Arthur von Hippel, Weston, Mass., assignor to Federal Telephone & Radio Corporation, a corporation of Delaware
Application July 12, 1941, Serial No. 402,103
10 Claims. (Cl. 148—6)

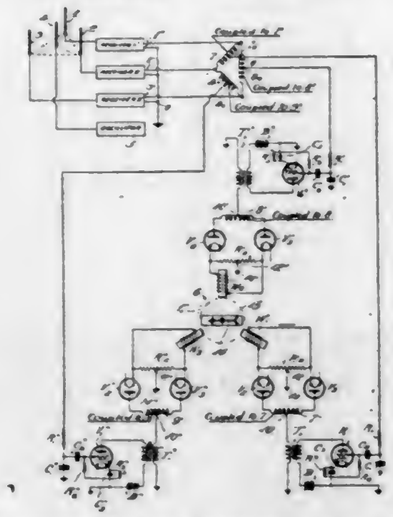


1. In the coating of metal surfaces for the production of selenium coated plates the steps which comprise treating the metal surface with a solution containing a form of selenium to form a metal-selenium compound thereon and thereafter coating the treated surface with selenium.

2,408,117
METHOD AND MEANS FOR THE REPRODUCTION OF INTELLIGENCE

Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

Application February 20, 1943, Serial No. 476,604
10 Claims. (Cl. 178—7.3)

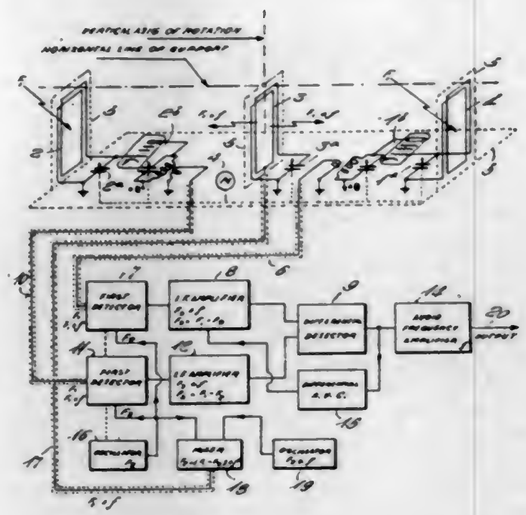


1. An intelligence reproducing system including, in combination, a receiver, a normally blocked amplifier connected to said receiver, an intelligence reproducer connected to said amplifier, movable signal-recording means, a recorder connected to said means for impressing received signals thereon, a pick-up device positioned adjacent said means and spaced from said recorder in the direction of movement of said means for reproducing the recorded signal, and means activated by said pick-up device for unblocking said amplifier.

2,408,118
AZIMUTH RADIO DIRECTION FINDING SYSTEM

Walter H. Wirkler, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application February 14, 1939, Serial No. 256,339
16 Claims. (Cl. 250—11)



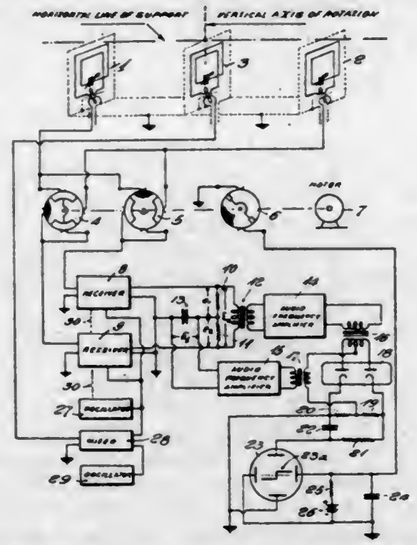
1. A direction finding system comprising a plurality of stationary geographically spaced receiving antennae, an injector antenna centrally disposed with respect to said receiving antennae, means for electrically exciting said injector antenna for impressing heterodyning energy upon said plurality of geographically spaced receiving antennae, independent receiving circuits connected with said plurality of geographically spaced receiving antennae, a polyphase circuit interconnected with the outputs of said independent receiving circuits, an angularly shiftable indicator, and means for magnetically controlling said indicator connected with said polyphase circuit whereby said indicator may be moved to a position corresponding to the position of a radio transmitting source with respect to said stationary geographically spaced receiving antennae.

2,408,119
HETERODYNE RADIO DIRECTION FINDING SYSTEM

Walter H. Wirkler, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application May 16, 1939, Serial No. 274,039
8 Claims. (Cl. 250—11)

1. In a radio direction finding system, the method of determining the radio frequency time-phase of signal voltages induced in different parts of a directional antenna system which comprises supplying radio frequency energy locally in equal relation to the different parts of the antenna system for inducing therein second voltages of like phase characteristics, the frequency of said locally supplied energy being different from that of the signal energy in a relatively small degree, separately mixing the voltages induced in each part of the antenna system to obtain separate low frequency components the phase relation of which is the same as that of the signal voltages induced in the different parts of the antenna system, said low frequency being equal to the difference in frequency of the signal energy and the locally supplied energy, combining said low frequency components, and indicating the phase relation of said low frequency components as a function of the resultant derived from the combination of said components.

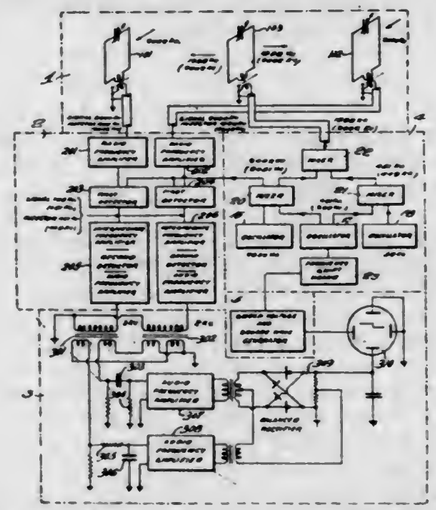


2,408,120
RADIO DIRECTION FINDING SYSTEM

Walter H. Wirkler, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application September 12, 1939, Serial No. 294,522
13 Claims. (Cl. 250—11)

1. In a radio direction finding system, a directional antenna system including at least two receiving antennae, two separate receiving circuits, commutator means for alternately connecting said receiving circuits individually to each of said receiving antennae, means cooperatively energized by the outputs of both said receiving circuits for producing a voltage proportional to the phase difference of the signals received at the respective antennae, and visual indicating means energized by said voltage with said commutator means producing a reversal in the sense of the indication of said voltage upon the alternate connection of said receiving circuits with respect to said antennae.

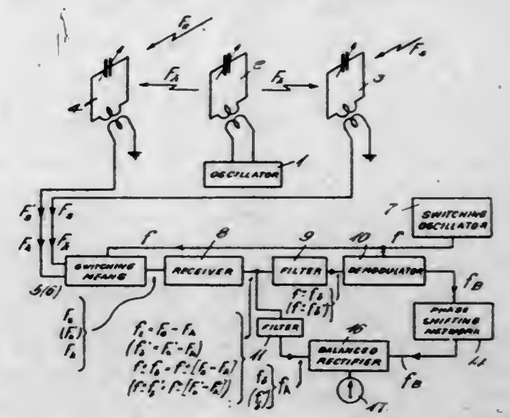


13. In a heterodyne radio direction finding system, a directional antenna system including at least two signal receiving antennae and a locally energized injector antenna coupled in like relation to both said receiving antennae, separate receiving circuits including detector means for said receiving antennae, commutator means for alternately connecting said receiving circuits individually to each of said receiving antennae, said receiving circuits having heterodyne audio frequency output currents derived in said detector means from received signal energy and energy from said injector antenna and varying in phase relation as the signals received at the respective receiving antennae, rectifier means cooperatively energized by both said currents for producing a direct voltage proportional to the phase difference in the currents, and visual indicating means energized by said voltage and adapted to indicate direction through both the polarity and magnitude of said direct voltage.

2,408,121
DIRECTION FINDING SYSTEM WITH FREQUENCY SHIFT

Walter H. Wirkler, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application March 30, 1940, Serial No. 327,011
17 Claims. (Cl. 250—11)



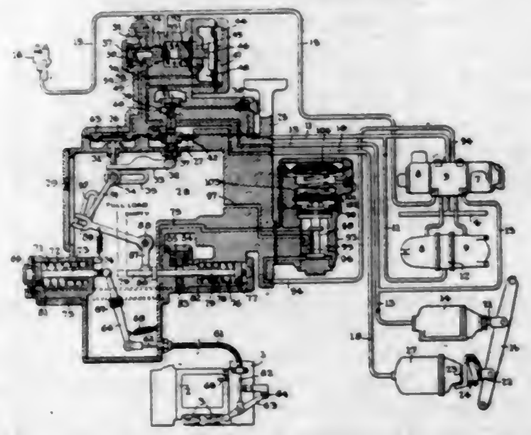
1. In a heterodyne radio direction finding system including at least two receiving antennas and superheterodyne receiving circuits, locally energized injector antenna means coupled in like relation to said receiving antennas, each of said superheterodyne receiving circuits having components of intermediate frequency derived from signal energy and from injected energy, means for producing an indicating direct voltage proportional to the phase difference in the currents at the outputs of the superheterodyne receiving circuits, and visual indicating means energized by said voltage; the method of maintaining the significant phase difference in said output currents substantially equal to an off-bearing phase difference in signal waves incident at said receiving antennas which consists in shifting the frequency of the injection energy through a predetermined frequency range for producing intermediate frequencies in the receiving circuits such that the signal derivative has a frequency alternately higher and lower than the injection derivative in each of said receiving circuits, the output currents being advanced in phase when the signal derivatives are of higher frequency and retarded in phase when the signal derivatives are of lower frequency by an amount in each instance proportional to the off-bearing phase displacement of the signal wave at the respective antenna, whereby the phase difference of the signal waves at the antennas may be determined from the relative phases of the output currents of said receiving circuits.

2,408,122
HETERODYNE DIRECTION FINDER WITH SINGLE RECEIVER

Walter H. Wirkler, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application November 15, 1940, Serial No. 365,826
16 Claims. (Cl. 250—11)

1. In a heterodyne radio direction finding system, in combination: a directional antenna system, including a pair of signal receiving antennae and a locally energized injector antenna coupled in like relation to both said receiving antennae; a receiving circuit including detector means; switching means for connecting said receiving circuit alternately with each of said receiving antennae for producing heterodyne output beat frequency components, derived in said detector means from received signal energy and energy from said injector antenna, and varying in phase relation as the signals received at the respective receiving antennae; said beat frequency components being interrupted at the frequency of said switching means and constituting amplitude modulation sidebands of the switching frequency proportional in amplitude to the phase relation of said beat frequency components; means for detecting said modulation sidebands for producing a beat frequency current proportional in ampli-



tude to the phase relation of said received signals; said beat frequency components, pulsating at said switching frequency, comprising together a continuous wave constituting an average beat frequency current of effectively fixed phase; balanced rectifier means cooperatively energized by both said beat frequency currents in substantially like phase for producing a direct voltage proportional to the phase relation of said received signals, and direction indicating means energized by said direct voltage.

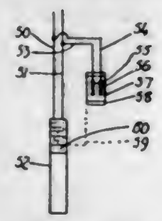
2,408,123

VARIABLE LOAD BRAKE

Lynn I. Pickert, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey

Application December 9, 1944, Serial No. 567,337
7 Claims. (Cl. 303—22)

1. In a variable load air brake for vehicles, the combination of a load sensing member guided in a definite path between limiting positions, one of which is an empty and the other a full-load position; means for positioning said load sensing member between said limits in approximate proportion to the load on the vehicle; a relay for controlling braking pressure in response to a controlling pressure, said relay including a variable ratio lever mechanism having a controlling part which is shiftable to vary the ratio of braking pressure to controlling pressure, the ratio changing at a varying rate as the controlling part is moved; and a motion-modifying setting means interposed between said sensing member and said controlling part and adapted substantially to neutralize said variation of rate, whereby said ratio will be controlled substantially in proportion to the sensed load.



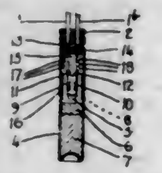
2,408,124

MEANS FOR SAFEGUARDING ELECTRIC IGNITERS OF BLASTING DETONATORS AGAINST ACCIDENTAL FIRING

Hans Jay Rolfes, Melrose, Johannesburg, Transvaal, Union of South Africa

Application August 18, 1942, Serial No. 455,235. In the Union of South Africa September 11, 1941
4 Claims. (Cl. 102—28)

1. An electric igniter of a blasting detonator in a combination with means by which it is safeguarded against accidental firing by electric shock or spark discharges produced respectively in, or in the vicinity of, the firing means of the igniter by atmospheric electricity, comprising a coherer mass which is in electrical cooperation with insulated conductive branches connected with each lead of the igniter, said branches having bared parts surrounded by the coherer mass, a conductive grounded casing conductively connected to a conductive shell of the igniter, the coherer mass including a metal powder offering a substantially



complete resistance to voltages of the magnitude used for firing the igniter and which, on being subjected to voltages substantially higher than said firing voltages, becomes locally conductive through coherer action along a path permitting the passage of the high voltage charge.

2,408,125

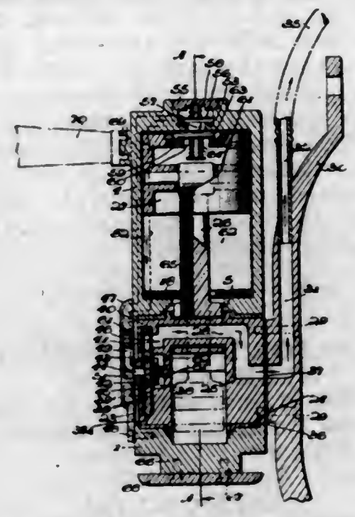
MEANS FOR SAFEGUARDING ELECTRIC IGNITERS OF BLASTING DETONATORS AGAINST ACCIDENTAL FIRING

Hans Jay Rolfes, Melrose, Johannesburg, Transvaal, Union of South Africa

Application August 18, 1942, Serial No. 455,236. In the Union of South Africa September 11, 1941
15 Claims. (Cl. 102—28)

1. Means for safeguarding the firing means of blasting detonators against static charges, including a safeguarding material of a nature to provide high resistance against current voltages for intentional firing and low resistance to higher voltages of a static charge, means for grounding said safeguarding means, electric leads for the firing means, said leads having bared parts surrounded by the safeguarding material at a distance from the firing means, and discharge points in electrical continuity with said bared parts of such leads to thereby increase the static voltage discharge through said material.

2,408,126



APPARATUS FOR INFLATING TIRES

Georges Charles Schüle, Buenos Aires, Argentina

Application January 13, 1944, Serial No. 518,134
4 Claims. (Cl. 152—419)

1. An apparatus carried by a wheel of a vehicle for inflating the tires thereof while the vehicle is in motion, comprising: a compressor assembly including, a crank-case formed to provide a crank-shaft journal bearing and also to provide an air intake chamber and a compressed air filtering chamber; a crank-shaft journaled in said crank-case and having an air duct, a cylinder including a head surmounting the crank-case and in ported communication at its lower end with said air intake chamber of the crank case, a piston slidable in the cylinder, a valve in the piston spring-urged to open on its inward stroke to receive air from the air intake chamber and to close on the outward compression stroke of the piston, said cylinder head having a valve

chamber which receives air compressed by the outward stroke of the piston, and the wall of the said cylinder having a vertical passage including inlet and outlet ends and which inlet end communicates with said valved chamber, a cover plate secured to the crank-case over the outer end of the journal bearing, said cover plate having radial ducts converging inwardly to a central transverse duct, one of said radial ducts communicating with the outlet end of said vertical passage of the cylinder and the other communicating with said air filtering chamber, an air transfer unit disposed between one end of the crank-shaft and the cover plate, said unit including a ported semi-spherical extension whose port registers with the central

transfer duct of the cover plate, and said unit also having duct means leading to the duct of the crank-shaft, a bracket for mounting the compressor unit on the wheel of the vehicle, said bracket being keyed to the journal portion of the crank-shaft and having a conduit communicating with the outlet end of the duct of the crank shaft, a tubular flexible connection between the bracket and the tire of the wheel on which the bracket is mounted, a rod connecting the compressor assembly to a fixed part of the vehicle to maintain said assembly stationary relative to the crank-shaft, and a flexible connection leading from said air filtering chamber to the tires on other wheels of the vehicle.

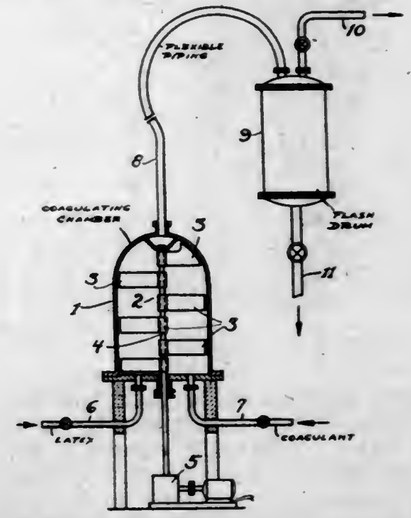
2,408,127

CONDENSATION PROCESS

George W. Seymour and Victor S. Salvin, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application June 12, 1943, Serial No. 490,674
14 Claims. (Cl. 260—635)

1. Process for the production of high molecular weight polyene aldehydes, which comprises subjecting crotonaldehyde to a condensation reaction in a reaction medium comprising water, a lower aliphatic alcohol and a condensation catalyst comprising a member of the group consisting of secondary amines and salts thereof, the water produced by said condensation reaction being maintained in the reaction medium during the course of said reaction.



11. Higher molecular weight mono- and polyhydroxy alcohols prepared by subjecting crotonaldehyde to a condensation reaction in a reaction medium comprising water, a lower aliphatic alcohol and a condensation catalyst comprising a member of the group consisting of secondary amines and salts thereof, the water produced by said condensation reaction being maintained in the reaction medium during the course of said reaction, and subjecting the compounds thereby obtained to hydrogenation.

2,408,128

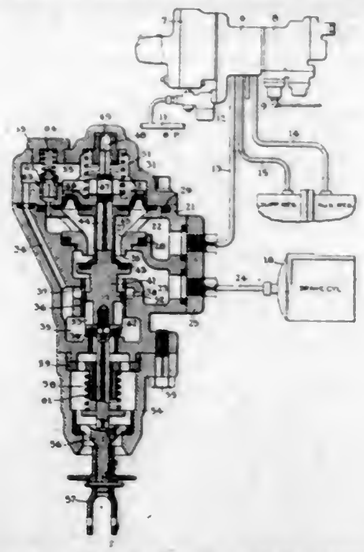
COAGULATION PROCESS

Walter Squires, Jr., and Paul T. Parker, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

Application October 24, 1942, Serial No. 463,146
5 Claims. (Cl. 260—96)

1. The process of preparing synthetic rubber-like materials, which comprises passing a stream of coagulant and a stream of a latex obtained by the polymerization of a diolefin in aqueous emulsion, said latex containing some low-boiling unpolymerized diolefin, into a coagulation zone at a low linear speed, agitating the latex and coagulant in the coagulation zone for a period sufficient to cause uniform intermixing of the latex and coagulant and under a hydrostatic pressure imposed by a liquid column containing coagulate which has left said zone, said pressure being sufficient to prevent the unpolymerized low-boiling diolefin from flashing off in said zone, and discharging the stream of coagulate and aqueous suspension medium against a gradually diminishing hydrostatic head outside the coagulation zone, whereby the unpolymerized low-boiling diolefin is permitted to vaporize and agitate said liquid column.

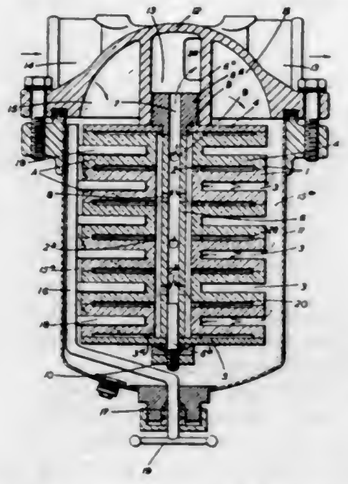
2,408,129



AIR BRAKE

Henry Norton Sudduth, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey

Application January 1, 1945, Serial No. 570,815
10 Claims. (Cl. 303—68)

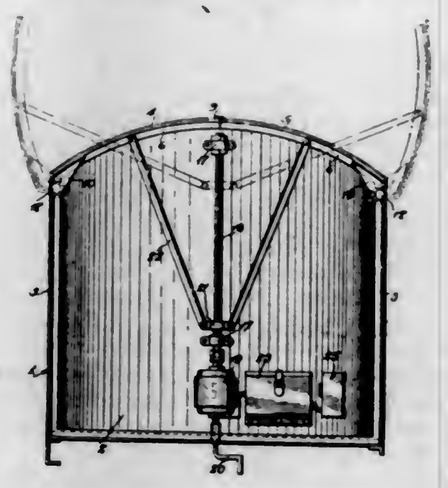


1. The combination of a brake pipe adapted to be operated at two different running pressures; a brake controlling valve device of the automatic type connected with said brake pipe and capable of being controlled by reductions and restorations of pressure in said brake pipe from and to either of said running pressures; reservoir means arranged to be charged through said valve device and comprising at least one reservoir; a brake cylinder operable under control of the valve device by air derived from said reservoir means; a relief valve adapted to open when subjected to

pressures exceeding a chosen value which is lower than the lower of said two brake-pipe running pressures; release valve means having a normal position in which it connects the brake cylinder to be controlled by said controlling valve device, the release valve means being movable from said normal position to an abnormal position in which it disconnects and vents the brake

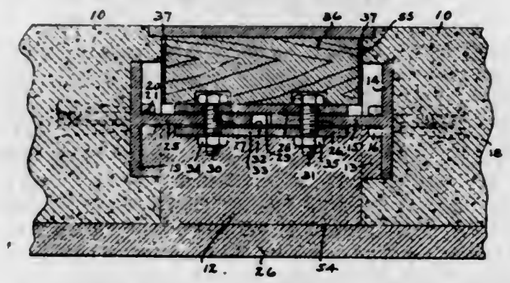
cylinder and establishes a path through which reservoir pressure may be reduced by flow through the relief valve; manually operable means for shifting said release valve means to and leaving it in said abnormal position; and means rendered effective by the development of releasing pressure in the brake pipe to restore said release valve means to normal position.

2,408,130
FILTER CLEANING MECHANISM
Cecil Gordon Vokes and Edward Arthur Stokes, London, England; said Stokes assignor to Vokes Limited, London, England
Application September 1, 1943, Serial No. 500,872
In Great Britain September 17, 1942
6 Claims. (Cl. 210—116)



3. A filter unit made up of a series of independent discs, supported in relatively superimposed relation, each disc having an inner peripheral surface defining a central opening, each disc having an outer peripheral surface defining an annular outer margin with the said outer margin formed with an annular channel defining a filter entrance channel with the said channel extending through the outer peripheral surface of the disc, toward, but not through, the outer peripheral surface of the disc, each disc being formed in its upper and lower surfaces with elements providing axially extending ribs adjacent the outer periphery of each disc and further formed with additional axially extending ribs on said upper and lower surfaces adjacent the inner periphery of each disc, with such additional ribs having radially extending channels therethrough to afford communication with said central opening and the annular space between said ribs, the ribs at the outer margins of the superimposed discs abutting when the discs are assembled, to provide a seal at one end of an inner channel formed between approximate faces of adjacent superimposed discs when discs are assembled, means to direct a fluid to be filtered, to the entrance channels whereby the fluid is directed from the entrance through the body of the discs and into the inner channels between adjacent discs and to the central openings of the discs when assembled, and means extending longitudinally of the central opening of the discs to receive the fluid directed into said central opening from the discs and to direct the same outwardly beyond the discs for discharge.

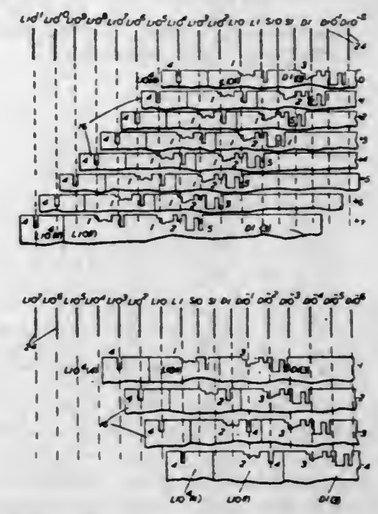
2,408,131
PROCESS FOR DEHYDROGENATING HYDROCARBONS
Alexis Voorhies, Jr., Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 21, 1941, Serial No. 415,903
4 Claims. (Cl. 260—683.3)



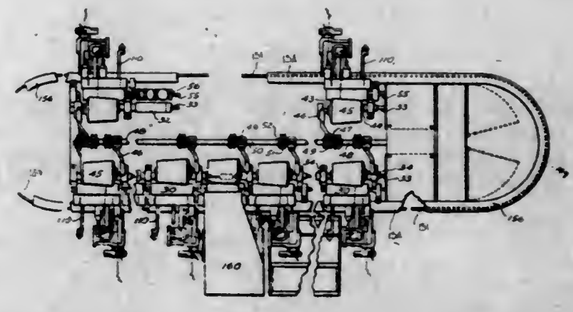
3. The process of dehydrogenating hydrocarbons having from 2 to 5 carbon atoms which comprises passing the hydrocarbons at dehydrogenating temperatures and pressures over a catalyst which consists of a major proportion of aluminum oxide and minor substantially equal proportions of chromium oxide and nickel oxide and which has been heated to a temperature between 1800° and 2000° F.

2,408,132
AUTOMATIC TOP
Sanford J. Weeks, Elyria, Ohio
Application April 20, 1945, Serial No. 589,379
3 Claims. (Cl. 296—137)

1. A top door structure for vehicle bodies comprising first and second arcuate rigid plate members, transverse members secured to each of said plate members at spaced points, gussets secured adjacent the outer extremities of said transverse members, sleeves secured to each of said gussets, first and second side walls for said body, additional sleeves extending the full length of each of said side walls at the top thereof, and having cut-away portions of a dimension to permit alignment of said first-mentioned sleeves therewith, said first-mentioned sleeves and said additional sleeves being of substantially the same interior and exterior diameter, shafts extending the full length of each side wall through aligned first-mentioned and additional sleeves, and means securing said first-mentioned sleeves to said shafts, said shafts being freely rotatable in said additional sleeves to form a water-tight hinge structure extending the full length of said vehicle body.



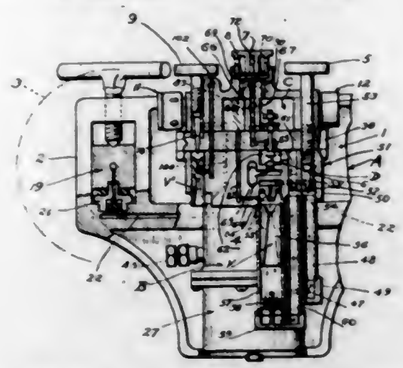
2,408,133
PAVEMENT SLAB CONNECTING MEANS
Franklin W. Abel, Franklin, Ind.
Application May 16, 1945, Serial No. 593,997
8 Claims. (Cl. 94—8)



1. A longitudinally yielding, vertically fixed connector of pavement slabs, comprising a pair of tongues each carried by a slab; a base on each tongue rigidly securing it to its respective slab to have the tongue extend therefrom in longitudinal alignment with the other tongue between the top and bottom faces of the slabs; a plate overlapping said tongues; bolts extending through said plate and said tongues to maintain vertical alignment of said tongues, said bolts fitting through said plate and tongues with lost motion to permit limited longitudinal travel of one tongue in respect to the other; and means interposed between said plate and tongues to maintain slidable surfaces therebetween; one of said slabs at least being provided with a well into which the opposing ends of said tongues extend; a well cover seated over said tongues; cover anchor means within said well and fixed to the slab thereof; and means interengaging said cover and said anchor means.

2,408,134
CALCULATING MACHINE
Daniel Broido, Cockfosters, near Barnet, England
Application January 13, 1944, Serial No. 518,044
In Great Britain October 21, 1942
16 Claims. (Cl. 235—61)

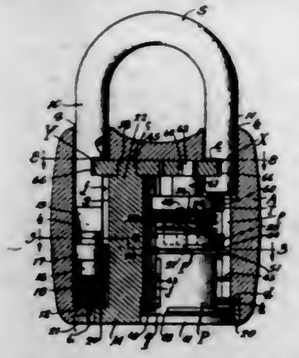
1. In a calculating machine for non-uniform first factors comprising interrelated decimal and non-decimal denominations and for decimal second factors, set-up means for setting up the values of the first factor, selector elements settable by said set-up means and each associated with a set-up value, each selector element comprising representations of digits of products formed by multiplication of the respective set-up value by the unit values of all denominations, within the machine capacity, of the second factor, said products being expressed in the non-uniform numerical system, a totalising register comprising a plurality of denominational registering elements, sensing elements each operatively associated with a denominational registering element and being spaced laterally of the register by a constant distance in the case of sensing elements associated with registering elements of decimal denominations and by a distance different to said constant distance in the case of sensing elements associated with non-decimal denominations, and a carriage movable in the direction parallel to the register in steps equal to said constant distance into a plurality of positions each associated with a denomination of the second factor, the said carriage serving to change the relative positions of said sensing means and of said selector elements, the said representations being spaced laterally in accordance with said spacing of the sensing elements so that in each carriage position only those representations are aligned with said sensing elements which represent the product of the set-up factor by the unit value of the particular denomination of the second factor associated with this carriage position.



2,408,135
YARN WINDING MACHINE
Louis M. Cotchett, Hingham, Mass., assignor to Foster Machine Company, Westfield, Mass., a corporation of Massachusetts
Original application January 19, 1943, Serial No. 472,862. Divided and this application November 16, 1943, Serial No. 510,471
6 Claims. (Cl. 242—35.6)

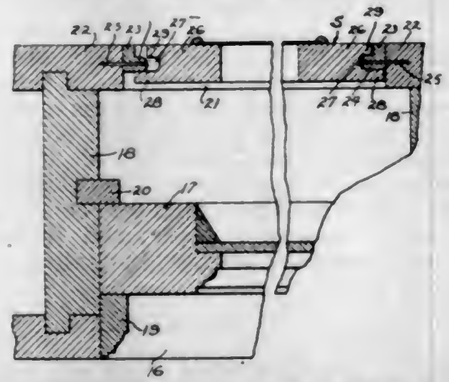
1. In a multi-unit winding machine, the combination of a trackway passing a plurality of winding units and below the units, a tender movable on the trackway, a track engaging traction device on the tender and a motor carried in the lower portion of the tender for driving the traction device to move the tender, said traction device including a pair of pulleys riding upon a

part of said trackway and a belt connecting said pulleys and a driving pulley driven by said motor, said belt having one face in frictional contact with part of said trackway.



2,408,136
RESUSCITATOR INSUFFLATOR ASPIRATOR
Le Roy G. Fox, Los Angeles, Calif., assignor, by mesne assignments, to E & J Manufacturing Company, Glendale, Calif., a corporation of California
Application December 7, 1942, Serial No. 468,079
3 Claims. (Cl. 128—29)

1. In a machine for selectively effecting resuscitation and insufflation, a supply of gas under pressure, means embodied in the machine for operation responsive to gas from said supply for promoting resuscitation including a mask; hose lines leading from said means to the mask, insufflation means including one of said hose lines for conducting gas from said supply to said mask; a manually operable valve for controlling the flow of gas from said supply to the resuscitation means and the insufflation means; valve means affording exhalation of the patient to atmosphere when the machine is operated as an insufflator, an indicator including a visual member arranged to move responsive to and in accordance with the variational pressures in the machine during resuscitation and insufflation to show the depth and rate of breathing of the patient, and manually adjustable valve means operatively associated with said resuscitation means, said insufflation means and said indicator and which when in one position renders the indicator responsive to the inhalation and exhalation actions of the machine during resuscitation, and when in another position renders the indicator responsive to inhalation and exhalation operations during insufflation.



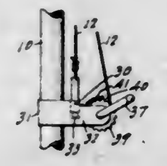
2,408,137
PADLOCK
Raymond K. Gray and Rollin Lester Gray, Chicago, Ill., assignors to The Illinois Lock Company, Chicago, Ill., a corporation of Illinois
Application May 24, 1944, Serial No. 537,114
6 Claims. (Cl. 70—38)

1. In a padlock, a chambered body substantially fully open at one end and having in its opposite end two relative small openings, a shackle having two arms one movable through each small opening into the chamber within the body, an insert movable through the full opening into the body chamber and provided with a base adapted to provide a closure therefor, dual locking devices mounted on the insert for movement within the confines thereof and in one position being engageable with both arms of the shackle to restrain movement thereof, a transmission also mounted on the insert in operative connection with the dual locking devices, spaced stop means confining the rotary movements of the transmission to a relatively wide range, tension means normally urging the transmission to a position of engagement with one stop means in which position the dual locking devices are engaged with both shackle arms, the dual locking devices being removed wholly from the confines of the shackle arms when the transmission is operated to the extreme opposite position in its movement

range whereby to permit the shackle arms to be advanced freely past the dual locking devices, key-controlled rotatable means axially movable toward the transmission to establish operative connection therewith, and spaced stop means confining the rotary movements of the key-controlled means, and thereby the transmission, to a different and relatively narrow range in which the dual locking devices act always to restrain advance of one shackle arm outwardly from the padlock body.

2,408,138
SLIDING WINDOW SCREEN SUPPORTING STRUCTURE
Emil Gutoski, Cicero, Ill.
Application October 28, 1944, Serial No. 560,788
3 Claims. (Cl. 160—369)

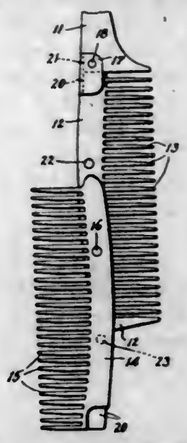
3. In the combination of a window frame and a sliding screen, guide strips of L-shape fastened to the side walls of the frame along their outer margins with the bases of the strips towards the outer wall margins and the beads extending at right angles to the side walls, said strips providing inner screen sash bearing surfaces which include the cross-sectional thickness of the bases plus the inner side surfaces of the beads, the side rails of the sash having grooves forming spaced tongues from top to bottom thereof for engaging the strip beads, the tongues engaging with the inner bearing surfaces of the strips being of substantially the same width as the said surfaces and the tongues engaging with the outer bearing surfaces of the strip beads being substantially the same width as the outer surface of the beads, whereby abutment engagement is maintained between the inner tongues and the guide strips during lateral shift of the sash in said frame to thereby prevent outward displacement of the sash from said frame under pressure against the inner sides of the same.



2,408,139
DEHYDROGENATION PROCESS
Carlos L. Gutzeit, Terre Haute, Ind., assignor to Shell Development Company, a corporation of Delaware
No Drawing. Application March 6, 1944, Serial No. 525,299
7 Claims. (Cl. 260—680)

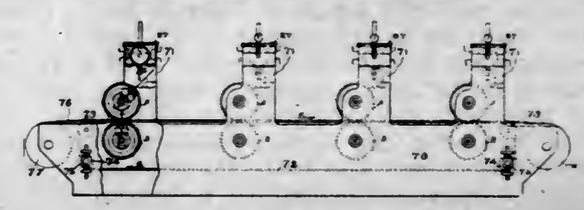
5. A process for the continuous production of a diolefin from the corresponding mono-olefin by catalytic dehydrogenation which comprises continuously contacting a mono-olefin having at least four non-quaternary carbon atoms in a straight chain in the presence of at least two mols of steam per mol of mono-olefin at a temperature above about 580° C. and at a gaseous hourly space velocity between about 300 and 3000 with a dehydrogenation catalyst consisting essentially of an essentially homogeneous mixture of iron oxide, bismuth oxide and potassium oxide, containing said iron oxide as the major constituent and from 1 to 40 mol percent of bismuth oxide and from 0.2 to 5 mol percent of potassium oxide.

2,408,140
DEHYDROGENATION CATALYST
Carlos L. Gutzeit, Terre Haute, Ind., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 18, 1944, Serial No. 554,724
4 Claims. (Cl. 252—230.6)



1. A catalyst particularly adapted for effecting dehydrogenation at temperatures above about 580° C. in the presence of steam consisting essentially of a major mol amount of iron oxide, a minor mol amount of an alkaline compound of potassium and a minor mol amount of at least one mol per cent of chromium oxide, the mixture having been calcined at a temperature between about 800° C. and about 950° C. in an atmosphere under which no appreciable formation of iron chromite takes place and for a sufficient length of time to decrease the available surface of the catalyst to below 30 square meters per gram.

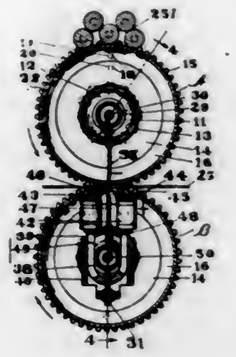
2,408,141
TOY
Theodore Heil, Berkeley, Calif.
Application March 7, 1944, Serial No. 525,398
5 Claims. (Cl. 46—45)



1. A simulative reel mounted on the handle portion of a toy fishing rod and having a socket formed therein to receive the legs of a magnet, and a keeper for the magnet located and fixed in the lower portion of said socket, with the walls of the socket functioning as lateral support for the magnet, and the keeper functioning to secure the magnet in the socket.

2,408,142
COMB
Ernest L. Hollenbeck, Glendale, Calif.
Application September 24, 1945, Serial No. 618,211
3 Claims. (Cl. 132—11)

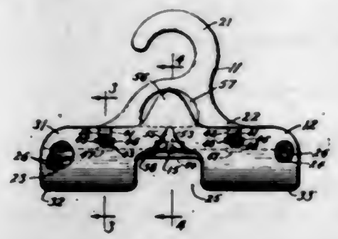
3. In a comb, a main comb member having a back, teeth on said back and a handle extending from said back, a second comb member having a back and teeth on said back, means pivotally connecting said backs at points intermediate the ends thereof whereby said second comb member may be swung into and out of position lying against one side of said main member with the teeth of said members presented in parallel rows for a joint combing action, a projection on the back of one of said members adapted to engage the back of the other of said members when said members are in side by side position and operating to flex said members, said other member having a depression therein in which said projection extends to hold said comb members in said side by side relation; and a keeper member on said main comb member arranged to embrace the back of the second member to hold it in combing relation to the main comb member.



2,408,143
APPARATUS FOR MULTICOLOR PRINTING WITH ELECTRO LINES OF FORCE
William C. Huebner, New York, N. Y.
Application January 15, 1944, Serial No. 518,468
9 Claims. (Cl. 101—181)

1. In printing apparatus, a movable member having image areas permeable to electro lines of force and non-image areas impermeable thereto, a member for supporting print receiving material between it and said movable member; means for inking said image areas while maintaining the non-image areas free of ink and comprising an ink discharge element located on one side of said movable member, means for supplying ink to said element, an attraction element located on the opposite side of said movable member, means for connecting said elements to a source of high potential electric energy to create a field of force with the lines of force thereof intercepted by the impermeable non-image areas but passing through the permeable image areas and acting to deposit ink on said image areas; and means for transferring the deposited ink

from said image areas to said material and comprising a repulsion element operatively associated with said movable member and located on one side of said material, an attraction element operatively associated with said second member and located on the opposite side of said material, and means connecting said repulsion element and said last mentioned attraction element with a source of high potential electric energy to create a field of force in which the lines of force pass through the permeable inked image areas of said movable member and act to transfer the ink from said image areas to correlated areas of said material.

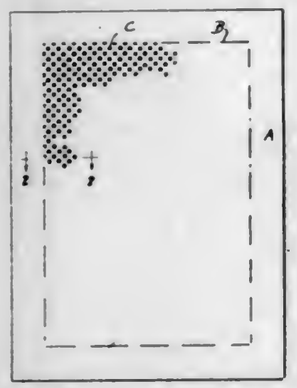


2,408,144
MEANS FOR PRINTING
William C. Huebner, New York, N. Y.
Application January 15, 1944, Serial No. 518,469
11 Claims. (Cl. 101—1)

1. In printing apparatus, a printing couple comprising a movable member, an image on a surface of said member, and a supporting member arranged in spaced relationship to said image; means electrically insulating said members from each other and from the apparatus, means for moving said first member to bring successive areas of said image into operative correlation with successive areas of print receiving material located between said members and supported by said supporting member, means for inking said image, and means for impelling the ink from said successive image areas to said successive print receiving material areas and comprising an element operatively associated with one of said members but insulated therefrom and a second element operatively associated with the other of said members but insulated therefrom, said elements having a gap therebetween and in which gap said members and material are located, said elements being connected to a source of high potential electric energy whereby said electric energy passes across said gap between said elements and through said members and said material and transfers ink from said successive image areas to said successive material areas to print the image on said material.

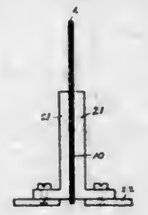
2,408,145
GARMENT HANGER
Elmer L. Johnson, Chicago, Ill.
Application October 30, 1944, Serial No. 561,119
6 Claims. (Cl. 223—96)

1. A garment hanger comprising, a suspension element having a carrier portion provided with spaced depending abutment fingers, a pair of duplicate clamp elements for cooperation therewith in hanging garments, each having a body portion shaped to conform to the contour of the carrier portion of said suspension element and having depending clamping fingers disposed in registration with the abutment fingers thereon, and yieldable means for effecting clamping action, said clamp elements being disposed on



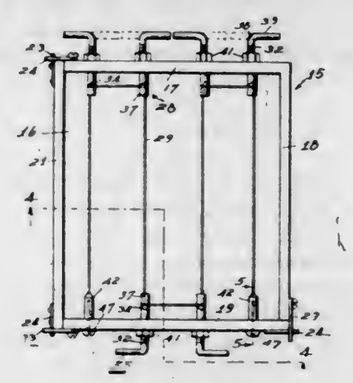
opposite sides of said suspension element and being retained in operative registration therewith by means of pivot bearing connections formed in part integral with the carrier portion of said suspension element and functioning in cooperation with the yieldable means for effecting clamping action.

2,408,146
DEHYDROGENATION OF HYDROCARBONS
Kenneth K. Kearby, Elizabeth, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
No Drawing. Application September 19, 1941, Serial No. 411,559
10 Claims. (Cl. 260—680)



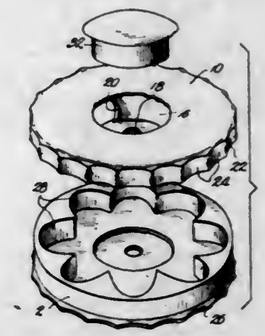
1. An improved process for the catalytic dehydrogenation of low molecular weight olefins, which comprises adding steam to the olefins in the ratio of 15:1 to 1:1 of steam to olefins, and passing the mixture at a temperature between 1000 and 1600° F. over a catalyst comprising a major proportion of magnesium oxide and a minor proportion of chromium oxide and an alkaline oxide having the power to promote the reaction of the steam with carbon deposited on the catalyst during the reaction.

2,408,147
TRANSFER SHEET
Ralph M. Kneale, Cleveland Heights, Ohio
Application June 24, 1944, Serial No. 541,910
2 Claims. (Cl. 41—33)



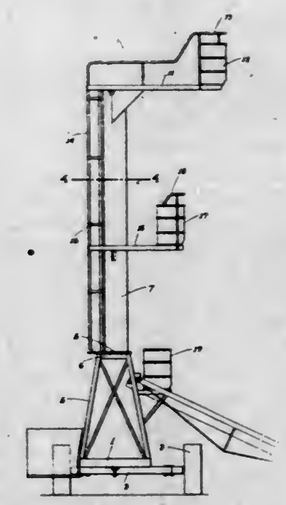
1. A transfer sheet comprising a sheet of translucent paper coated with paraffin wax, there being isolated printed areas on the wax of an ink solid enough so as not to offset under normal handling of the sheet but transferable by concentrated pressure on the back of the sheet, said ink comprising principally carbon black, linseed varnish and ester gum.

2,408,148
DIAMOND CHARGED SAW BLADE AND METHOD OF MAKING SAME
Thomas Longbotham, Portland, Oreg.
Application March 4, 1944, Serial No. 524,982
5 Claims. (Cl. 51—309)



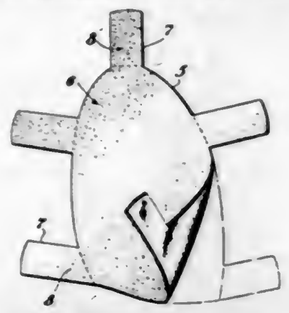
1. A diamond charged saw blade consisting of a disc of soft steel having a plurality of diagonal slots formed about the periphery thereof constituting a continuous zig zag groove, the reversing bends of which extend to the lateral faces of the disc, said groove being filled with diamond particles which extend laterally from the sides of the disc and radially from the groove.

2,408,149
APPARATUS FOR EMBEDDING AN ELONGATED FLEXIBLE MEMBER IN A MOLDABLE MATERIAL
Leslie W. Miller and Sampson Dewey Mahlstadt, Waverly, Iowa
Application August 6, 1943, Serial No. 497,710
5 Claims. (Cl. 25—118)



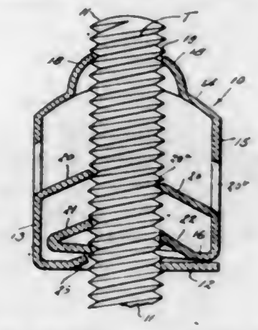
1. Apparatus for embedding a flexible member in a pourable material capable of becoming solidified comprising a form having side members, means for releasably supporting said flexible member in a predetermined pattern within said form including a plurality of anchoring devices detachably and rotatably carried in certain of said side members, with each of said anchoring devices having a straight body member with one end portion located inside of said form, a hook at said one end portion within the peripheral confines of said body member and comprised of a transverse groove, and a longitudinal groove open to one end of said transverse groove and to the free end of said one end portion, with said flexible member being extended through said two grooves for engagement with said hook, and means for retaining said anchoring device in a fixed position at which said hook is engaged with said flexible member, said anchoring device being rotatable in one direction, when the pourable material is in a partially solidified state, to move said hook out of an engaged position with said flexible member to provide for the free removal of said one end portion outwardly from said form.

2,408,150
POCKET DISPENSER
William C. Moeller, Kansas City, Mo.
Application September 23, 1944, Serial No. 555,503
1 Claim. (Cl. 206—42)



A pocket dispenser for small articles comprising a pair of mating, disc-shaped sections; means for pivotally interconnecting the sections at their axes for relative rotary movement; a series of stalls between the sections and in a path substantially concentric with the pivotal connection; a pocket formed by one of the sections at the axis thereof; a discharge port in the said one section in communication with the pocket, said discharge port being disposed to successively register with the stalls as the sections are relatively rotated whereby the articles are fed one at a time into the pocket from the stalls; and scallops formed on the edge of each disc-shaped section, said scallops being aligned when one of the stalls is in register with the said discharge port.

2,408,151
TRANSPORT TOWER
Maxwell E. Phillips, Stockton, Calif.
Application September 5, 1945, Serial No. 614,504
5 Claims. (Cl. 304—9)



1. A tower comprising a wheeled support, a main tower element projecting vertically from the support, a plurality of catwalks projecting outwardly at right angles to the tower element, the length of the catwalks progressively increasing from the lowest one to the uppermost one thereof, an operator's crow's-nest at the outer end of each catwalk, and a ladder mounted vertically along the tower element and leading to all the catwalks.

2,408,152
ANTISKID CANVAS DEVICE
Alfonso Porcelli, Brooklyn, N. Y.
Application January 27, 1945, Serial No. 574,853
3 Claims. (Cl. 36—59)

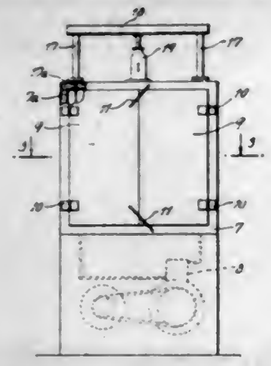
1. In an antiskid device of the character described, a canvas sheet shaped to fit on a shoe tread member to which the same is adapted to be attached, one face of the canvas sheet being adhesively coated to facilitate attachment to the member and means extending from the marginal edge of the sheet carrying an adhesive for contact with parts of the member spaced from the engaging portion of said sheet.

2,408,153
FASTENING DEVICE
Lionel H. Steans and Earle R. Andrews, Los Angeles, Calif.
Application April 14, 1943. Serial No. 482,950
4 Claims. (Cl. 151—14)

1. A fastening device for use on a threaded bolt including a length of material bent into the form of a substantially rectangular loop having a first base portion, a side extending upwardly from the first base portion, a top extending from the side, a second side extending downwardly from the top and a second base portion extending inwardly from the second side to be in overlying relation to the first base portion, said base portions and top having openings for receiving the bolt, inturned parts on the two sides sloping upwardly and inwardly to engage the thread of the bolt, an upwardly and inwardly projecting part on the first base portion engageable with the thread of the bolt, and at least one upwardly and inwardly projecting part on the second base portion for engaging the thread of the bolt, the said base portions being related for relative movement and the last named part being pressed against the thread of the bolt by said relative movement.

2,408,154
QUICK-FREEZING APPARATUS FOR FOOD ARTICLES
Andrew J. Stone, New York, N. Y.
Application February 21, 1945, Serial No. 578,969
12 Claims. (Cl. 62—114)

1. In a refrigerating apparatus, a housing, a stationary plate in said housing providing a refrigerant chamber, a movable plate associated therewith and providing a complementary refrigerant chamber, springs urging said movable



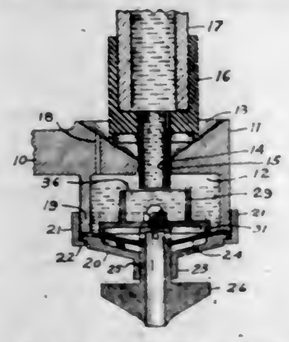


plate toward said stationary plate, and means for moving said movable plate away from said stationary plate.

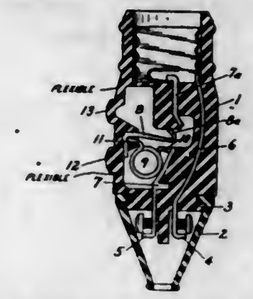
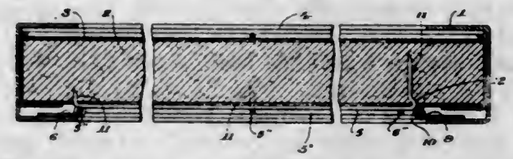
2,408,155
COMPOSITION FOR AND METHOD OF CLEANING AND COATING METAL
Sydney G. Thornbury, Los Angeles, Calif., assignor to Turco Products, Inc., Los Angeles, Calif., a corporation of California
No Drawing. Application September 17, 1943, Serial No. 502,817
3 Claims. (Cl. 148—6)



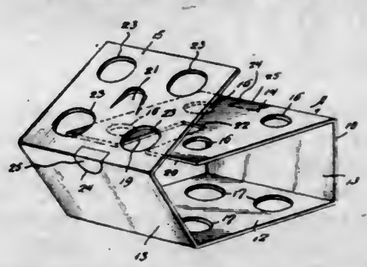
1. A composition for removing oil, grease, metal oxide and the like from and depositing a metallic phosphate coating on metal which comprises a solution consisting of water, phosphoric acid, aromatic petroleum solvent, and a coupling agent comprising, by weight, 25–33% of butanol and 21–29% of ethanol.

2,408,156
MEASURING TRAP CHAMBER WITH BAROMETRIC CUTOFF
Thomas L. Titus, Cheyenne, Wyo., assignor to The Wyott Manufacturing Company, Cheyenne, Wyo., a corporation of Wyoming
Application March 10, 1945, Serial No. 581,979
3 Claims. (Cl. 222—437)



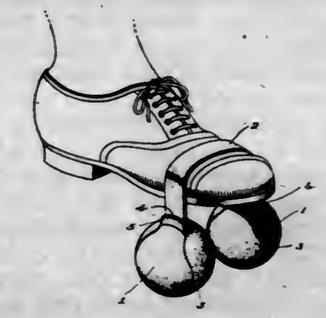
1. A device for dispensing liquid in measured quantities, comprising, a body having a valve chamber, provided with a fill opening and a vent in its upper wall, a fill tube in the fill opening, the fill tube projecting below the upper wall surface of the chamber, an airtight liquid container above the body in communication with the fill tube through an opening in its bottom, the lower end wall of the chamber having a discharge opening, a discharge tube extending through the discharge opening, the upper end of said tube being closed, a flexible diaphragm having a central opening through which the discharge tube extends, means for attaching the outer edge of the diaphragm to the wall of the valve chamber, the wall of the discharge tube having an opening above the diaphragm, a cup secured to the upper end of the discharge tube, below the lower end of the fill tube, the under surface of the cup having an annular flange positioned to engage the upper surface of the diaphragm to form a seal, the parts being so proportioned and related that when the flange is in normal sealing position the plane of the upper edge of the cup will be spaced a short distance below the lower end of the fill tube, the cup being movable upwardly to a point where the plane of its upper edge is above the lower end of the fill tube before the seal between the flange and the diaphragm is broken, whereby air is prevented from entering the container until the flange returns to sealing position.

2,408,157
ELECTRIC SWITCH
Charles A. Adams, Davenport, Iowa
Application March 12, 1945, Serial No. 582,252
4 Claims. (Cl. 200—159)



1. A switch of the character described having a hollow insulating wall, one portion of which may be flexed to cause opening and closing of the switch, the body of the switch housing having a conductor embedded therein which comprises two separated parts, a switch element having an end portion secured to the flexible portion of the switch housing, said switch element having its unattached end bent at an angle such that it is adapted to be restrained from inadvertent separation from the conductor element with which it engages when the switch is closed, and a coil spring bridging the space between the switch element and the second portion of said conductor element, said spring serving as a current carrier between the conductor and the switch element.

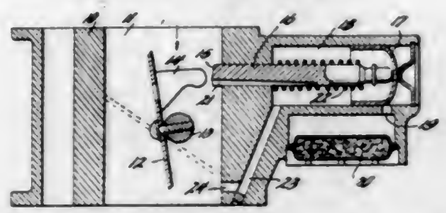
2,408,158
AIR FILTER
Harold E. Belsher, Phoenix, Ariz.
Application February 3, 1944, Serial No. 520,949
2 Claims. (Cl. 183—49)



1. An air filter comprising a frame open at its front and back and having an internal channel about its periphery, a grating mounted in the channeled frame in shielding relation to the rear opening thereof, a pad in said frame bearing against said grating and having marginal portions engaged in the channel of the frame, a door for the open front of said frame formed of strands disposed vertically and horizontally in crossed relation to each other, and having end portions bent to form prongs projecting from the door for penetrating the pad when the door is closed, hinge plates secured to said frame at one side thereof and having portions rolled to form sleeves receiving portions of a vertical strand at the adjoining side of the door above and below a horizontal strand and pivotally mounting the door for swinging movement to opened and closed positions, and means for releasably holding the door closed.

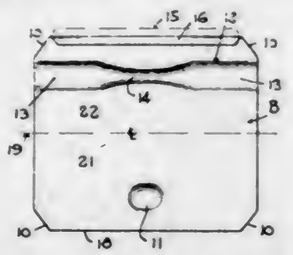
2,408,159
PACKING WRAPPER
George W. Boh, Chattanooga, Tenn., assignor to O. B. Andrews Company, Chattanooga, Tenn., a corporation of Tennessee
Application March 6, 1944, Serial No. 525,238
1 Claim. (Cl. 206—46)

A package of yarn cones comprising a sheet of fibrous material folded to form a rectangular frame having top and bottom walls inclosing the cones, the ends of said sheet being secured in overlapping relation to form a double layer top wall, said top and bottom walls having aligned openings therein, the openings in the inner layer of the top wall being relatively small and the openings in the outer layer of the top wall and bottom wall being relatively large and substantially the same size, the lower end of each cone being snugly received in one of the bottom openings and projecting therethrough, the upper end of each cone being snugly received in the small opening of the top wall and the large opening in the outer layer of the top wall being adapted to snugly receive the projecting lower end of the cone of an adjacent package when the packages are disposed in stacked relation and operating to interlock said packages together.



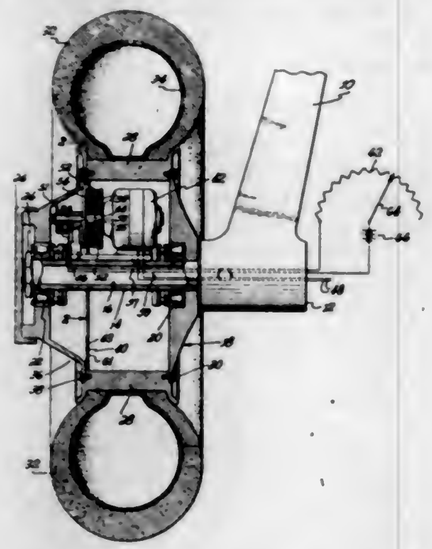
2,408,160
EXERCISING AND GAME APPARATUS
Leo G. Brunner, Milwaukee, Wis.
Application July 17, 1944, Serial No. 545,229
1 Claim. (Cl. 273—1)

An apparatus for games and exercising comprising weights, leather covers for said weights, tabs extending from said covers, a band of flexible material extending between said weights with its ends anchored to the tabs on said covers, the



ends of said band having curved edges to conform to the shape of said weights, said band being of a length adapting it to be engaged across a person's foot when the weights are at opposite sides thereof whereby the weights may be impelled through the air by kicking movement of a person's leg.

2,408,161
SPEED GOVERNOR
Rex C. Darnell, Ann Arbor, Mich., assignor to King-Seeley Corporation, Ann Arbor, Mich., a corporation of Michigan
Application June 9, 1944, Serial No. 539,493
16 Claims. (Cl. 137—153)

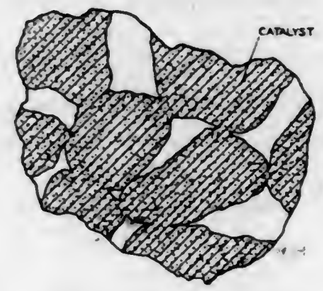


1. In a speed governor for internal combustion engines, a governor body enclosing a fuel mixture conduit, an unbalanced throttle plate pivoted in said conduit and having the larger of its unbalanced areas disposed upstream of its pivot axis, means including a pressure responsive element for urging said throttle plate toward closed position, and means for subjecting said element to the engine vacuum when said throttle plate is near its closed position.

2,408,162
SPECTACLE AND EYEGLASS RECEPTACLE
Gregory Y. Eaton, Pasadena, Calif., assignor to Technical Surfaces Ltd., Los Angeles, Calif., a limited partnership composed of Howard G. Hoffer and Chester L. Chalberg
Application April 3, 1944, Serial No. 529,280
3 Claims. (Cl. 206—5)

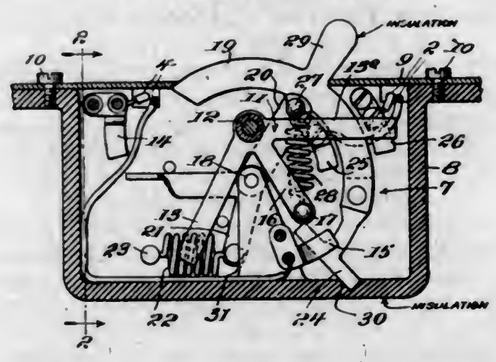
1. A spectacle case in the form of a flattened tube open at both ends and adapted to slidably receive a pair of spectacles with crossed bows from either end, said case being made from a single blank of relatively stiff but resilient sheet material, said blank being folded and its longitudinal edges connected along the top longitudinal edge of the case to form side walls capable of being resiliently urged apart when a pair of spectacles is inserted through either open end of the case; a shallow recess formed in the inner surface of one wall intermediate its ends and closer to said top longitudinal edge than to the opposing edge; a channel formed in the inner surface of the other wall and extending from end to end of the case, said channel paralleling the top edge and spaced therefrom a greater distance than the shallow recess, said shallow recess and channel providing surfaces to be sprung apart by the nose piece and crossed bows of a pair of spectacles inserted in the case whereby the walls of the case are flexed outwardly out of contact with the lenses of such spectacles and such spectacles are removably retained in such case by the resiliency of the walls and cooperation between the nose piece and the shallow recess.

2,408,163
LANDING WHEEL DRIVE
Ferenz H. Fodor, Los Angeles, Calif., assignor to Technical Securities Corporation, Los Angeles, Calif., a corporation of Delaware
Application January 30, 1945, Serial No. 575,227
8 Claims. (Cl. 244—103)



2. A landing wheel slip drive for aircraft comprising a stationary wheel mounting, a wheel on the mounting, an electric motor stationarily secured to the mounting having a rotating shaft extending therefrom in parallel spaced rotation to the wheel axis, a drive connection between the motor and the wheel comprising a member of magnetic material secured to the motor shaft having magnetic core elements thereon, a winding for each core connected in a circuit, a second member of magnetic material mounted on the shaft defining a space between itself and the cores on the first member and a perforated annular flange of non-magnetic material on the wheel extending into said space and adapted to move therethrough in a path such that some of the perforations are always positioned between the second magnetic member and the core, and a source of electric power connected in series in said circuit.

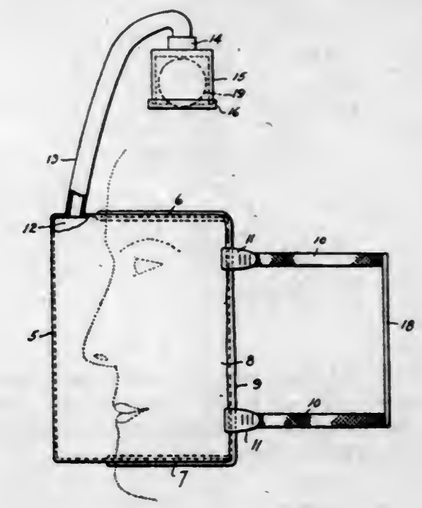
2,408,164
CATALYST PREPARATION
Arch L. Foster, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application April 25, 1942, Serial No. 440,561
3 Claims. (Cl. 252—259.2)



3. A process of forming a substantially rugged and pervious mass of formed catalyst particles consisting of a mixture of aluminum chloride and calcium chloride, which comprises heating a mixture of solid particles of aluminum chloride and of calcium chloride, and containing at least 20% by volume of inter-particle voids, to a temperature below the melting point and within the range of approximately 300° to approximately 325° F. and, while the particles are maintained at such temperature, molding a mass of the particles

under a mechanical pressure within the range of approximately 25 to approximately 100 pounds per square inch to effect bonding of the particles

only at the points of contact thereof without substantial disintegration of the particles and without substantial reduction in volume of voids between the particles.



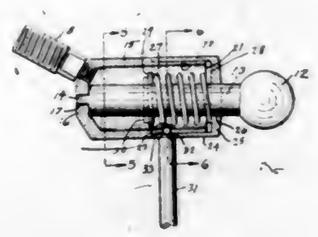
2,408,165
FLUORESCENT SWITCH STARTER
Luther A. Harrawood, Broughton, Ill.
Application January 8, 1945, Serial No. 571,870
6 Claims. (Cl. 200—6)

1. A fluorescent lighting system starter, comprising a pivoted semi-circular snap switch having an operating arm movable from one side to the other of the pivot point of the switch representing the fulcrum, contacts for the switch in circuit with the lighting system, a pivoted plate, a connection from the plate to the operating arm, said plate being movable to shift the arm from a position on one side of the fulcrum to the other, contact points in circuit with the lighting system to start the same, said plate having points to engage the contacts in one position, and spring means normally holding said plate with the contacts in open position.

2,408,166
LIFESAVING DEVICE
Eugene R. Hawkins, Compton, Calif.
Application May 19, 1944, Serial No. 536,273
4 Claims. (Cl. 128—145)

1. In a respiratory mask article, a shield adapted to be secured on the face, a tube leading upwardly from the shield having a transverse bar near the end thereof, and a check valve structure for respiration secured at the end of said tube, a buoyant valve in said body adapted to close the tube against the ingress of water when the structure is submerged, and spring means secured to said bar and tending to move the valve away from its tube closing position when the structure is freed of water, the spring means being of such lightness that water in the structure buoyantly closes the valve against the action of the spring means, the structure having in the bottom thereof an aperture for the movement of air in and out of the valve, the wall of said aperture having annularly arranged projections for seating

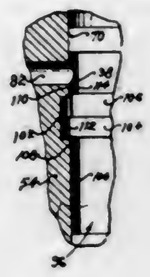
the valve free of the aperture structure around the valve.



2,408,167
CATALYTIC ALKYLATION PROCESS
Harold J. Hepp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application October 14, 1944, Serial No. 558,734
13 Claims. (Cl. 260—671)

7. An improved process for the production of a monoalkyl derivative of an alkylatable aromatic hydrocarbon, which comprises passing a hydrocarbon mixture comprising an olefin hydrocarbon of not more than 6 carbon atoms per molecule and a molar excess of an alkylatable aromatic hydrocarbon together with not more than about 1 per cent by weight of the reactants of hydrogen chloride through a bed of a solid granular catalyst under conditions of temperature and pressure such as to promote union of said olefin and said aromatic hydrocarbon to form a corresponding monoalkyl derivative thereof, said granular catalyst comprising silica and a minor amount of an oxide of a metal selected from groups IIIB and IVA of the periodic system and prepared by reacting an alkali silicate with an excess of a mineral acid to form a silicic acid gel, washing said gel with water and only partially drying same to form a hydrous acidic silica gel, contacting the resulting silica gel with an aqueous solution of a hydrolyzable salt of a metal selected from groups IIIB and IVA of the periodic system to activate same by adsorption of a hydrous oxide of said metal thereon, and subsequently washing and drying the resultant activated material to form said granular catalyst.

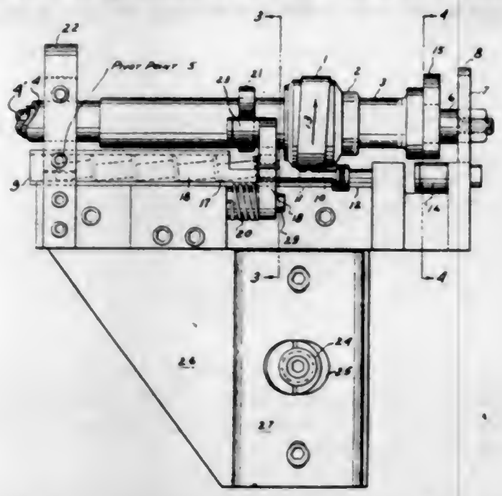
2,408,168
REARVIEW MIRROR
Laurence F. Hofer, Oswego, Oreg.
Application June 5, 1944, Serial No. 538,752
3 Claims. (Cl. 88—98)



3. In a device of the class described, the combination of a fixed tubular body, an arm disposed within said body having one end thereof pivotally and non-rotatably mounted within the body, a cylindrical cap for said body having an opening in the end thereof eccentric with relation to the axis of the cap and forming a journal for said

arm means for limiting the rotation of said cap, the portion of said arm which projects through said cap having a ball formed thereon, a mirror

mounted on the ball end of said arm, a means for rotating said cap with relation to said body, and a spring on said arm disposed to urge the ball end of said arm toward said cap.



2,408,169
LEVEL WORK SUPPORTING STRUCTURE
James F. Hoffer, Detroit, Mich., assignor to Superdraulic Corporation, Dearborn, Mich., a corporation of Michigan
Application February 12, 1944, Serial No. 522,063
4 Claims. (Cl. 121—41)

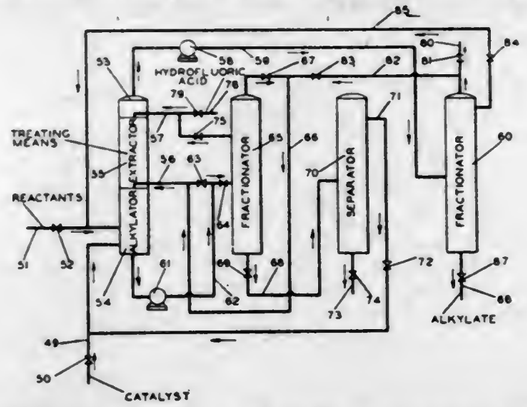
1. A device of the type described comprising a supporting member, a float disposed in a bath of liquid, and a fluid servo-mechanism interconnecting said float with said member, said mechanism including a cylinder, a piston disposed therein and connected to said supporting member, a pair of cooperating and relatively shiftable valve elements, one of said valve elements being connected to said piston and the other to said float, and means to supply fluid under pressure past said valve elements, said valve elements being so constructed and arranged that fluid is continuously passed to atmosphere.

2,408,170
DEVICE FOR ROTATING ROUNDS
Samuel C. Hurley, Jr., Danville, Ill.
Application October 2, 1944, Serial No. 556,811
3 Claims. (Cl. 214—1)

1. An apparatus of the class described comprising in combination a rotatable shaft arranged and adapted to be raised and lowered, a roller attached thereto, a feed way associated therewith, a first cam attached to said shaft and adapted and arranged for periodically raising the roller, a movable trap associated with said feed way, a second cam on said shaft adapted and arranged for actuating the movable trap and said

second cam synchronized with said first cam to release said trap while the roller is raised.

2,408,171
PROCESS FOR PREPARATION OF 2-METHYL-1,2-PROPANEDIAMINE
Harold G. Johnson, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application July 27, 1944, Serial No. 546,935
5 Claims. (Cl. 260—583)



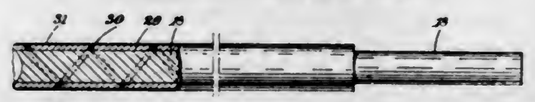
1. In a process for the production of 2-methyl-1,2-propanediamine, the steps which comprise reacting 2-methyl-2-nitro-1-propanol with ammonia under pressure at a temperature of between about 20 and 85° C., then subjecting the resultant mixture to hydrogenation in the presence of a hydrogenation catalyst at elevated temperature and pressure.

2,408,172
PROCESS FOR PREPARATION OF DIAMINES
Harold G. Johnson, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application July 27, 1944, Serial No. 546,936
4 Claims. (Cl. 260—583)

1. In a process for the production of 2-methyl-1,2-propanediamine, the steps which comprise subjecting a mixture comprising 2-nitropropane, ammonia, and formaldehyde at elevated temperature and pressure, then after said pressure remains constant subjecting the resultant mixture to hydrogenation in the presence of a hydrogenation catalyst at elevated temperature and pressure.

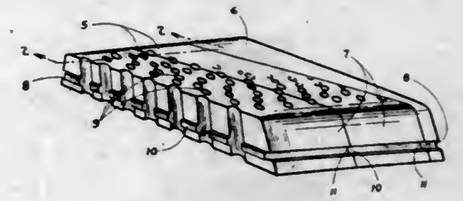
2,408,173
TREATMENT OF AROMATIC HYDROCARBON MATERIALS
Maryan P. Matuszak, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application May 26, 1943, Serial No. 488,547
25 Claims. (Cl. 260—671)

18. An improved process for the alkylation of an aromatic hydrocarbon, which comprises alkylating an alkylatable aromatic hydrocarbon in the presence of a liquid alkylation catalyst comprising hydrofluoric acid, passing a resulting mixture of hydrocarbons and catalyst to separating means, separating a hydrocarbon liquid phase from said liquid catalyst, contacting said hydrocarbon liquid phase with substantially pure concentrated liquid hydrofluoric acid to effect a



purification of said hydrocarbon phase, passing liquid hydrofluoric acid effluent from said contacting to said alkylation, and removing dissolved hydrofluoric acid from a hydrocarbon phase effluent from said contacting.

2,408,174
VINYL RESIN COATING COMPOSITIONS
Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application March 20, 1944, Serial No. 527,351
6 Claims. (Cl. 260—32)



1. A coating composition possessing decreased gelling tendencies, comprising a tough and strong artificial resin insoluble in toluene, having a molecular weight in excess of 4000, and prepared by the copolymerization of vinyl chloride with vinyl acetate, said resin being dissolved in a sufficient quantity of a solvent having a low rate of evaporation to decrease the gelling tendency of the composition, comprising an alkyl ester of levulinic acid and a liquid coal-tar hydrocarbon, to make a readily flowable composition adapted to produce resistant, adhesive, and stable protective or ornamental surface coatings.

2,408,175
ELECTRIC UNDERWATER WELDING
Paul Peillon, Cairo, Egypt, assignor to Salvage & Marine Company of Egypt S. A. E., Cairo, Egypt, an Egyptian company
Application March 29, 1943, Serial No. 481,023
In Great Britain October 23, 1942
6 Claims. (Cl. 219—10)

4. An underwater arc welding electrode, especially adapted for use in sea water, said electrode comprising a steel rod having a solid, electrically non-conducting flux coating thereon, a separate covering layer superposed on and impregnated into the outer portion only of said flux coating, said covering layer consisting of an organic electrically insulating water-proof material capable of being vaporized by the welding heat, without undue decomposition or the production of carbonaceous matter to form a body of vapor protecting the welding zone from the action of the water, said material being selected from the group consisting of waxes and drying oils.

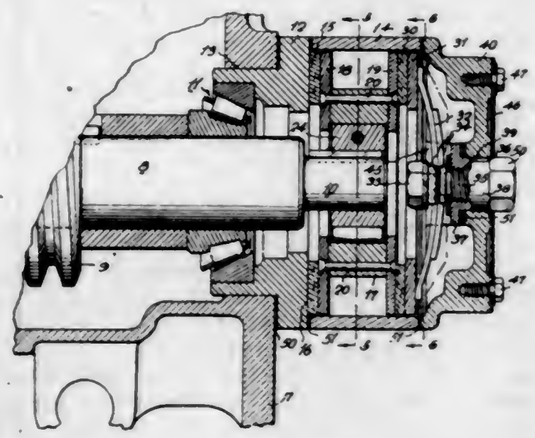
2,408,176
COVER FOR THE SUCTION BOXES OF PAPERMAKING MACHINES
Jean Proulx, Hull, Quebec, Canada
Application December 16, 1943, Serial No. 514,572
1 Claim. (Cl. 92—51)

In a Fourdrinier paper making machine, including a moving wire member for supporting wet paper stock, a suction box disposed below a portion of said member, a smooth wear-resistant cover on said box, the cover consisting of a plurality of elongated wax-impregnated end-of-grain wood blocks which extend transversely across the suction box at an angle to the line of travel of the moving wire member, the blocks each having their ends beveled and tapering downwardly and outwardly, each of the blocks having a side rail engaging groove at their opposite ends and adjacent the bottoms thereof, means for securing the blocks together consisting of a tongue and groove connection between the opposite sides of each of the blocks adjacent the bottoms thereof and in substantially the same plane as the said groove at the ends of each of the blocks which groove engages opposite side rails of the suction box to maintain the blocks in place with respect thereto and which tongue and groove connections prevent displacement of the blocks with respect to each other, and the said blocks being provided with tapered openings, certain of which openings extend through and interrupt the said tongue and groove connections.

2,408,177
IMPROVED PROCESS FOR THE MANUFACTURE OF METHYL ACRYLATE BY THE THERMAL DECOMPOSITION OF METHYL ALPHA-ACETOXYPROPIONATE
William P. Ratchford, Willow Grove, and Charles H. Fisher, Abington, Pa., assignors to Claude R. Wickard, as Secretary of Agriculture of the United States of America, and his successors in office
No Drawing. Application May 4, 1943, Serial No. 485,618
1 Claim. (Cl. 260—486)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

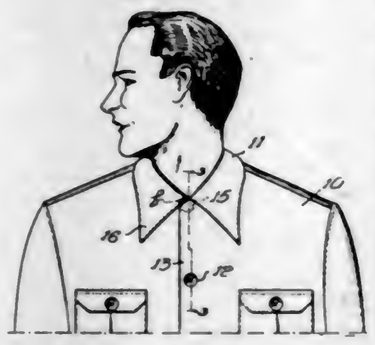
The process of manufacturing methyl acrylate which comprises thermally decomposing methyl alpha-acetoxypropionate at a temperature of about 400° to 600° C. and a pressure of about 3 to 60 atmospheres.

2,408,178
ELECTROLYTE LEVEL CONTROL DEVICE FOR STORAGE BATTERIES
Julius Sandusky, Toronto, Ontario, Canada
Application May 3, 1945, Serial No. 591,816
10 Claims. (Cl. 136—177)



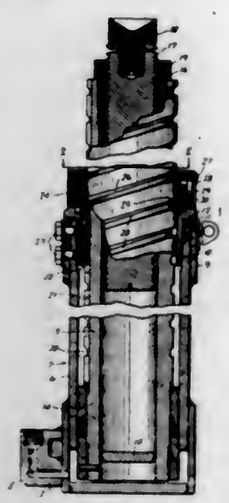
1. In an electrolyte level control device for batteries, a cell having a filling opening in the top thereof, a filling tube extending into the cell from the filling opening and forming a closed air space

beneath the top of the cell, a disc supported in the tube spaced from the bottom thereof and below the top of the cell, said disc being constructed so as to provide a limited passage within the tube for fluid from above the disc to pass to below the disc, and a vent aperture extending through the tube above the disc communicating between the



otherwise closed air space beneath the top of the cell and the interior of the tube above the disc, said limited fluid passage and vent aperture being of such size that liquid poured into the interior of the tube through the filling opening will form a seal thereover when electrolyte in the cell closes the bottom of the tube.

2,408,179
FRICTION BRAKE
Thomas J. Schuetz and Edwin W. Turnquist, Tulsa, Okla., assignors, by mesne assignments, to John E. Mabee, Thomas J. Schuetz, and Logan Stephenson, all of Tulsa, Okla.
Application July 10, 1945, Serial No. 604,202
4 Claims. (Cl. 188—82)

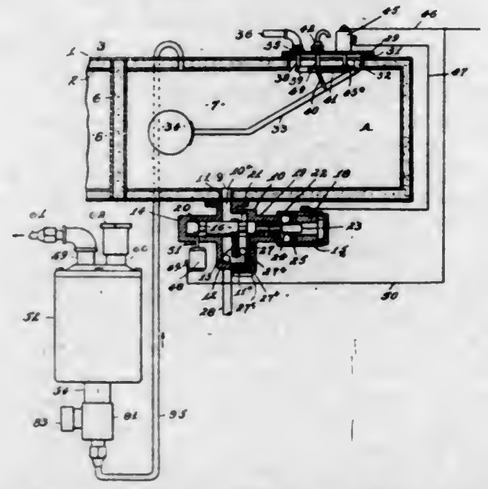


1. In a friction braking mechanism of the type comprising a shaft having a portion arranged within a housing, a friction plate unit in the housing surrounding the shaft and comprising a plurality of friction plates secured together with a clutch casing interposed therebetween, a clutch member fixed on the shaft and rotatable therewith, within said clutch casing, said clutch being adapted to rotate freely in one direction and engage said friction plate unit when force is applied in the reverse direction, and a pressure member adapted to normally prevent the rotation of said unit, the improvement comprising a leaf spring having its ends operatively connected to the pressure member, and means operable from the exterior of the braking mechanism for adjusting said spring to increase or decrease pressure of the spring on the pressure member, said means including a threaded member, and a rotatable disc operably connected to the threaded member and arranged at the exterior of the braking mechanism.

2,408,180
SHIRT CONSTRUCTION
Albert L. Silver and Abraham Stein, Dallas, Tex.
Application January 9, 1945, Serial No. 571,977
1 Claim. (Cl. 2—116)

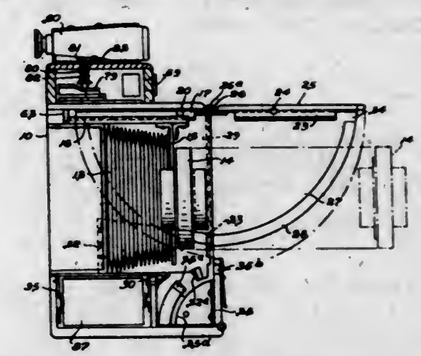
In an article of wearing apparel, a shirt having a collar and a collar band, the latter being comprised of at least two thicknesses of fabric and rounded at one end to conform with the curvature of a button, the layer next adjacent the uppermost layer having a button hole therein, and a button mounted on the opposite end of said fabric, overlying the uppermost layer of fabric and receivable in said button hole to conform to said recess and concealable by the layer of fabric overlying said button hole.

2,408,181
LIFTING MECHANISM
William L. Simonton, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a corporation of Ohio
Application January 22, 1942, Serial No. 427,717
9 Claims. (Cl. 188—67)



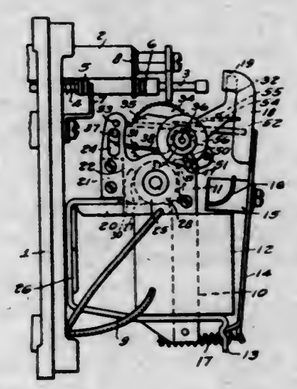
1. A mechanism comprising an upright tubular element, an elongate element mounted for vertical movement in and projecting beyond the upper end of said tubular element and having an exterior spiral groove, and a locking member extending about the projecting portion of said elongate element and having a part extending into said spiral groove to cause said locking member to rotate about said elongate element under the influence of gravity as said elongate element moves upwardly with relation to said tubular element, and to be pressed into locking relation to said tubular element by a downward force exerted thereon by said elongate element.

2,408,182
DERIVATIVES OF ISOASCORBIC ACID
Percy A. Wells, Abington, and Daniel Swern, Melrose Park, Pa., assignors to The United States of America as represented by Claude R. Wickard, Secretary of Agriculture, and his successors in office
No Drawing. Application March 8, 1944, Serial No. 525,540
4 Claims. (Cl. 260—344.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The method of producing fatty acid esters of d-isoascorbic acid said esters containing an unsubstituted ene-diol group comprising reacting calcium 2-ketogluconate with a saturated fatty acid containing 12 to 18 carbon atoms in the presence of concentrated sulfuric acid.

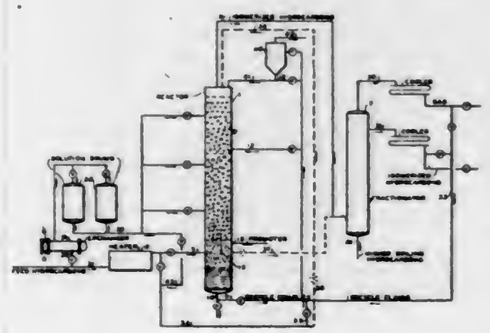
2,408,183
AUTOMATIC DRAIN DEVICE FOR COOLING SYSTEMS
George Wood, Toronto, Ontario, Canada
Application October 25, 1944, Serial No. 560,324
5 Claims. (Cl. 123—174)



1. In an engine warming device, in combination with an internal combustion engine and the cooling system thereof including a radiator, an insulated liquid storage tank, a vacuum pipe leading from the manifold of the engine to the interior of said tank at or near the top of the latter, a valve casing having a port in each of two substantially opposed walls and spaced liquid passages communicating with said ports, one of said ports being in communication with the lower interior of said tank, a conduit leading from the other of said ports to the radiator, a check valve located in one of said liquid passages, a valve movable across said liquid passages, said valve having two spaced circumferential grooves spaced at variance with the spacing of said liquid passages whereby in one position of said valve one of said circumferential grooves will be aligned with one of said liquid passages only to permit of the flow of liquid to said tank, in another position the other of said grooves will be aligned with the other of said liquid passages to permit of the flow of liquid from said tank and in another position both of said liquid passages will be closed, a float controlled by level of the liquid in said tank, an air relief passage associated with said tank, means controlled by said float for closing said vacuum pipe and opening said air relief passage simultaneously when the liquid has been transferred to said tank and opening said vacuum pipe and closing said air relief passage when the liquid has been transferred to said cooling system, and float controlled electrical means adapted, in the raised condition of said float due to the presence of liquid in said tank to move said valve to close the liquid passage in said valve casing to said tank and to open the liquid passage from said tank and in the lowered position of said float holding said valve to a position wherein both of said liquid passages are closed.

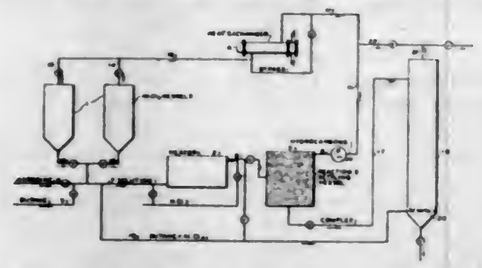
2,408,184
COMBINED LENS SUPPORT AND LENS HOOD FOR FOLDING CAMERAS
Thomas McG. Aiken, Pittsburgh, Pa.
Application December 17, 1943, Serial No. 514,618
8 Claims. (Cl. 95—40)

1. The combination with a camera box having a bellows and a lens hanger on the forward end of the bellows, of a hood member pivotally connected to the upper forward corner of the box and movable against the forward side of the box to serve as a closure therefor, guide members on the box and the hood member, wing-like shield members of segmental plate form connected to the side edges of the hood member throughout substantially its entire length, in position to extend downward and rearwardly therefrom when the hood is raised and to lie along side the vertical sides of the camera box when the hood member is in closed position, means for releasably latching the rear edges of the shield members at their lower ends, to hold the hood in raised position, and means for adjusting the hanger on said guide members in forward and rearward directions.



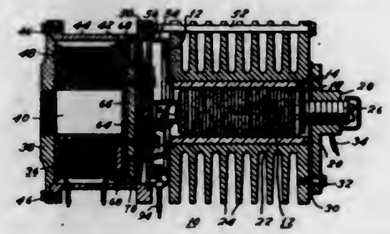
2,408,185
ROTOR TYPE CONTACTOR
George C. Armstrong, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 19, 1944, Serial No. 523,059
16 Claims. (Cl. 200—97)

1. An electromagnetic device comprising, in combination, a magnetic structure having two



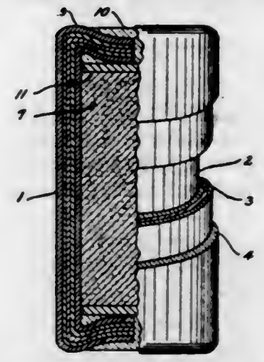
pairs of pole surfaces forming two respective air gaps and containing a coil for producing periodic magnetic flux in said gaps, a magnetizable rotor disposed in one of said gaps adjacent one of the appertaining pole surfaces to roll relative thereto and being movable towards said appertaining other pole surface for attraction thereby and biased away from said latter surface so as to perform unidirectional rotation when said coil is energized, an armature disposed in said other gap for attraction by said structure so as to shunt said first gap when in attracted position in order to thereby stop the rotation of said rotor, and means disposed between said rotor and said armature for preventing said armature to move into said position, said means being controlled by said rotor so as to become ineffective upon rotation of said rotor through a given angle.

2,408,186
CATALYTIC CONVERSION OF HYDROCARBONS
Harold V. Atwell, Beacon, and Howard H. Gross, Pleasantville, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 18, 1944, Serial No. 536,088
12 Claims. (Cl. 260—683.5)



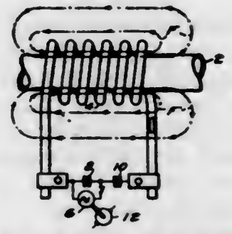
1. In a continuous process for converting hydrocarbons by the action of an aluminum halide-hydrocarbon complex catalyst of predetermined activity in the presence of hydrogen halide the steps which comprise maintaining a reaction tower substantially filled with a column of feed hydrocarbon in continuous liquid phase, said tower being packed with inert contact material, continuously introducing feed hydrocarbon to the lower portion of the tower such that feed hydrocarbon rises through the tower while undergoing catalytic conversion, continuously introducing complex catalyst liquid to the upper portion of the tower, moving the catalyst in dispersed phase downwardly through the tower, continuously withdrawing used complex from the bottom of the tower, recycling withdrawn complex to the upper portion of the tower, introducing a small amount of fresh aluminum halide to the tower at an intervening point between, and removed substantially from, the points of used catalyst withdrawal from, and return to, the tower and sufficient to maintain the concentration of aluminum halide in the complex relatively greater in the intervening portion than in the upper and lower portions of the tower, maintaining the reaction tower at elevated temperature sufficient to effect said conversion, and continuously removing from the upper portion of the tower, hydrocarbon products of reaction substantially free from aluminum halide.

2,408,187
CATALYST MANUFACTURE
Harold V. Atwell, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 18, 1944, Serial No. 536,089
3 Claims. (Cl. 252—254)



3. A method of preparing a complex catalyst formed by reacting aluminum chloride with kerosine in the presence of hydrogen halide which comprises maintaining in a contact zone aluminum chloride in solid granular form, circulating through said contact zone in contact with the solid halide a stream of saturated aliphatic C_4 hydrocarbons in liquid phase, effecting contact between solid halide and C_4 hydrocarbons under conditions of time and temperature such that solution of a small amount of aluminum chloride in C_4 hydrocarbons occurs without substantial complex formation, thereafter passing the circulating stream containing dissolved aluminum chloride to a reaction zone, adding to the stream, passing to said reaction zone a small amount of kerosine, subjecting the dissolved chloride to contact with the kerosine in the presence of hydrogen halide at elevated temperature such that dissolved aluminum chloride reacts with kerosine to form complex, separating resulting complex from the unreacted hydrocarbons including C_4 hydrocarbons, recycling the hydrocarbons from which complex has been separated to the contact zone, and continuing the circulation of hydrocarbons to effect substantial conversion of kerosine hydrocarbons to complex.

2,408,188
REGULATOR
Bascum O. Austin, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 1, 1945, Serial No. 591,276
11 Claims. (Cl. 201—51)



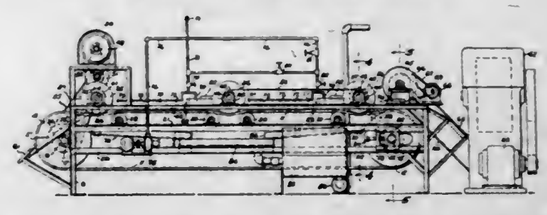
1. A regulator comprising, in combination, a stack of disks of resistance material, a pressure plate at each end of the stack, a spring member disposed to apply pressure to the stack through one of the pressure plates, an electromagnet having a core member and an armature member, the armature member being disposed to control the pressure applied to the stack in response to the energization of the electromagnet, a disk of magnetizable material disposed between the core member and the armature member to be magnetically held against movement when the electromagnet is energized, a flexible diaphragm of non-magnetic material carried by the armature member, the flexible diaphragm having a major part disposed in spaced relation to the disk of magnetizable material and having an outer edge disposed in seating engagement therewith, and means disposed to be held under pressure by the spring member against the outer edge of the flexible diaphragm to maintain the edge in its seating engagement whereby the disk of magnetizable material and the flexible diaphragm cooperate to effectively damp excessive movement of the armature member.

2,408,189
WATERPROOF EXPLOSIVE CARTRIDGE
Arthur W. Baker, Lookout Mountain, Tenn., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application November 10, 1942, Serial No. 465,105
2 Claims. (Cl. 102—24)

1. A rigid blasting cartridge comprising a substantially cylindrical explosive charge of a water-soluble material and a substantially rigid water-resistant tubular envelope therefor and having water-resistant crimped end closures; the tubular envelope comprising a tube of a waterproof laminated paper sealed to itself and overlapping itself at opposed edges, a paper lining for said laminated tube and sealed thereto, a paper covering for said laminated tube and sealed thereto; the tubular envelope having a cardboard disc at each end interiorly thereof and having an end section crimped over each disc, and a seal for each end section comprising an adhesive waxlike material disposed on each side of the crimped end section forming upper and lower layers and having a contiguous central portion passing through the crimped end section thus joining the two layers.

2,408,190
MAGNETIC INDUCTION HEATING OF THIN-WALLED NONMAGNETIC METALLIC TUBES
Robert M. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 27, 1944, Serial No. 519,866
2 Claims. (Cl. 219—13)

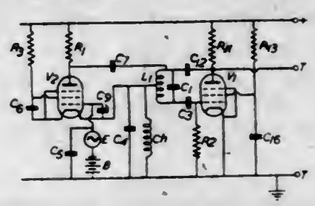
1. A method of efficiently and effectively magnetically inductively heating hollow nonmagnetic metallic cylindrical material having an outer diameter d, in centimeters, generally in excess of six times its wall-thickness t, in centimeters, which method comprises passing the hollow cylindrical material in the direction of its axis through an induction heating-coil, and energizing the heating-coil from a rotary alternator delivering an alternating current having a frequency in cycles per second, in a range between



$$\frac{153r10^6}{td}$$

and

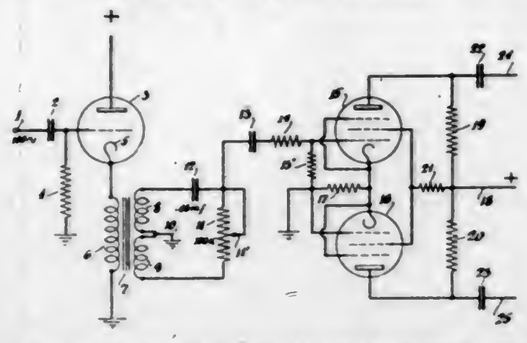
$$\frac{25.6r10^6}{t^2}$$



where r is the resistivity of the material in ohm-centimeters.

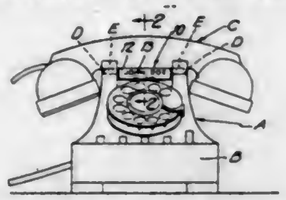
2,408,191
PULP WASHER
Harold M. Barnett, Long Beach, and Rupert C. Mosher, Downey, Calif.; said Mosher assignor to said Barnett
Application March 27, 1944, Serial No. 528,248
6 Claims. (Cl. 100—37)

1. In a vegetable pulp washing machine of the class described, the combination of a foraminous conveyor belt, end pulleys for said belt, upper and lower pressing rollers extending across the top run of said belt adapted to press therebetween vegetable pulp carried on its surface, scraping distributors following each of said upper rollers except the last one adapted to break up the caked pulp and to redistribute it on said belt, and hydraulic sprayers disposed between said upper rollers adapted to hydraulically agitate and to wash the pulp on said belt.



2,408,192
ELECTRICAL APPARATUS
David Arthur Bell and Arthur Henry Ashford Wynn, London, England, assignors to A. C. Cossor Limited, London, England, a company of Great Britain
Application August 11, 1942, Serial No. 454,391
In Great Britain August 16, 1941
7 Claims. (Cl. 250—36)

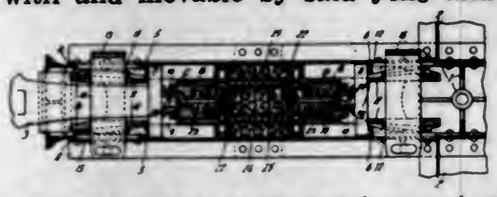
5. In a system for generating oscillations of controllable frequency, an oscillator comprising an electron discharge tube having oscillation generating electrodes and a resonant oscillation generating circuit determinative of the generated frequency and operatively connected to said electrodes to maintain sustained electrical oscillations, said circuit being traversed by the oscillation output current of said tube, reactance means connected in series between an electrode of said tube



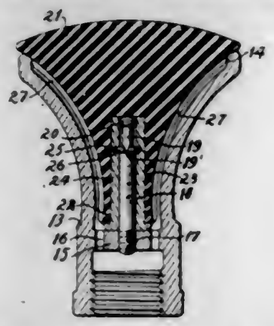
and said oscillation circuit, a reactance control electron tube having input and output circuits coupled to said reactance means and to said oscillation circuit, respectively, and means for varying the output oscillation current of said reactance tube to correspondingly vary the effective resonant frequency of said oscillation circuit and to thereby control the frequency of the oscillations produced.

2,408,193
PHASE SHIFTER
Harold Edward Beste, East Rutherford, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application December 6, 1943, Serial No. 513,136
4 Claims. (Cl. 172—246)

1. In an electronic device for shifting the phase of voltage, a vacuum tube to the control grid of which said voltage is to be applied, and a transformer having its primary connected between the cathode of said tube and ground, the ends of the secondary of said transformer being connected to a resistance and capacitance in series.



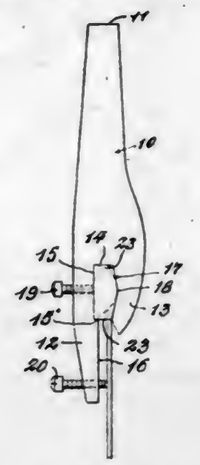
2,408,194
CUSHION REST ATTACHMENT FOR TELEPHONE INSTRUMENTS
John P. Bourdius, New York, N. Y.
Application April 21, 1944, Serial No. 532,177
2 Claims. (Cl. 179—100)



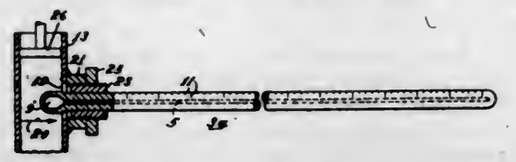
1. In combination, a hand telephone instrument and a stand therefor, said stand having a horizontal ledge, a cushion rest attachment comprising a flat rigid base resting upon the ledge, clamping means connected to said base and engaging the underside of said ledge, and a resilient cushion fixedly mounted on the upper side of the base for receiving the hand telephone instrument at rest upon said stand, said base having its front edge turned upward along the adjacent edge of said resilient cushion.

2,408,195
DRAFT MECHANISM FOR RAILWAY CARS
Argyle Campbell, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application March 27, 1943, Serial No. 480,738
7 Claims. (Cl. 213—32)

6. In a draft mechanism for railway cars, the combination of car centersills spaced apart and having forward and rear draft lugs on their inner faces, follower plates bearing against said stops, a yoke member positioned between said centersills and supported by said centersills for movement in both directions, a coupler connected with the forward end of said yoke member for moving the yoke member in both directions in response to draft and buff forces applied thereto, shock absorbing units carried entirely by said yoke member and each comprising a shell portion integral with and movable by said yoke and friction members in said shells bearing against said follower plates, an intermediate spring shock absorbing means carried by said yoke member common to both shock absorbing units and positioned therebetween, and means for rendering either one of said shock absorbing units effective depending upon the direction of movement of said yoke member.



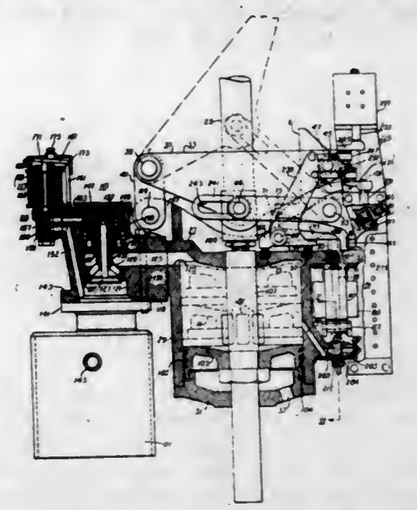
2,408,196
SPRINKLER HEAD
Rudolph E. Carlson, Jacksonville, Fla.
Application June 23, 1944, Serial No. 541,796
2 Claims. (Cl. 299—67)



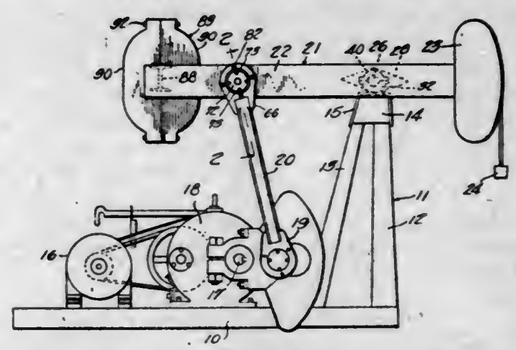
1. A sprinkler head for use with underground lawn sprinkling systems comprising a hollow substantially bell-shaped body member, having a threaded opening at the reduced end thereof, a transverse wall inwardly of said threaded opening, said wall having a plurality of openings in communication with said threaded opening, an axially disposed stud on said wall, said stud having a portion of reduced diameter and a head thereabove, a substantially bell-shaped turbine of dimensions to fit within the open end of said body member and having an outer circumference normally adapted to rest upon the open end of the hollow body member, said turbine having an axial sleeve slidably receiving said stud, said sleeve having an interior groove, a ring within the groove positioned to encircle said reduced portion of the stud, and said turbine having a plurality of vane members on the exterior surface disposed in the path of water discharged through the openings of the wall.

2,408,197
SAW-TOOTH SETTING DEVICE
Ira L. Church, Reed City, Mich.
Application July 13, 1945, Serial No. 604,890
1 Claim. (Cl. 76—72)

A saw tooth setting tool comprising an elongated body having an end for receiving the blow of a hammer and a bifurcated opposite end defining a long leg and a short leg, said long leg having a recessed part upon its inner face adjacent the bight of said furcation, the inner face of said short leg having converging walls opposed to said recessed part of the long leg, an anvil seated in said recessed part and having an apex portion complemental to the juncture of said converging walls, said anvil having a V-shaped notch formed in a pair of opposed walls thereof, said notches extending in the direction of the short leg, a set screw in the long leg adapted to impinge upon the base wall of the anvil in alignment with the apex of the anvil and the juncture of said converging walls and a second set screw in said long leg adjacent the lower end thereof for centering of a saw body with respect to the notch of the anvil, said last named set screw being in opposed relation to the line of travel of a saw tooth under setting action.



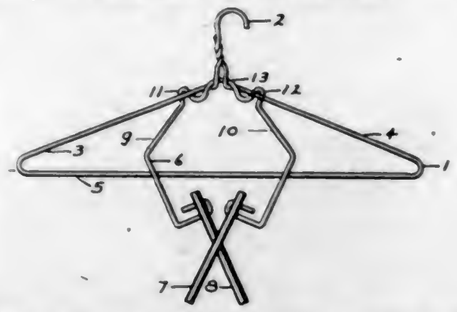
2,408,198
ULTRA HIGH FREQUENCY POWER MEASURING DEVICE
John W. Coltman, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1943, Serial No. 474,884
18 Claims. (Cl. 171—95)



1. A device for measuring the intensity of an ultra high-frequency electric field comprising an elongated envelope of translucent, insulating material having a capillary bore therein filled with gas of the type which produces a glow in the presence of an electric field of a predetermined intensity, said envelope being adapted to have the electric field to be measured introduced into said bore at a selected place whereby said field travels along said bore from said place, said bore being of such length that said field decreases below said predetermined intensity intermediate the ends of the bore.

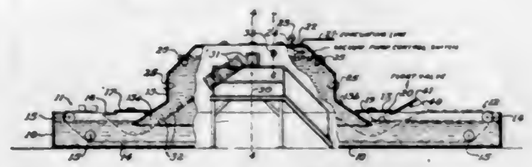
2,408,199
CIRCUIT BREAKER
James M. Cumming, Turtle Creek, and Richard C. Cunningham, East McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 13, 1941, Serial No. 410,686
17 Claims. (Cl. 175—294)

1. In combination, a circuit breaker biased to open circuit position, operating mechanism therefor comprising an operating cylinder, a piston in said cylinder operatively related to the breaker, a source of compressed air for operating said piston to close the breaker, means including an inlet valve operable to connect said source of compressed air to said cylinder to close the breaker, latching means for releasably holding said breaker closed, tripping means operable in response to predetermined abnormal conditions in the circuit to cause said latching means to release the breaker and thereby cause opening of the breaker, air pressure exhaust means connected to said cylinder intermediate its ends so as to be closed off by said piston when in an intermediate position, said exhaust means including a normally closed exhaust valve directly connected to said cylinder apart from the connection to said source of compressed air, said valve when opened causing quick collapse of pressure in said cylinder except when said piston is at or to one side of said intermediate position, and means operated by said tripping means upon operation thereof for causing opening of said exhaust valve.



2,408,200
WALKING BEAM STRUCTURE
Robert G. De La Mater, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a corporation of West Virginia
Application August 30, 1944, Serial No. 551,908
10 Claims. (Cl. 74—41)

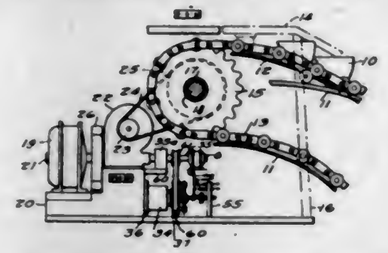
1. A walking beam for oil well pumping rigs and the like comprising a pair of structural members spaced substantially throughout their lengths and fixed with respect to each other at the well end of the beam, and rigid means fixed to said structural members at a point substantially spaced from the well end of the beam, said rigid means being arranged within the space between said structural members and projecting there-



through for connection with pitman means, and a trunnion arranged in the space between said structural members and rigidly connected at its ends thereto between said rigid means and the well end of the beam to form a part of a rocking support for the beam.

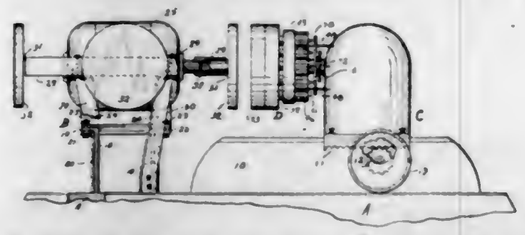
2,408,201
CLOTHES HANGER
Charles Manuel Derderian, Richmond, Va.
Application February 6, 1945, Serial No. 576,428
2 Claims. (Cl. 223—88)

1. The combination of a coat hanger consisting of a hook secured to oppositely arranged shoulder members, joined by a basal support, of a lapel holder consisting of a loop passing around the rear of said hook and then extending oppositely and downwardly around front portions of said shoulder members and then extending upwardly around rear portions of said shoulder members to form rounded braces, each of said braces having an arm depending therefrom and to which is respectively secured struts adapted to engage the lapels of a coat for positioning the latter.



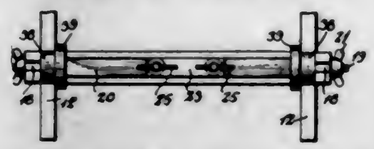
2,408,202
APPARATUS FOR VACUUM TESTING SEALED ARTICLES
Robert H. Dickman, Evansville, Ind.
Application November 7, 1944, Serial No. 562,303
5 Claims. (Cl. 73—45)

1. Apparatus for vacuum-testing sealed articles for leakage, comprising an elongated liquid-containing tank, having an elevated intermediate portion which is hermetically sealed to the main tank by a water seal and which constitutes a testing chamber, means for applying a partial vacuum in said testing chamber to raise the liquid therein to a level above the level in said tank and means for moving articles successively from said tank into said elevated testing chamber and then back into said tank.



2,408,203
MOVING STAIRWAY
William F. Eames, Westfield, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 30, 1942, Serial No. 470,657
10 Claims. (Cl. 188—172)

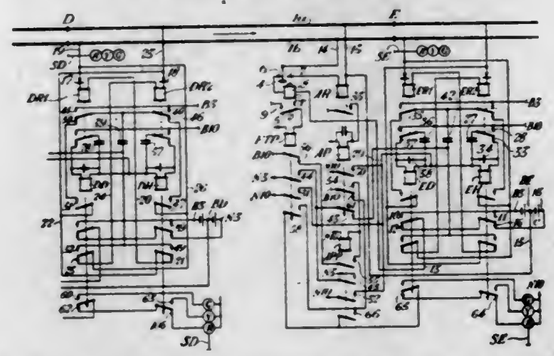
1. In a control system for a movable body, an electric motor, an electromagnetic brake, control means for connecting and disconnecting the motor and the brake to a source of electric energy for starting and stopping the body, an auxiliary circuit for the brake, means responsive to operation of the control means in connecting the motor to be energized for preparing the auxiliary cir-



cuit for operation, mechanism automatically responsive to a decelerating movement of the body in making a stop for maintaining the auxiliary circuit in condition for operation, and means responsive to a predetermined excessive rate of deceleration for completing the auxiliary circuit to reduce the braking effect of the brake.

2,408,204
LAPPING AND HONING MACHINE
M. Edward Early, Rockford, Ill.
Application October 27, 1944, Serial No. 560,657
4 Claims. (Cl. 51—133)

3. A device of the character described, comprising a head having a protruding driven shaft, an eccentric gear and bearing member rotatably mounted on said shaft, a ring rotatably mounted on said bearing member, a number of spaced work holder equipped shafts rotatably mounted on said ring having pinions adapted to mesh said gear, a driving member secured to the end of said driven shaft operatively connected to said ring, releasable means associated with said work holding means, means adapted to hold said gear and bearing elements from turning, whereby the work will be revolved and also turned around said driving shaft and oscillated radially.

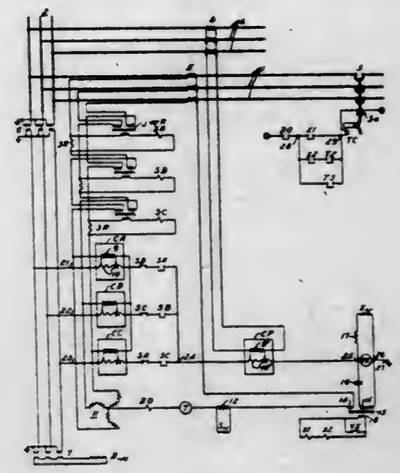


2,408,205
QUILTING FRAME
Robert N. Fancher, Springfield, Mo.
Application August 24, 1945, Serial No. 612,323
6 Claims. (Cl. 45—24)

1. A quilting frame structure comprising a pair of vertical posts, a bottom transverse bar connecting said posts, a top transverse bar rotatably mounted in and connecting said posts, elongated vertical slots formed in the intermediate portions of said posts, a rectangular frame adjustably supported between said posts by bolt

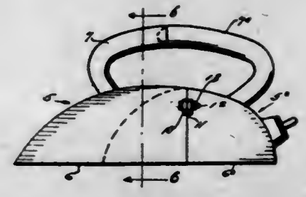
members secured to said frame and extending through said slots, and a flexible member secured to said frame and wound over said top transverse bar for raising or lowering said frame responsive to rotation of said top transverse bar.

2,408,206
APPARATUS FOR RAILWAY SIGNAL SYSTEMS
Frederick T. Fereday, Louisville, Ky., assignor to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application January 6, 1944, Serial No. 517,197
2 Claims. (Cl. 246—38)



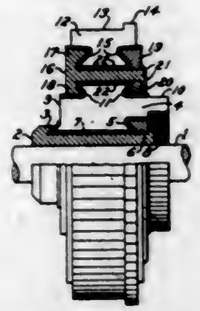
1. In combination with a railway track circuit including the rails of a section and a track relay connected across the rails at one end of said section, a source of direct current, a code transmitter having a first contact member biased to a first position where it engages a fixed contact and operable to a second position where it is out of engagement with said fixed contact when a winding of the transmitter is energized, circuit means including said fixed contact and said contact member to connect said current source across the rails at the end of said section opposite said one end through said winding to code the current supplied to said track circuit for operating said track relay at said code when the section is unoccupied, a second contact member operable by said transmitter to engage a fixed contact only when said transmitter winding is energized at a relatively high value of current to close the last mentioned contact only when a train occupies the section to shunt the rails, and a first and a second signaling means controlled by said track relay and said second transmitter contact member respectively.

2,408,207
TREATMENT OF CLAYS
Allen D. Garrison and Karl C. ten Brink, Houston, Tex., assignors to Texaco Development Corporation, New York, N. Y., a corporation of Delaware
Application November 6, 1941, Serial No. 418,030
12 Claims. (Cl. 252—301)



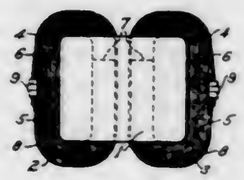
1. The process of treating an activable, non-swelling clay containing montmorillonite to improve the adsorptive characteristics thereof which comprises converting said non-swelling clay into a swelling clay by suspending the clay in a dilute aqueous medium having a pH of at least 8.5 and containing a small amount of a dispersing agent furnishing alkali metal ions that promotes the separation of the primary particles of the clay for a period of time sufficient to produce a substantially completely dispersed and hydrated clay, incorporating an inorganic gel in the clay while in the highly dispersed and hydrated state, and drying the dispersed and hydrated clay containing the inorganic gel to produce a clay product of improved adsorptive characteristics.

2,408,208
SIMPLIFIED GROUND RELAY
Shirley L. Goldsborough, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 10, 1944, Serial No. 521,801
20 Claims. (Cl. 175—294)



1. Terminal protective equipment for protecting a terminal of a three-phase line-section, comprising the combination, with a line-segregating circuit-interrupting means at that terminal of the line-section, of circuit-interrupter-controlling relaying-means comprising a single-phase distance-responsive ground-fault relaying means, means for supplying to said ground-fault relaying-means a single-phase relaying-current dependent upon the zero-sequence component of the line-current, means for supplying to said ground-fault relaying-means any one of a plurality of single-phase relaying-voltages dependent upon the different line-to-ground line-voltages respectively, preventive means for normally rendering said ground-fault relaying-means inoperative, ground-fault phase-selector means for selecting and applying one of said relaying-voltages to said ground-fault relaying-means, and means for removing the effect of said preventive means when one of said relaying-voltages is applied to said ground-fault relaying-means.

2,408,209
ELECTRIC IRON
William L. Gould, Albany, N. Y.
Application April 15, 1944, Serial No. 531,250
6 Claims. (Cl. 219—25)



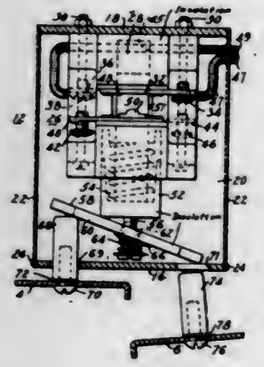
1. An electric iron comprising a plurality of at least two iron sections, each having a pointed front end and an ironing surface and each provided with a separate permanent handle member, a heating element for each iron section, means at one end of each iron section to facilitate electrical connection of its heating element with a source of electricity, and mechanical means for rigidly securing said iron sections together.

2,408,210
COMMUTATOR CONSTRUCTION
Fred A. Heddleson and Andrew C. Welerich, Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 27, 1945, Serial No. 579,972
6 Claims. (Cl. 171—320)

1. A double commutator assembly for mounting on the shaft of a dynamo-electric machine, said assembly comprising a plurality of commutator bars disposed in a first commutator cylinder, means for holding said bars in assembled relation and for mounting said commutator cylinder on a shaft, said first commutator cylinder having a V-groove in its peripheral surface, a plurality of commutator bars disposed in a second commutator cylinder surrounding said first commutator cylinder, said second commutator cylinder being secured to the first commutator cylinder by means of said V-groove.

2,408,211
ELECTRICAL INDUCTION APPARATUS
John K. Hodnette, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1941, Serial No. 377,472
11 Claims. (Cl. 175—356)

1. In a magnetic structure for electrical apparatus, a plurality of core loops each formed from a ribbon of magnetic sheet steel wound flatwise layer upon layer and having a substantially rectangular window therein, the several layers being bonded together to form a solid mass, smooth butt joints on opposite sides of the rectangular loops to provide separable sections, and a resilient band of metal about the core loops under constant tension for maintaining a constant pressure on said butt joints.



2,408,212
ELECTRICAL INDUCTION APPARATUS
John K. Hodnette, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application July 20, 1943, Serial No. 495,421. Divided and this application July 18, 1944, Serial No. 545,487
6 Claims. (Cl. 175—356)

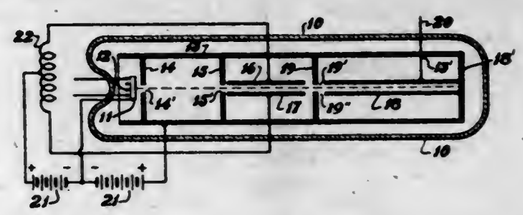
1. In a three-phase induction apparatus having a winding structure comprising three sets of windings, each set adapted to be connected to one of the three phases of an electric circuit, said three sets of windings being arranged in a row with their axis in alignment, a core structure comprising a plurality of core loops each formed of magnetic sheet material wound flatwise, the spaces between the successive layers of magnetic sheet material being filled with a substantially non-flowable, non-volatile, molded, solid mate-

rial for solidly supporting the several layers of material against relative movement, each loop being cut to form closely fitting butt joints on opposite sides thereof and to provide separable core sections, the core structure comprising a plurality of core loop members, certain of said core loop members extending through a window of one set of windings only, and other core loop members adjacent thereto extending through the windows of all sets of windings.

2,408,213
ELECTRIC CIRCUIT CONTROLLER
John K. Huber, Lakewood, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 4, 1942, Serial No. 433,349
11 Claims. (Cl. 200—54)

11. A housing for electrical apparatus, double doors for said housing, switch means supported by said housing in proximity to said doors to be actuated thereby in the closed positions of said doors, said switch means including separable contacts normally biased apart and adapted to be connected in the supply circuit to said apparatus to control energization thereof, a casing for said switch, actuating means for said switch means within said casing and spaced from the adjacent wall of said casing, spaced apertures in said casing wall aligned with spaced portions of said actuating means, projections on said doors for entering said apertures, respectively, and engaging said actuating member to move at least one of said contacts into engagement with another contact only when both of said doors are closed, but ineffective to cause engagement of said contact if one or both of said doors are on open position, and means whereby the effective length of said projections may be adjusted.

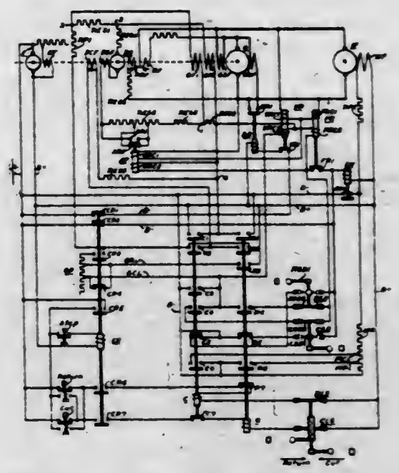
2,408,214
HIGH TRACTION SOLE AND HEEL
Harry A. Husted, St. Clair, Mich.
Application April 28, 1945, Serial No. 590,808
2 Claims. (Cl. 36—59)



1. A sole, a heel attached thereto, said sole and heel being molded of rubber-like material, a tread on said sole and heel, said tread comprising: an area at the toe knurled to provide traction in any direction in the plane of the sole and to provide minimum anchorage normal to said plane; an area at the rear of said heel providing traction in the plane of said heel primarily in the direction of the toe, the remainder of said heel surface substantially duplicating said toe area; and an area in said sole intermediate said toe area and the shank comprising zig-zag ribs of substantial width and substantially spaced, one from the other, said tread being formed of the material of said sole and heel.

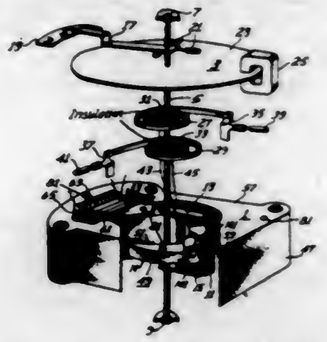
2,408,215
CATALYST PRODUCTION
George H. Keating, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application February 11, 1944, Serial No. 521,975
8 Claims. (Cl. 252—259.2)

6. A process for the production of catalysts comprising a major proportion of a silica gel and a minor proportion of alumina gel in ring form, which comprises mulling a composition composed predominantly of a combination comprising a major proportion of hydrated silica gel and a minor proportion of hydrated alumina gel, said gels being prepared by precipitation in aqueous solution, while moist and before removal of water of hydration, with a dry, finely-divided starch in an amount corresponding to at least 30 per cent of the dry weight of the catalyst gel until a substantially homogeneous plastic mass is formed, extruding the plastic mass into ring form, drying the rings, and calcining to remove said starch from said catalyst gel.



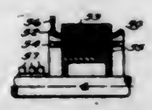
2,408,216
BEAM DEFLECTION ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 6, 1942, Serial No. 433,580
12 Claims. (Cl. 250—27.5)

1. An electron discharge device having a cathode for supplying a stream of electrons, an output electrode system in the path of said beam of electrons and including an inner conducting member surrounded by an outer hollow conducting member and forming therewith a resonator, tubular shielding means positioned between the cathode and the output electrode system, and a pair



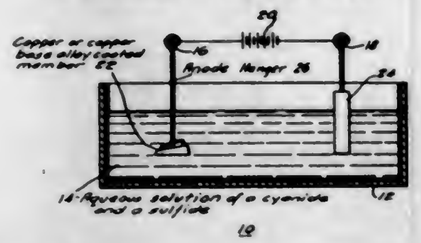
of apertured transverse elements within said tubular shielding means and positioned between the cathode and the output electrode system, and a pair of deflecting electrodes positioned between said aperture transverse elements and between which the path of said beam extends to said output electrode system.

2,408,217
CONTROL SYSTEM
George E. King, Swissvale, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 27, 1944, Serial No. 542,402
3 Claims. (Cl. 172—179)



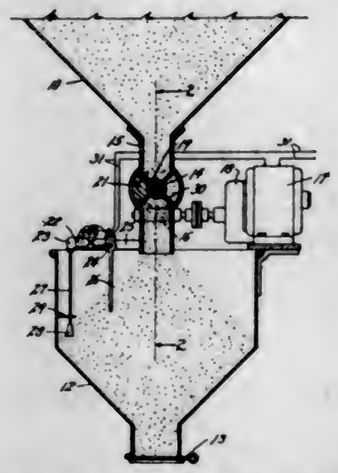
1. In a system of control for a motor, the combination of, a generator having a pair of field windings, a motor directly connected to be energized by the generator, an electrical bridge circuit including said generator field windings in opposite legs thereof and having electrical bridge balancing elements in the remaining two opposite legs, a source of electrical energy for energizing the bridge circuit, a regulating generator including a series connected field winding and three separately excited field windings, said regulating generator including the series field winding being connected across the output terminals of said bridge circuit, two of said separately excited field windings being differentially connected to the motor-generator circuit, one winding being connected to be energized in an amount proportional to the current in the motor-generator circuit and the other winding being connected to be energized in an amount proportional to the motor armature terminal voltage, and the third separately excited field winding being connected in a circuit disposed across the input terminals of said bridge circuit.

2,408,218
ELECTRICAL MEASURING INSTRUMENT
Bernard E. Lenehan, Bloomfield, and George J. Wey, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 10, 1943, Serial No. 509,728
7 Claims. (Cl. 172—245)



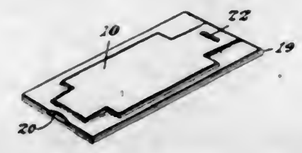
1. In a device responsive to the frequency of an alternating electrical quantity, a magnetic structure having an air gap, a coil having a portion positioned in said air gap, means mounting said coil for movement relative to said magnetic structure to direct said portion through said air gap, means associated with said magnetic structure and responsive to the alternating quantity to be measured for directing a magnetic flux through said air gap and through said coil, said magnetic structure being configured to effect a change in inductance of said coil as said coil moves through said air gap, a circuit containing inductance and capacitance, said circuit including said coil and being proportioned to be resonant for the range of frequencies to which said device is designed to respond, whereby magnetic flux passing through said coil causes current to flow in said circuit having a phase relationship relative to the magnetic flux in said air gap which is dependent on the deviation of the frequency of the alternating quantity to be measured from the value corresponding to the position of said coil relative to said magnetic structure, a substantial portion of the inductance in said circuit having a non-magnetic core, and auxiliary means for energizing said circuit in accordance with the alternating quantity to be measured.

2,408,219
POLYPHASE MULTIPOLAR WINDING
Michael Liwschitz, Brooklyn, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 29, 1944, Serial No. 520,233
13 Claims. (Cl. 171—206)



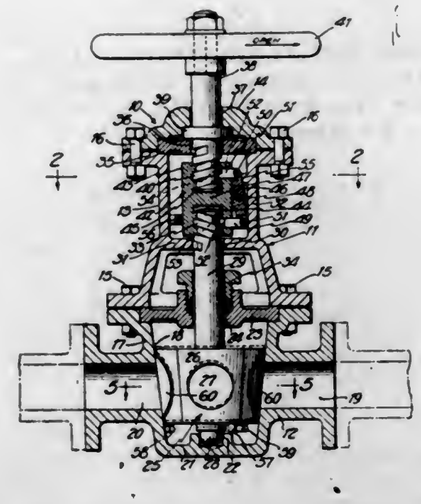
1. A multipolar electrical apparatus having a magnetizable core having equally spaced slots, and a balanced polyphase wave-winding having coil-sides lying in said slots, characterized by said core having a number of slots per phase per pole that is represented by a fraction which, when reduced to its lowest terms, has a denominator greater than 2, said denominator representing the number of poles in a repeatable group of slots, and the numerator of said fraction representing the number of slots per phase in each repeatable group, the 180° slot-star of the voltage-vectors of the voltages induced in the coil-sides lying in the slots of each repeatable group being divided into as many groups of consecutive vectors as there are phases, and each phase of the winding in each repeatable group including one or more sub-groups composed of coils which follow each other around the core in the same order followed by the corresponding vectors in the portion of the slot-star assigned to said phase.

2,408,220
STRIPPING OF COPPER FROM ZINC
John C. Lum, Union, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1943, Serial No. 474,784
2 Claims. (Cl. 204—146)



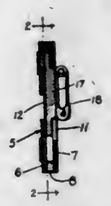
2. The process of rapidly and substantially completely removing a surface layer of a metal of the group consisting of copper and copper base alloys containing a major amount of copper applied to a zinc base member without detrimentally affecting the zinc base member which comprises immersing the member in an aqueous solution composed essentially of from saturation to one part by weight of an alkali metal cyanide and from saturation to one part by weight of an alkali metal sulfide for each 100 parts by weight of water and applying direct current, the member being the anode while being immersed in the solution.

2,408,221
AUTOMATIC MEANS RESPONSIVE TO QUANTITY OF MATERIAL IN DISCHARGING RECEIVER FOR CONTROLLING DELIVERY FROM SOURCE
Jacob L. Michel, Denver, Colo., assignor to Bluhill Foods, Incorporated, Denver, Colo., a corporation of Colorado
Application April 22, 1944, Serial No. 532,339
2 Claims. (Cl. 222—56)



1. Means for controlling the discharge of finely divided material from a receptacle comprising: a boot for receiving said material from said receptacle; a feeder in said boot for feeding material therethrough; a motor operating said feeder; a mercury tilt switch controlling the current to said motor; a tiltable arm supporting said switch; a paddle projecting from said arm into the flow of material from said boot for tilting the former; and a supporting member depending from said arm into said material to support the arm after the material has left said paddle.

2,408,222
BLADE PACKAGE
Joseph Muros, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application March 25, 1944, Serial No. 528,102
3 Claims. (Cl. 206—46)

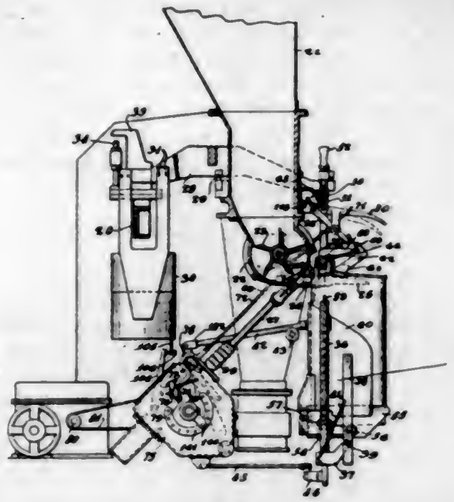


1. An open container for use in forming a blade package, comprising a straight elongated blank of pasteboard having therein a pair of substantially identical rectangular recesses spaced apart and connected through a common trough of less width than the recesses and intersected by a transverse scored line, the said recesses and trough being surrounded with complementary flat areas whereby the container may be sealed when folded on said scored line.

2,408,223
ROTARY GATE VALVE
Herbert G. Nash, Kew Gardens, N. Y.
Application December 17, 1943, Serial No. 514,626
2 Claims. (Cl. 74—22)

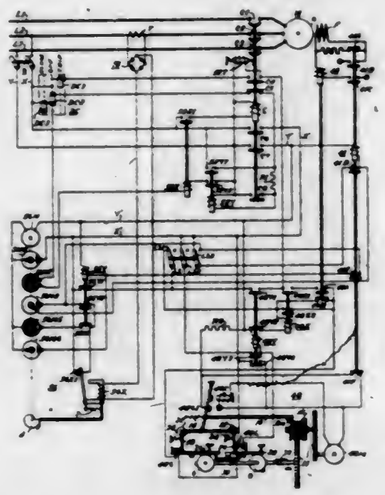
1. In a mechanism for imparting lift-turn movements to a member having a stem provided with a threaded portion, an actuating stem in axial alinement with said first stem and in spaced relation to one end thereof, said actuating stem having a threaded portion of a reverse pitch from the threaded portion on the first stem, a coupling nut having opposed screw threaded sockets complementary to the respective threaded portions of the stems and with which they threadingly engage, and means for alternately keying the coupling nut to the stems during a single continuous turning movement of the actuating stem in one direction to impart a lift-turn movement to the first stem, said means including a rock arm pivoted to the coupling nut, key pins pivoted to the ends of the rock arm for alternate reception in keyways provided in the respective stems, and fixed cam elements respectively disposed in the path of the rock arm at opposite sides of the pivotal axis of the rock arm and with which the opposed end portions of the rock arm respectively engage.

2,408,224
CAMPAIGN BADGE
John B. Palmer, Los Angeles, Calif.
Application December 4, 1944, Serial No. 566,440
1 Claim. (Cl. 40—1.6)



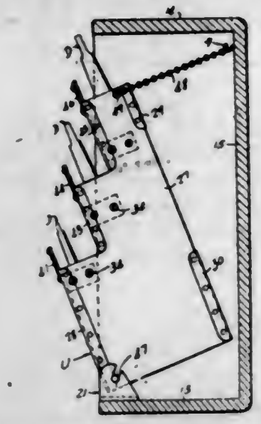
A badge of the class described comprising front and rear walls maintained in spaced parallel relation by spacing strip walls, said walls defining a rectangular walled chamber, said front wall having a centrally located substantially rectangular horizontal window, said rear wall having a centrally located vertical substantially rectangular opening, in combination with a panel slidably fitted within the major portion of the walled rectangular chamber, said panel having two labels adhesively secured respectively on each side of a centrally located horizontal line on said panel, said labels having indicated thereon respectively the names of opposing candidates for a certain office, said labels and names thereon being individually and selectively displayed through the window of the front wall, said panel having on its rear side a centrally located vertical boss extending through the rectangular opening in said rear wall and slidably received therein, cooperating stops on said panel and on said walled chamber to provide for limited movement relatively of said walled chamber and panel, whereby the alignment of either label and its name for display through the window may be accomplished, means on said boss whereby said badge may be secured on a garment for display purposes.

2,408,225
VALVE BAG FILLING, WEIGHING, AND DISCHARGING APPARATUS
William R. Peterson, Oswego, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Application July 22, 1942, Serial No. 451,883
5 Claims. (Cl. 249—60)



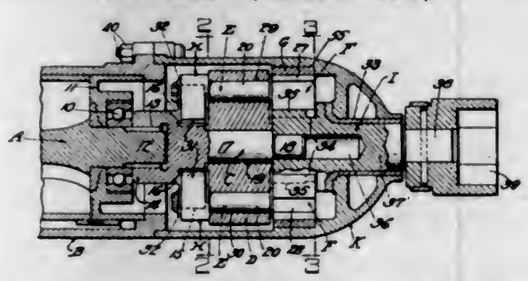
1. In apparatus for filling and discharging receptacles, means for feeding material to a receptacle, a one-revolution clutch, manual means for closing the clutch, means responsive to the operation of said clutch for initiating the feed of material to the receptacle, adjustable means for opening the clutch during the course of its one revolution, weighing means, means responsive to the action of said weighing means for stopping the feed of material to the receptacle

and reclosing the clutch, and means actuated and timed by the clutch for discharging the receptacle



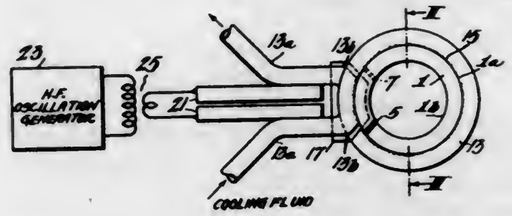
near the completion of the one revolution of the clutch.

2,408,226
CONTROL SCHEME
Mark A. Pringle, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 3, 1944, Serial No. 538,683
7 Claims. (Cl. 172—289)



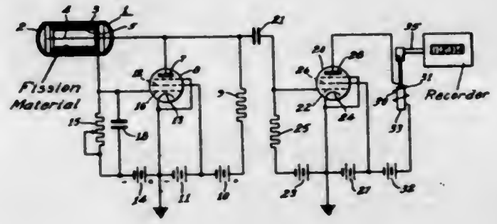
1. A control system for a synchronous motor having conventional windings including armature windings and field windings comprising, in combination, electrical means operative to energize said armature windings, control means responsive to selected electrical characteristics of said motor for energizing said field windings, timing means having sequentially operated control elements, means responsive to energization of said field windings and operative in conjunction with the first operated of said control elements for rendering said electrical means inoperative only during the time limits determined by the first operated control element, means responsive to the second operated of said control elements, and means forming a part of said control means and operative in conjunction with said means responsive to the second operated control element when the rate of change of said selected electrical characteristics of said motor is below a predetermined value, for also rendering said electrical means inoperative.

2,408,227
TILTABLE SHELVES DRILL HOLDER CASE
Jesse A. Ramsey, Wenonah, N. J.
Application June 24, 1944, Serial No. 541,951
1 Claim. (Cl. 206—17)



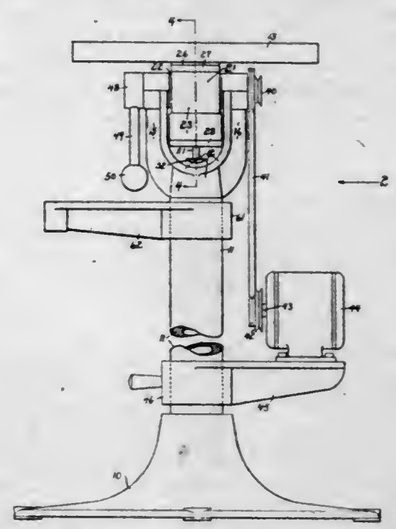
A drill holder of the character described, comprising a casing consisting of a pair of complemental casing sections, a drill holder unit tiltably and removably mounted in each casing section, each drill holder unit comprising stepped end walls joined by a front end wall and rear strips, a plurality of shelves extending between said end walls and corresponding in position to said stepped construction, each of said shelves having a series of openings; a drill supporting pin associated with each opening and having an end projecting thereinto, a panel projecting above each of the upper shelves, the upper edge of the said front end wall extending upward above the bottom shelf to form an extending panel and an indicating strip carried by each panel, each of said indicating strips having a series of openings corresponding in number and arrangement to the series of openings in the shelf with which it is associated.

2,408,228
IMPACT TOOL MECHANISM
Carroll H. Richards, Boston, Mass.
Application February 24, 1944, Serial No. 523,694
6 Claims. (Cl. 192—30.5)



1. In an impact tool in combination, a rotatable driving member, a rotatable driven member having an impact receiving surface, a driving connection between said driving and driven members including a force receiving member rotatably mounted to rotate relative to said members, a hammer rotatably carried by said force receiving member and having an impact applying surface adapted to impact said receiving surface, said impact applying and impact receiving surfaces at the time of impact being positioned with respect to the axis of rotation of said hammer so that a line normal to their engaging surfaces at any point of the entire portion thereof passes in back of said axis with respect to the direction of rotation of the driving member whereby, when the force resisting movement of the driven member exceeds the force tending to drive said driven member said force receiving member is moved faster than said driving member in the direction of rotation of the driving member and the hammer is rotated in one direction about its axis to disrupt its driving connection with said impact receiving surface, said driving connection also including means for causing said hammer to rotate in the opposite direction when said driving connection has been disrupted, said last mentioned means including a member operatively connected with said hammer and contacting a driving surface on said driving member, and guide means for controlling the extent of rotation of said hammer in said opposite direction to locate the impact applying surface thereon in a predetermined position relative to said impact receiving surface.

2,408,229
ELECTRICAL HEATING APPARATUS
Wesley M. Roberds, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 30, 1943, Serial No. 485,133
12 Claims. (Cl. 219—13)



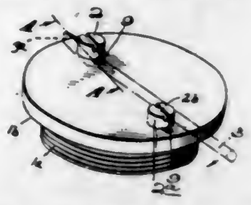
1. An inductor coupling coil for electrical heating apparatus comprising a single turn, annular conductor having overlapped terminal portions spaced from each other in a direction parallel to the axis of said turn to provide a gap therebetween, said turn having substantially uniform overall thickness in said direction throughout the entire circumference thereof.

2,408,230
MEASURING APPARATUS
William E. Shoupp, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 9, 1941, Serial No. 422,271
11 Claims. (Cl. 250—83.6)

1. In a counter for indicating neutron particles, a counter tube including a pair of discharge electrodes in a gaseous atmosphere, material capable of atomic fission under neutron bombardment, thereby liberating radiation causing ionization of said atmosphere, associated with one of said electrodes, and an ionization responsive circuit connected between said electrodes.

2,408,231
TILTABLE ROTARY POWER-DRIVEN WORK-HOLDING UNIT
Harry A. Skilton, Watertown, Conn.
Application April 10, 1945, Serial No. 587,529
13 Claims. (Cl. 51—237)

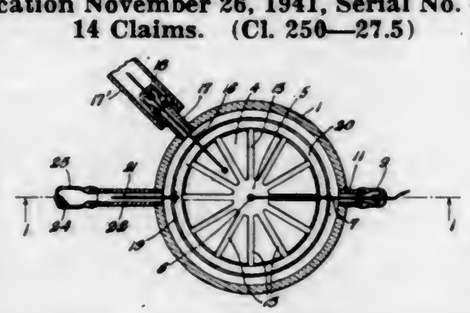
1. A tiltable rotary power-driven work-holding unit, including in combination: a support having a bearing; a tiltable bearing-head having a tubular trunnion mounted for oscillation in the bearing of the said support; a first gear-member carried by the said bearing-head adjacent the inner end of its said tubular trunnion; drive-means projecting through the tubular trunnion of the said bearing-head and connected to the said first gear-member for driving the same; a work-carrying spindle mounted in the said bearing-head for rotation about an axis disposed at an angle with respect to the axis of the tubular trunnion of the bearing-head; a second gear-member also carried by the said bearing-head and meshing with the said first gear-member; and releasable coupling-means operatively interposed between the said drive-means and the said spindle to selectively connect and disconnect the same; the said bearing-head, second gear-member and work-carrying spindle being jointly tiltable about the axis of the said tubular trunnion.



2,408,232
CHEMICAL COMPOUNDS AND PROCESSES
Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 7, 1946, Serial No. 639,701
5 Claims. (Cl. 260—461)

1. An aromatic amine salt of 3-methyl-butyl, 2-ethyl-hexyl orthophosphate.

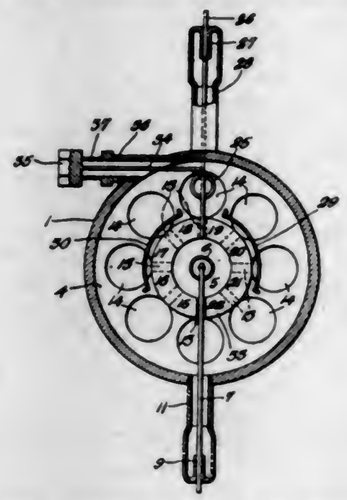
2,408,233
SCREW-THREADED CLOSURE DEVICE
Sydney Hartley Smith, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application December 21, 1943, Serial No. 515,104
In Great Britain November 13, 1942
4 Claims. (Cl. 220—39)



1. A closure device which comprises a rotatable closure body provided with a pair of spaced re-

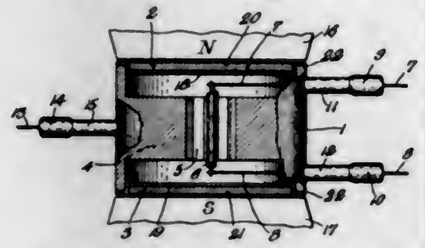
cesses opening outward, each shouldered to provide a neck portion and an enlarged inner portion with a closed base, a peg slidably mounted in each recess for movement between elevated and depressed positions and rotatable in depressed position, said peg being provided with lateral projections working in longitudinal slots in the wall of said neck portion and opening into said enlarged portion, said slots extending in the direction of a straight line passing through both of said recesses, said projections being arranged

to ride clear of said slots when the peg is fully depressed and, by then rotating the peg, to be moved under the shoulder of said recess for retaining engagement therewith, a spring compressed between said peg and the base of the recess, and means projecting laterally from said peg adapted and arranged, when said lateral projections are engaged in said slots, to stop outward movement of the peg by engagement with said shoulder, when the peg has been urged outwardly to project a substantial distance beyond said head.



2,408,234
TUNABLE MAGNETRON
Percy L. Spencer, West Newton, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, a corporation of Delaware
Application November 26, 1941, Serial No. 420,558
14 Claims. (Cl. 250—27.5)

7. An electron discharge device comprising a sealed envelope containing an elongated cathode, an anode structure having adjacent anode elements defining a transverse cavity resonator, an adjustable tuning element within said envelope adjacent said cavity resonator, said tuning element comprising a conductive member, and means connected to said tuning element for adjusting the position of said conductive member toward and away from said cavity resonator.

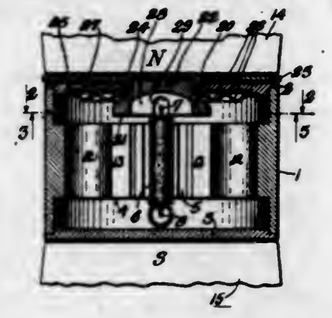


2,408,235
HIGH EFFICIENCY MAGNETRON
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 31, 1941, Serial No. 425,071
10 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an electrode structure including a cathode and an anode, said electrode structure having a configuration constituting capacitance and inductance elements forming circuits which are adapted to have oscillations set up therein, said oscillations being all of the same frequency, a plurality of predetermined points on said electrode structure at which in-phase voltage loops of said oscillations occur, and relatively low impedance means directly interconnecting said points and

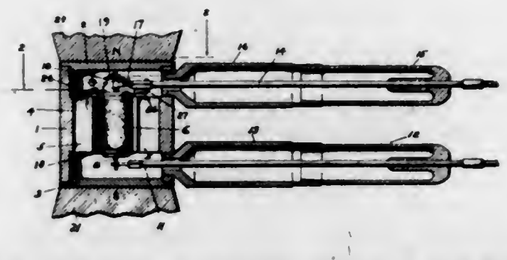
forming with portions of said electrode structure an additional oscillating circuit, the frequency of said last-named oscillating circuit being substantially equal to the frequency of said first-named oscillating circuits.

2,408,236
MAGNETRON CASING
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 17, 1941, Serial No. 423,307
3 Claims. (Cl. 250—27.5)



1. A magnetron comprising a hollow envelope of a substantially non-magnetic metal containing cooperating electrode elements, said magnetron being designed and adapted to have a magnetic field set up in the space between said electrode elements, said envelope having an end cap sealed to and closing one end of said hollow envelope, said end cap comprising a sheet of a substantially non-magnetic metal and an insert of magnetic material set into said sheet to decrease the gap space through which said magnetic field must pass.

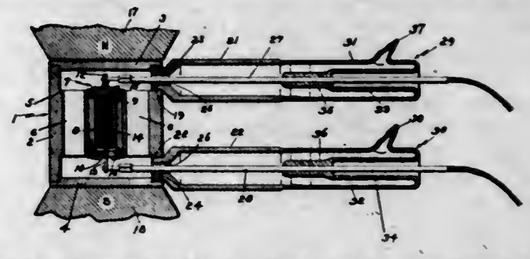
2,408,237
TUNABLE MAGNETRON
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 6, 1942, Serial No. 433,649
9 Claims. (Cl. 250—27.5)



1. An electron discharge device comprising a sealed envelope containing an elongated cathode, adjacent anode elements, and a hollow resonator interconnecting said anode elements, a tuning element within said envelope adjacent said hollow resonator, said tuning element being mounted upon a flexible diaphragm hermetically sealed

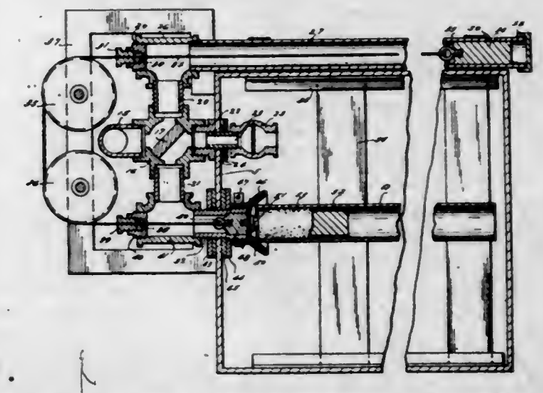
in a wall of said envelope, the median plane of said diaphragm being substantially perpendicular to the longitudinal axis of said cathode, and ad-

justable means connected to said diaphragm for flexing said diaphragm in a direction substantially perpendicular to said median plane for adjusting the position of said tuning element.



2,408,238
SPACE DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 7, 1943, Serial No. 490,113
7 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an envelope containing a cathode and an anode, said anode having a plurality of electron-receiving portions adjacent said cathode, and a cavity resonator interconnecting each pair of electron-receiving portions, said cathode having a pair of electrical terminals, said cathode being rigidly supported within said envelope and provided with an external electrical connection for one of its terminals, a lead-in conductor for the other of said terminals sealed through the wall of said envelope, a flexible electrical conductor connecting said lead-in conductor with the other of said terminals, and a tuning member for said cavity resonator carried by said lead-in conductor, the connection between said lead-in conductor and the wall of said envelope being sufficiently adjustable to provide an adjusting movement of said lead-in conductor and the tuning member carried thereby.

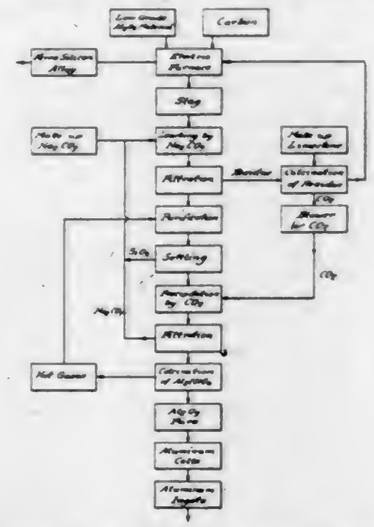


2,408,239
ELECTRONIC DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application July 14, 1943, Serial No. 494,685
5 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an envelope, a cathode-heater structure, a pair of lead-in conductors connected to opposite ends of said cathode-heater structure, providing supports therefor and extending transversely thereof, a pair of conducting tubes projecting externally of said envelope, said lead-in conductors extending through said conducting tubes and out of contact therewith, glass seals for closing the outer ends of said conducting tubes, said seals having tubular portions projecting outwardly

from said conducting tubes, and reentrant stems projecting back into the outer ends of said conducting tubes for sealing and supporting said conducting rods therein.

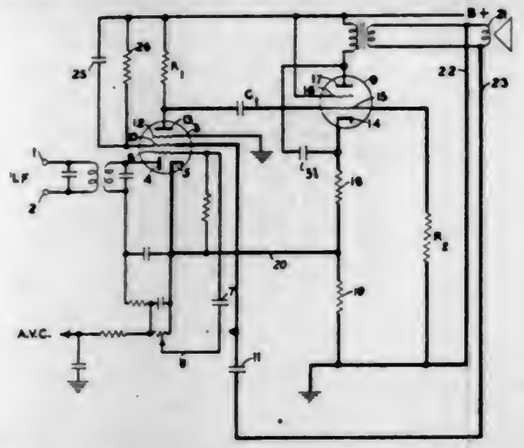
2,408,240
SANITARY PIPE WASHER
Ordell E. Stone, Lake Mills, Wis.
Application April 15, 1944, Serial No. 531,167
2 Claims. (Cl. 15—88)



2. In a pipe-washing machine, a tank for a washing solution, means in said tank for supporting a pipe in horizontal position immersed in said solution, a brush in said tank for reciprocation in said pipe to force the solution through the pipe and fitting in said pipe to brush the inside thereof, means for reciprocating said brush comprising a piston fitting in said pipe and operatively connected to the brush, a cylinder extending alongside the tank, a second piston in said cylinder, means for moving said pistons in one and the same direction alternately under pneumatic pressure, and means for causing each piston during its movement in said direction to impart movement to the other piston in a relatively opposite direction.

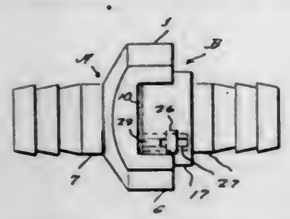
2,408,241
PRODUCTION OF ALUMINUM
Lucien C. Sturbelle, New York, N. Y.
Application January 16, 1943, Serial No. 472,586
5 Claims. (Cl. 23—141)

5. In a process of producing metallic aluminum from low grade sources of alumina containing substantial amounts of silica, such as low grade bauxites, clays, and coal ashes, the steps of mixing the alumina bearing material from said sources with carboniferous material and lime, with the carboniferous material present in an amount approximately sufficient to reduce the silica, iron oxide and titanium oxide to silicon, iron and titanium and the formation of silicon alloys, and with the lime present in an amount sufficient to give, upon smelting of the mixture, a slag which contains calcium aluminate and di-



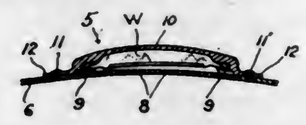
calcium silicate and wherein the calcium aluminate is present as tricalcium aluminate and 5:3 calcium aluminate and mixtures thereof, said slag further being such as to disintegrate automatically upon cooling, smelting the mixture, cooling the same to effect a separation of the alloyed metals from the slag and the solidification of the slag with disintegration at low temperatures, leaching the disintegrated slag with a sodium carbonate solution to form a solution of sodium aluminate and a residue of dicalcium silicate and precipitated calcium carbonate, heating the liquid from the leaching step to coagulate the silicious content thereof, separating the coagulated silica by settling, treating the so purified liquid with carbon dioxide to precipitate aluminum hydroxide and form a solution of sodium carbonate, separating the aluminum hy-

droxide from said solution to form aluminum hydroxide with the liberation of hot gases, using the heat of said gases to heat the liquid from the leaching operation to effect the coagulation of the silicious content, calcining the residue of dicalcium silicate and calcium carbonate to release carbon dioxide and recover a lime-silica mixture, using the released carbon dioxide as the precipitant for the aluminum hydroxide, returning the lime-silica mixture to fresh charges of alumina bearing material together with such quantities of lime and carbon as are required to form the said alloys and slag, returning the solution of sodium carbonate regenerated by the precipitation of the aluminum hydroxide to the leaching step, and treating the precipitated aluminum hydroxide to recover aluminum therefrom.



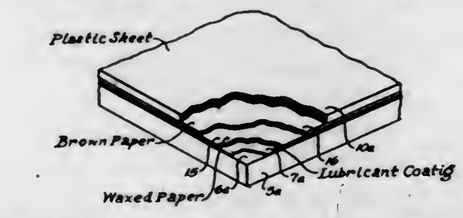
2,408,242
REGENERATIVE BASS COMPENSATION CIRCUIT
Hershel Toomim, Douglaston, N. Y., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y., a corporation of New York
Application December 30, 1944, Serial No. 570,716
12 Claims. (Cl. 179—1)

1. An audio amplifier circuit comprising an input circuit, an audio amplifier tube, and an output circuit, a transducer connected in said output circuit, means for regeneratively feeding back to said amplifier a voltage having a characteristic which discriminates against frequencies lower than the low frequency resonance point of said transducer and in favor of frequencies higher than the low frequency resonance point of said transducer, means for degeneratively feeding back to said amplifier a voltage having a characteristic which discriminates in favor of frequencies higher than the low frequency



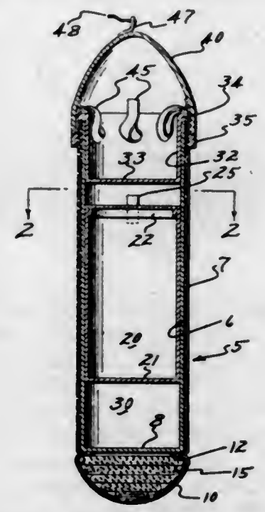
resonance point of said transducer, and means for deriving said second voltage from said transducer.

2,408,243
HOSE COUPLING
John G. Vartanian, Hanford, Calif.
Application June 21, 1944, Serial No. 541,323
2 Claims. (Cl. 285—175)



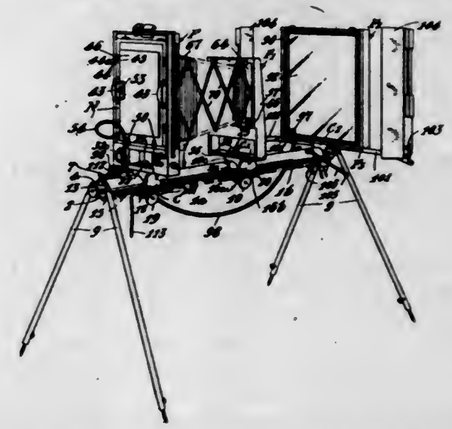
1. A hose coupling comprising separable male and female coupling members, said female coupling member including a hose nipple having spaced diametrically opposed curved jaws integral with one end of the same said nipple being formed at said end with an annular groove concentric with and surrounding its bore, said jaws having circumferentially extending arcuate grooves in their inner faces that open through opposite sides of the respective jaws and terminate in shoulders inwardly of the other sides of said jaws, said grooves defining inwardly extending arcuate flanges on the jaws at the outer sides of said grooves, said flanges having inwardly projecting lugs on and recesses in the inner sides thereof, said male coupling member including a second hose nipple externally enlarged at one end to provide a cylindrical head snugly receivable between the jaws of the female coupling member, said head being formed at its outer end with an annular groove registerable with the annular groove of the nipple of the female coupling member, said head further being formed on opposite sides of its outer end portion with circumferentially extending arcuate ribs receivable in the grooves of said jaws and provided at their inner sides with inwardly projecting lugs and with recesses to respectively engage in the recesses of and to receive the lugs of said flanges upon relative separating movement of the coupling members when the ribs are engaged in said arcuate grooves, and a compressible packing sleeve having its opposite ends engaged in the annular grooves of the nipples and yieldingly acting to effect said relative separating movement of the coupling members, the spaces between adjacent sides of said jaws being greater than the length of said arcuate ribs.

2,408,244
WRIST WATCH BAND AND PROTECTOR
Clayton J. Watkins, Forest City, N. C.
Application April 12, 1945, Serial No. 587,859
1 Claim. (Cl. 224—4)



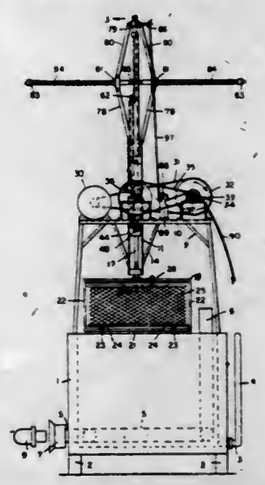
A wrist watch strap comprising an adjustment element, hooks spacedly disposed on the strap to receive the loop ends of a wrist watch, a hood covering the watch and having hook receiving pockets in its inner surface at opposite ends thereof and the major portion of its interior area conforming to the configuration of the watch, means hingedly securing one end of the hood to the strap, means removably securing the opposite end of the hood to the strap, and that area of said strap beneath the watch being spaced from the back of the same and having ventilating apertures therein.

2,408,245
MOLD AND METHOD OF FORMING PLASTICS THEREON
Zachary T. Walter, Los Angeles, Calif.
Application April 9, 1943, Serial No. 482,407
3 Claims. (Cl. 154—110)



1. The method of forming a plastic product on a mold which comprises superposing on the mold a waxed sheet, superposing on said sheet a sheet of absorbent material and applying the plastic to the exposed surface of the last-mentioned sheet.

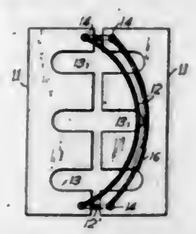
2,408,246
AERIAL CARGO LANDING CONTAINER
Zachary T. Walter, Los Angeles, Calif.
Application October 7, 1944, Serial No. 557,612
3 Claims. (Cl. 244—138)



1. A device for landing cargo from an airplane or the like comprising a casing having a bottom end wall, a cargo container slidably mounted as a piston in the casing, said container being slidable longitudinally of the casing in response to impact of the casing with the ground, an impact pad on the bottom end of the casing, a conical cover lid frictionally fitting on the casing and extensible means securing the lid to the casing.

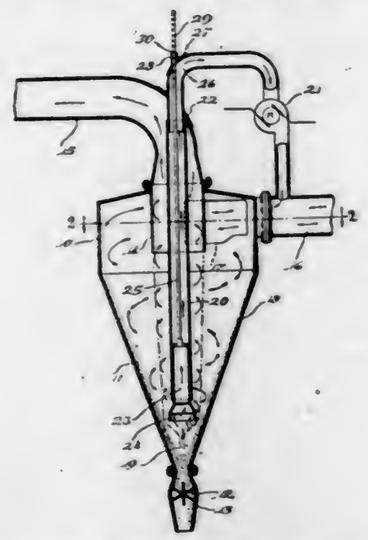
2,408,247
CAMERA
Stephen N. Wekeman, Saddle River Township, Bergen County, N. J., assignor to Sun Chemical Corporation, a corporation of Delaware
Application December 15, 1943, Serial No. 514,311
4 Claims. (Cl. 88—24)

1. In a device of the character described, a tubular support, pivoted legs at each end of said support, means forming a detachable connection between the ends of said support, said means comprising end sections of said support which engage each other in telescopic relation, means for alining said end sections, and mechanism for releasably retaining said end sections in said relation, said mechanism comprising a rotatable retaining member extending through said tubular support and terminating exteriorly of one end thereof in an actuating wheel.



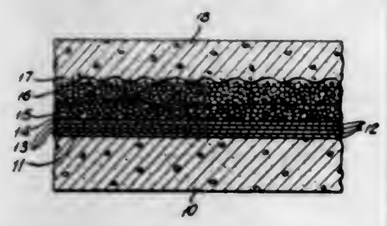
2,408,248
TREATING MACHINE
Quay C. Barber, Cleveland, Ohio; John E. Burnside administrator of said Quay C. Barber, deceased
Application August 10, 1945, Serial No. 610,133
8 Claims. (Cl. 134—46)

1. In a device of the character described, the combination of a treating vat, a work support adapted to move into and out of said vat, means



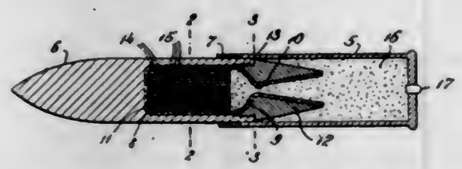
urging said work support to a position out of said vat, a cross-head, continuously operating means for reciprocating said cross-head, and means for releasably connecting said work support to said cross-head.

2,408,249
BOTTLE CARRIER
Lawrence H. Cohn, University City, Mo.
Application June 22, 1944, Serial No. 541,639
1 Claim. (Cl. 224—45)



A device for carrying bottles comprising a pair of flat rigid members disposed in side-by-side relation, said members having complementary rows of recesses formed in their opposed side margins, each of said recesses being of width snugly to receive the neck of a bottle immediately below the rim or head portion thereof, and being of greater depth than the neck diameter immediately below the rib or head portion of the bottle; a handle comprising a closed loop of cord having portions thereof loosely embracing opposed marginal portions near the opposite ends of said members, said handle being relaxable to permit limited separation of the said opposed marginal portions whereby to provide a space between the members for access to said recesses, said handle tending to draw the members together when the device is being carried.

2,408,250
CYCLONE DUST COLLECTOR
Joe Crites, Evanston, Ill., assignor to Combustion Engineering Company, Inc., New York, N. Y., a corporation of Delaware
Application January 26, 1944, Serial No. 519,763
2 Claims. (Cl. 183—86)

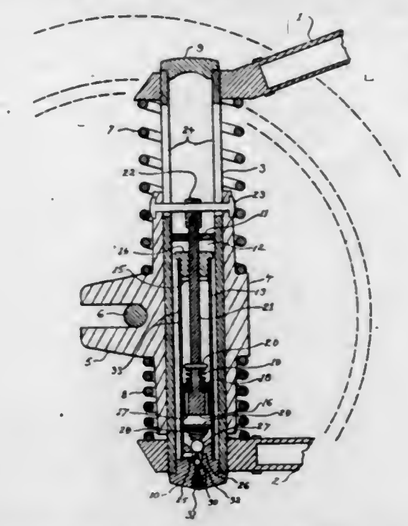


1. A cyclone separator comprising, in combination, a conical separator casing having a centrally arranged air discharge in its upper end, means including an inlet conduit for introducing dust laden air into the upper portion of the casing tangentially to the inner surface thereof to form a downwardly moving dust precipitating outer spiral of air and an upwardly moving inner concentric spiral of air being discharged, and means comprising a vertically disposed interceptor conduit arranged concentric to the separator casing and extending upwardly through the casing and said discharge to the exterior of the casing and provided at its lower end with an inverted hood of greater cross-sectional area than said conduit and positioned with its open lower end portion in close relation to the restricted lower end of the separator and said conduit communicating at its other end with the inlet end of the separator, a fan interposed in said interceptor conduit whereby dust suspended in said inner spiral of air at the lower portion of the separator is intercepted by said hood and directed through said interceptor conduit to the inlet conduit of the separator.

2,408,251
COMPOSITE ROOF
Thomas M. Dantz, Chicago, Ill., assignor to The Ruberoid Co., New York, N. Y., a corporation of New Jersey
Application June 8, 1945, Serial No. 598,264
4 Claims. (Cl. 108—6.5)

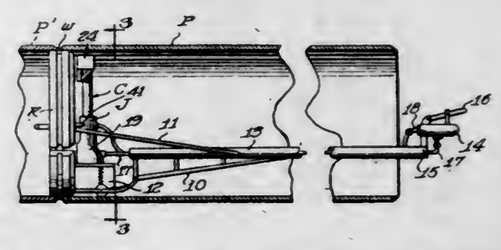
1. A composite roof comprising a roof deck, a plurality of layers of bituminized roofing felt, a coating of bituminous substance on each felt layer, the coating on the top felt layer being thicker than the others and having gravel embedded therein, a layer of loose gravel overlying said graveled bituminous layer, and a surfacing of wear-resistant material applied over the layer of loose gravel.

2,408,252
AMMUNITION
Carl de Ganahl, Trenton, N. J., assignor, by mesne assignments, to Kaiser Cargo, Inc., Bristol, Pa., a corporation of California
Application December 23, 1942, Serial No. 469,871
8 Claims. (Cl. 102—49)



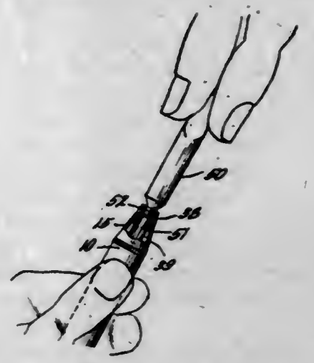
1. In a projectile, a chamber having a restricted outlet passage communicating therewith, a charge of combustible material including explosive and a non-explosive carbonaceous filler in the chamber, and auxiliary material comprising an oxide of a metal of the eleventh series of the periodic system of elements associated with the combustible material and adapted to increase the mass of the combustion gases ejected through the passage when the combustible material is ignited.

2,408,253
GUARD OR PROTECTOR FOR ELECTRIC CABLES
Barney A. Diebold, Irvington, N. J.
Application August 27, 1943, Serial No. 500,221
1 Claim. (Cl. 174—136)



A guard for electric cables and the like comprising, a lengthy C-shaped resilient, plastic-material sleeve having its walls spaced apart at their edges for a distance less than the diameter of an electric cable to be accommodated within the sleeve whereby said walls must be sprung apart to enable the sleeve to be fitted around the electric cable and the springiness of said walls will cause them to fit the sleeve sungly around the cable, a similarly shaped sleeve fitted over the outside of the first sleeve, the second sleeve being fitted on the outside of the first sleeve after the first sleeve has been fitted around the cable, the outer sleeve having its split portion located diametrically opposite to that of the first sleeve when the outer sleeve is fitted over the same, the first sleeve having a rib extending longitudinally for its length and projecting radially from its outer surface and disposed between the sides of the outer sleeve to thereby prevent rotative movement of the outer sleeve on the first sleeve.

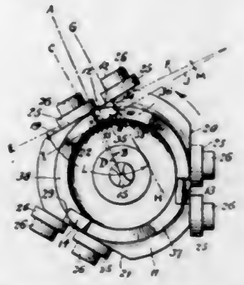
2,408,254
SUSPENSION UNIT FOR VEHICLE WHEELS
Stephen du Pont, Wilbraham, Mass., assignor to Indian Motocycle Company, Springfield, Mass., a corporation of Massachusetts
Application April 19, 1944, Serial No. 531,754
1 Claim. (Cl. 267—8)



A suspension mounting for a vehicle wheel comprising in combination, upper and lower members of a vehicle frame, a hollow spindle fastened at its upper end to said upper frame member and at its lower end to said lower frame member, a slipper bracket comprising a sleeve portion having extensions above and below the mid section of said spindle and slidably mounted on the outside of said spindle, said slipper bracket having an integral fork portion midway between its upper and lower ends for carrying the axle of said wheel, a load carrying spring surrounding said spindle and the upper extension of said slipper bracket and having a bearing against said upper frame member, and a recoil spring surrounding said spindle and the lower extension of said slipper bracket and having a bearing against the lower frame member, said spindle having formed therein at its lower part a closed chamber containing liquid, a dash-pot piston and its cylinder mounted within said chamber with inlet and outlet ports for the interflow of liquid between said cylinder and chamber, a connecting rod extending from said piston to the upper part of said spindle, and a cross pin extended through a slot in the upper part of said spindle and united to the upper end of said connecting rod and to the upper end of said slipper bracket upper extension whereby said piston is moved up and down within its cylinder by movements of the wheel relative to the vehicle frame.

2,408,255
HYDRAULIC INTERNAL LINE-UP CLAMP
Bernard V. Elliott and Harold C. Price, Bartlesville, Okla., assignors to H. C. Price Company, Bartlesville, Okla.
Application September 13, 1944, Serial No. 553,948
5 Claims. (Cl. 113—103)

1. An internal line-up clamp comprising a support, a jack and a clamping ring carried by said support, said jack having an element thereof adapted to contact an inner surface of a pipe upon actuation of said jack, said jack being mounted inwardly of and adjacent said clamping ring, said ring comprising a stationary disc and a pair of movable plates carried by said disc, said disc having a pair of spaced cylinders secured thereto, a piston in each cylinder connected to a plate, and means for selectively actuating the jack and pistons.



2,408,256
FILLING ARRANGEMENT FOR BALL-POINTED FOUNTAIN PENS
Irving Florman, New York, N. Y.
Application April 5, 1946, Serial No. 659,907
2 Claims. (Cl. 226—63)

1. In a filling arrangement for fountain pens of the ball-point stylus type using viscous writ-

ing fluid, each having a barrel containing a writing fluid reservoir and terminating in a convergent tapering end portion having a removable ball-point-carrying tip, said arrangement also including a writing fluid package; an axial, internally threaded, relatively small but non-capillary opening in the tapering end portion of the pen into which the ball-point-carrying tip is normally screwed, a radially projecting knurled flange on said tip whereby it may be manually removed from said opening when the reservoir is to be filled, and a nozzle on the package having an externally threaded portion adapted to be screwed into said tip-receiving opening, whereby the viscous writing fluid may be injected into the reservoir in the barrel of the pen without leakage.

2,408,257
ROTARY CUTTER
Andrew S. Fodor, South Norwalk, Conn.
Application February 1, 1944, Serial No. 520,641
13 Claims. (Cl. 77—69)

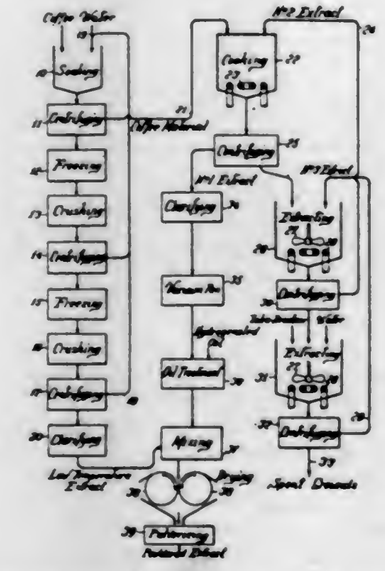
1. A rotary cutter having a head adapted to be fastened to a driving spindle to be rotated thereby; and a cutting member projecting beyond the end thereof and having an elongate shank mounted on the head to extend in a direction substantially parallel to the axis of rotation thereof, said head having a backing member projecting beyond the end thereof and engaging the back of the cutting member, one of said members nesting the other so that radial movement of the cutting member is restrained when the tool is cutting.

2,408,258
STABILIZED ACID SODIUM PYROPHOSPHATE AND PROCESS OF MAKING IT
Eugene N. Hetzel, St. Louis, Mo., and George E. Taylor, Anniston, Ala., assignors to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application February 6, 1943, Serial No. 475,042
15 Claims. (Cl. 23—106)

8. The process for producing stabilized sodium acid pyrophosphate which comprises drying a monosodium orthophosphate solution within a period of less than 12 seconds upon a drum dryer heated by saturated steam under at least 110 lbs. but preferably below 150 lbs. pressure to produce substantially dry NaH_2PO_4, converting said NaH_2PO_4 into sodium acid pyrophosphate by passing it through a rotary kiln countercurrent to a stream of air having an entering temperature of from 240° C. to 250° C. and containing water vapor at a partial pressure of from 100 to 140 mm. of mercury, discharging said sodium acid pyrophosphate while at a temperature of from 225° C. to 235° C. from said kiln into a heat-insulated container and then tempering said pyrophosphate by maintaining it, in an atmosphere containing water vapor at a partial pressure of from 100 mm. to 140 mm. of mercury, at a temperature of from 225 to 235° C. for a period of about 4 to 6 hours, said monosodium orthophosphate solution having a specific gravity of 1.55 to 1.65 at 90° C. and containing from 0.10% to 0.20% K_2O and from 0.025% to 0.075% Al_2O_4, basis NaH_2PO_4.

14. Stabilized sodium acid pyrophosphate produced by the method defined in claim 8, said pyrophosphate when incorporated into a leavening composition, exhibiting when freshly prepared a reaction rate of about 28% of the contained carbon dioxide and said reaction rate increasing not more than 4% when stored for 6 months.

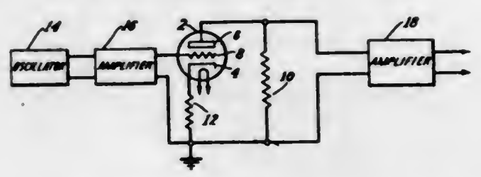
15. Stabilized sodium acid pyrophosphate produced by the method defined in claim 8, said pyrophosphate having a "temperature coefficient" of from 2.95 to 3.51 when reacted with sodium carbonate in a dough mixture.



2,408,259
VAT DYESTUFFS AND PROCESS OF MAKING SAME
Theodor Holbro, Basel, Walter Kern, Sissach, and Paul Sutter, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application February 4, 1943, Serial No. 474,728. In Switzerland January 8, 1942
13 Claims. (Cl. 260—303)

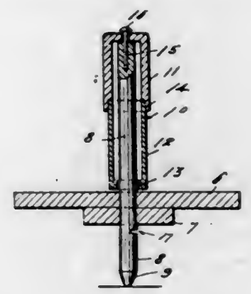
1. A vat dyestuff of the formula

$$R_2—NH—CO—R_1—CO—NH—R_2$$



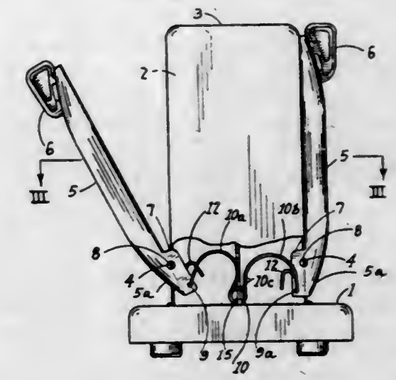
wherein R_1 stands for the radical of a compound selected from the group consisting of 1:9,5:10-anthradithiazole and 1:9,5:10-anthradipyrazole, the respective —CO— groups being severally attached to the two terminal benzene rings of the radical R_1, and each R_2 stands for the same radical of a vattable compound of the anthraquinone series.

2,408,260
PROCESS FOR MAKING COFFEE EXTRACTS
John L. Kellogg, Chicago, Ill., assignor to John L. Kellogg & Co., Chicago, Ill., a corporation of Illinois
Application September 21, 1942, Serial No. 459,104
9 Claims. (Cl. 99—71)



1. Improvement in the process of making coffee extracts which comprises: subjecting roasted and ground coffee to a soaking operation in cold water; drawing off the liquid and subjecting the same to repeated freezing and separating operations, giving a low temperature concentrated extract; subjecting the coffee material to a boiling operation; drawing off the extract from the boiling operation; concentrating the same in a vacuum pan; mixing this high temperature extract with the low temperature extract from the freezing operations; subjecting the coffee material from the cooking operation to a series of extracting operations in counter-current with each other and with said cooking operation in which the more concentrated extract is introduced into the cooking operation; and subjecting the mixture of concentrated high temperature and low temperature extracts to a quick drying operation.

2,408,261
PULSE GENERATOR
Louis L. Lakatos, Bela-Cynwyd, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application January 21, 1944, Serial No. 519,100
8 Claims. (Cl. 178—44)

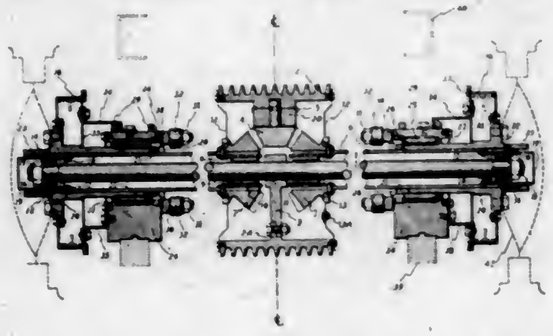


4. A pulse generator comprising an electron tube having a cathode and at least two other electrodes so connected to said cathode externally of said tube as to be substantially at contact potential with respect thereto, one of said other electrodes being located between said cathode and a second of said other electrodes, connections for impressing a periodically varying signal between one of said electrodes and said cathode, and a utilization circuit connecting the other of said electrodes to said cathode externally of said tube.

2,408,262
TOP
Sidney L. Long, Minneapolis, Minn.
Application January 17, 1945, Serial No. 573,208
1 Claim. (Cl. 46—71)

A spinning top having a disk-like body, a spindle extending through the body at the center thereof and rigidly secured thereto at its intermediate portion, said spindle, at its lower end, terminating in a bearing point, a long tubular handle having an upper closed end and a lower open end completely encasing the upper section of the spindle, said spindle extending loosely through the open lower end of the handle, said handle, at its upper end, being supported on the upper end of the spindle with its lower end out of contact with the body, and a stud on the upper end of the spindle and extending loosely through a hole in the outer end of the handle at the center thereof, said stud being of a smaller diameter than that of the spindle and having a head holding the handle on the spindle and spaced from the upper end of the spindle to permit relative axial movement of the spindle and the handle without coming in contact with the body of the top, said ends of the handle affording bearings for the spindle and the stud and holding the handle spaced outwardly of the spindle, spinning movement being imparted to the top by winding a cord on the lower section of the spindle and pulling the same therefrom while holding the top by its handle.

2,408,263
TOASTER
Vito Mazzarisi, Clifton, N. J.
Application June 24, 1946, Serial No. 678,777
9 Claims. (Cl. 99—395)



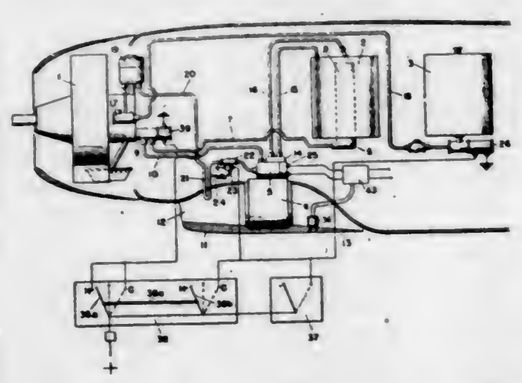
1. In toasters of the type having at least one slice-reversing door pivotable intermediate its ends, the improvement which comprises, in combination with at least one such door of such toaster, spring means having at least one arm laterally deflectable against spring resistance secured to said door at a securing point positioned, with the door closed, below the axis of pivot of said door, said arm substantially extending at said securing point with an arm directional spring thrust and in a downwardly direction at an angle of less than 90° to the vertical on said axis through said securing point, said arm being mounted for substantially arm directional lifting against spring resistance and for substantially lateral deflection against spring resistance throughout at least part of the arc of travel of said securing point around said axis when opening said door.

2,408,264
DRIVING AXLE FOR MOTOR VEHICLES
Fred B. McClure, Moundsville, W. Va., assignor of one-fourth to W. L. Stroup, Moundsville, W. Va.
Application December 10, 1943, Serial No. 513,692
5 Claims. (Cl. 180—71)

5. In a driving axle assembly, floating journal boxes disposed near each end of said axle assembly, driving tubes of said axle assembly, sleeves provided with hubs secured on said driving tubes, said journal boxes containing antifriction bearings whereby the boxes are journaled on said sleeves, and means for retaining same, each said journal box having a pair of radius rods, disposed one above the other, pivotally attached and extending forwardly to

similar pivotal attachment to the vehicle frame, a vehicle spring seated against and secured to each journal box, and, a circular plate having a central opening for the free passage of a hub sleeve aforesaid and vertically disposed between the outer side of said journal box and the outer end of said sleeved hub, said plate being rigidly attached to each journal box by means of angular brackets, said floating journal boxes providing for connections between the axle and the vehicle frame, said radius rods serving to

transmit forces between the axle and the vehicle frame and to prevent rotation of the said journal boxes, said vehicle springs serving to support and spring the imposed load, and said vertically disposed circular plates providing fixed bases for the brake mechanism.



2,408,265

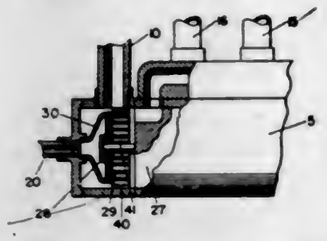
AUTOMATIC DILUTION SYSTEM

Leslie T. Miller, Stoneleigh, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland

Application October 3, 1942, Serial No. 460,642

5 Claims. (Cl. 123—196)

1. In a lubricating system for an engine, a reservoir for lubricant having a warm-up compartment, a supply conduit for conducting lubricant from said reservoir to said engine, an oil cooler, a normal return conduit through said oil cooler to the main section of said reservoir, a secondary return conduit to said warm-up compartment, valve means to direct flow of lubricant through either said normal or secondary return conduits, said valve means being operated by a thermal responsive element which is responsive to the temperature of the lubricant, means to introduce diluent into the lubricant flowing toward said thermal responsive element to decrease the temperature of the lubricant adjacent the thermal responsive element to move the valve to direct the flow of lubricant through the secondary return conduit during the introduction of diluent.



2,408,266

AUTOMATIC DILUTION SYSTEM CONTROL VALVE

Leslie T. Miller, Stoneleigh, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland

Original application October 3, 1942, Serial No. 460,642. Divided and this application January 15, 1944, Serial No. 518,368

3 Claims. (Cl. 123—196)

1. In combination, a valve housing having a fluid inlet and a plurality of fluid outlets, a valve having a thermal responsive element located in the flow path of the fluid to actuate said valve in said housing to direct fluid flow from the inlet to one of the outlets, depending upon the heat content of the fluid, means to introduce a second fluid adjacent said thermal responsive element whereby said valve is moved to a position to direct the flow of said first fluid, in accordance with the resulting temperature of the mixture of said first and said second fluids.

2,408,267

SETSCREW

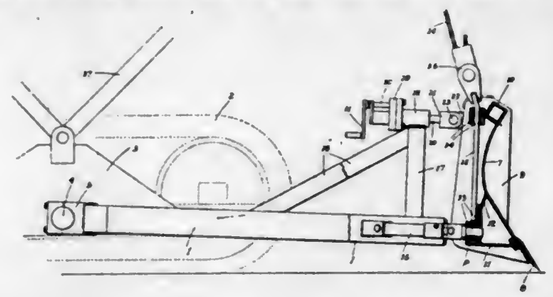
George A. Moore, Medford, Mass.; George A. Moore, Jr., Harrington Moore, and Lawrence Moore, executors of said George A. Moore, deceased

Application August 17, 1944, Serial No. 549,849

2 Claims. (Cl. 85—1)

1. A headless, cup-pointed set-screw having a bore extending therethrough from end to end, said bore having a relatively short cylindrical portion extending in from the cup-pointed end of the screw and a relatively long portion of larger diameter and of polygonal shape extending in from the opposite end of the screw.

2,408,268



ADJUSTABLE PUSH GRADER

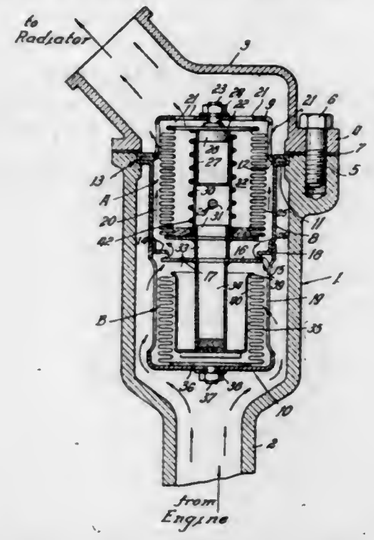
Oscar Raymond Peterson, Peoria, and Loiell L. Hyler, Washington, Ill., assignors to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California

Application July 25, 1942, Serial No. 452,254

3 Claims. (Cl. 37—144)

1. In a push grader, a pair of transversely spaced push beams, a transverse grader blade unit ahead of and pivoted to said push beams for tilting movement lengthwise of the direction of travel, means between the blade unit and push beams to control transverse tilting of said unit, and a blade unit lifting link disposed centrally of the ends of the blade unit and pivoted thereto at the back and adjacent its lower edge for transverse swinging movement, said link extending upward to a point above the blade unit and being

adapted at its upper end for connection with a lifting cable.



2,408,269

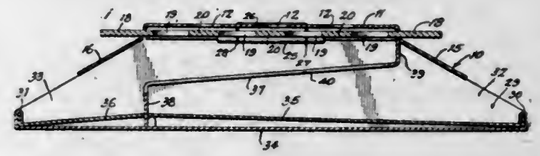
THERMOSTATIC CONTROLLER FOR WATER TEMPERATURE

William R. Peterson, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a corporation of New York

Application September 1, 1942, Serial No. 456,881

2 Claims. (Cl. 236—34)

1. In an engine cooling system, means for controlling the flow of water through a conduit leading from the engine to a radiator, comprising a valve-seat fixedly mounted in the conduit, a valve-plate movable from below to and from the seat to close or open the valve, an expansible bellows thermostat mounted in the conduit above the valve seat and attached to the upper side of the movable valve-plate, a thermostatic fluid in the bellows responsive to temperature changes in the water, a thermostatic fluid-containing receptacle projecting downwardly from the plate and connected through the plate with the thermostatic bellows so that the bellows thermostat will respond to temperature changes at both sides of the valve, and a second closed bellows member fixed at its lower end and secured to the lower face of the plate and having an end portion of the same effective area exposed to the water pressure as the lower face of the plate, thus balancing the water pressures tending to raise the plate, and the said bellows thermostat having an end, the effective area of which exposed to the water pressure is substantially equal to the area of the top surface of the valve exposed to the water pressure, whereby the valve is substantially balanced against the water pressure.



2,408,270

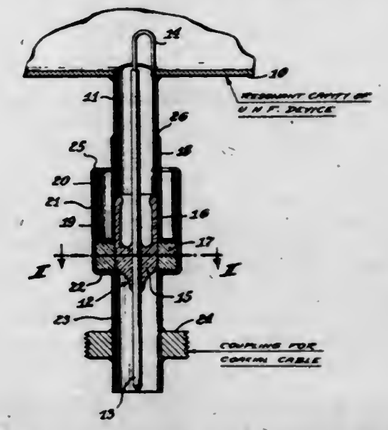
GAME

Elmer F. Rebholz, Chicago, Ill., assignor to James F. Barnes, as trustee

Application January 13, 1943, Serial No. 472,211

3 Claims. (Cl. 273—130)

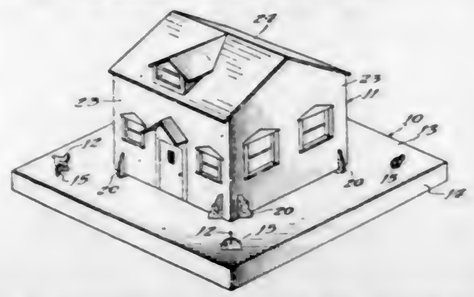
3. A game device of the character described comprising a casing having a pair of superposed, relatively movable plates spaced a slight distance apart, each of said plates being provided with a plurality of rows of spaced-apart aligned apertures through which game members of two different sizes may be passed, elastic means for normally maintaining one of said plates in such a position with respect to the other plate that the apertures in said plates are out of alignment with respect to each other so that game members received by the apertures in the upper plate are supported by the lower plate, said one plate being movable to a position where the apertures in said plates are in alignment and the game members drop through said apertures, and means within the casing for separating the game members of different sizes and delivering the members of one size at one side of the casing and delivering the members of the other size at the other side of the casing.



2,408,271

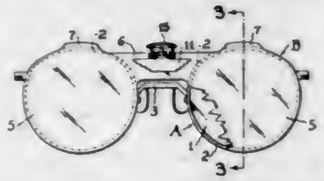
COAXIAL TERMINAL ASSEMBLY

William W. Rigrod, Bloomfield, and David Gordon Clifford, Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania



Application August 12, 1942, Serial No. 454,615

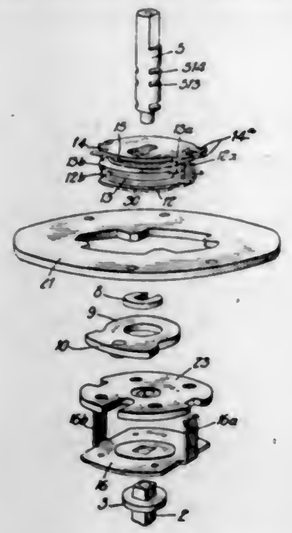
7 Claims. (Cl. 178—44)



1. A coaxial terminal assembly comprising a dielectric means, tubular coaxial line portions approaching the dielectric means at opposite ends, a central rod through the dielectric means axially disposed with respect to both said coaxial line portions, said dielectric means having one part thereof sealing one of the coaxial line portions and having a part of greater diameter than said one part, and conductive means overlying said dielectric means and connecting said tubular coaxial line portions, said dielectric means with said overlying conductive means and portion of rod therein having a surge impedance substantially equal to the surge impedance of the coaxial line portion adjacent said dielectric means.

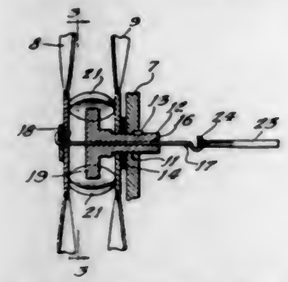
2,408,272
STRUCTURAL TOY
Earl M. Roach, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a corporation of Illinois
Application March 5, 1945, Serial No. 580,997
5 Claims. (Cl. 46—30)

1. In a structural toy, a sheet material base panel and a sheet material toy component comprising two faces in side-edgewise meeting angular relationship to each other constructed and arranged to be supported in upright position on said panel, said toy element faces being each formed with a slot opening to their lower marginal edges adjacent their convergent side edges and said base panel comprising a tab in hinged engagement therewith and elevatable from the plane thereof for projection within an adjacent pair of said slots at an oblique intersecting angle to said faces.



2,408,273
SUNSHADE AND OTHER AUXILIARY SPECTACLES
Robert H. Sager, University Heights, Ohio
Application January 5, 1944, Serial No. 517,014
10 Claims. (Cl. 88—41)

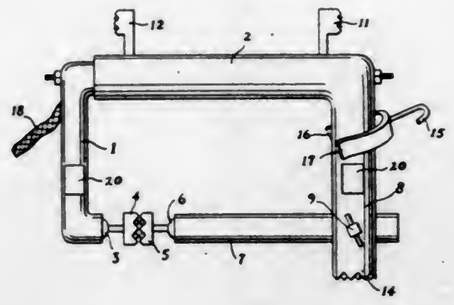
1. In a device of the character described, a pair of lenses, a bridge connecting said lenses, said bridge having a recess in its upper edge, said recess having side walls, a shaft disposed in said recess and retained against axial displacement by said side walls, and clamping means pivotally mounted on said shaft, said clamping means adapted for securing said device to a pair of primary spectacles.



2,408,274
SPRING MOUNTING AND ASSEMBLY FOR SNAP-ACTION ELECTRIC SWITCHES
Harold E. Schleicher, West Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application April 12, 1943, Serial No. 482,750
10 Claims. (Cl. 74—84)

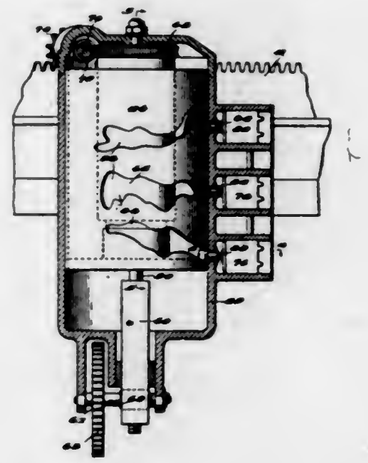
1. In an electric snap switch, a rotary driven element comprising a plate with parallel diametrically opposite arms extending parallel to the axis of rotation of said plate, driving means separately rotatable about said plate axis and comprising a spindle, a pair of spiralled springs wound around the spindle, a plate rotating with the spindle and having parallel diametrically opposed arms, the ends of one spring being extended radially to engage opposite sides of one driving and one driven arm, the ends of the other

spring being radially extended to engage opposite sides of the other driving and the other driven arms.



2,408,275
TOY FLYING MACHINE
Harvey E. Shaeffer, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a corporation of Illinois
Application February 19, 1945, Serial No. 578,581
1 Claim. (Cl. 46—78)

In a toy flying machine, a fuselage, an idler wheel mounting secured to said fuselage, a plurality of friction idler wheels journaled upon and having their axes radially disposed about the axis of said idler wheel mounting, a driving shaft journaled in said idler wheel mounting, a front propeller secured on the outer end of said driving shaft for driving engagement with said friction idler wheels, a rear propeller journaled on said idler wheel mounting to be driven in a reverse direction by said friction idler wheels, and a resilient band having its one end secured to the inner end of said driving shaft and its other end secured to said fuselage, said resilient band serving to rotate the driving shaft and to draw the latter rearwardly to maintain the front and rear propellers in operative frictional driving engagement against diametrically opposed sides of said friction idler wheels.



2,408,276
ELECTRICAL GROUND CLAMP
Chalmon John Shrader, Henrico County, Va.
Application March 31, 1943, Serial No. 481,367
3 Claims. (Cl. 173—273)

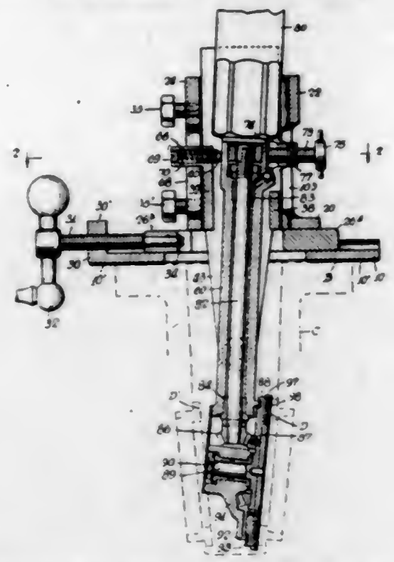
1. In an electrical connector, a tubular member having a slot through its side wall longitudinally of said member, a hollow elongated member, a contact mounted on said member and extending through said slot, a tension spring within said hollow member having its ends secured to said members slidably fitting within said tubular member, each of said members having an arm rigidly extending laterally from the free end

thereof, a first gripping element mounted upon the free end of one arm, a rod connected with the free end of the other arm for adjustment toward and from said element, means for securing said rod and its arm in adjusted position, and a second gripping element mounted upon the end of said rod adjacent said first element.

2,408,277
GUN CONTROL DEVICE
John E. Soenke, Baltimore, Md., assignor to The Glenn L. Martin Company, Baltimore, Md.
Application August 19, 1941, Serial No. 407,395
8 Claims. (Cl. 89—27)

1. In a device of the class described including a turret; guns mounted to turn about a first axis in said turret which is mounted to turn about a second axis, an electric firing control circuit for said guns, motor means and an electric circuit control means therefor to move said guns about said axes, a housing, an apertured drum mounted in said housing for turning and sliding movement therein, means for sliding said drum along its axis in said housing in accordance with movements of the guns about said first axis and for turning said drum in said housing in accordance with movements of the turret about said second axis, said drum having a plurality of cut-out portions in the surface thereof, a plurality of switches mounted on the housing corresponding to the number of cut-out portions, switch actuating means extending through said housing and normally engaging the surface of said drum, said switch actuating means arranged to operate said switches when said switch actuating means register with said cut-out portions, one of said switches connected to control the firing circuits of each gun and one of said switches and cut-out portions constructed and arranged to actuate the motor control circuit of the elevating motor to raise the guns whenever the switch registers with said cut-out portion.

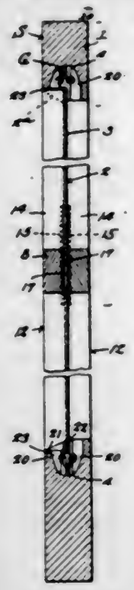
2,408,278
PROCESS OF METAL RECOVERY
Philip T. Stroup and Charles B. Willmore, New Kensington, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 30, 1945, Serial No. 585,816
6 Claims. (Cl. 75—67)



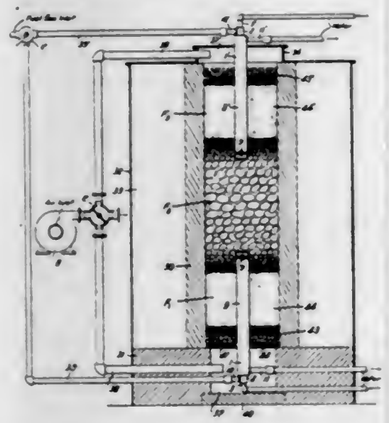
1. In a process of metal recovery in which a gas-vapor mixture containing carbon monoxide and a vapor of a metal miscible with molten aluminum is contacted with a molten aluminum body and vapor of said miscible metal absorbed in said body, the improvement consisting in providing said aluminum body with a content of beryllium and manganese, the amount of said beryllium being about 0.005 to 0.5 per cent by weight of said body and the amount of said manganese being about 0.1 to 1 per cent by weight of said body.

2,408,279
CLASP FOR WATCH BRACELETS OR THE LIKE
Louis E. Valcourt, East Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a corporation of Rhode Island
Application January 3, 1944, Serial No. 516,765
8 Claims. (Cl. 24—71)

4. A clasp or connector for wrist-watch bracelets comprising a base member, an intermediate member and a cover member, said members being hingedly connected to adapt them to be folded into overlying nested relationship, an extension member slidable in the base member, resilient means for contracting the extension member within the base member while permitting it to be extended therefrom, a latching ledge on the cover member, a latching element slidable in the base member and provided with means engageable with the latching ledge to lock the foldable members in closed relationship, means on the extension member engageable with the latching element when said extension member is contracted into the base member to move the latching element in one direction to engage it with the latching ledge and means on the extension member for engaging the latching element when said extension member is extended from the base member to move said latching element in the opposite direction to release said latching element from the ledge to unlock the clasp members to permit them to be unfolded.



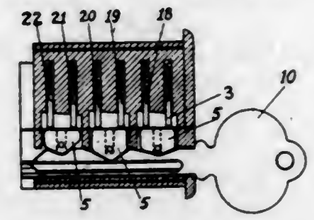
2,408,280
APPARATUS FOR REFACING GATE VALVES
Philip E. Wilcox, New York, N. Y., assignor to The Leavitt Machine Company, Orange, Mass., a corporation of Massachusetts
Application December 1, 1944, Serial No. 566,167
11 Claims. (Cl. 51—241)



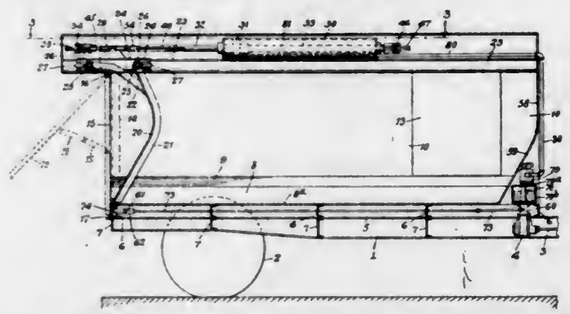
1. Mechanism for facing off the inclined seats of a gate valve without requiring the removal of the valve, said mechanism comprising a bedplate having an opening therethrough and adapted to be seated on the upper face of the open valve casing, a main frame and means for mounting it on and for sliding adjustment relatively to the bedplate, said means comprising a guideway on the bedplate and a slide frame received therewithin, means for mounting the main frame on the slide frame for adjustment therealong, a hanger supported by and for vertical adjustment relatively to the main frame said hanger extending below the bedplate into adjacency to the valve seats when the bedplate is seated on the valve casing and a cutter carrying member pivoted to the lower end of said hanger for angular adjustment about a horizontal axis located below the bedplate and adjacent the valve seats to bring the cutter into parallelism with the valve seat to be faced off, said cutter carrying member extending above the base plate and means above the base plate for angularly adjusting the cutter carrying member, said means for mounting the main frame on the slide frame comprising interengaging elements spaced 180° apart in a horizontal plane, for locating the main frame on the slide frame so that the main frame can be lifted vertically from the slide frame to disengage said elements, said elements being duplications of each other whereby when the main frame is lifted from off the slide frame and turned 180° about a vertical axis it can be reseated upon the slide frame with the cutter in parallelism to the other valve seat.

2,408,281
WINDOW SASH
James Gerow Wilkin, New Hurley, N. Y.
Application June 14, 1944, Serial No. 540,352
4 Claims. (Cl. 20—56.3)

1. A window sash comprising a frame, a pane carried by the frame, said frame having cut-out portions formed in the inner edges thereof, providing seats, a mullion including rails, fingers formed at the ends of the rails and adapted to be fitted within the seats, and members mounted within the seats adapted to grip the fingers positioned within the seats, holding the fingers and mullion against displacement.



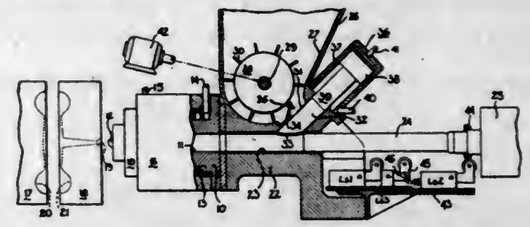
2,408,282
FUEL DISTRIBUTION SYSTEM FOR HIGH-TEMPERATURE PEBBLE BED FURNACES
Frank M. Wolf, Madison, Wis., assignor to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin
Application July 11, 1944, Serial No. 544,446
6 Claims. (Cl. 23—277)



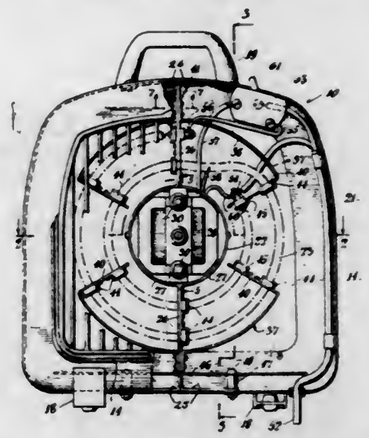
1. A furnace of the "pebble bed" type comprising a tubular shaft, a supporting grating, a stratified series of transverse beds of refractory filling, said series including a centrally disposed bed of relatively large refractory objects and beds immediately above and below the said centrally disposed bed of relatively small refractory objects, said shaft and filling being so constructed and arranged as to provide open spaces above said filling and below said grate, reversible means for alternately directing gases to traverse said shaft into said spaces, reversible means arranged to alternately feed fluid fuel to the top and bottom of said centrally disposed bed, and fuel feeding means in said furnace comprising a fuel conduit extending from one of said open spaces to said central bed, a plurality of laterally extending nozzles communicating with said tubular conduit, a fluid coolant jacket surrounding said fuel conduit, and outlet means for said coolant arranged for extension to the exterior of the furnace.

2,408,283
LOCK
Morey E. Wollin, Brookline, Mass.
Application December 27, 1944, Serial No. 569,981
7 Claims. (Cl. 70—419)

1. In a lock of the type described, a barrel, a core fitted to turn in the barrel, said barrel having a plurality of freely movable pins engaging said core, said core being slotted longitudinally thereof, for engagement of said pins, plate elements positioned in the slots of said core and abutting on one end, the ends of said pins, the other end of said plate elements positioned in a keyway in said core and adapted to be engaged by the key entering the lock.



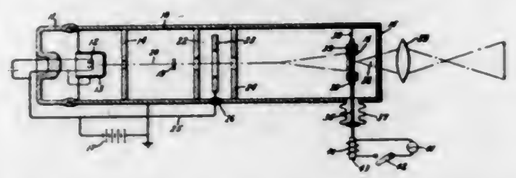
2,408,284
REFUSE BODY
William C. Anthony, Streator, Ill., assignor to Anthony Company, Streator, Ill., a corporation of Illinois
Application December 16, 1944, Serial No. 568,534
22 Claims. (Cl. 214—67)



1. In combination in a refuse body, means defining a refuse receiving container, said container being closed except along a restricted longitudinally disposed area at its top and at its rear, unitary means for packing material in said body and for discharging it therefrom, said means including a blade whose area and shape are substantially those of the cross section of the interior of said body and means for wholly supporting and for moving said blade back and forth within the body throughout substantially the entire length thereof, said means being located wholly outside of the body.

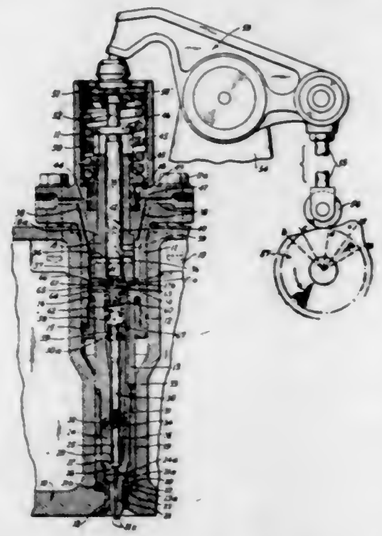
2,408,285
FEEDING DEVICE FOR INJECTION OR EXTRUSION MACHINES
Bernard D. Ashbaugh, Mount Gilead, Ohio, assignor to The Hydraulic Development Corp., Inc., Wilmington, Del., a corporation of Delaware
Application July 15, 1943, Serial No. 494,765
5 Claims. (Cl. 18—30)

1. In an injection molding device for feeding flock material, a feed hopper for receiving flock material, said hopper having a rounded base portion and an opening adjacent said base portion, an auxiliary feed means including a chamber positioned tangentially to said rounded base portion and communicating with said hopper through said opening, feed wheel means positioned in the bottom of said hopper and having vane means extending closely adjacent to said rounded base portion and adjacent the opening, means for rotating said feed wheel means, a scraper adjacent said opening positioned to remove material from said feed wheel and deposit the same in said opening, piston means reciprocating in said auxiliary feed chamber, means for operating said piston, said chamber having an exit opening communicating with the injection molding device, said piston being reciprocable in said chamber on a line substantially tangent to said rounded base portion.



2,408,286
COMBINED ELECTRIC HEATER AND AIR CIRCULATOR
John M. Aufiero, Plandome, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a corporation of New York
Application December 14, 1945, Serial No. 635,060
7 Claims. (Cl. 219—39)

1. A combination electric fan and heater, comprising a casing having mating front and rear sections disposed in edge to edge relationship substantially centrally of the casing, each of said casing sections having an enlarged wall opening; grille means including relatively closely spaced elements secured to said casing sections over said openings to permit air flow through the casing while guarding against the introduction of foreign objects thereinto; a motor and heat coil support structure extending transversely within said casing and having end members extending from one to the other of said mating casing sections and secured thereto to unite said sections; a motor and therewith associated fan supported by said structure; a plurality of rigid arcuate elements fixed to said support structure and defining an interrupted circle substantially concentric with the motor, said arcuate elements having branches extending radially; a plurality of axially extending blocks of insulation material fixed to said branches; and a heat coil supported in said blocks and arranged in a substantially helical course intermediate said support structure and said fan; said support structure being so dis-

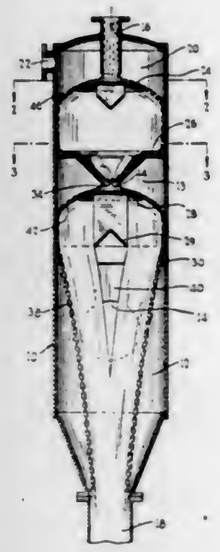


posed within said casing as to locate the center of gravity of the motor and heat coil assembly in substantially the vertical center plate of the casing.

2,408,287
ELECTRON MICROSCOPE
Charles H. Bachman, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application February 1, 1944, Serial No. 520,610
5 Claims. (Cl. 250—49.5)

3. An electron microscope system comprising an evacuated container having a transparent wall, a fluorescent screen supported within said container in front of said wall, means for projecting an electron beam upon said screen, means for supporting an object to be examined in the path of said beam whereby said beam produces an enlarged image of said object upon said screen, means external of said container for producing optical enlargement of the image on said screen, and means for vibrating said screen in a plane substantially transverse to said beam to reduce blurring of said enlarged image due to non-uniform distribution of fluorescent particles on said screen.

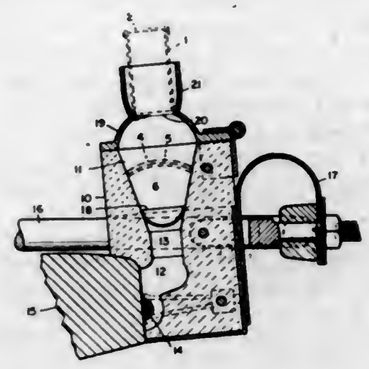
2,408,288
FUEL INJECTION APPARATUS
Albert T. Bremser, Sidney, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application November 13, 1942, Serial No. 465,448
17 Claims. (Cl. 103—41)



1. In fuel injection apparatus of the class described, pump means comprising a casing, a cylinder in said casing and a reciprocating plunger in said cylinder, said cylinder having port means controlled by said plunger and connecting the interior of the cylinder with an annular space between said casing and cylinder, said space having an inlet and an outlet independent of said ports whereby fuel may be circulated therethrough irrespective of the position of said plunger and said space being the sole connection between said inlet and outlet when said port means are closed by the plunger.

2,408,289
BARBITURIC ACID COMPOSITIONS
Milton T. Bush, Nashville, Tenn., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Application July 17, 1942, Serial No. 451,311
4 Claims. (Cl. 167—52)

1. A hypnotic composition for intramuscular injection comprising a solution of a barbituric acid in paraldehyde.

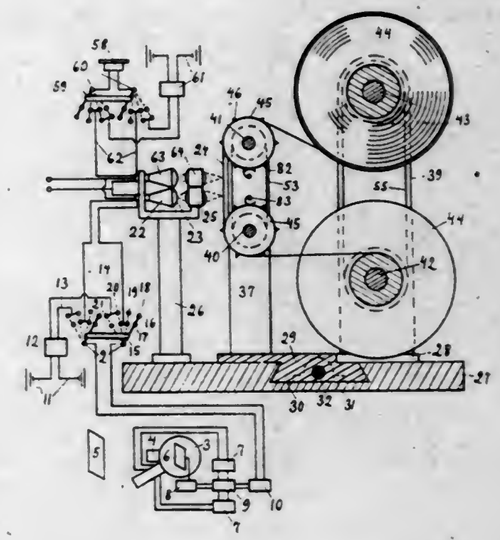


2,408,290
COUNTERCURRENT CONDENSER
Henry E. Byer, Bernardsville, N. J.
Application November 24, 1943, Serial No. 511,534
6 Claims. (Cl. 261—111)

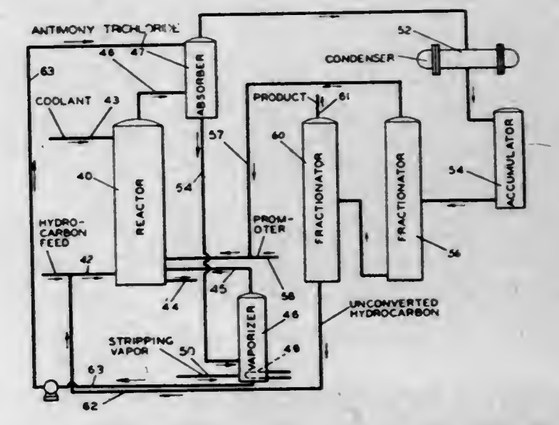
1. In a counter-current condenser, a leader for conducting water inwardly from the walls of the condenser and discharging it in a substantially unbroken stream at the center of a condenser which comprises an annular substantially horizontal ledge contacting with the walls of the condenser and adapted to turn the water inward, a plurality of spaced fingers extending inwardly and downwardly from said annular ledge and terminating in a substantially circular opening near the center of the condenser, with the spaces between said fingers being larger where the fingers meet said annular wall.

2,408,291
WELDING MATERIAL AND PROCESS
Charles A. Cadwell, Cleveland, Ohio, assignor to The Electric Railway Improvement Company, Cleveland, Ohio, a corporation of Ohio
Application February 3, 1944, Serial No. 520,896
14 Claims. (Cl. 75—27)

14. In a method of producing highly heated molten metal for use in welding, the steps which comprise inducing an exothermic reaction between copper oxide and aluminum, the amount of such aluminum being insufficient to reduce all such oxide, and including an agent taken from the group consisting of manganese, manganese boride, silicon, silicon carbide and zirconium, the amount of such agent being slightly in excess of that required to complete such reduction.



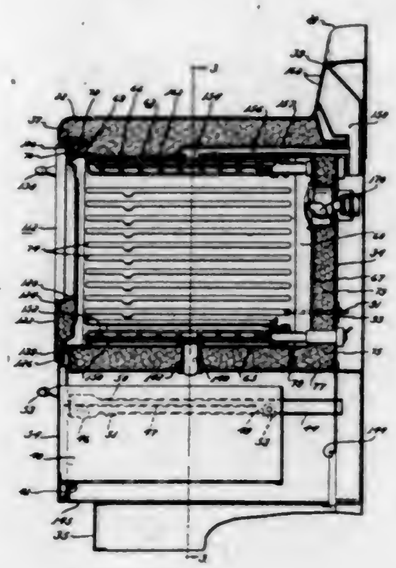
2,408,292
ROOFING
Victor Anthony Cardarelli, Sr., Boston, Mass.
Application April 18, 1945, Serial No. 589,062
2 Claims. (Cl. 108—13)



1. A roofing plate having spaced rounded fastener-receiving nodes extended upwardly from points adjacent to one edge thereof, a solid fastener-receiving material filling said nodes, and spaced rounded fastener-receiving nodes extended upwardly from the plate at points adjacent to the opposite edge thereof, the last-named nodes being proportioned and positioned to receive nodes corresponding with the first-named nodes when two plates of like construction are assembled.

2,408,293
TELEVISION SYSTEM
Alan M. Carmel, Forest Hills, N. Y.
Application October 14, 1944, Serial No. 558,630
2 Claims. (Cl. 242—55)

2. A device for use in a television method comprising the recording of television signals, said device comprising a film sufficiently broad for several rows of signals, a drum having a cylindrical surface contacted by one side of said film, a plurality of conductors carried by said drum on said contacted surface, a conductive layer carried by said film on said contacting side and extending over a portion of the length of said film, said layer having two different parts connecting temporarily some of said conductors, one of said parts connecting conductors which are not connected by the other part, means to rotate said drum and to move said film in contact with said drum, means to brake said movement, means to shift said film across the moving direction, means to reverse said moving direction, electrical circuits controlling said braking means and comprising some of said conductors, and electric circuits controlling said shifting and reversing and comprising others of said conductors.

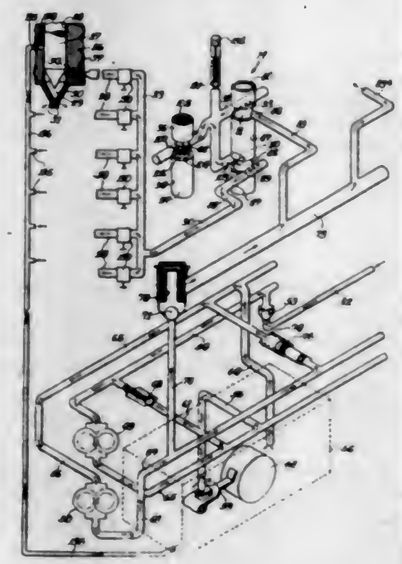


2,408,294
CATALYTIC CONVERSION OF HYDROCARBONS
Samuel C. Carney, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application November 13, 1943, Serial No. 510,179
9 Claims. (Cl. 260—683.5)

1. A process for the conversion of hydrocarbons in a reaction catalyzed by aluminum chloride which comprises contacting the hydrocarbon with aluminum chloride in a reaction zone under conditions such that the desired reaction is effected, passing vaporous effluent from the reaction zone containing hydrocarbon vapors and aluminum chloride vapors into contact with liquid antimony trichloride effecting separation of aluminum chloride vapors from the hydrocarbon vapors by solution in liquid antimony trichloride, subsequently liberating aluminum chloride vapors from liquid antimony trichloride, and returning the aluminum chloride to the reaction zone as catalyst.

2,408,295
RANGE APPARATUS
Hursle E. Cossin, Detroit, Mich., assignor to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland
Application August 10, 1942, Serial No. 454,261
1 Claim. (Cl. 219—35)

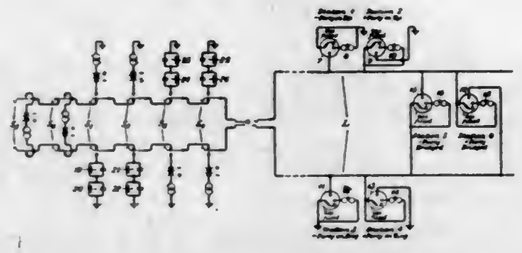
In a range having an inner and an outer casing with heat insulation therebetween, said inner casing having side, top and bottom walls for forming an oven chamber, said inner casing forming an access opening to said chamber, a movable door for closing said opening, sealing means for sealing said door to said casings about said access opening, said oven bottom wall having an air intake passage disposed centrally thereof, an electrical heating element positioned over said passage and supported adjacent the bottom wall of said oven, a baffle positioned directly over said heating element and sloping upwardly toward the side walls of the oven chamber, said heating element and baffle being centered over said inlet passage so that a distribution of heated air is directed toward and upwardly along the face of said door and side walls, said oven top wall being provided with a vent outlet disposed in the central area thereof and a horizontally disposed heating element suspended from said oven top wall and coextensive with the major portion of the central area of the top wall.



2,408,296
PROCESS OF RECLAIMING RUBBER
Frank Harriss Cotton, East Barnet, and Percy Albert Gibbons, London, England; said Gibbons assignor to said Cotton
No Drawing. Application August 13, 1943, Serial No. 498,576. In Great Britain July 3, 1942
8 Claims. (Cl. 260—720)

1. A process of reclaiming rubber from vulcanized rubber scrap, which comprises subjecting a quantity of pieces of scrap material in substantially dry form to intense mechanical action in a heated internal mixer, in the presence of oxygen amounting to a fraction of one per cent by weight of the scrap material, for a period of from about ten minutes to about thirty minutes until the temperature of the mass rises, as a result of such action, to a peak of between about 190° C. to about 250° C.; discharging the rubber; and quenching the same at about the same moment to cool and protect it against rapid oxidation.

2,408,297
BITUMINOUS COMPOSITIONS
Richard H. Cubberley, Ridgewood, and Frank W. Yeager, Englewood, N. J., assignors to The Patent and Licensing Corporation, New York, N. Y., a corporation of Massachusetts
No Drawing. Application May 11, 1944, Serial No. 535,194
2 Claims. (Cl. 260—28)

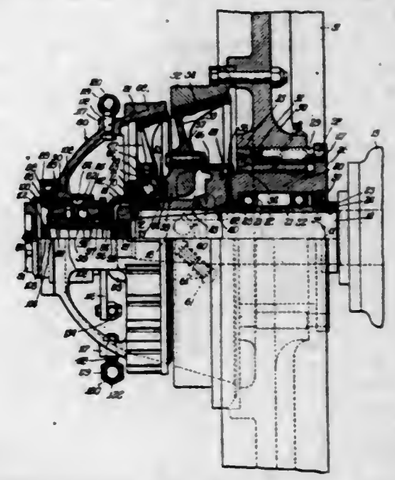


1. An adhesive, waterproof composition characterized by its high fluidity at a temperature as low as 20° F. above its softening point, heat stability at temperatures as high as about 10° F. below its softening point, chemical inertness, non-corrosiveness, and flexibility at temperatures as low as about 0° F., said composition comprising 73 to 95% of a normally solid asphalt, 2 to 15% of cetyl acetamide wax, and 3 to 12% of a polyisobutlyene having a molecular weight within the range of approximately 500–2500.

2,408,298
FUEL FEEDING AND INJECTION APPARATUS FOR OIL-BURNING ENGINES
Clessie L. Cummins, Columbus, Ind., assignor to Cummins Engine Company, Inc., Columbus, Ind., a corporation of Indiana
Application April 26, 1943, Serial No. 484,562
2 Claims. (Cl. 123—139)

1. In a multi-cylinder, oil burning engine, a plurality of injectors, one for each cylinder and each comprising a body having a fuel inlet port and a reciprocable plunger therein adapted when moved in one direction to leave a chamber in said body communicating with the associated cylinder and to open the inlet port, said chamber being adapted for mixing fuel and air, means for operating said injector plungers in predetermined order so that but one inlet port is opened at a time, a fuel line common to all of said ports, a fuel pump for delivering a controlled quantity of fuel to said line each time an inlet port is open and thereby forcing a like quantity of fuel from said line through said port to the associated chamber, said fuel pump acting to so deliver fuel to each chamber in timed relation to movement of the piston in the associated cylinder that the piston thereafter forces air into the chamber to mix with the fuel therein, the plunger being timed to move thereafter in the opposite direction to close the port and to discharge the mixture of fuel and air from the chamber into the cylinder.

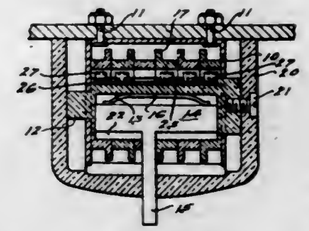
2,408,299
SELECTIVE SIGNALING SYSTEM
Rowland Fenner Davis, Tuckahoe, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application November 18, 1944, Serial No. 564,127
4 Claims. (Cl. 179—86)



3. A line having a plurality of signal responsive devices connected thereto, two of said devices being oppositely poled with respect to each other and connected between one side of said line and ground, another two of said devices being oppositely poled with respect to each other and connected between the other side of said line and ground, another two of said devices being oppositely poled with respect to each other and bridged across said line, switching mechanism for connecting positive or negative pulsating current between one side of said line and ground to selectively operate either of the signal responsive devices connected to said side of the line, circuits anti-resonant at the frequency of the pulsating current and harmonics thereof, and means controlled by said switching means for connecting said anti-resonant circuits between the other side of the line and ground to prevent the pulsating current or harmonics thereof from operating said devices bridged across said line.

2,408,300
HYDROLYSIS OF ALIPHATIC SULPHONYL CHLORIDES
Thomas Edward Dillon, New Castle, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 30, 1945, Serial No. 625,685
5 Claims. (Cl. 260—513)

1. In the process of hydrolyzing an aliphatic sulphonyl chloride by reacting upon the same with aqueous caustic alkali, the improvement which consists in effecting the reaction in the presence of an organic nitrogenous base.

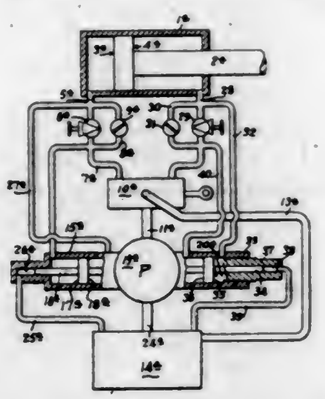


2,408,301
CLUTCH
Clarence M. Eason, Waukesha, Wis.
Application January 22, 1943, Serial No. 473,208
33 Claims. (Cl. 192—36)

1. In clutch mechanism, the combination of a driving member, a rotatable driven member, a self-energizing axially shiftable clutch spring-biased to engage by shifting movement in one direction, and control apparatus for said clutch comprising a servo action axially shiftable brake spring-biased to engage by shifting movement in the other direction, the spring biasing force of

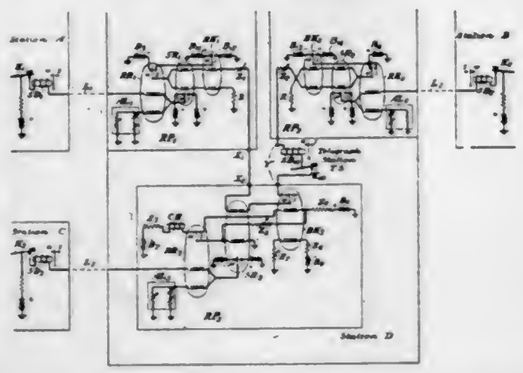
said brake being operative to overcome the spring biasing force of said clutch.

2,408,302
RECORDING DEVICE FOR AUTOMOBILES
Erik E. Eriksson, Base Line, Mich.
Application August 1, 1945, Serial No. 608,123
3 Claims. (Cl. 40—68)



1. A recording device of the class described comprising, in combination, a housing having therein a bracket, a slotted shaft non-rotatably mounted in said bracket, a plurality of wheels rotatably mounted on said shaft having central openings therein, indicia on the outer periphery of said wheels and a plurality of notches on the periphery of said central wheel openings, ratchet means seated in said shaft and permanently engaging said notches on the periphery of said central wheel openings, and a locking member seated within said slotted shaft, opposed to said ratchet means, adapted to engage said central opening notches and lock the wheels against rotation.

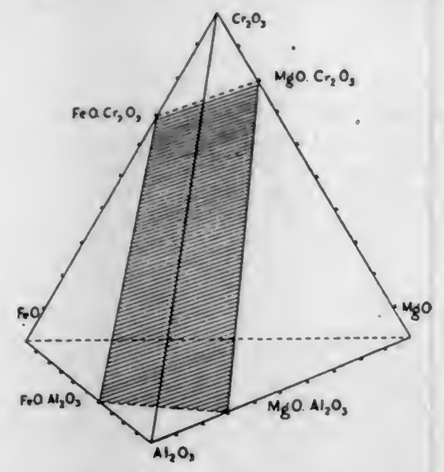
2,408,303
CONTROL SYSTEM
Walter Ernst, Mount Gilead, Ohio, assignor to The Hydraulic Development Corporation, Inc., Wilmington, Del., a corporation of Delaware
Application May 10, 1943, Serial No. 486,283
4 Claims. (Cl. 60—52)



4. In a hydraulic system, in combination with a fluid source of variable delivery, a reversible fluid motor having a first and a second port, first and second flow restricting means connecting said source with said first and second ports respectively and each operable to establish a predetermined pressure difference between its inlet and outlet in response to fluid flow toward the associated port but to permit free flow from the said port, yielding means continuously urging said source toward maximum delivery position, and first and second flow controlling means con-

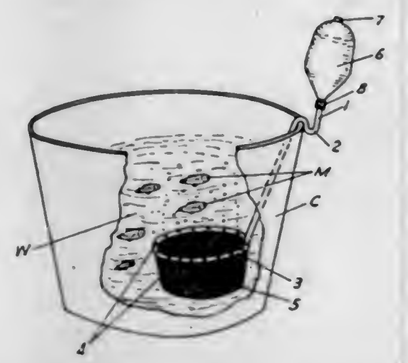
nected to vary the delivery of said source and each comprising oppositely effective fluid operable

means connected respectively with the inlet and the outlet of one of said flow restricting means.



2,408,304
TELEGRAPH REPEATER SYSTEM
Frank Homer Fay, Huguenot Park, N. Y., and Elmer William Reeve, Plainfield, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application October 22, 1943, Serial No. 507,230
5 Claims. (Cl. 178—73)

1. In a telegraph repeating system for repeating signals from any one of three lines to the other lines simultaneously, the combination of two repeaters each having a line terminal and a loop terminal, a third repeater having a line terminal, a first relay and a second relay constituting the loop of said third repeater, the line terminal of each repeater being connected to one of said lines, the loop terminals of said two repeaters being connected in series with each other in a series circuit which includes the winding of the first relay of said third repeater and the armature and contact of the second relay of said third repeater, and means whereby said third repeater will send oppositely poled currents over the line associated with said third repeater to repeat signals thereto from either of the other repeaters.

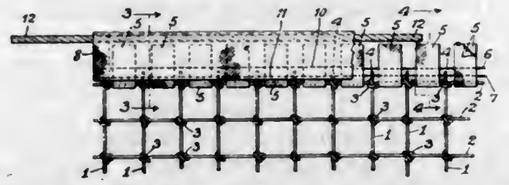


2,408,305
CAST REFRACTORY PRODUCT
Theodore Estes Field, Louisville, Ky., assignor to Corhart Refractories Company, Louisville, Ky., a corporation of Delaware
Application August 1, 1944, Serial No. 547,565
6 Claims. (Cl. 106—59)

1. A heat cast refractory composed principally of Cr_2O_3, FeO, Al_2O_3 and MgO in which the moles of Cr_2O_3 plus Al_2O_3 lie between 80% and 120% of the moles of FeO plus MgO and in which the FeO is not less than 8%, the MgO not less than

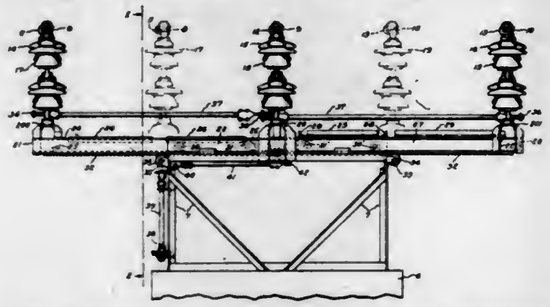
1.5%, the Cr_2O_3 not less than 11% and the Al_2O_3 not over 50% by weight by chemical analysis and in which the ratio of the mols of MgO to the mols of FeO lies between 0.1 and 4.

2,408,306
AERATOR
Algernon F. Flournoy, Shreveport, La.
Application April 29, 1944, Serial No. 533,368
5 Claims. (Cl. 43—57)



1. A device of class described comprising a minnow net supporting frame fashioned out of a perforated portion of a hollow tube, a handle member extending from the frame consisting in an extension of a non-perforated portion of said tube, and a collapsible bulb mounted on said handle member, said bulb being adapted to expel air through said minnow net supporting frame.

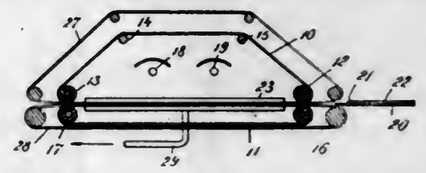
2,408,307
INSECTICIDE
Samuel I. Gertler and Herbert L. J. Haller, Washington, D. C., assignors to The United States of America as represented by the Secretary of Agriculture and his successors in office
No Drawing. Original application December 7, 1943, Serial No. 513,220. Divided and this application September 27, 1945, Serial No. 619,012
2 Claims. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An insecticidal dust composition comprising acetophenone semicarbazone in the form of an impalpable powder admixed with a solid diluent.

2,408,308
METHOD OF MAKING NET
Murray G. Grabowsky, Chicago, Ill., assignor to R. J. Ederer Company, Chicago, Ill., a corporation of Illinois
Original application May 24, 1943, Serial No. 488,176, now Patent No. 2,357,890, dated September 12, 1944. Divided and this application May 18, 1944, Serial No. 536,094
11 Claims. (Cl. 28—77)

1. The method of forming a fabric article which includes the following steps: preparing the desired amount of large mesh material, inserting tabs of finer mesh fabric through the meshes of said first-mentioned material along its edge, folding said tabs of material upon themselves, forming stitches through said tabs at points positioned away from said edge of said fabric, positioning a strip of reinforcing material over said tabs with the edge of said reinforcing material overlapping said tabs and positioned outwardly from the edge of said fabric, and forming stitches through said reinforcing material and through said tabs.



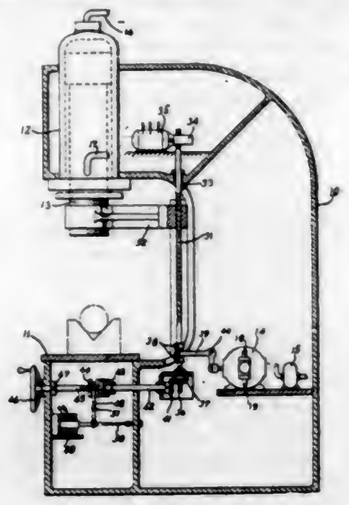
2,408,309
PORTABLE MOUNTING FOR ELECTRIC SWITCHES
Howard R. Harrison, Upper Darby, Pa., assignor to General Electric Company, a corporation of New York
Application April 24, 1944, Serial No. 532,431
12 Claims. (Cl. 200—168)

1. In a portable switch mounting wherein a transporting device is provided with a framework extending athwart the device in a direction substantially perpendicular to the direction of movement thereof; a switch, means supporting said switch on said framework for bodily movement thereon athwart the device between an extended position a substantial distance beyond one side of the device for electric current conducting purposes and a portable position closer to the side of the device for transportation clearance purposes, and means adapted to be operated to effect said bodily movement of the switch.

2,408,310
MECHANISM FOR CONTACT PRINTING
Gerald L. Hassler, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application January 4, 1944, Serial No. 516,910
6 Claims. (Cl. 95—73)

1. Mechanism for contact printing including in combination, a rotary printing device including wheels rotatable about a common axis, a printing light, a rim for each said wheel adapted to guide an original and sensitized printing material at its edges only during a continuous printing operation, chambers within said wheels and connections to a source of vacuum, sealing strips, one for each rim, rotatable with the wheels and

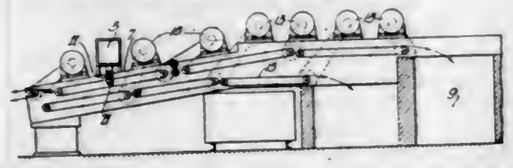
means including a plurality of rollers for guiding said sealing strips, connecting passages from the vacuum chambers in said wheels to the edges of the original and material to be printed, including radially disposed openings leading to an annular space, said annular space being filled with porous material.



2,408,311
REMOVAL OF SULPHUR IN RECOVERY OF NICKEL
Robert C. Hills and Maurice F. Dufour, New York, N. Y., assignors to Nicaro Nickel Company, New York, N. Y., a corporation of Delaware
No Drawing. Application February 16, 1943, Serial No. 476,063
7 Claims. (Cl. 23—61)

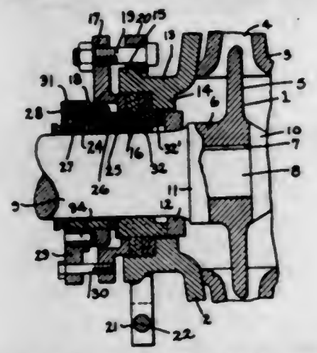
1. In a process for obtaining precipitated nickel compounds in a condition substantially free of sulphur impurities from ammonium carbonate leach liquors containing nickel compounds dissolved therein and sulphur impurities, a substantial amount of the sulphur of which unites with the nickel in a water-insoluble form on expelling ammonia from the solution, the steps which comprise adding to said product leach liquor a soluble alkali metal compound, heating the resulting mixture until the nickel content is precipitated and separating substantially sulphur free nickel compounds thus precipitated from the solution containing sulphur impurities.

2,408,312
PRESS CONTROL
Leslie S. Hubbert, Mount Gilead, Ohio, assignor to The Hydraulic Development Corporation, Inc., Wilmington, Del., a corporation of Delaware
Application November 5, 1943, Serial No. 509,041
3 Claims. (Cl. 60—52)



1. In a hydraulic press, a press platen, fluid motor means for reciprocating said platen, a source of pressure fluid, means forming a hydraulic circuit connecting said source with said motor and including control means for varying the rate of fluid flow, a rod threadedly engaging said platen for movement therewith and including means operatively connected with said control means, a reversible electric motor slidably keyed to one end of said rod selectively operable for rotating the said rod in either direction, manual means slidably keyed to the opposite end of said rod extending to the operator's position and operable to rotate said rod in either direction, normally open switch means selectively operable to energize said motor to operate in either direction, electrically actuated clutch means between said rod and said manual means operable when energized to disengage said manual means from said rod, and contactor means connected

to be energized by said switch means and having contactor blades in circuit with said motor

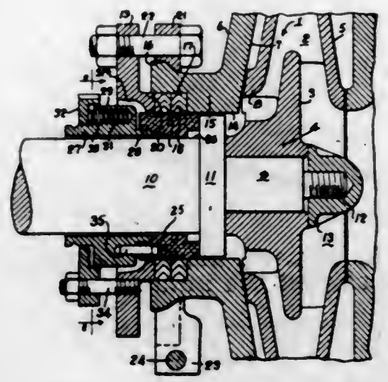


and said clutch means for positively deenergizing said clutch means simultaneously with the energization of said motor.

2,408,313
PHOTOELECTRIC COUNTER
Lyle R. Hunter, Clairton, and Oliver C. Levander, McKeesport, Pa.
Application September 5, 1942, Serial No. 457,480
5 Claims. (Cl. 250—41.5)

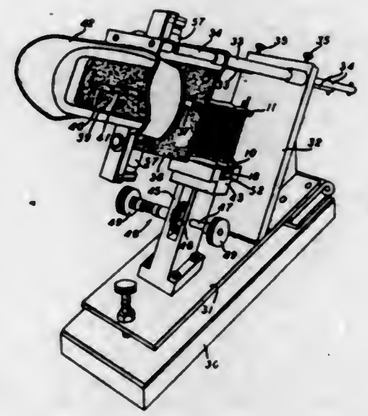
5. Mechanism for counting rapidly moving, closely spaced-apart metal sheet, which comprises the combination with a conveyor having the sheets to be counted traveling thereon, of a source of light positioned on one side of the conveyor and adapted to illuminate the sheets and spaces therebetween, a photoelectric cell mounted relative to the conveyor for receiving infinitesimally short flashes of light from the light source, the said infinitesimally short light flashes being the light passing through successive spaces between the rapidly moving sheets, the photoelectric cell being completely masked from the light source by passage of the sheets, first and second rectifying instrumentalities for rectifying alternating current, the first and second rectifying instrumentalities being free from mechanical and electrical inertia effects, the first rectifying instrumentalities being a rectifying circuit including a transformer and a triode rectifying tube having diode characteristics at any given instant for obtaining full wave rectification, the said circuit being adapted to deliver an unamplified unidirectional current, the second rectifying instrumentalities including a second triode rectifying circuit including a second transformer and a pair of triode thyratron-type tubes connected to sections of the said transformer and adapted to produce full wave rectification, a load adapted to be operated through a predetermined cycle by unamplified unidirectional current from the thyratron-type tubes, a potentiometer, the said first rectifying circuit being connected through the potentiometer and the photoelectric cell to a control grid of each of the thyratron-type tubes for impressing momentary unamplified unidirectional current to the said grid of each of the triode thyratron-type tubes for interrupting alternating current discharge between the remaining elements of the tubes responsively to momentary conductivity of the photoelectric cell during infinitesimally short intervals of time as light flashes between the sheets being counted to render conductive the photoelectric cell, thereby energizing the load during each flash responsively to the infinitesimally short interruptions to actuation of the thyratron-type tubes, the said tubes supplying unamplified rectified current to the counting means during relatively long periods of time during which the photoelectric cell is completely masked during passage of the sheets between the light source and the photoelectric cell, the said load performing a resetting operating during the periods of actuation of the thyratron-type tubes, and being actuated to perform the said predetermined cycle during the infinitesimally short interruptions of the thyratron-type tubes as the photoelectric cell becomes conductive responsive to light flashes between the sheets being counted, the thyratron-type tubes being connected in the circuit to be self-starting after each interruption and, being in parallel, the said thyratron-type tubes deliver a total current to the load which is the sum of the current outputs of the tubes, thereby producing extremely rapid actuation of the counting means.

2,408,314
SHAFT SEAL
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application October 4, 1943, Serial No. 504,824
3 Claims. (Cl. 286—7)



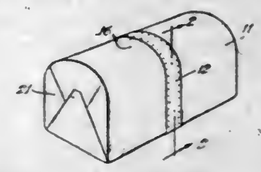
1. A seal for the shaft of a fluid pressure pump, said shaft being adapted to carry an impeller contained within a casing, a sealing collar on said shaft and secured thereto, a sealing ring adapted to surround the shaft and bear against the collar, means for applying pressure endwise to the sealing ring, said means comprising a retaining ring which surrounds said sealing ring and contains a plurality of compression springs arranged around the retaining ring and contained in compartments, and a retaining plate overlying said compartments to close the same.

2,408,315
SHAFT SEAL
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application October 4, 1943, Serial No. 504,825
2 Claims. (Cl. 286—7)



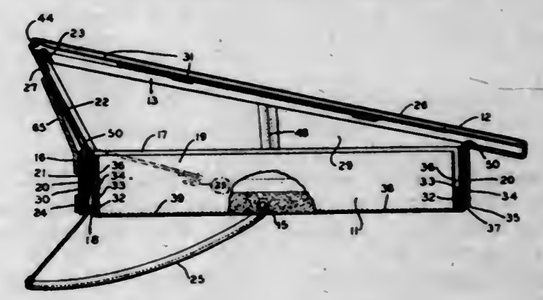
1. A seal for a high pressure fluid pump having a casing and a pump shaft, a collar on said

shaft, a sealing ring surrounding the shaft and abutting said collar, said sealing ring being provided with annular recesses at opposite edges thereof immediately adjacent the shaft thereby providing a reduced surface area abutting said collar at a point spaced from said shaft, means for applying longitudinal pressure to said sealing ring, and simultaneously preventing rotation of



said ring, said means including a plate loosely surrounding the shaft and adjustably secured to said casing, said plate having an annular projection which extends into the recess of the sealing ring at the end remote from the shaft collar in contact therewith to apply the longitudinal pressure to said sealing ring and a pin extending from said plate endwise into said sealing ring.

2,408,316
ADJUSTMENT FIXTURE
Vincent G. Jarman, Watchung, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 23, 1943, Serial No. 480,169
4 Claims. (Cl. 248—124)

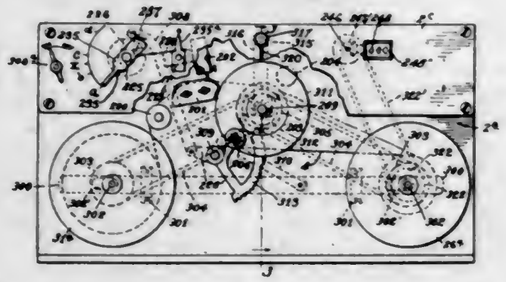


1. In an optical device for observing and holding articles to be adjusted and having an optical system for observing an article, a support base rigidly mounted beside and spaced from the optical axis of the system, a support carrier mounted in the support base to be adjustably traversable therein toward and from the optical axis at right angles thereto, and an article support mounted on the carrier to be rotatable thereon about the axis of motion thereof with respect to the support base.

2,408,317
BANDED BREAD LOAF PACKAGE
Ap Trevor Jones, Chicago, Ill., assignor to Interstate Bakeries Corporation, Kansas City, Mo., a corporation of Delaware
Application May 24, 1943, Serial No. 488,177
1 Claim. (Cl. 99—172)

A banded bread loaf package, comprising: a loaf of bread; a wrapper of flexible material enveloping said loaf, said wrapper having a potentially adhesive flowable coating on the exterior thereof adapted to be activated by heat and pressure, a pair of adjacent ends of the wrapper forming an overlapped seam area having said coating to which the heat and pressure have been applied; a band of flexible material which does not have adhesive or potentially adhesive properties encircling said loaf on the exterior of the wrapper and having overlapped ends within the seam area, one end of the band being interleaved with the edges of said wrapper in the seam and the other end of the band being overlapped with said seam on the exterior of the wrapper; perforations in said band spaced longitudinally along each side margin thereof throughout the length of the band at sufficiently close intervals so that the ends of the band within said seam area have perforations therein at each side of each band end; and extruded rivet portions of said coating after the application of said heat and pressure extending from said wrapper through said perforations in both ends of the band in inner and outer laminated formation in the area of said seam, the rivet portions in the end of the band outermost of the seam being on the exterior of the wrapper and in the plane of the band end outermost of the seam, whereby both ends of the band are secured to the wrapper in the seam area but the band is unsecured to the wrapper except where the heat and pressure have been applied and the band has a different surface than the wrapper and has a central portion therealong between said perforations for indicia lettering.

2,408,318
INTERCHANGEABLE HAT CONSTRUCTION
Abraham I. Josephs, New York, N. Y.
Application July 21, 1943, Serial No. 495,592
7 Claims. (Cl. 2—195)

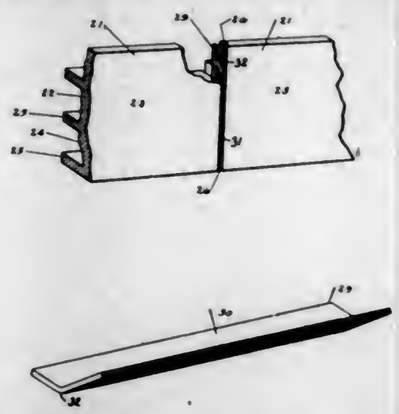


3. An interchangeable crown hat construction, comprising: a main band; a support element connected to said band and movable with respect thereto; a crown detachably connectable to said band; a stretcher ring in the upper portion of

said crown; means detachably connecting said ring to said support element; and sweat proof identification means detachably connected to said crown on the inner surface thereof.

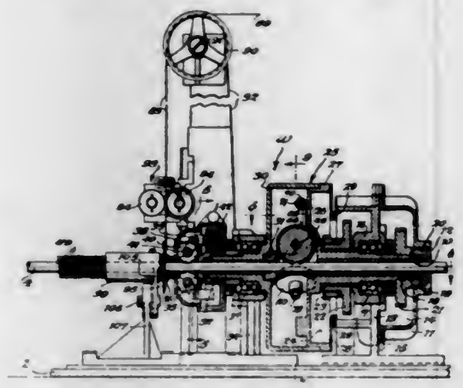
2,408,319
ABRASIVE ARTICLES
Samuel S. Kistler, West Boylston, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
No Drawing. Application January 24, 1946, Serial No. 643,202
5 Claims. (Cl. 51—307)

1. An abrasive article comprising abrasive grains, a bond uniting the grains as an integral body, and the combination of iron sulphide and potassium fluoborate interspersed throughout the bonded mass.



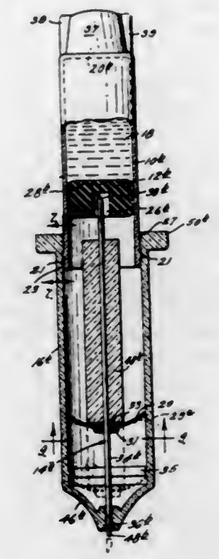
2,408,320
SOUND RECORDING AND REPRODUCING MACHINE
Jacob M. Kuhlik, Brooklyn, N. Y., assignor to Hattie B. Kuhlik, Sea Gate, N. Y.
Original application July 4, 1942, Serial No. 449,710. Divided and this application November 23, 1943, Serial No. 511,400
7 Claims. (Cl. 274—11)

1. In a sound recording and reproducing machine, in combination, a traveling strip of film, means for moving said film for recording and reproducing including a drive shaft, a driven shaft, a roller fixed on said driven shaft for frictionally driving said film, a sound head for recording and reproducing upon said film, means for tensioning said film during its recording and reproducing travel including a disc loosely mounted on said drive shaft, a roller carried by said disc for engaging and looping said film, a gear fixed to said disc and means for moving said tensioning roller away from said film to eliminate said loop for rewinding the film including a rockable shaft, a gear segment operatively connected to said shaft and in mesh with the gear on the disc for moving said disc and tensioning roller away from the film and means for rocking said shaft.



2,408,321
STOKER
Howard F. Lawrence, Philadelphia, Pa., assignor, by mesne assignments, to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 4, 1943, Serial No. 512,955
1 Claim. (Cl. 110—44)

A stoker comprising retort walls, each of said walls comprising a series of slightly spaced members arranged in end to end relation, each of said members having a vertical slot provided at each end thereof, and a sealing member of substantially V shape construction insertable in said slots, said sealing members being adapted to be straightened and thereby extended to the inner ends of

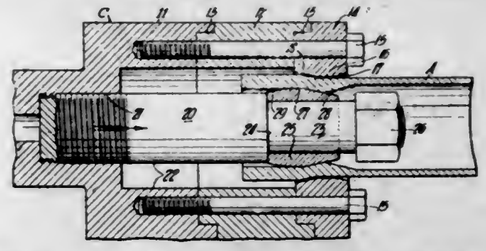


said slots by impact, thereby effectively sealing the retorts against the influx of air.

2,408,322
MACHINE FOR WINDING FIN STOCKS
Joseph D. Lear, Buffalo, N. Y., assignor, by mesne assignments, to Fedders-Quigan Corporation, Buffalo, N. Y., a corporation of New York
Application August 16, 1943, Serial No. 498,845
13 Claims. (Cl. 153—64.5)

1. A machine for winding fin stock in ribbon form spirally on the periphery of a tube which comprises a tubular member having a bore therethrough of a size to slidingly receive a tube to which a fin is to be applied, means rotatably mounting said member for rotation about the axis of said bore, a plurality of levers mounted on said member for oscillation about axes crosswise of and offset from the axis of said bore, each of said levers having at one end a roller engageable with the tube in said bore close to the exit end of said bore and its other end progressing along said tube and away from its roller in a direction opposite from the direction of travel of said tube and overweighted so as to serve as a centrifugal weight which, when said member is rotated, will move outwardly and force its roller against said tube in said bore with a force increasing with the rate of operation, each of said rollers having a peripheral surface formed to grip said tube sufficiently to cause it to rotate with said member, spring means yieldingly urging said levers in directions to cause said rollers to engage said tube, means for causing endwise movement of said tube through said bore, and means for delivering said fin stock in ribbon form progressively to the portion of the tube leaving said member, with the ribbon abutting edgewise of itself against the periphery of the tube.

2,408,323
HYPODERMIC SYRINGE
Marshall L. Lockhart, Detroit, Mich., assignor of one-half to Margaret L. Lockhart, Detroit, Mich.
Application June 10, 1943, Serial No. 490,250
6 Claims. (Cl. 128—220)



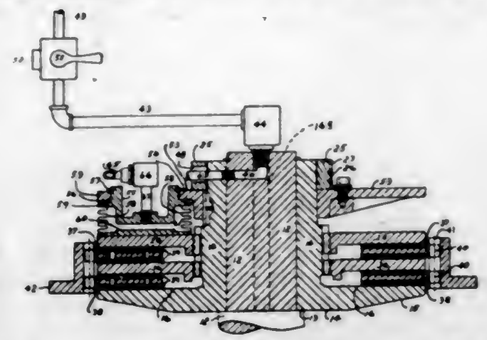
6. A hypodermic syringe including in combination a pair of tubes, the inner end of one tube overlapping and being telescopically disposed with respect to the inner end of the other tube, one of said tubes being adapted to receive medicament, a pierceable closure-member sealing the medicament within such tube and being slidably mounted therein, a tubular needle disposed within the other of said tubes and being formed with piercing portions at each of its ends, the outer end of said other tube being constricted, a seal carried by that tube at such outer end and initially extending beyond the adjacent piercing point of the needle, means carried by said needle and cooperable with the inner face of the constricted tube end for limiting the projection of the needle beyond the seal and end, means also carried by the needle and lying adjacent its opposite end to cooperate with the closure of the first-named tube to cause such closure to be longitudinally shifted within its tube and to act on the medicament as a piston, and means forming a part of said other tube and cooperable with the means carried by said needle to prevent a retraction of said needle into said tube once said needle has been projected with respect to the same.

2,408,324
HYDRATED DOLOMITIC LIMES AND METHOD OF REDUCING THE PLASTICITY OF AQUEOUS SUSPENSIONS THEREOF
Chauncey C. Loomis, Lee, and William J. Barrett, Adams, Mass., assignors to New England Lime Company, Adams, Mass., a corporation of Massachusetts
No Drawing. Application February 19, 1941, Serial No. 379,642
16 Claims. (Cl. 106—109)

1. A hydrated dolomitic lime whose magnesium oxide content is slaked to at least about 35%, mixed with about 1% or less of an agent capable of preventing thickening of a putty made of such lime, on gauging with gypsum.

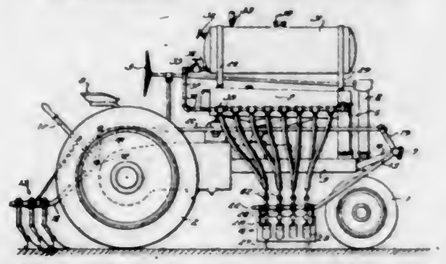
2,408,325
WORKING TUBULAR ARTICLES
Charles C. Luce, McKeesport, and Neil B. Duncan, Pittsburgh, Pa., assignors to National Tube Company, a corporation of New Jersey
Application October 21, 1944, Serial No. 559,866
4 Claims. (Cl. 29—156)

3. The method of increasing the strength of pipe ends which comprises upsetting the end portion of a length of pipe while in a heated condition to thicken and taper the walls thereof, cooling said upset end portion below the critical temperature thereof, inserting an internal die member in said upset portion to expand the same while passing an external die thereover in longitudinally offset relation with respect to said inner die member, bringing said die members into telescoped relation and withdrawing the same from said expanded portion to reduce the diameter of said expanded and upset portion by said outer die and to reduce the wall thickness of said portion by the conjoint action of said inner and outer die members.



2,408,326
PROCESS FOR PREPARING ALKALI-SOLUBLE METHYL CELLULOSE
Albert T. Maasberg, Huntsville, Ala., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application April 26, 1944, Serial No. 532,876
2 Claims. (Cl. 260—231)

1. The method which comprises providing a fibrous cellulose of high alpha-cellulose content, absorbing uniformly therein, at from 15° to 35° C., an aqueous alkali metal hydroxide solution of from 27.5 to 45 per cent concentration in an amount equivalent to from 0.35 to 0.60 part by weight of sodium hydroxide per part of cellulose, treating the so-formed alkali cellulose under autogenous pressure in a closed system at from 35° to 75° C. with from 0.15 to 0.5 part by weight of a methyl halide, calculated as methyl chloride, per part of cellulose, until the resulting methyl cellulose contains from 6 to 13 per cent of methoxyl, and separating from the reaction mixture the so-formed methyl cellulose which is insoluble in water and is soluble directly, to form haze-free solutions, in 3 to 4 per cent aqueous sodium hydroxide solution at 15° to 20° C. without further chilling, which alkaline solutions of the methyl cellulose may be diluted with an equal volume of water without precipitation of the methyl cellulose.

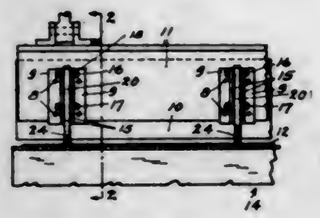


2,408,327
FLUID PRESSURE CLUTCH MECHANISM
Leland O. McLean, Marion, Ohio, assignor to The Osgood Company, Marion, Ohio, a corporation of Ohio
Application November 17, 1944, Serial No. 563,949
8 Claims. (Cl. 192—88)

1. In a clutch structure for transmitting rotary motion from a source of power comprising a

rotary driving shaft, the combination of a hub arranged to be mounted on the shaft and to rotate therewith, a radial flange mounted on and rotating with the hub, at least one chamber having a circular wall of circumferentially corrugated material attached at one end with a sealed joint to the flange, the other end of the wall being enclosed to complete the chamber, the material of said wall having an elastic characteristic to expand longitudinally as fluid pressure is introduced into the chamber and tensioned to retract as such pressure is relieved, an annular driving plate mounted on the hub to rotate therewith but slidable longitudinally thereof, a driven ring loosely mounted on the hub and arranged to be operatively connected to the mechanism to be driven, and means to introduce fluid under pressure into the chamber to expand the same longitudinally to force the driving plate into frictional engagement with the driven ring to rotate the same, and to relieve such pressure and interrupt such frictional engagement.

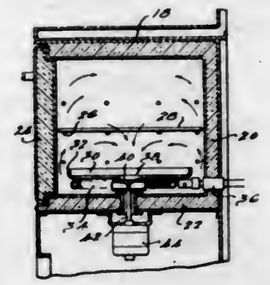
2,408,328
APPARATUS FOR CULTIVATION OF PLANTS
Price Chrenleigh McLemore, Montgomery, Ala.
Original application October 11, 1939, Serial No. 298,870. Divided and this application November 4, 1940, Serial No. 364,140
11 Claims. (Cl. 126—271.2)



1. A flame cultivator comprising a vehicle having ground engaging wheels for supporting the vehicle on the ground, a pair of burners connected to the vehicle for travel therewith, and fuel supply means carried by said vehicle for supplying said burners, said burners being disposed upon opposite sides of a vertical plane which extends longitudinally of the vehicle and parallel to the line of forward travel of the vehicle, each burner being directed diagonally downwardly in a direction substantially crosswise of said vehicle for causing its flame to strike the surface of the ground supporting the vehicle at a point short of the line of intersection of the said plane and the ground, said burners and fuel supply means cooperating to cause each burner to project a relatively long otherwise unconfined flame which is spread by impingement against the ground to form a laterally widened sheet of flame of shallow depth which flows along the ground and floods across the line of intersection of the said plane and the ground.

2,408,329
ALKYATION PROCESS
Jacob R. Meadow, Lexington, Ky., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Original application October 9, 1943, Serial No. 505,661. Divided and this application May 23, 1945, Serial No. 595,492
5 Claims. (Cl. 260—683.4)

1. In a process for alkylating a paraffinic hydrocarbon having at least three carbon atoms with an olefinic hydrocarbon having at least three carbon atoms, which includes contacting said paraffinic hydrocarbon with said olefinic hydrocarbon in a reaction zone under alkylating conditions, in the presence of a hydrogen fluoride alkylation catalyst, and maintaining said paraffinic hydrocarbon in excess over said olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction; the improvement which comprises contacting said paraffinic hydrocarbon and said olefinic hydrocarbon with a hydrogen fluoride alkylation catalyst in said reaction zone, in the presence of a material selected from the group consisting of chlorine, bromine, and iodine.



2,408,330
RESILIENT HOLD-DOWN DEVICE
William J. Miller, Seattle, Wash., assignor to Elliott Bay Mill Co., Seattle, Wash., a corporation of Washington
Application September 30, 1944, Serial No. 556,630
2 Claims. (Cl. 164—51)

1. A resilient veneer hold down unit for attachment to a high speed reciprocable veneer clipping knife, comprising frame means adapted to be carried by the knife; a veneer hold down member of relatively light weight fibrous material movably supported by said frame means and having a curved veneer engaging portion extending beyond an end portion of said frame means and normally extending beyond the cutting edge of the knife; and resilient means yieldingly urging said veneer hold down member into veneer engaging position.

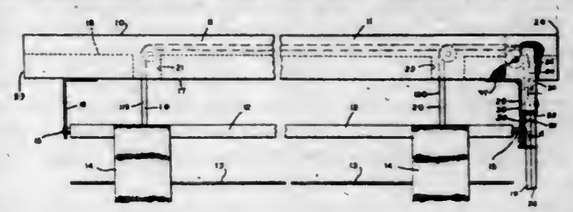
2,408,331
AIR-CONDITIONED ELECTRIC COOKING OVEN
Herbert E. Mills, Detroit, Mich., assignor, by mesne assignments, to Mills Engineering Company, Detroit, Mich., a partnership
Application April 12, 1943, Serial No. 482,787
2 Claims. (Cl. 219—35)

1. An electric cooking stove comprising an oven defined by insulated walls, a generally horizontal baffle arranged in the lower part of said oven and in closely spaced relationship with the bottom wall thereof, said baffle having its surrounding side edges arranged in spaced relationship with the side walls of said oven to define a blower discharge opening therebetween extending entirely around said baffle and said oven, said baffle having an unobstructed central opening forming a blower inlet, a blower positioned below said central opening and operable to effect the continuous circulation of oven air downwardly through said blower inlet, laterally in all directions below said baffle, thence upwardly through said discharge opening on all sides of said oven into the oven space thereabove and thence back to said blower inlet, a flat electric heating element arranged below said baffle in the path of the air circulated by said blower, and operable for heating the air circulated by said blower, thereby to heat said oven for cooking food therein, and an electric motor arranged below said bottom oven wall and connected to said blower for operating the same only when said heating means is operable, said heating element substantially surrounding said blower and being arranged in substantially the same general plane thereof.

2,408,332
WATER-SOLUBLE RESINOUS CONDENSATES
Willard L. Morgan, Columbus, Ohio, assignor to Arnold, Hoffman & Co. Incorporated, a corporation of Rhode Island
No Drawing. Application March 6, 1945, Serial No. 581,328
12 Claims. (Cl. 260—2)

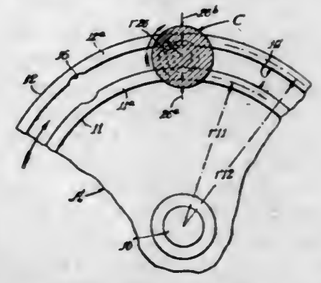
1. The process for the manufacture of water soluble resins which consists of condensing boric acid and an amino compound of the following general formula:

$$RNH—(CH_2)_n—[NH(CH_2)_n]_p—Y$$



in which n and p are small integers, with n varying from 2 to 6 and p from 0 to 6, and Y is a radical selected from the group consisting of a hydroxyl (OH) and an amino (NH_2), and in which formula R represents a radical selected from the group consisting of hydrogen and

$$—(CH_2)_n—[NH(CH_2)_n]_p—Y$$

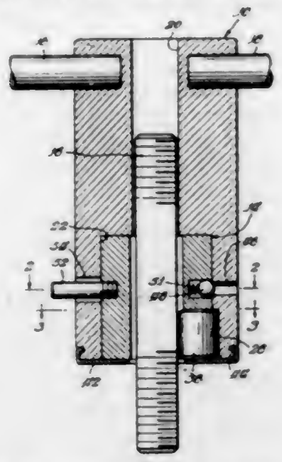


in which n and p are small integers, with n varying from 2 to 6 and p from 0 to 6, and Y is a radical selected from the group consisting of a hydroxyl (OH) and an amino (NH_2).

2,408,333
VENETIAN BLIND CORD-LOCKING CONSTRUCTION
Jules Nisenson, New York, N. Y., assignor to Publix Metal Products, Inc., New York, N. Y., a corporation of New York
Application May 23, 1944, Serial No. 536,994
4 Claims. (Cl. 160—173)

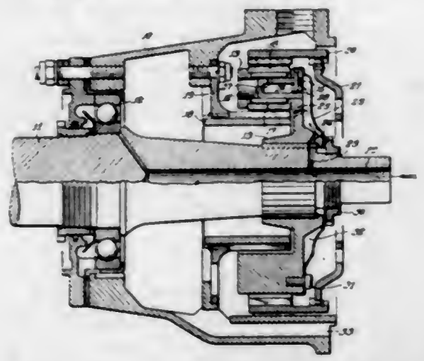
2. In a Venetian blind construction having a slat tiltable about its own longitudinal axis, and elevating means for said slat including a cord; a cord-lock for maintaining said cord in adjusted positions thereof comprising: a body; a cord gripping dog movably mounted on said body, and adapted for effective movement forwardly and rearwardly with respect to said body, said dog having a gripping surface extending generally forwardly with respect to said body and said blind and when in idle position adapted to be normally and freely engaged at the front side thereof by said cord; whereby manual movement of said cord forwardly of the blind will disengage the cord from said dog.

2,408,334
LAPPING METHOD AND MACHINE
Delbert S. Oliver, Euclid, Ohio, assignor to Pesco Products Co., Cleveland, Ohio, a corporation of Ohio
Application July 31, 1944, Serial No. 547,389
6 Claims. (Cl. 51—131)



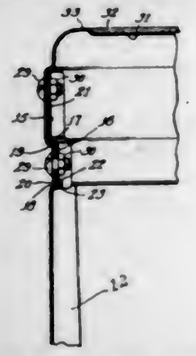
1. An apparatus for lapping a work piece having a headed stem and a flat radial seal flange spaced from the head, the seal surface having an annular contour arranged in a plane at a right angle to and concentric with the stem axis; said apparatus comprising a rotatable holder supporting the work piece; and a lapping assembly opposing said holder comprising a base rotatable on an axis parallel with and spaced from the holder axis; two coaxial parallel walls of substantial height having confronting abrasive supporting flanges at their ends and defining a relatively deep chamber the entrance to which is restricted by said flanges, the stem and head of the work piece being received in said chamber and entrance thereto; and radially alined recesses in said flanges effecting the insertion of the work piece head into said chamber thereby to engage the seal flange with the abrasive supporting flanges of the lapping assembly.

2,408,335
TORQUE WRENCH
Delbert S. Oliver, Euclid, and John Kanuch, Cleveland, Ohio, assignors to Pesco Products Co., a corporation of Ohio
Application May 21, 1943, Serial No. 487,896
3 Claims. (Cl. 81—53)



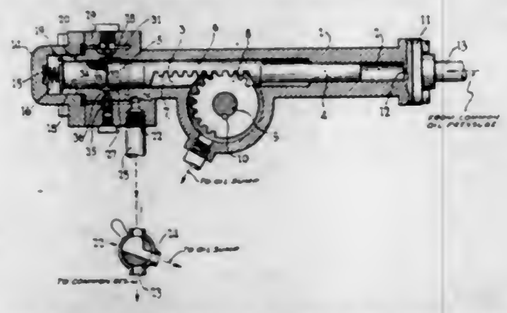
3. A torque wrench for drivingly engaging the curved surface of an elongated article, said wrench including, in combination, means defining a cylindrical housing having a coaxial bore therethrough, a cage and roller assembly coaxially journaled in said bore for arcuate movement therein and having one roller of a greater

diameter than the remaining rollers, an arcuate slot in said housing, a rod secured to said cage and protruding through the slot in said housing, a recess formed in the bore of said housing opposite said one roller and defining a dwell surface and a cam surface on either side of said dwell surface, which cam surfaces cooperate with said one roller to move the same radially inwardly to effect gripping of said article between the rollers when said cage and roller assembly is adjusted arcuately with respect to the housing, the diameter of said one roller being such that when said



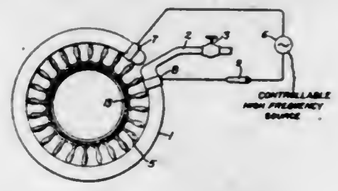
one roller is in engagement with said dwell surface of said recess and said remaining rollers are in engagement with the bore of said housing, the axis of said housing and said assembly is substantially equidistant from the nearest surface of all of the rollers and the opening between said rollers is at its maximum, said position of maximum opening or variations therefrom being visually indicated by said rod which additionally serves as means for manually adjusting the cage to said position of maximum opening or to a position causing gripping of said article by said rollers.

2,408,336
TRANSMISSION
Palmer Orr, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application January 8, 1943, Serial No. 471,666
5 Claims. (Cl. 184—6)



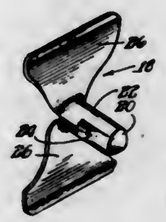
1. In power transmission mechanism, the combination of a hollow rotatable shaft; a plurality of power transmitting elements; a support on said shaft for rotatably mounting said elements about the axis of said shaft; a source of lubricant under pressure discharging into said shaft; an annular pressure chamber sealed wholly upon and rotatable with said support; inlet conduits for said chamber communicating with said shaft; and discharge conduits connecting said chamber to said power transmitting elements, the sum of the effective cross-sectional areas of the inlet conduits exceeding the sum of the effective cross-sectional areas of the discharge conduits, whereby lubricant under pressure is maintained in said chamber at all times.

2,408,337
KNOCKDOWN STOOL OR THE LIKE
William C. Panzer, Chicago, Ill.
Application October 30, 1944, Serial No. 560,921
4 Claims. (Cl. 155—194)



3. In a knock-down sheet metal stool embodying a top and at least three legs, the combination of a band encircling said legs, a depending skirt on said top spaced substantially above said band, interengaging formations on said skirt and each leg respectively, said interengaging formations including an exteriorly channeled portion at the upper end of each leg, a shouldered formation on said skirt matingly received in said exteriorly channeled portion, a further exteriorly channeled portion in said first mentioned channeled portion, and an inturned flange at the lower end of said skirt matingly received in said further exteriorly channeled portion and whereby to predetermine the respective positions of the parts, screws extending between said skirt and said legs and between said band and said legs, and nuts on said screws.

2,408,338
HYDRAULIC DEVICE
Robert J. Parsons, Schenectady, N. Y., assignor to Consolidated Car Heating Company, Inc., Albany, N. Y., a corporation of New York
Application June 13, 1944, Serial No. 540,081
1 Claim. (Cl. 121—44)



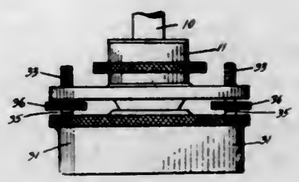
A hydraulic motor, including, in combination: a body formed with a cylinder, a piston in the cylinder, a shaft, means for causing an oscillation of the shaft by a reciprocation of the piston, a slide valve in the form of a hollow cylinder having an end wall in the cylinder between the end of the piston and the end of the cylinder, said slide valve having resilient means between it and the end of the cylinder whereby it is always pressed toward the piston, means on the slide valve for limiting its extent of movement, said cylinder formed with a circumferential channel opening in the inside surface, two ducts opening therein, a connecting duct and a cavity adapted for the reception of a fluid supply line connected with said ducts, a spring held valve closing one of the ducts opening into the channel, said slide valve having two spaced through bores in the side wall and a bore in the end wall, a source of fluid pressure, an oil sump, a valve adapted to alternatively connect said cavity with the source of fluid pressure or the oil sump, and means to move the piston toward the slide valve, whereby when the cavity is connected to the source of fluid the piston moves away from the slide valve and when the cavity is connected to the oil sump the piston moves rapidly at first toward the slide valve and then with a gradually decelerating motion together with the slide valve.

2,408,339
HEATING APPARATUS
Otis W. Pike, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 28, 1943, Serial No. 473,845
11 Claims. (Cl. 263—4)

1. In apparatus for heating glass parts or the like, the combination which comprises means for heating said parts including a metallic tube shaped to surround substantially said parts, means for supplying combustible gas to said tube, an opening in said tube through which said gas may be directed in burning condition against the parts under treatment, and means for passing high frequency current through the tube to produce further heating of the parts by the action of said high frequency current.

2,408,340
FASTENING DEVICE
Ouglijesa Jules Poupitch, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application February 14, 1945, Serial No. 577,762
7 Claims. (Cl. 85—40)

1. A tension applying hollow rivet formed complete from a single strip of sheet metal, comprising a tubular shank having a solid end portion formed from the middle part of the strip and having rounded complementary body portions positioned side by side in mutually reinforcing edge to edge engagement with each other, axially resilient head portions formed from the end parts of the blank turned outwardly and backwardly, and inwardly displaceable latching means normally terminating in outwardly spaced relationship to the periphery of the shank, said latching means cooperatively disposed with respect to said resilient head portions to effect automatic gripping of a workpiece between said resilient head portions and latching means as an incident to telescopic association of the tubular shank and a work aperture.

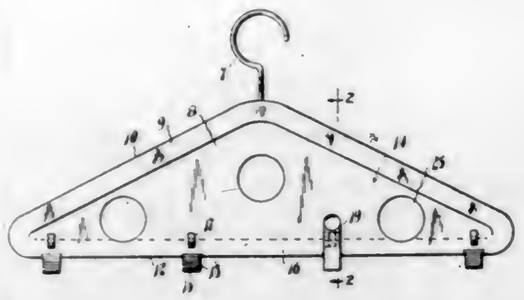


2,408,341
ALLOY
John L. Rodda, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application July 20, 1944, Serial No. 545,867
12 Claims. (Cl. 75—157.5)

1. An alloy containing 15 to 37.5% zinc, 7.5 to 30% manganese, 0.25 to 2% silicon, 0.005 to 2% beryllium, and the balance substantially all copper but not less than 50%.

2,408,342
ALLOY
John L. Rodda, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application July 20, 1944, Serial No. 545,868
11 Claims. (Cl. 75—157.5)

1. An alloy containing 15 to 37.5% zinc, 7.5 to 30% manganese, 0.005 to 2% beryllium, and the balance substantially all copper but not less than 50%.



2,408,343
LEVEL
Charles O. Rothweiler, Milwaukee, Wis.
Application June 10, 1944, Serial No. 539,750
3 Claims. (Cl. 248—180)

1. A device of the character described comprising a vertical shaft, an outer casing, an end thrust bearing disposed between said shaft and casing, a lock nut for supporting the inner race of said bearing to the shaft, a lock nut supporting the outer race of said bearing to the casing, a ground seat bearing nut, an auxiliary member attaching said bearing nut to said casing, the lower end of said shaft ground for engagement with said bearing nut, a flanged thrust plate, a threaded collar horizontally disposed encircling said thrust plate, said collar having an aperture in its center, a plurality of leveling screws threadedly supported by said casing, radial contact surfaces on said collar, said surfaces corresponding with said leveling

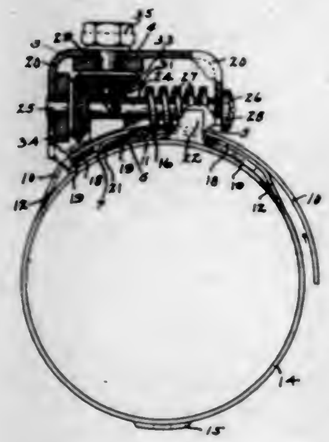
screws and arranged for engagement therewith, thereby causing an adjustable contact between said casing and said collar when said collar is attached to a tripod or the like.

2,408,344
COAT HANGER OR WALL RACK
William Scurrah, Toronto, Ontario, Canada
Application February 12, 1945, Serial No. 577,404
1 Claim. (Cl. 223—91)

In a device of the class described, a support of a formable or mouldable material consisting of a broad substantially flat-sided member vertically arranged and having a straight horizontal lower edge, a horizontal series of jaws integrally formed on said support to project from the lower edge thereof, said jaws each having a serrated face disposed outwardly of a side of said support, ears integrally formed on said support, there being one ear above each of said jaws disposed on the same side of said support as said serrated faces thereof, a plurality of vertical fingers on said support with one of the fingers pivotally mounted intermediate of its length on each of said ears, each finger having a serrated inner face overlying the jaw, and springs mounted on said support with one of the springs applying outward pressure on the upper end of each of said fingers.

2,408,345
COMPOSITION OF MATTER AND METHOD
Robert S. Shelton, Mariemont, and Marcus G. Van Campen, Jr., Deer Park, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application April 13, 1942, Serial No. 438,728
8 Claims. (Cl. 260—570.8)

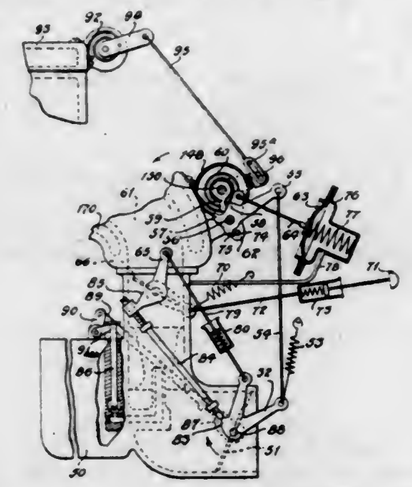
7. Beta-phenyl-alpha-alpha-dimethyl - alpha-amino ethane.



2,408,346
PISTON
Kave A. Smith, Overland, Mo., assignor to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application October 7, 1944, Serial No. 557,587
5 Claims. (Cl. 309—4)

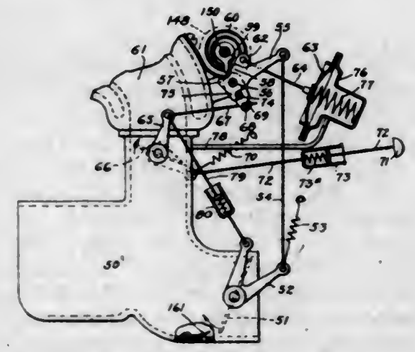
3. A piston comprising an intermediate packing member, a head on one side of said member having diametrically opposite openings, said packing having openings aligned therewith, studs passing through said openings, a second head on the opposite side of said packing member, said studs having grooves in the plane of said second head adjacent to the packing, and keyhole openings in the second head having notched portions cooperating with said grooves and oppositely directed with respect to a radius of the piston, said keyhole openings having enlarged portions accommodating the non-grooved portions of said studs beyond the grooves, the length of said

notched portions of the keyhole openings being such as to require for disassembly a misalignment between the head in which they are located and the packing member which is greater than that which is permitted by the cylindric member in connection with which the piston cooperates.



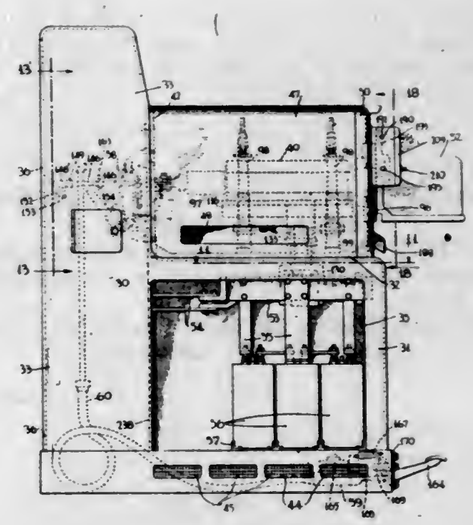
2,408,347
WORM ADJUSTING DOUBLE WRAP HOSE CLAMP
Verner E. Sprouse, Columbus, Ind.
Application July 19, 1944, Serial No. 545,559
4 Claims. (Cl. 24—19)

4. A hose clamp comprising a hose wrapping band circumferentially wrapped to extend twice around the hose, the band having overlapping ends; one of said ends being provided with a series of abutments therealong; a bracket to which the other of said band ends is secured; said bracket having a member circumferentially riding on said band spaced between said ends; said one end extending over said bracket member; and a worm rotatably carried by the bracket and having a thread engaging said end abutments for pulling the entire band under tension between said ends to reduce its effective diameter; and means carried by said bracket having an operating member angularly disposed from the axis of said worm thread for revolving the worm; said bracket carried means comprising a gear system interconnecting said worm and said operating member; the axis of said worm thread being substantially parallel to a tangent to said wrapped band; and said operating member extending externally of said bracket and having its axis substantially normal to that of the worm



thread; said gear system consisting of a gear fixed to said worm, and a second gear meshed with the first gear and fixed to said operating member; said operating member having a bearing in an outer portion of said bracket outside of its attached gear; and a crossbar within said bracket carrying an inner end of said operating member.

2,408,348
FUEL MIXTURE CONTROL
Warren F. Stanton, Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y., a corporation of Delaware
Application June 12, 1937, Serial No. 147,876
13 Claims. (Cl. 123—119)

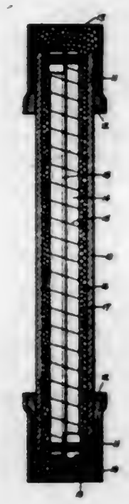


1. A carburetor for an internal combustion engine comprising an inlet passage, a mixture outlet connected thereto and having a throttle valve therein, and means responsive to the temperature of the internal combustion engine adapted to limit both the opening and closing of the throttle valve when the engine is cold.

2,408,349
FUEL MIXTURE CONTROL
Warren F. Stanton, deceased, late of Pawtucket, R. I., by Gladys Perry Stanton, administratrix, Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y., a corporation of Delaware
Original application March 19, 1932, Serial No. 600,038. Divided and this application April 28, 1944, Serial No. 533,184
3 Claims. (Cl. 123—119)

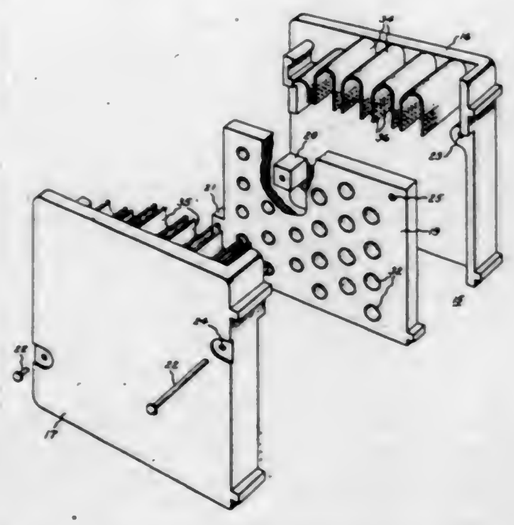
1. A carburetor for an internal combustion engine including an air entrance, a choke valve therein, a mixture outlet, a throttle valve controlling said outlet, and means for conditioning said valves for starting said engine, said means including a pivoted arm, a fluid motor for varying the angular position of said arm, heat control means for varying the movement of said arm by said fluid motor, adjustable means for limiting the movement of said arm in one direction, a connection between said arm and one of said valves, an interconnection means for the said valves whereby the movement of one of said valves by said arm will determine the position of the associated valve.

2,408,350
ELECTRIC FURNACE MACHINE
Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 21, 1941, Serial No. 384,503
8 Claims. (Cl. 219—13)



1. An apparatus for heating a workpiece by electromagnetic induction comprising an inducing coil, a source of power therefor, means for connecting said coil and source of power, a timer for disconnecting said coil and source of power after a predetermined time interval, means connected to said connecting and disconnecting means for preventing connection of said coil and power source after the opening of the coil and power source connection prior to completion of said time interval, and means connected to said connecting and disconnecting means and responsive to relative axial movement between said coil and workpiece to render said connection preventing means inoperative.

2,408,351
CURRENT-LIMITING FUSE
Chauncey G. Suits, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 11, 1942, Serial No. 465,205
1 Claim. (Cl. 200—120)

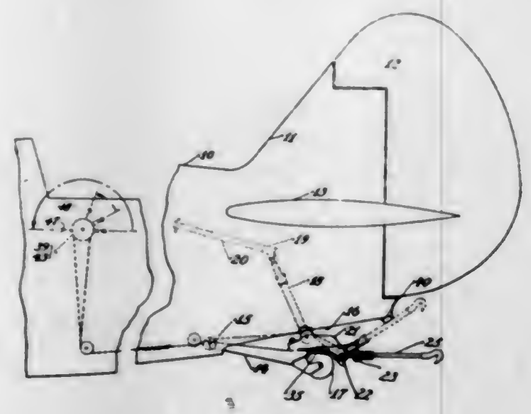


In a high tension fuse of the current-limiting type, the combination of a totally enclosed casing containing a body of arc-quenching medium comprising an intimate mixture of 200-mesh and

80-mesh granular inert material, and a conductor embedded in said material which conductor is adapted to dissipate throughout a fusible section

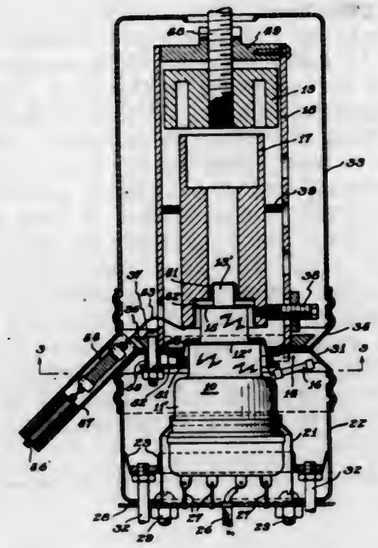
of considerable length as distinguished from dissipation only at a point of reduced cross-section upon subjection of the fusible section to excess current of large magnitude.

2,408,352
GAS COOLING ARRANGEMENT FOR CIRCUIT INTERRUPTERS
Charles H. Titus, Philadelphia, Pa., assignor to General Electric Company, a corporation of New York
Application March 24, 1944, Serial No. 527,912
6 Claims. (Cl. 200—144)



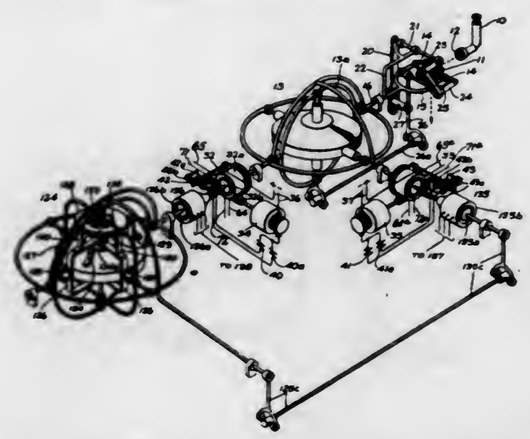
1. In arc extinguishing means for an electric circuit interrupter, an arc extinguishing chamber having a passageway through which exhaust gases may leave said chamber, and a gas cooling arrangement comprising a series of alternately erect and inverted U-shaped metallic members interleaved and spaced in parallel relation across said passageway with the outer side of the bight of the erect members and the inner side of the bight of the inverted members toward the base of the passageway thereby forming a plurality of sinuous escape openings for the outflowing hot exhaust gases of an arc formed in said chamber.

2,408,353
PIGMENTED RESIN GEL
Harry A. Toulmin, Jr., Oakwood, Ohio, assignor, by mesne assignments, to Chemical Developments Corporation, Dayton, Ohio, a corporation of Ohio
No Drawing. Original application November 8, 1939, Serial No. 303,447. Divided and this application March 17, 1943, Serial No. 479,483
4 Claims. (Cl. 260—19)



1. The method comprising heating together 100 parts by weight of cresol and 70 parts by weight of 30% formaldehyde for time sufficient to cause reaction of all the formaldehyde present, distilling off water and uncombined cresol, adding approximately 800 parts by weight of fused rosin, heating the mixture in a closed vessel until a clear homogeneous resin free from cresol odor has been formed, driving off volatile substances while adding to the mixture 100 parts by weight of glycerol together with a waterfree pigment previously treated with a dispersing agent therefor, and continuing heating the mixture at a temperature of approximately 500° F. until the glycerol has fully reacted to form ester products, whereby there is obtained a pigmented resinous gel in which the pigment is uniformly and finely dispersed, said pigmented gel being adapted for use in compounding enamels, lacquers, plastics, and the like.

2,408,354
ARRESTING GEAR
Clem G. Trimbach, Eggertsville, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation, a corporation of New York
Application March 28, 1936, Serial No. 71,415
10 Claims. (Cl. 244—110)

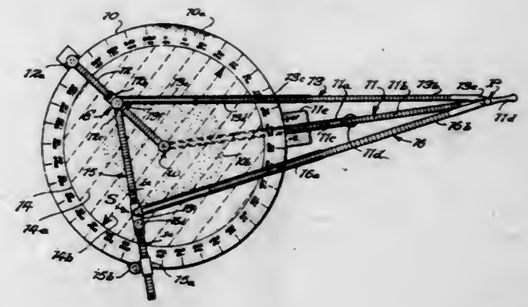


1. In an aircraft fuselage having an opening in the lower rearward surface thereof, a tail wheel chassis hinged to said fuselage and swingable vertically into and from said fuselage, means to swing said chassis, an arresting hook shank pivoted on said chassis and swingable with and with respect thereto, an abutment on said fuselage adjacent the rearward edge of said opening, and resilient means for urging said shank upward and into engagement with said abutment when said chassis is in an intermediate position of its swing, said shank being of such length that, when said chassis is in an extreme downward position, said shank clears said abutment and is swingable through said opening into said fuselage.

2,408,355
CONCENTRIC LINE OSCILLATOR
Alfred H. Turner, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 29, 1942, Serial No. 428,665
5 Claims. (Cl. 250—36)

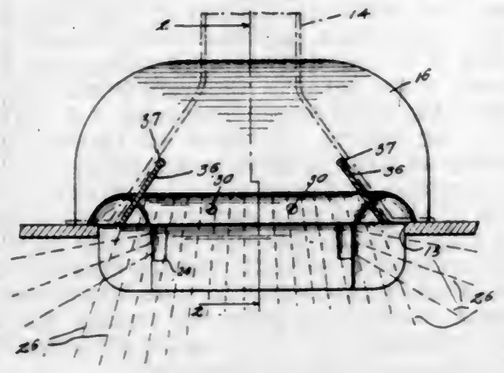
1. An oscillator comprising a vacuum tube having a cathode, a control grid and an anode, a tuned circuit having one terminal connected to said anode and having the ather terminal connected through a capacity element to said grid, and a second tuned circuit having one terminal connected to said cathode and having the other terminal connected through said capacity element to said grid whereby regenerative feedback is provided both by the anode-cathode capacity of said tube and by said capacity element.

2,408,356
SIGHTING MECHANISM
Waldo W. Willard, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 20, 1931, Serial No. 524,193
57 Claims. (Cl. 33—46.5)



1. In sighting mechanism and the like for airplanes and like aircraft, a sighting device, a pair of spring members arranged to generate measured forces, means interposed between said spring members and said sighting device arranged to transmit and apply said measured forces to move said sighting device fore and aft and athwartship to maintain it on a target which has a substantially constant apparent linear velocity and means responsive to the fore and aft and athwartship coordinates of the angular position of said sighting device for controlling the forces applied by said spring members to move said sighting device so that constant settings in the forces applied by said spring members correspond to the fore and aft and athwartship components respectively of the target's apparent linear velocity.

7. Sighting mechanism comprising a sighting device, a gyroscope arranged to precess about a plurality of axes, a driving connection between said gyroscope and said sighting device so that the line of sight of said sighting device is maintained substantially parallel with the spin axis of said gyroscope, electric motors operably connected to apply precessing torques to precess said gyroscope about said axes and means for controlling said motors so as to apply measured precessing torques to said gyroscope.

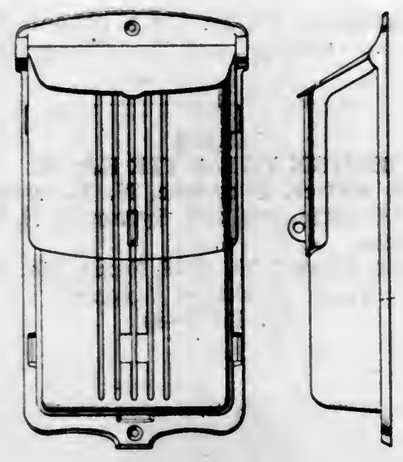


33. In sighting mechanism and the like, a sighting device arranged to be directed on a target and like object, means for moving said sighting device to maintain it directed on said target, means including mechanism operated responsively to the position of said sighting device for measuring the instantaneous magnitudes of the target's bearing with reference to a predetermined axis, means operated responsively to the operation of said means for moving said sighting device so as to measure the apparent direction of motion of said target with respect to the same predetermined axis and means controlled by both of said measuring means for comparing continuously the values of said bearing and said apparent direction of motion measured with reference to said predetermined axis.

2,408,357
NAVIGATION COMPUTER
Asher M. Wolfe, Bloomsburg, Pa.
Application July 6, 1944, Serial No. 543,677
16 Claims. (Cl. 33—76)

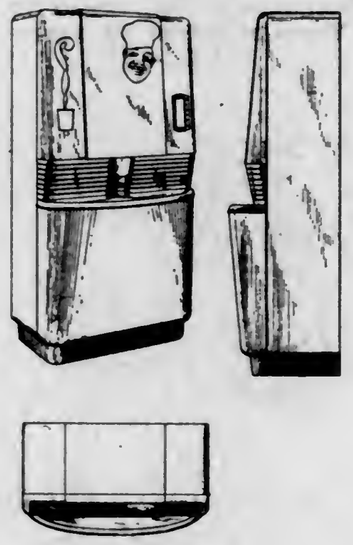
1. A navigation computer comprising, in combination, a compass rose, an extensile arm pivotally secured for rotation to the center of said compass rose, said arm being provided with a scale indicating speed, a second arm pivotally secured to the center of said compass rose for rotation, said second arm carrying a scale indicating wind velocity, and a second extensile arm pivoted at one end to the outer end of the first extensile arm and at the other end to an adjustable point on said second arm, said third arm carrying a scale indicating speed.

2,408,358
DISTRIBUTOR FOR STOKERS
Sheppard Boyd Yates, Hamlet, N. C.
Application May 7, 1945, Serial No. 592,358
2 Claims. (Cl. 110—105.5)



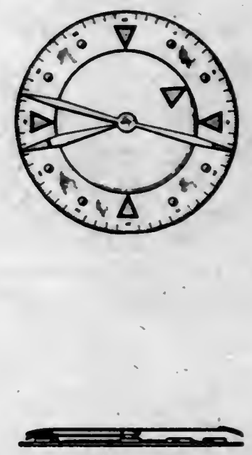
1. In a stoker, a coal distributing means for mounting in the feeding opening of a firebox, said means comprising a coal guiding plate formed with a horizontally disposed steam passage parallel with the forward edge of said plate and having a plurality of main jet openings in the forward edge communicating with said passage, a pair of oppositely disposed nozzles projecting forwardly from said plate and disposed forwardly of said main jet openings, said nozzles being disposed below said main jet openings and laterally of the outermost of said main jet openings, said nozzles being formed with a pair of jet openings arranged so as to project a substantial portion of the fuel at substantially right angles to the movement of fuel effected by the fluid discharged from said main jet openings whereby fuel will be discharged into the firebox adjacent the front wall thereof, a coal guiding member depending from the forward end of said plate and engaging the adjacent wall of the firebox, a pair of rearwardly extending arms carried by said guiding member, said plate having a pair of sockets in which said arms removably engage, a pair of locking members for locking said arms in said sockets, said guiding member being formed with recesses within which said nozzles engage whereby the upper surfaces of said nozzles will be substantially flush with the upper surface of said guiding member.

DESIGNS



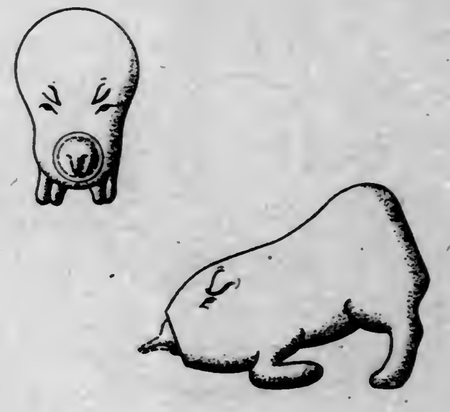
SEPTEMBER 24, 1946

145,608
DESIGN FOR A MAILBOX
Vytant Aleks, Rockford, Ill., assignor to Ebaloy, Incorporated, Rockford, Ill., a corporation of Illinois
Application January 18, 1946, Serial No. 125,679
Term of patent 7 years
(Cl. D74—9)



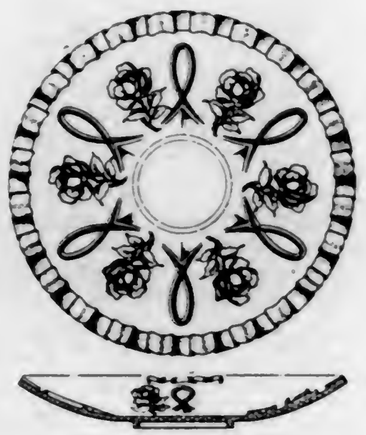
The ornamental design for a mailbox, substantially as shown.

145,609
DESIGN FOR A FOOD DISPENSING CABINET
Alfons Bach, Stamford, Conn., assignor to C. Earl Hovey, trustee, Kansas City, Mo.
Application December 18, 1945, Serial No. 124,816
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a food dispensing cabinet, as shown.

145,610
DESIGN FOR A TIMEPIECE FACE
Stevan Banick, New York, N. Y.
Application June 7, 1946, Serial No. 130,482
Term of patent 14 years
(Cl. D42—3)



The ornamental design for a timepiece face, as shown.

145,611
DESIGN FOR A BOTTLE HOLDER
Easter M. Butterfield, Redondo Beach, Calif.
Application November 13, 1945, Serial No. 123,676
Term of patent 14 years
(Cl. D83—8)

The ornamental design for a bottle holder, as shown and described.

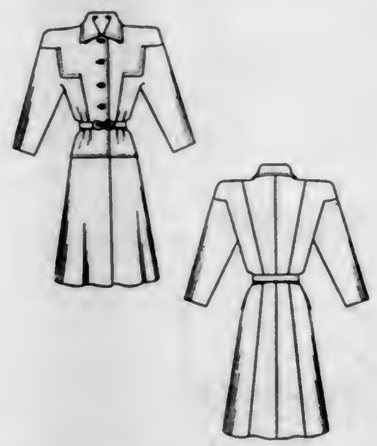
145,612
DESIGN FOR A PLATE
Charles W. Carlson, Tiffin, Ohio, assignor to United States Glass Company, Tiffin, Ohio, a corporation of Pennsylvania
Application November 8, 1944, Serial No. 116,218
Term of patent 14 years
(Cl. D44—15)

The ornamental design for a plate, as shown.

145,613
DESIGN FOR A PLATE
Charles W. Carlson, Tiffin, Ohio, assignor to United States Glass Company, Tiffin, Ohio, a corporation of Pennsylvania
Application November 8, 1944, Serial No. 116,219
Term of patent 14 years
(Cl. D44—15)

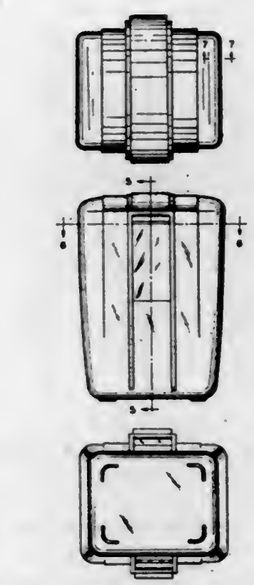
The ornamental design for a plate, as shown.

145,614
DESIGN FOR A BROOCH MOUNTED WATCH-CASE OR SIMILAR ARTICLE
Emanuel Deutsch, New York, N. Y.
Application March 15, 1946, Serial No. 127,564
Term of patent 14 years
(Cl. D42—8)



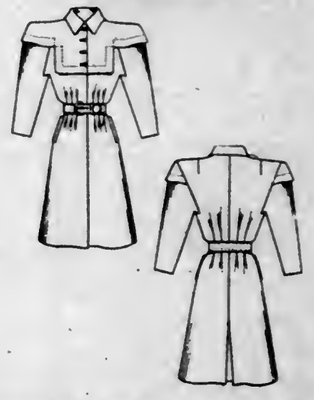
The ornamental design for a brooch mounted watchcase or similar article, substantially as shown.

145,615
DESIGN FOR A TIE RACK
Frederic H. Fisher, Syracuse, N. Y., assignor to Syracuse Ornamental Co., Syracuse, N. Y., a co-partnership
Application August 28, 1945, Serial No. 121,696
Term of patent 7 years
(Cl. D33—8)



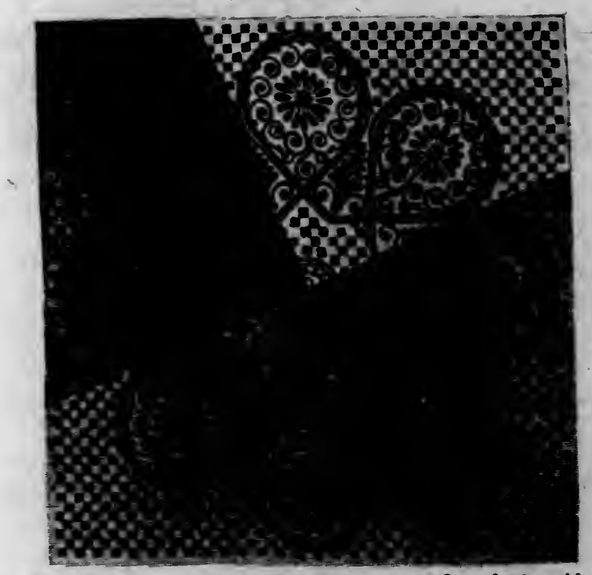
The ornamental design for a tie rack, substantially as shown.

145,616
DESIGN FOR A COAT
Jules Freedman, New York, N. Y.
Application June 6, 1946, Serial No. 130,461
Term of patent 3½ years
(Cl. D3—4)



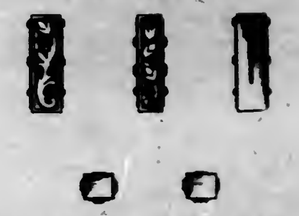
The ornamental design for a coat, substantially as shown.

145,617
DESIGN FOR A FOOD CANISTER
Albert J. Gerber, St. Louis, Mo., assignor to Gerber Plastic Co., St. Louis, Mo., a corporation of Missouri
Application November 1, 1945, Serial No. 123,388
Term of patent 7 years
(Cl. D58—17)



The ornamental design for a food canister, as shown.

145,618
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y.
Application June 4, 1946, Serial No. 130,402
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a coat, substantially as shown.

145,619
DESIGN FOR A SCARF
Rose Gottschalk, New York, N. Y., assignor to Edgar C. Hyman Co., New York, N. Y., a firm composed of Edgar C. Hyman and Theresa M. Hyman
Application May 7, 1946, Serial No. 129,429
Term of patent 3½ years
(Cl. D3—12)

The ornamental design for a scarf, substantially as shown.

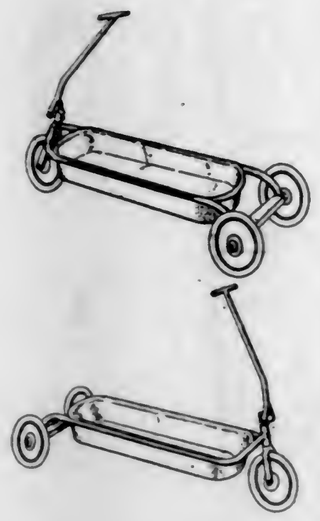
145,620
DESIGN FOR A LIPSTICK CASE OR SIMILAR ARTICLE
Elizabeth N. Graham, New York, N. Y.
Application March 21, 1946, Serial No. 127,727
Term of patent 14 years
(Cl. D86—10)

The ornamental design for a lipstick case or similar article, substantially as shown.

145,621
DESIGN FOR A COMPACT OR SIMILAR ARTICLE
Elizabeth N. Graham, New York, N. Y.
Application March 21, 1946, Serial No. 127,728
Term of patent 14 years
(Cl. D86—10)

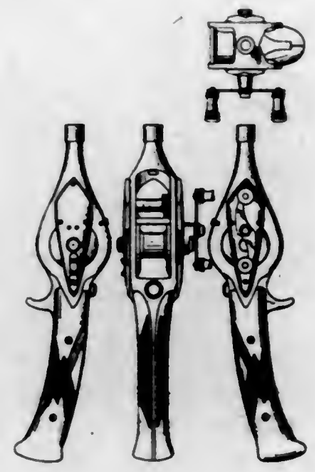
The ornamental design for a compact or similar article, substantially as shown.

145,622
DESIGN FOR A SCARF
Margaret B. Graham, New York, N. Y., assignor to Edgar C. Hyman Co., New York, N. Y., a firm composed of Edgar C. Hyman and Theresa M. Hyman
Application April 23, 1946, Serial No. 128,889
Term of patent 3½ years
(Cl. D3—12)



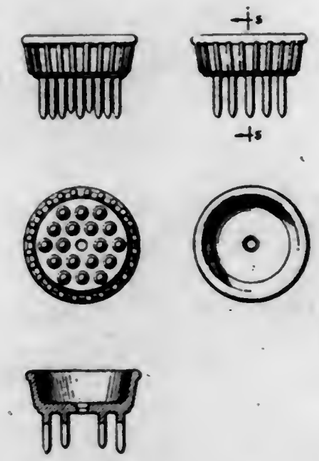
The ornamental design for a scarf, substantially as shown.

145,623
DESIGN FOR A DRESS
Lucy Hoshaflan, New York, N. Y.
Application December 5, 1945, Serial No. 124,361
Term of patent 7 years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

145,624
DESIGN FOR A CHILD'S WHEELED VEHICLE
Edward C. Huebner, Detroit, Mich.
Application November 23, 1945, Serial No. 124,001
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a child's wheeled vehicle, substantially as shown.

145,625
DESIGN FOR A COMBINED FISHING REEL AND ROD SEAT
Edwin P. Hurd, Detroit, Mich., assignor to Hurd Lock & Manufacturing Company, a corporation of Michigan
Application November 3, 1945, Serial No. 123,434
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a combined fishing reel and rod seat, as shown.

145,626
DESIGN FOR A SCALP MASSAGER
Jewel K. Kahn, Hastings, Nebr., assignor to Raymond W. Kerr and Charlotte J. Kerr, copartners, doing business as R. W. Kerr Co., Hastings, Nebr.
Application November 1, 1945, Serial No. 123,386
Term of patent 14 years
(Cl. D83—1)

The ornamental design for a scalp massager, substantially as shown.

145,627
DESIGN FOR A TOY FIGURE
Henry M. Kass, Seattle, Wash.
Application November 19, 1945, Serial No. 123,896
Term of patent 7 years
(Cl. D34—4)

The ornamental design for a toy figure, substantially as shown.

145,628
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,835
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

145,629
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,836
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

145,630
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,837
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

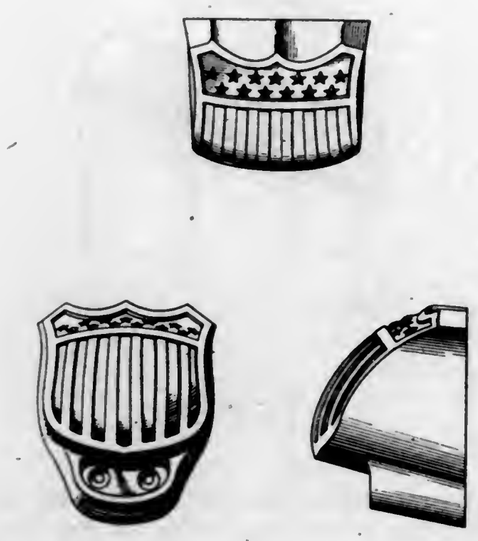
145,631
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,839
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

145,632
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,841
Term of patent 7 years
(Cl. D45—19)

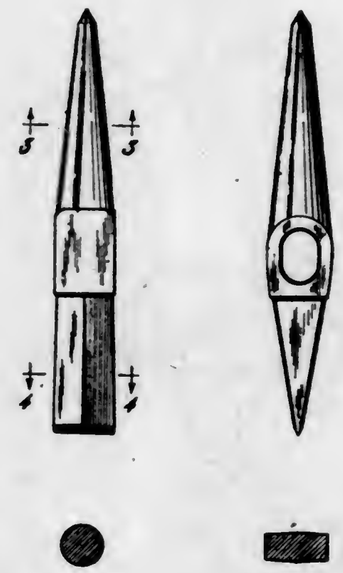
The ornamental design for a brooch or similar article, substantially as shown.

145,633
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,842
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

145,634
DESIGN FOR A FLUFFED YARN ANIMAL FIGURE
Victor J. Kritske and Jeanette M. Kritske, Sheboygan, Wis., assignors of one-half to William H. Murphy, Chicago, Ill.
Application May 23, 1945, Serial No. 119,691
Term of patent 14 years
(Cl. D34—2)

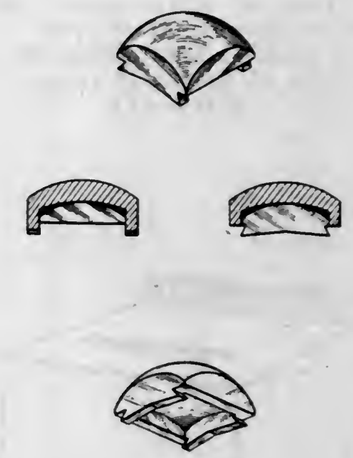


The ornamental design for a fluffed yarn animal figure, substantially as shown and described.

145,635
DESIGN FOR A BOTTLE OPENER
Fred O. Labich, Evanston, Ill.
Application November 29, 1945, Serial No. 124,177
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a bottle opener, as shown.

145,636
DESIGN FOR A CHIPPING HAMMER HEAD
Bernard L. McClure, Norwalk, Ohio
Application August 27, 1945, Serial No. 121,672
Term of patent 14 years
(Cl. D54—13)

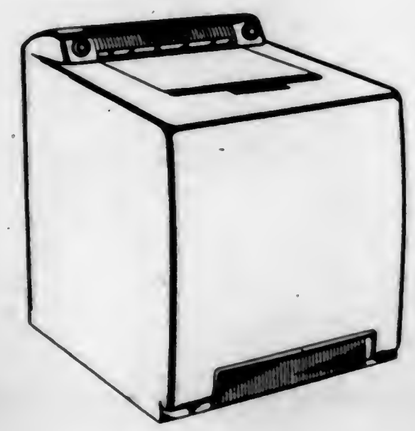


The ornamental design for a chipping hammer head, substantially as shown.

145,637
DESIGN FOR A BOOT
Charles J. Roos, Muskegon, Mich.
Application April 17, 1946, Serial No. 128,688
Term of patent 3½ years
(Cl. D7—4)

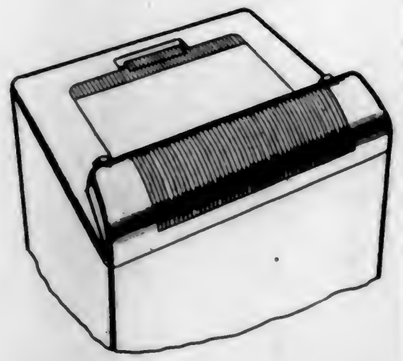
The ornamental design for a boot, as shown.

145,638
DESIGN FOR A MAGNIFYING LENS
Myer Rosenberg, Chicago, Ill.
Application December 20, 1945, Serial No. 124,897
Term of patent 14 years
(Cl. D57—1)



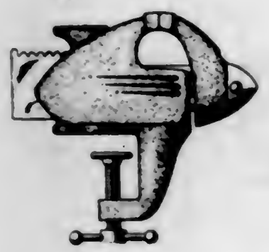
The ornamental design for a magnifying lens, as shown.

145,639
DESIGN FOR A COMBINED WASHING MACHINE AND WRINGER OR SIMILAR ARTICLE
Carl W. Sundberg, Detroit, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application September 19, 1945, Serial No. 122,172
Term of patent 7 years
(Cl. D49—1)



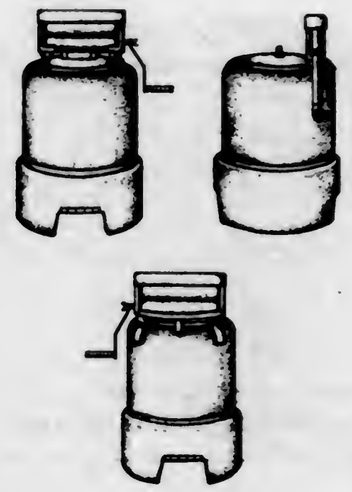
The ornamental design for a combined washing machine and wringer or similar article, as shown.

145,640
DESIGN FOR A CASING FOR WASHING MACHINES, DRYING MACHINES, OR THE LIKE
Carl W. Sundberg, Detroit, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application June 24, 1944, Serial No. 114,186
Term of patent 14 years
(Cl. D49—1)

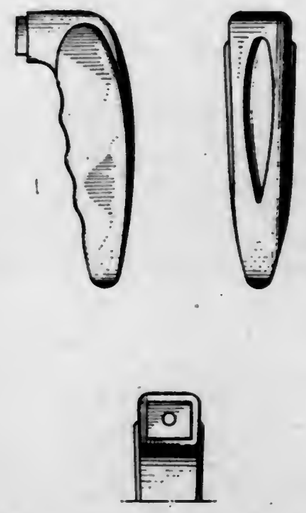


145,640—Continued

The ornamental design for a casing for washing machines, drying machines, or the like, as shown.

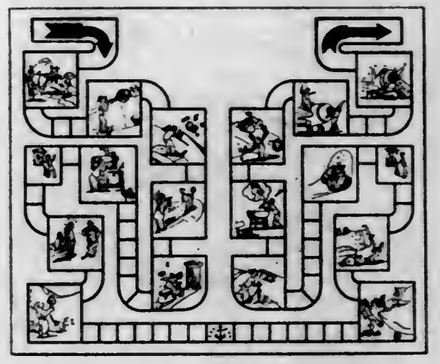


145,641
DESIGN FOR A VISE
John B. Thomson, Plandome, N. Y.
Application August 29, 1945, Serial No. 121,729
Term of patent 14 years
(Cl. D54—13)



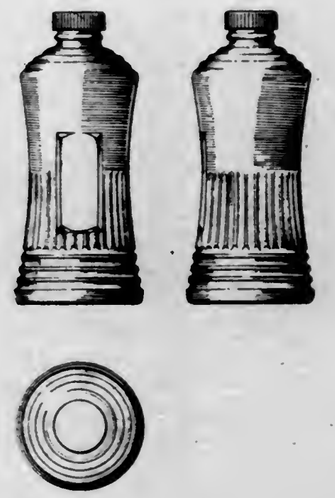
The ornamental design for a vise, as shown and described.

145,642
DESIGN FOR A COMBINED WASHING MACHINE AND WRINGER OR SIMILAR ARTICLE
John H. Walter, Detroit, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application September 19, 1945, Serial No. 122,171
Term of patent 7 years
(Cl. D49—1)



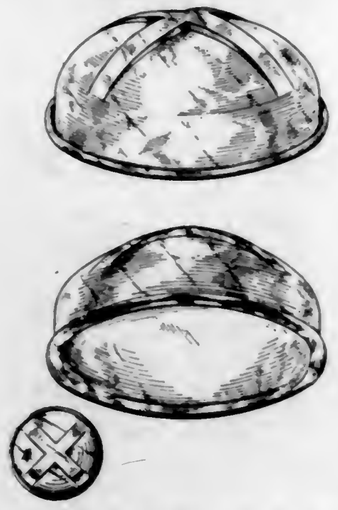
The ornamental design for a combined washing machine and wringer or similar article, as shown.

145,643
DESIGN FOR A HANDLE FOR COOKING UTENSILS
Robert B. Wemyss, Louisville, Ky., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware
Application February 5, 1945, Serial No. 117,756
Term of patent 7 years
(Cl. D44—29)



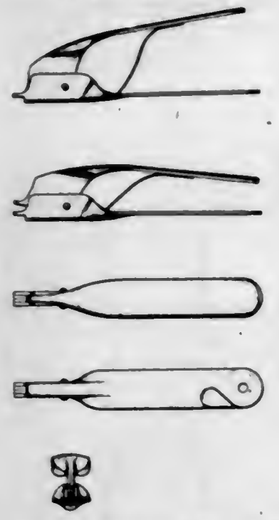
The ornamental design for a handle for cooking utensils, substantially as shown.

145,644
DESIGN FOR A GAME BOARD
William C. Wymer, United States Navy, Oregon City, Oreg.
Application September 20, 1945, Serial No. 122,193
Term of patent 3½ years
(Cl. D34—5)



The ornamental design for a game board, substantially as shown and described.

145,645
DESIGN FOR A BOTTLE
Garland D. Runnels, New York, N. Y.
Application November 8, 1945, Serial No. 123,578
Term of patent 14 years
(Cl. D58—8)



The ornamental design for a bottle, as shown.

145,646
DESIGN FOR A COVER FOR FOOD RECEPTACLES
Deane C. Severance, Walnut Park, Calif.
Application August 20, 1945, Serial No. 121,504
Term of patent 3½ years
(Cl. D44—1)

The ornamental design for a cover for food receptacles, substantially as shown.

145,647
DESIGN FOR A JAR AND BOTTLE CAP REMOVER
Bertram H. Stewart, New York, N. Y.
Application November 29, 1945, Serial No. 124,172
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a jar and bottle cap remover, substantially as shown.

Kahn, Jewel K.

Kerr, Raymond W., assignee, et al.: *See*—
Kahn, Jewel K.

Kritske, Jeanette M.: *See*—
Kritske, Victor J. and J. M.

Kritske, Victor J. and J. M., Sheboygan, Wis., assignors of one-half to W. H. Murphy, Chicago, Ill. Fluffed yarn animal figure. 145,634; Sept. 24.

Labich, Fred O., Evanston, Ill. Bottle opener. 145,635; Sept. 24.

McClure, Bernard L., Norwalk, Ohio. Chipping hammer head. 145,636; Sept. 24.

Murphy, William H., assignee: *See*—
Kritske, Victor J. and J. M.

Nineteen Hundred Corporation, assignee: *See*—
Sundberg, Carl W.
Walter, John H.

Reynolds Metals Company, assignee: *See*—
Wemyss, Robert B.

Roos, Charles J., Muskegon, Mich. Boot. 145,637; Sept. 24.

Rosenberg, Myer, Chicago, Ill. Magnifying lens. 145,638; Sept. 24.

Runnels, Garland D., New York, N. Y. Bottle. 145,645; Sept. 24.

Severance, Deane C., Walnut Park, Calif. Cover for food receptacles. 145,646; Sept. 24.

Stewart, Bertram H., New York, N. Y. Jar and bottle cap remover. 145,647; Sept. 24.

Sundberg, Carl W., Detroit, assignor to Nineteen Hundred Corporation, St. Joseph, Mich. Combined washing machine and wringer or similar article. 145,639; Sept. 24.

Sundberg, Carl W., Detroit, assignor to Nineteen Hundred Corporation, St. Joseph, Mich. Casing for washing machines, drying machines, or the like. 145,640; Sept. 24.

Syracuse Ornamental Co., assignee: *See*—
Fisher, Frederic H.

Thomson, John B., Plandome, N. Y. Vise. 145,641; Sept. 24.

United States Glass Company, assignee: *See*—
Carlson, Charles W.

Walter, John H., Detroit, assignor to Nineteen Hundred Corporation, St. Joseph, Mich. Combined washing machine and wringer or similar article.. 145,642; Sept. 24.

Wemyss, Robert B., Louisville, Ky., assignor to Reynolds Metals Company, Richmond, Va. Handle for cooking utensils. 145,643; Sept. 24.

Wymer, William C., U. S. Navy, Oregon City, Oreg. Game board. 145,644; Sept. 24.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 24TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abel, Franklin W., Franklin, Ind. Pavement slab connecting means. 2,408,133; Sept. 24.

Adams, Charles A., Davenport, Iowa. Electric switch. 2,408,157; Sept. 24.

Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Gertler, Samuel I., and Haller.
Ratchford, William P., and Fisher.
Wells, Percy A., and Swern.

Aiken, Thomas M., Pittsburgh, Pa. Combined lens support and lens hood for folding cameras. 2,408,184; Sept. 24.

Aitchison, Robert B., Staten Island, N. Y., assignor to The Linde Air Products Company. Blowpipe for piercing metal bodies. 2,407,972; Sept. 24.

Alien Property Custodian: *See*—
Hentrich, Winfrid, and Schirm.
Pott, August F.

Aluminum Company of America, assignee: *See*—
Stroup, Philip T., and Willmore.

Aluminum Plant & Vessel Company, The, assignee: *See*—
Hill, Ronald A.

American Car and Foundry Investment Corporation, assignee: *See*—
Stanton, Warren F.

American District Telegraph Company, assignee: *See*—
Donelian, Khatchik O.

American Engineering Company, assignee: *See*—
Lawrence, Howard F.

American Machine and Foundry Company, assignee: *See*—
Johnson, Carl W.

American Swiss Company, The, assignee: *See*—
Rightmyer, Holden W.

American Telephone and Telegraph Company, assignee: *See*—
Davis, Rowland F.
Fay, Frank H., and Reeve.

Andrew, William K., Wauwatosa, and J. J. Lenert, Milwaukee, assignors to Kearney & Trecker Corporation, West Allis, Wis. Work indexing mechanism. 2,407,970; Sept. 24.

Andrews, Earle R.: *See*—
Steans, Lionel H., and Andrews.

Andrews, O. B., Company, assignee: *See*—
Boh, George W.

Anthony Company, assignee: *See*—
Anthony, William C.

Anthony, William C., assignor to Anthony Company, Streator, Ill. Refuse body. 2,408,284; Sept. 24.

Armstrong, George C., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rotor type contactor. 2,408,185; Sept. 24.

Arnold, Hoffman & Co., Incorporated, assignee: *See*—
Morgan, Willard L.

Arrow-Hart & Hegeman Electric Company, assignee: *See*—
Schleicher, Harold E.

Arvey Corporation, assignee: *See*—
Roach, Earl M.
Shaeffer, Harvey E.

Ashbaugh, Bernard D., Mount Gilead, Ohio, assignor to The Hydraulic Development Corp., Inc., Wilmington, Del. Hydraulic device for injection or extrusion machines. 2,408,285; Sept. 24.

Atwell, Harold V., Beacon, assignor to The Texas Company, New York, N. Y. Catalyst manufacture. 2,408,187; Sept. 24.

Atwell, Harold V., Beacon, and H. H. Gross, Pleasantville, assignors to The Texas Company, New York, N. Y. Catalytic conversion of hydrocarbons. 2,408,186; Sept. 24.

Atwood, Francis C., Newton, Mass., assignor, by mesne assignments, to National Dairy Products Corporation, New York, N. Y. Treating synthetically shaped protein base materials. 2,408,026; Sept. 24.

Atwood, Francis C., Newton, Mass., assignor to National Dairy Products Corporation, New York, N. Y. Treating synthetic proteinaceous fibers. 2,408,027; Sept. 24.

Auflero, John M., Plandome, assignor to E. A. Laboratories, Inc., Brooklyn, N. Y. Combined electric heater and air circulator. 2,408,286; Sept. 24.

Austin, Bascum O., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulator. 2,408,188; Sept. 24.

Automatic Voting Machine Corporation, assignee: *See*—
Gustavson, Alvin N.

Automotive Products Company, Limited, assignee: *See*—
Simpson, John K.

Aviation Corporation, The, assignee: *See*—
Moyer, Harris P.

Bachman, Charles H., Scotia, N. Y., assignor to General Electric Company. Electron microscope. 2,408,287; Sept. 24.

Baker, Arthur W., Lookout Mountain, Tenn., assignor to Hercules Powder Company, Wilmington, Del. Waterproof explosive cartridge. 2,408,189; Sept. 24.

Baker, Robert M., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Magnetic induction heating of thin-walled nonmagnetic metallic tubes. 2,408,190; Sept. 24.

Barber, Quay C., deceased, Cleveland, Ohio; J. E. Burnside, administrator. Treating machine. 2,408,248; Sept. 24.

Barnes, James F., assignee, trustee: *See*—
Rebholz, Elmer F.

Barnett, Harold M., Long Beach, and R. C. Mosher, Downey, Calif.; said Mosher assignor to said Barnett. Pulp washer. 2,408,191; Sept. 24.

Barrett, William J.: *See*—
Loomis, Chauncey C., and Barrett.

Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Sending and receiving compressional waves. 2,408,028; Sept. 24.

Bazzoni, Charles B., Wallingford, Pa., and J. W. Millington, Beaumont, Tex., assignors to Sperry-Sun Well Surveying Company, Philadelphia, Pa. Electrical prospecting apparatus. 2,408,029; Sept. 24.

Beale, Evelyn S. L., Staines, assignor to Alan Muntz & Company Limited, Hounslow, England. Two-stroke piston-controlled engine. 2,408,030; Sept. 24.

Beale, Evelyn S. L., Staines, assignor to Alan Muntz & Company Limited, Hounslow, England. Free piston internal-combustion engine. 2,408,031; Sept. 24.

Beck, Alfred C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupling arrangement. 2,408,032; Sept. 24.

Beck, Alfred C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupling system. 2,408,033; Sept. 24.

Beckstrom, Harry A., assignor to J. G. Frost, Seattle, Wash. Igniting liquid fuel. 2,407,973; Sept. 24.

Bell, David A., and A. H. A. Wynn, assignors to A. C. Cossor Limited, London, England. Electrical apparatus. 2,408,192; Sept. 24.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Beck, Alfred C.
Coyne, Howard L., Kuhn, and Ross.
Johnson, Kenneth S.
Koos, Paul V.
Lovell, Clarence A., Parkinson, Swartzel, and Weber.
Meacham, Larned A.
Meacham, Larned A., Mohr, and Parker.
Patterson, Everett M.
Shipley, Frank F.
Teal, Gordon K.

Bellare, David, Brooklyn, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Direction finder antenna. 2,408,034; Sept. 24.

Belsher, Harold E., Phoenix, Ariz. Air filter. 2,408,158; Sept. 24.

Bendix Aviation Corporation, assignee: *See*—
Bremser, Albert T.

Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Observation system. 2,408,035; Sept. 24.

Beste, Harold E., East Rutherford, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Phase shifter. 2,408,193; Sept. 24.

Black, Theodore R., Tipp City, Ohio. Storage receptacle for toilet paper. 2,407,971; Sept. 24.

Bluhill Foods, Incorporated, assignee: *See*—
Michel, Jacob L.

Boettger, Charles R., Jr., Roselle, T. S. Chambers, Newark, and O. C. Slotterbeck, Rahway, N. J., assignors to Standard Oil Development Company. Electrolytic pinacol production. 2,408,036; Sept. 24.

Boh, George W., assignor to O. B. Andrews Company, Chattanooga, Tenn. Packing wrapper. 2,408,159; Sept. 24.

Borg-Warner Corporation, assignee: *See*—
Orr, Palmer.

Bosshard, Werner: *See*—
Hartmann, Max, Miescher, Kaegi, and Bosshard.

Bourdius, John P., New York, N. Y. Cushion rest attachment for telephone instruments. 2,408,194; Sept. 24.

Bowsher, Edward A. H., H. M. M. d'Assis-Fonseca, and H. J. Ward, London, W. C. 2, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electrical remote indicating and supervisory system. 2,408,037; Sept. 24.

Bremser, Albert T., Sidney, assignor to Bendix Aviation Corporation, New York, N. Y. Fuel injection apparatus. 2,408,288; Sept. 24.

Brennan, Joseph B., Euclid, Ohio. Article made of fibrous material. 2,408,038; Sept. 24.

Broido, Daniel, Cockfosters, near Barnet, England. Calculating machine. 2,408,134; Sept. 24.

Brunner, Leo G., Milwaukee, Wis. Exercising and game apparatus. 2,408,160; Sept. 24.

Buud Company, The, assignee: *See*—
Strickland, Harold A., Jr.

Burnside, John E., administrator: *See*—
Barber, Quay C.

Bush, Milton T., Nashville, Tenn., assignor to Mallinckrodt Chemical Works, St. Louis, Mo. Barbituric acid compositions. 2,408,289; Sept. 24.

Busignies, Henri G., Forest Hills, assignor to International Standard Electric Corporation, New York, N. Y. Electronic rotation direction finder. 2,408,039; Sept. 24.

Busignies, Henri G., Forest Hills, assignor to International Standard Electric Corporation, New York, N. Y. Distorting direction finder receiver. 2,408,040; Sept. 24.

Busignies, Henri G., Forest Hills, N. Y., assignor to Federal Telephone & Radio Corporation. Instantaneous visual direction finder. 2,408,041; Sept. 24.

Busse, Edwin G., assignor to Chicago Railway Equipment Company, Chicago, Ill. Railway brake beam. 2,408,015; Sept. 24.

Butler, Seth E., Union City, assignor to Federal Telephone and Radio Corporation, Newark, N. J. Dial. 2,408,042; Sept. 24.

Byer, Henry E., Bernardsville, N. J. Countercurrent condenser. 2,408,290; Sept. 24.

Cadwell, Charles A., assignor to The Electric Railway Improvement Company, Cleveland, Ohio. Welding material and process. 2,408,291; Sept. 24.

Cain, John J., Jr., Youngstown, Ohio. Open-hearth furnace repair unit. 2,408,016; Sept. 24.

Calabrese, Conlonel C., Webster Groves, Mo., and J. S. Herold, Greenwich, Conn. Fire hose reel. 2,408,043; Sept. 24.

Camp, Eliza Q.: *See*—
Walsh, David C., Jr., and Camp.

Campbell, Argyle, assignor to Enterprise Railway Equipment Company, Chicago, Ill. Draft mechanism for railway cars. 2,408,195; Sept. 24.

Cantrell, Troy L.: *See*—
Smith, Herschel G., and Cantrell.
Smith, Herschel G., Cantrell, and Peters.

Cardarelli, Victor A., Sr., Boston, Mass. Roofing. 2,408,292; Sept. 24.

Carlson, Rudolph E., Jacksonville, Fla. Sprinkler head. 2,408,196; Sept. 24.

Carmel, Alan M., Forest Hills, N. Y. Television system. 2,408,293; Sept. 24.

Carney, Samuel C., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalytic conversion of hydrocarbons. 2,408,294; Sept. 24.

Carter, Leslie F., Leonia, N. J., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Erection device for gyroscopes. 2,408,044; Sept. 24.

Celanese Corporation of America, assignee: *See*—
Seymour, George W., and Salvin.

Chambers, Thomas S.: *See*—
Boettger, Charles R., Jr., Chambers, and Slotterbeck.

Chemical Development Corporation, assignee: *See*—
Toulmin, Harry A., Jr.

Chicago Railway Equipment Company, assignee: *See*—
Busse, Edwin G.

Christian, Joseph D., San Francisco, Calif. Speed change unit. 2,407,975; Sept. 24.

Church, Ira L., Reed City, Mich. Saw-tooth setting device. 2,408,197; Sept. 24.

Ciba Pharmaceutical Products, Incorporated, assignee: *See*—
Hartmann, Max, Miescher, Kaegi, and Bosshard.

Clifford, David G.: *See*—
Rigrod, William W., and Clifford.

Clifford, David G., Palo Alto, Calif., and I. E. Mouromtseff, Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ultra high-frequency device. 2,407,974; Sept. 24.

Cohn, Lawrence H., University City, Mo. Bottle carrier. 2,408,249; Sept. 24.

Collins Radio Company, assignee: *See*—
Wirkler, Walter H.

Coltman, John W., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ultra high-frequency power measuring device. 2,408,198; Sept. 24.

Combustion Engineering Company, Inc., assignee: *See*—
Crites, Joe.

Commercial Solvents Corporation, assignee: *See*—
Johnson, Harold G.
Morey, Glen H.

Consolidated Car Heating Company, Inc., assignee: *See*—
Parsons, Robert J.

Consolidated Engineering Corporation, assignee: *See*—
Olesen, Raymond C.

Corhart Refractories Company, assignee: *See*—
Field, Theodore E.

Cossin, Hursle E., assignor to Nash-Kelvinator Corporation, Detroit, Mich. Range apparatus. 2,408,295; Sept. 24.

Cossor, A. C., Limited, assignee: *See*—
Bell, David A., and Wynn.

Cotchett, Louis M., Hingham, assignor to Foster Machine Company, Westfield, Mass. Yarn winding machine. 2,408,135; Sept. 24.

Cotton, Frank H., East Barnet, and P. A. Gibbons, London, England; said Gibbons assignor to said Cotton. Reclaiming rubber. 2,408,296; Sept. 24.

Cottrell, Turner R., Neptune, N. J. Line connector. 2,408,045; Sept. 24.

Coyne, Howard L., Rockville Centre, N. Y., J. J. Kuhn, Elizabeth, N. J., and J. E. Ross, Corona, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical resistance unit. 2,408,046; Sept. 24.

Crites, Joe, Evanston, Ill., assignor to Combustion Engineering Company, Inc., New York, N. Y. Cyclone dust collector. 2,408,250; Sept. 24.

Crown Cork & Seal Company, Inc., assignee: *See*—
Goebel, George H., and Rau.
Stewart, Robert J.

Cubberley, Richard H., Ridgewood, and F. W. Yeager, Englewood, N. J., assignors to The Patent and Licensing Corporation, New York, N. Y. Bituminous compositions. 2,408,297; Sept. 24.

Cumming, James M., Turtle Creek, and R. C. Cunningham, East McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,408,199; Sept. 24.

Cummins, Clessie L., assignor to Cummins Engine Company, Inc., Columbus, Ind. Fuel feeding and injection apparatus for oil burning engines. 2,408,298; Sept. 24.

Cummins Engine Company, Inc., assignee: *See*—
Cummins, Clessie L.

Cunningham, Lewis L., Glendale, Calif., assignor to Perfex Corporation, Milwaukee, Wis. Burner control apparatus. 2,408,047; Sept. 24.

Cunningham, Richard C.: *See*—
Cumming, James M., and Cunningham.

Curtis, John C., and E. G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company. Drilling apparatus. 2,407,976; Sept. 24.

Curtiss-Wright Corporation, assignee: *See*—
Trimbach, Clem G.

Dantz, Thomas M., Chicago, Ill., assignor to The Ruberoid Co., New York, N. Y. Composite roof. 2,408,251; Sept. 24.

Darnell, Rex C., assignor to King-Seeley Corporation, Ann Arbor, Mich. Speed governor. 2,408,161; Sept. 24.

D'Assis-Fonseca, Harold M.M.: *See*—
Bowsher, E. A. H., d'Assis-Fonseca, and Ward.

Davis, Rowland F., Tuckahoe, N. Y., assignor to American Telephone and Telegraph Company. Selective signaling system. 2,408,299; Sept. 24.

Dawley, Clarence E.: *See*—
Findlay, John H., Dawley, and Pfeiffer.
Slack, Charles M., Dawley, and Pfeiffer.

De Ganahl, Carl, Trenton, N. J., assignor, by mesne assignments, to Kaiser Cargo, Inc., Bristol, Pa. Ammunition. 2,408,252; Sept. 24.

De La Mater, Robert G., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va. Walking beam structure. 2,408,200; Sept. 24.

Deloraine, Edmond M., and E. Labin, New York, N. Y., assignors to Federal Telephone and Radio Corporation. Radio direction method and system. 2,408,048; Sept. 24.

Derderian, Charles M., Richmond, Va. Clothes hanger. 2,408,201; Sept. 24.

De Rosa, Louis A., West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Intelligence transmission system. 2,408,049; Sept. 24.

De Rosa, Louis A., West Brighton, Staten Island, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Visually reproducing signals. 2,408,050; Sept. 24.

Dickman, Robert H., Evansville, Ind. Apparatus for vacuum testing sealed articles. 2,408,202; Sept. 24.

Diebold, Barney A., Irvington, N. J. Guard or protector for electric cables. 2,408,253; Sept. 24.

Dillon, Thomas E., New Castle, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydrolysis of aliphatic sulphonyl chlorides. 2,408,300; Sept. 24.

Donelian, Khatchik O., New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J. Fire and smoke detector and the like. 2,408,051; Sept. 24.

Dow Chemical Company, The, assignee: *See*—
Maasberg, Albert T.

Dreher, Herman W.: *See*—
Garfield, Frederick M., and Dreher.

Dufour, Maurice F.: *See*—
Hills, Robert C., and Dufour.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Beste, Harold E.

Duncan, Neil B.: *See*—
Luce, Charles C., and Duncan.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Dillon, Thomas E.
Pavlic, Albert A.
Peppel, William J.

Du Pont, Stephen, Wilbraham, assignor to Indian Motocycle Company, Springfield, Mass. Suspension unit for vehicle wheels. 2,408,254; Sept. 24.

Duriron Company, Inc., The, assignee: *See*—
Jacobsen, Oystein.

E. A. Laboratories, Inc., assignee: *See*—
Aufiero, John M.

E & J Manufacturing Company, assignee: *See*—
Fox, Le Roy G.

Eames, William F., Westfield, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Moving stairway. 2,408,203; Sept. 24.

Early, M. Edward, Rockford, Ill. Lapping and honing machine. 2,408,204; Sept. 24.

Eason, Clarence M., Waukesha, Wis. Clutch. 2,408,301; Sept. 24.

Eaton, Gregory Y., Pasadena, assignor to Technical Surfaces Ltd., Los Angeles, Calif. Spectacle and eyeglass receptacle. 2,408,162; Sept. 24.

Ederer, R. J., Company, assignee: *See*—
Grabowsky, Murray G.

Electric Railway Improvement Company, The, assignee: *See*—
Cadwell, Charles A.

Elliott Bay Mill Co., assignee: *See*—
Miller, William J.

Elliott, Bernard V., and H. C. Price, assignors to H. C. Price Company, Bartlesville, Okla. Hydraulic internal line-up clamp. 2,408,255; Sept. 24.

Enderlin, Max, Madison, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Rectifier stack mounting construction. 2,408,052; Sept. 24.

English, William H., Seattle, Wash. Mount for telescopic sights. 2,407,977; Sept. 24.

Enterprise Railway Equipment Company, assignee: *See*—
Campbell, Argyle.

Eriksson, Erik E., Base Line, Mich. Recording device for automobiles. 2,408,302; Sept. 24.

Ernst, Walter, Mount Gilead, Ohio, assignor to The Hydraulic Development Corporation, Inc., Wilmington, Del. Control system. 2,408,303; Sept. 24.

Eyles, Thomas H., assignor to Fosgood Corporation, Leominster, Mass. Toggle system for injection molding machines. 2,407,978; Sept. 24.

Eyre, Charles M. Le G., and J. O. Gilderdale, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Frequency changing network. 2,408,053; Sept. 24.

Fancher, Robert N., Springfield, Mo. Quilting frame. 2,408,205; Sept. 24.

Farmer, Harold O., assignor to Alan Muntz & Company Limited, Hounslow, England. Nonreturn valve. 2,408,056; Sept. 24.

Farmer, Harold O., assignor to Alan Muntz & Company Limited, Hounslow, England. Internal-combustion engine of the free piston type. 2,408,057; Sept. 24.

Fay, Frank H., Huguenot Park, N. Y., and E. W. Reeve, Plainfield, N. J., assignors to American Telephone and Telegraph Company. Telegraph repeater system. 2,408,304; Sept. 24.

Fedders-Quigan Corporation, assignee: *See*—
Lear, Joseph D.

Federal Telephone and Radio Corporation, assignee: *See*—
Bellare, David.
Busignies, Henri G.
Butler, Seth E.
Deloraine, Edmond M., and Labin.
De Rosa, Louis A.
Enderlin, Max.
Grieg, Donald D.
Labin, Emile.
Labin, Emile, and Grieg.
Stearn, Franklin A.
Von Hippel, Arthur.
Young, Norman H., Jr.

Fenn, Emory W., Chicago, Ill., assignor to Firecraft Corporation. Electromechanical interlock for elevator doors. 2,408,054; Sept. 24.

Fereday, Frederick T., Louisville, Ky., assignor to The Union Switch and Signal Company, Swissvale, Pa. Apparatus for railway signal systems. 2,408,206; Sept. 24.

Field, Donald C.: *See*—
Thomas, Robert M., and Field.

Field, Theodore E., assignor to Corhart Refractories Company, Louisville, Ky. Cast refractory product. 2,408,305; Sept. 24.

Findlay, John H., Upper Montclair, C. E. Dawley, and A. Pfeiffer, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Controlled electrode for field emission discharge device. 2,407,979; Sept. 24.

Firecraft Corporation, assignee: *See*—
Fenn, Emory W.
Jahn, Clarence M.

Fisher, Charles H.: *See*—
Ratchford, William P., and Fisher.

Fisher Scientific Company, assignee: *See*—
Kruper, Andrew P.

Fiske, Milan D., Schenectady, N. Y., assignor to General Electric Company. Ultra high frequency coupling device and system. 2,408,055; Sept. 24.

Florman, Irving, New York, N. Y. Filling arrangement for ball-pointed fountain pens. 2,408,256; Sept. 24.

Flournoy, Algernon F., Shreveport, La. Aerator. 2,408,306; Sept. 24.

Fodor, Andrew S., South Norwalk, Conn. Rotary cutter. 2,408,257; Sept. 24.

Fodor, Ferenz H., assignor to Technical Securities Corporation, Los Angeles, Calif. Landing wheel drive. 2,408,163; Sept. 24.

Fosgood Corporation, assignee: *See*—
Eyles, Thomas H.

Foster, Arch L., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalyst preparation. 2,408,164; Sept. 24.

Foster Machine Company, assignee: *See*—
Cotchett, Louis M.

Fox, Le Roy G., Los Angeles, assignor, by mesne assignments, to E & J Manufacturing Company, Glendale, Calif. Resuscitator insufflator aspirator. 2,408,136; Sept. 24.

Fox Products Company, assignee: *See*—
Henke, Frederick W.

Frost, J. G., assignee: *See*—
Beckstrom, Harry A.

Frost, William F.: *See*—
Hull, Harvard L., Gorrill, and Frost.

Gallagher, William F., Springfield, Mass. Hygroscopic material dispenser. 2,408,058; Sept. 24.

Garfield, Frederick M., and H. W. Dreher, St. Louis, Mo., assignor to Olin Industries, Inc. Manufacture of diazodinitrophenol. 2,408,059; Sept. 24.

Garretson, Harry D., Whitestone, assignor to Philips Metalix Corporation, New York, N. Y. Electrical circuit arrangement. 2,408,017; Sept. 24.

Garrison, Allen D., and K. C. ten Brink, Houston, Tex., assignors to Texaco Development Corporation, New York, N. Y. Treatment of clays. 2,408,207; Sept. 24.

Gartin, Elmer G.: *See*—
Curtin, John C., and Gartin.

George, Fred W., Jr., Lima, Ohio. Multiple-cylinder steam locomotive. 2,407,980; Sept. 24.

General Aniline & Film Corporation, assignee: *See*—
Hassler, Gerald L.

General Electric Company, assignee: *See*—
Bachman, Charles H.
Fiske, Milan D.
Harrison, Howard R.
Pike, Otis W.
Suits, Chauncey G.
Titus, Charles H.
Willard, Waldo W.

General Motors Corporation, assignee: *See*—
Menzies, William E.

Gerbes, Otto, Goose Creek, Tex., assignor to Standard Oil Development Company. Isomerization process. 2,408,018; Sept. 24.

Gretler, Samuel I., and H. L. J. Haller, Washington, D. C., assignors to The United States of America as represented by the Secretary of Agriculture and his successors in office. Insecticide. 2,408,307; Sept. 24.

Gibbons, Percy A.: *See*—
Cotton, Frank H., and Gibbons.

Gilderdale, John O.: *See*—
Eyre, Charles M. Le G., and Gilderdale.

Gillette Safety Razor Company, assignee: *See*—
Muros, Joseph.

Gilliver, Gilbert: *See*—
Grace, Bertram B., Handley, and Gilliver.

Goebel, George, deceased, by H. Goebel, administratrix, and H. A. Rau, assignors to Crown Cork & Seal Company, Inc., Baltimore, Md. Article handling apparatus. 2,408,019; Sept. 24.

Goebel, Helene: *See*—
Goebel, George H., and Rau.

Goldsborough, Shirley L., Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Simplified ground relay. 2,408,208; Sept. 24.

Gorrill, William S.: *See*—
Hull, Harvard L., Gorrill, and Frost.

Gould, William L., Albany, N. Y. Electric iron. 2,408,209; Sept. 24.

Goulds Pumps, Inc., assignee: *See*—
Landberg, Erik G.

Grabowsky, Murray G., assignor to R. J. Ederer Company, Chicago, Ill. Making net. 2,408,308; Sept. 24.

Grace, Bertram B., J. Handley, and G. Gilliver, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electrical measuring instrument. 2,408,060; Sept. 24.

Gray, Raymond K. and R. L., assignors to The Illinois Lock Company, Chicago, Ill. Padlock. 2,408,137; Sept. 24.

Gray, Rollin L.: *See*—
Gray, Raymond K. and R. L.

Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.

Grieg, Donald D., New York, N. Y., assignor to Federal Telephone and Radio Corporation. Stable pulse generator. 2,408,061; Sept. 24.

Grieg, Donald D., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Signal translator. 2,408,062; Sept. 24.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Multiplex receiver. 2,408,063; Sept. 24.

Gross, Howard H.: *See*—
Atwell, Harold V., and Gross.

Gulf Oil Corporation, assignee: *See*—
Smith, Herschel G., and Cantrell.
Smith, Herschel G., Cantrell, and Peters.

Gustavson, Alvin N., Bemus Point, assignor to Automatic Voting Machine Corporation, Jamestown, N. Y. Voting machines. 2,407,981; Sept. 24.

Gutoski, Emil, Cicero, Ill. Sliding window screen supporting structure. 2,408,138; Sept. 24.

Gutzeit, Carlos L., Terre Haute, Ind., assignor to Shell Development Company. Dehydrogenation process. 2,408,139; Sept. 24.

Gutzeit, Carlos L., Terre Haute, Ind., assignor to Shell Development Company, San Francisco, Calif. Dehydrogenation catalyst. 2,408,140; Sept. 24.

Hall, Selden H., assignor to James L. Taylor Mfg. Co., Poughkeepsie, N. Y. Continuous gluing machine. 2,408,064; Sept. 24.

Haller, Herbert L. J.: *See*—
Gertler, Samuel I., and Haller.

Handley, John: *See*—
Grace, Bertram B., Handley, and Gilliver.

Hanna, Clinton R., Pittsburgh, and S. J. Mikina, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Acceleration-responsive governor systems. 2,407,982; Sept. 24.

Hansen, Donald W., assignor to A. E. Staley Manufacturing Company, Decatur, Ill. Starch-melamine molding composition. 2,408,065; Sept. 24.

Harper, Orvie D., Vandalia, Ill., assignor to Standard Oil Development Company. Completion of wells. 2,407,983; Sept. 24.

Harper, Raymond L.: *See*—
Kowaski, Frank, and Harper.

Harrawood, Luther A., Broughton, Ill. Fluorescent switch starter. 2,408,165; Sept. 24.

Harrison, Howard R., Upper Darby, Pa., assignor to General Electric Company. Portable mounting for electric switches. 2,408,309; Sept. 24.

Hartman, Max, and K. Miescher, Riehen, H. Kaegi, Basel, and W. Bosshard, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products, Incorporated, Summit, N. J. Pyridine-3-acetic acid and derivatives thereof and preparing the same. 2,408,020; Sept. 24.

Hassler, Gerald L., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Mechanism for contact printing. 2,408,310; Sept. 24.

Hawkins, Eugene R., Compton, Calif. Life saving device. 2,408,166; Sept. 24.

Heddleson, Fred A., and A. C. Weierich, Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Commutator construction. 2,408,210; Sept. 24.

Heil, Theodore, Berkeley, Calif. Toy. 2,408,141; Sept. 24.

Hellman, Joseph R., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Toaster casing structure. 2,407,984; Sept. 24.

Hemphill, William B.: *See*—
Shimek, Edwin J., and Hemphill.

Henke, Frederick W., assignor to Fox Products Company, Philadelphia, Pa. Machine tool. 2,407,985; Sept. 24.

Hentrich, Winfrid, Rodleben, near Dessau-Rosslau, Anhalt, and E. Schirm, Dessau, Anhalt, Germany; vested in the Alien Property Custodian. P-amino-benzenesulphamide derivatives. 2,408,066; Sept. 24.

Hepp, Harold J., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalytic alkylation process. 2,408,167; Sept. 24.

Hercules Powder Company, assignee: *See*—
Baker, Arthur W.

Herold, John S.: *See*—
Calabrese, Conlonel C., and Herold.

Herzig, Henry A., Port Washington, N. Y., assignor to Sperry Gyroscope Company, Inc. Inertia absorber. 2,408,067; Sept. 24.

Hetzel, Eugene N., St. Louis, Mo., and G. E. Taylor, Anniston, Ala., assignors to Monsanto Chemical Company. Stabilized acid sodium pyrophosphate and making it. 2,408,258; Sept. 24.

Hill Brothers Veneer Co., assignee: *See*—
McKee, Halbert.

Hill, Ronald A., Wandsworth, London, assignor to The Aluminum Plant & Vessel Company Limited, London, England. Treatment of liquids. 2,408,021; Sept. 24.

Hills, Robert C., and M. F. Dufour, assignors to Nicaro Nickel Company, New York, N. Y. Removal of sulphur in recovery of nickel. 2,408,311; Sept. 24.

Hodnette, John K., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical induction apparatus. 2,408,211; Sept. 24.

Hodnette, John K., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical induction apparatus. 2,408,212; Sept. 24.

Hofer, Laurence F., Oswego, Oreg. Rear view mirror. 2,408,168; Sept. 24.

Hoffer, James F., Detroit, assignor to Superdraulic Corporation Dearborn, Mich. Level work supporting structure. 2,408,169; Sept. 24.

Holbro, Theodor, Basel, W. Kern, Sissach, and P. Sutter, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Vat dyestuff and making same. 2,408,259; Sept. 24.

Hollenbeck, Ernest L., Glendale, Calif. Comb. 2,408,142; Sept. 24.

Horeczy, Joseph T.: *See*—
Wadley, Edward F., and Horeczy.

Hubbert, Leslie S., Mount Gilead, Ohio, assignor to The Hydraulic Development Corporation, Inc., Wilmington, Del. Press control. 2,408,312; Sept. 24.

Huber, John K., Lakewood, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric circuit controller. 2,408,213; Sept. 24.

Huebner, William C., New York, N. Y. Apparatus for multicolor printing with electro lines of force. 2,408,143; Sept. 24.

Huebner, William C., New York, N. Y. Printing. 2,408,144; Sept. 24.

Hull, Harvard L., East Williston, W. S. Gorrill, Hempstead, and W. F. Frost, Williston Park, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Automatic positional control of objects. 2,408,068; Sept. 24.

Hull, Harvard L., East Williston, W. S. Gorrill, Brooklyn, and W. F. Frost, Williston Park, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Gun positioning system. 2,408,069; Sept. 24.

Hull, Harvard L., East Williston, and D. J. Munroe, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y System for positioning heavy objects. 2,408,070; Sept. 24.

Hunter, Lyle R., Clairton, and O. C. Levander, McKeesport, Pa. Photoelectric counter. 2,408,313; Sept. 24.

Hurley, Samuel C., Jr., Danville, Ill. Device for rotating rounds. 2,408,170; Sept. 24.

Husted, Harry A., St. Clair, Mich. High traction sole and heel. 2,408,214; Sept. 24.

Hydraulic Development Corp., Inc., The, assignee: *See*—
Ashbaugh, Bernard D.
Ernst, Walter.
Hubbert, Leslie S.

Hyler, Loiell L.: *See*—
Peterson, Oscar R., and Hyler.

Illinois Lock Company, The, assignee: *See*—
Gray, Raymond K. and R. L.

Illinois Tool Works, assignee: *See*—
Poupitch, Ouglјesa J.

Imperial Chemical Industries Limited, assignee: *See*—
Smith Sydney H.

Indian Motocycle Company, assignee: *See*—
du Pont, Stephen.

International Standard Electric Corporation, assignee: *See*—
Bowsher, Edward A. H., d'Assis-Fonseca, and Ward.
Busignies, Henri G.
Eyre, Charles M. L. G., and Gilderdale.
Grace, Bertram B., Handley, and Gilliver.
Labin, Emile.

Interstate Bakeries Corporation, assignee: *See*—
Jones, Ap T.

Jacobsen, Oystein, Montgomery County, assignor to The Duriron Company, Inc., Dayton, Ohio. Shaft seal. 2,408,314; Sept. 24.

Jacobsen, Oystein, Montgomery County, assignor to The Duriron Company, Inc., Dayton, Ohio. Shaft seal. 2,408,315; Sept. 24.

Jarman, Vincent G., Watchung, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Adjustment fixture. 2,408,316; Sept. 24.

Jasco, Incorporated, assignee: *See*—
Kearby, Kenneth K.
Thomas, Robert M., and Field.

Jahn, Clarence M., Chicago, Ill., assignor to Firecraft Corporation. Adjustable hinge. 2,408,071; Sept. 24.

Johnson, Carl W., Brooklyn, N. Y., assignor to American Machine and Foundry Company. Stitch length adjusting mechanism. 2,407,986; Sept. 24.

Johnson, Elmer L., Chicago, Ill. Garment hanger. 2,408,145; Sept. 24.

Johnson, Harold G., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Preparation of 2-methyl-1,2-propanediamine. 2,408,171; Sept. 24.

Johnson, Harold G., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Preparation of diamines. 2,408,172; Sept. 24.

Johnson, Kenneth S., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone repeater circuit. 2,408,072; Sept. 24.

Jones, Ap T., Chicago, Ill., assignor to Interstate Bakeries Corporation, Kansas City, Mo. Banded bread loaf package. 2,408,317; Sept. 24.

Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for shaping uppers over lasts. 2,408,022; Sept. 24.

Josephs, Abraham I., New York, N. Y. Interchangeable hat construction. 2,408,318; Sept. 24.

Joy Manufacturing Company, assignee: *See*—
Curtis, John C., and Gartin.
Wineman, Wade H.

Joyce-Cridland Company, The, assignee: *See*—
Simonton, William L.

Kaegi, Hans: *See*—
Hartmann, Max, Miescher, Kaegi, and Bosshard.

Kaiser Cargo, Inc., assignee: *See*—
De Ganahl, Carl.

Kanuch, John: *See*—
Oliver, Delbert S., and Kanuch.

Kauffman, Bergie L.: *See*—
Miller, Joshua, and Kauffman.

Kearby, Kenneth K., Elizabeth, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Dehydrogenation of hydrocarbons. 2,408,146; Sept. 24.

Kearney & Trecker Corp., assignee: *See*—
Andrew, William K., and Lenert.

Keating, George H., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Catalyst production. 2,408,215; Sept. 24.

Kellogg, John L., assignor to John L. Kellogg & Co., Chicago, Ill. Making coffee extracts. 2,408,260; Sept. 24.

Kellogg, John L., & Co., assignee: *See*—
Kellogg, John L.

Kern, Walter: *See*—
Holbro, Theodor, Kern, and Sutter.

Kestenman Bros. Mfg. Co., assignee: *See*—
Valcourt, Louis E.

Kickland, Clara I., Aberdeen, Wash. Suspender for artificial legs. 2,408,073; Sept. 24.

Kilgore, George R., Verona, N. J., assignor to Radio Corporation of America. Beam deflection electron discharge. 2,408,216; Sept. 24.

King, George E., Swissvale, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,408,217; Sept. 24.

King-Seeley Corporation, assignee: *See*—
Darnell, Rex C.

Kistler, Samuel S., West Boylston, assignor to Norton Company, Worcester, Mass. Abrasive articles. 2,408,319; Sept. 24.

Koos, Paul V., Manhasset, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Teletypewriter switchboard. 2,408,074; Sept. 24.

Kowalski, Frank, Jr., U. S. Army, Camp Chaffee, Ark., and R. L. Harper, U. S. Army, Camp Bowie, Tex. Oil well pump. 2,408,075; Sept. 24.

Kneale, Ralph M., Cleveland Heights, Ohio. Transfer sheet. 2,408,147; Sept. 24.

Kruper, Andrew P., Waterbury, Conn., assignor to Fisher Scientific Company, Pittsburgh, Pa. Spectrophotometric system. 2,408,023; Sept. 24.

Kuhlik, Hattie B., assignee: *See*—
Kuhlik, Jacob M.

Kuhlik, Jacob M., Brooklyn, assignor to Hattie B. Kuhlik, Sea Gate, N. Y. Sound recording and reproducing machine. 2,408,320; Sept. 24.

Kuhn, John J.: *See*—
Coyne, Howard L., Kuhn, and Ross.

Labin, Emile: *See*—
Deloraine, Edmond M., and Labin.

Labin, Emile, assignor to International Standard Electric Corporation, New York, N. Y. Pulse transmitter. 2,408,076; Sept. 24.

Labin, Emile, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Multichannel system. 2,408,077; Sept. 24.

Labin, Emile, and D. D. Grieg, New York, N. Y., assignors to Federal Telephone and Radio Corporation. Constant width synchronized pulse generator. 2,408,078; Sept. 24.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation. Pulse discriminator. 2,408,079; Sept. 24.

Lakatos, Louis L., Bela-Cynwyd, Pa., assignor to Radio Corporation of America. Pulse generator. 2,408,261; Sept. 24.

Landberg, Erik G., assignor to Goulds Pumps, Inc., Seneca Falls, N. Y. Multistage centrifugal pump. 2,407,987; Sept. 24.

Larsson, Sven, Ekeby, Almby, Sweden. Locking mechanism. 2,408,024; Sept. 24.

Lawrence, Howard F., assignor, by mesne assignments, to American Engineering Company, Philadelphia, Pa. Stoker. 2,408,321; Sept. 24.

Lear, Joseph D., assignor, by mesne assignments, to Fedders-Quigan Corporation, Buffalo, N. Y. Machine for winding fin stocks. 2,408,322; Sept. 24.

Leavitt Machine Company, The, assignee: *See*—
Wilcox, Philip E.

Lenehan, Bernard E., Bloomfield, and G. J. Wey, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical measuring instrument. 2,408,218; Sept. 24.

Lenert, Joseph J.: *See*—
Andrew, William K., and Lenert.

Le Tourneau, R. G., Inc., assignee: *See*—
Peterson, Oscar R., and Hyler.

Levander, Oliver C.: *See*—
Hunter, Lyle R., and Levander.

Lincoln Engineering Company, assignee: *See*—
Smith, Kaye A.

Linde Air Products Company, The, assignee: *See*—
Aitchison, Robert B.

Liwschitz, Michael, Brooklyn, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Polyphase multipolar winding. 2,408,219; Sept. 24.

Lloyd, Edward C., Takoma Park, Md. Power transmission device. 2,408,080; Sept. 24.

Lockhart, Margaret L., assignee: *See*—
Lockhart, Marshall L.

Lockhart, Marshall L., assignor of one-half to M. L. Lockhart, Detroit, Mich. Hypodermic syringe. 2,408,323; Sept. 24.

Lone Star Gas Company, assignee: *See*—
Martin, James W.

Long, Sidney L., Minneapolis, Minn. Top. 2,408,262; Sept. 24.

Longbotham, Thomas, Portland, Oreg. Diamond charged saw blade and making same. 2,408,148; Sept. 24.

Loomis, Chauncey C., Lee, and W. J. Barrett, assignors to New England Lime Company, Adams, Mass. Hydrated dolomitic limes and reducing the plasticity of aqueous suspensions thereof. 2,408,324; Sept. 24.

Lovell, Clarence A., and D. B. Parkinson, Maplewood, K. D. Swartzel, Jr., Teaneck, N. J., and B. T. Weber, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Artillery predictor. 2,408,081; Sept. 24.

Luce, Charles L., McKeesport, and N. B. Duncan, Pittsburgh, Pa., assignors to National Tube Company. Working tubular articles. 2,408,325; Sept. 24.

Luckhaupt, Christopher, Jamaica, N. Y., assignor to Luckite Processes, Inc., Delawanna, N. J. Treating cellulose matter with terpene dihydrochloride. 2,407,988; Sept. 24.

Luckhaupt, Christopher, Jamaica, N. Y., assignor to Luckite Processes, Inc., Delawanna, N. J. Treating cellulose matter with terebene. 2,407,989; Sept. 24.

Luckite Processes, Inc., assignee: *See*—
Luckhaupt, Christopher.

Lum, John C., Union, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Stripping of copper from zinc. 2,408,220; Sept. 24.

Lurie, Benjamin L., Chicago, Ill. Pipe wrench. 2,407,990; Sept. 24.

Maasberg, Albert T., Huntsville, Ala., assignor to The Dow Chemical Company, Midland, Mich. Preparing alkali soluble methyl cellulose. 2,408,326; Sept. 24.

Mabee, John E., assignee, et al.: *See*—
Schuetz, Thomas J., and Turnquist.

Mack, Wayne E., Martins Ferry, Ohio, assignor, by mesne assignments, to Wheeling Steel Corporation, Wheeling, W. Va. Expanded metal load bearing structure. 2,408,082; Sept. 24.

Mack, Wayne E., Martins Ferry, Ohio, assignor, by mesne assignments, to Wheeling Steel Corporation, Wheeling, W. Va. Expanded metal load bearing structure. 2,408,083; Sept. 24.

Mahlstadt, Sampson D.: *See*—
Miller, Leslie W., and Mahlstadt.

Mallinckrodt Chemical Works, assignee: *See*—
Bush, Milton T.

Marmon-Herrington Company, Inc., assignee: *See*—
Schon, Pierre.

Martin, Charles W., Chattanooga, Tenn. Sewing machine attachment. 2,408,025; Sept. 24.

Martin, Glenn L., Company, The, assignee: *See*—
Miller, Leslie T.
Soenke, John E.

Martin, James W., assignor to Lone Star Gas Company, Dallas, Tex. Vaporizing apparatus. 2,408,084; Sept. 24.

Matuszak, Maryan P., Bartlesville, Okla., assignor to Phillips Petroleum Company. Treatment of aromatic hydrocarbon materials. 2,408,173; Sept. 24.

Maytag Company, The, assignee: *See*—
Smith, Thomas R.

Mazzarisi, Vito, Clifton, N. J. Toaster. 2,408,263; Sept. 24.

McClure, Fred B., assignor of one-fourth to W. L. Stroup, Moundsville, W. Va. Driving axle for motor vehicles. 2,408,264; Sept. 24.

McCullough, Otis J., assignor to McCullough Tool Company, Houston, Tex. Pipe releasing device. 2,407,991; Sept. 24.

McCullough Tool Company, assignee: *See*—
McCullough, Otis J.

McFarlane, Edwin C., Brooklyn, N. Y. Plan folding machine. 2,407,992; Sept. 24.

McKee, Halbert, Nineveh, assignor of two-thirds to Hill Brothers Veneer Co., Edinburg, Ind. Hoist and transporting device. 2,407,993; Sept. 24.

McLean, Leland O., assignor to The Osgood Company, Marion, Ohio. Fluid pressure clutch mechanism. 2,408,327; Sept. 24.

McLemore, Price C., Montgomery, Ala. Apparatus for cultivation of plants. 2,408,328; Sept. 24.

Meacham, Larned A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Communication system. 2,408,085; Sept. 24.

Meacham, Larned A., Summit, N. J., M. E. Mohr, Jamaica, N. Y., and C. V. Parker, Washington, D. C., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Impulse system. 2,408,086; Sept. 24.

Meadow, Jacob R., Lexington, Ky., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation process. 2,408,329; Sept. 24.

Menzies, William E., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Reversible single phase capacitor motor. 2,407,994; Sept. 24.

Merrell, Wm. S., Company, The, assignee: *See*—
Shelton, Robert S., and Van Campen, Jr.

Michel, Jacob L., assignor to Bluhill Foods, Incorporated, Denver, Colo. Automatic means responsive to quantity of material in discharging receiver for controlling delivery from source. 2,408,221; Sept. 24.

Miescher, Karl: *See*—
Hartman, Max, Miescher, Kaegi, and Bosshard.

Mikina, Stanley J.: *See*—
Hanna, Clinton R., and Mikina.

Miles, James C., Cleveland, Ohio. Hot-air furnace. 2,408,087; Sept. 24.

Miller, Joshua, Drexel Park, Pa., and B. L. Kauffman, Collingswood, N. J. Improvement in parachute harness. 2,408,088; Sept. 24.

Miller, Leslie T., Stoneleigh, assignor to The Glenn L. Martin Company, Middle River, Md. Automatic dilution system. 2,408,265; Sept. 24.

Miller, Leslie T., Stoneleigh, assignor to The Glenn L. Martin Company, Middle River, Md. Automatic dilution system control valve. 2,408,266; Sept. 24.

Miller, Leslie W., and S. D. Mahlstadt, Waverly, Iowa. Apparatus for embedding an elongated flexible member in a moldable material. 2,408,149; Sept. 24.

Miller, William J., assignor to Elliott Bay Mill Co., Seattle, Wash. Resilient hold-down device. 2,408,330; Sept. 24.

Millington, John W.: *See*—
Bazzoni, Charles B., and Millington.

Mills Engineering Company, assignee: *See*—
Mills, Herbert E.

Mills, Herbert E., assignor, by mesne assignments, to Mills Engineering Company, Detroit, Mich. Air-conditioned electric cooking oven. 2,408,331; Sept. 24.

Moeller, William C., Kansas City, Mo. Pocket dispenser. 2,408,150; Sept. 24.

Mohr, Milton E.: *See*—
Meacham, Larned A., Mohr, and Parker.

Monsanto Chemical Company, assignee: *See*—
Hetzel, Eugene N., and Taylor.

Moore, George A., Jr., executor, et al.: *See*—
Moore, George A.

Moore, George A., Medford, Mass., G. A., Jr., H., and L. Moore, executors of said G. A. Moore, deceased. Setscrew. 2,408,267; Sept. 24.

Moore, Harrington, executor, et al.: *See*—
Moore, George A.

Moore, Lawrence, executor, et al.: *See*—
Moore, George A.

Morey, Glen H., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Vinyl resin coating compositions. 2,408,174; Sept. 24.

Morgan, Willard L., Columbus, Ohio, assignor to Arnold, Hoffman & Co. Incorporated. Water soluble resinous condensates. 2,408,332; Sept. 24.

Mosher, Rupert C.: *See*—
Barnett, Harold M., and Mosher.

Mouromtseff, Ilia A.: *See*—
Clifford, David G., and Mouromtseff.

Moyer, Harris P., Toledo, Ohio, assignor to The Aviation Corporation, New York, N. Y. Producing fillets. 2,407,995; Sept. 24.

Munroe, David J.: *See*—
Hull, Harvard L., and Munroe.

Muntz, Alan & Company Limited, assignee: *See*—
Beale, Evelyn S. L.
Farmer, Harold O.
Muntz, Frederick A. I.

Muntz, Frederick A. I., assignor to Alan Muntz & Company Limited, Hounslow, England. Internal-combustion engine. 2,408,089; Sept. 24.

Muros, Joseph, Cambridge, assignor to Gillette Safety Razor Company, Boston, Mass. Blade package. 2,408,222; Sept. 24.

Musher Foundation Incorporated, assignee: *See*—
Musher, Sidney.

Musher, Sidney, assignor to Musher Foundation Incorporated, New York, N. Y. Lubricating oils. 2,408,090; Sept. 24.

Nash, Herbert G., Kew Gardens, N. Y. Rotary gate valve. 2,408,223; Sept. 24.

Nash-Kelvinator Corporation, assignee: *See*—
Cossin, Hursle E.

National Dairy Products Corporation, assignee: *See*—
Atwood, Francis C.

National Tube Company, assignee: *See*—
Luce, Charles C., and Duncan.

New England Lime Company, assignee: *See*—
Loomis, Chaucey C., and Barrett.

New Jersey Zinc Company, The, assignee: *See*—
Rodda, John L.

New York Air Brake Company, The, assignee: *See*—
Pickert, Lynn I.
Sudduth, Henry N.

Nicaro Nickel Company, assignee: *See*—
Hills, Robert C., and Dufour.

Nies, William L., Wheaton, Ill. Stroboscopic apparatus for phonographs. 2,407,996; Sept. 24.

Nisenson, Jules, assignor to Publix Metal Products, Inc., New York, N. Y. Venetian blind cord-locking construction. 2,408,333; Sept. 24.

Norton Company, assignee: *See*—
Kistler, Samuel S.

Ogukuos Metalix Corporation, assignee: *See*—
Garretson, Harry D.

Olesen, Raymond C., Altadena, assignor to Consolidated Engineering Corporation, Pasadena, Calif. Electrical regulating system. 2,408,091; Sept. 24.

Olin Industries, Inc., assignee: *See*—
Garfield, Frederick M., and Dreher.

Oliver, Delbert S., Euclid, assignor to Pesco Products Co., Cleveland, Ohio. Lapping method and machine. 2,408,334; Sept. 24.

Oliver, Delbert S., Euclid, and J. Kanuch, Cleveland, Ohio, assignors to Pesco Products Co. Torque wrench. 2,408,335; Sept. 24.

Orr, Palmer, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission. 2,408,336; Sept. 24.

Osgood Company, The, assignee: *See*—
McLean, Leland O.

Palmer, John B., Los Angeles, Calif. Campaign badge. 2,408,224; Sept. 24.

Panzer, William C., Chicago, Ill. Knockdown stool or the like. 2,408,337; Sept. 24.

Parker, Carlyle V.: *See*—
Meacham, Larned A., Mohr, and Parker.

Parker, Paul T.: *See*—
Squires, Walter, Jr., and Parker.

Parkersburg Rig & Reel Company, The, assignee: *See*—
De La Mater, Robert G.

Parkinson, David B.: *See*—
Lovell, C. A., Parkinson, Swartzel, and Weber.

Parsons, Robert J., Schenectady, assignor to Consolidated Car Heating Company, Inc., Albany, N. Y. Hydraulic device. 2,408,338; Sept. 24.

Patent and Licensing Corporation, The, assignee: *See*—
Cubberley, Richard H., and Yeager.

Patterson, Everett M., Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wire-wound resistance and making same. 2,408,092; Sept. 24.

Patterson, Everett M., Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Making wire-wound card-type resistance devices. 2,408,093; Sept. 24.

Patterson, John A., Westfield, N. J., assignor to Standard Oil Development Company. Separation and purification of isoprene. 2,407,997; Sept. 24.

Patton, James R., Jr.: *See*—
Truax, Robert C., Stiff, Schubert, Patton, and Youngquist.

Pavlic, Albert A., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Process. 2,408,094; Sept. 24.

Peillon, Paul, assignor to Salvage & Marine Company of Egypt, S. A. E., Cairo, Egypt. Electric underwater welding. 2,408,175; Sept. 24.

Peppel, William J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Highly useful compounds. 2,408,095; Sept. 24.

Perfex Corporation, assignee: *See*—
Cunningham, Lewis L.

Pesco Products Co., assignee: *See*—
Oliver, Delbert S.
Oliver, Delbert S., and Kanuch.

Peters, John G.: *See*—
Smith, Herschel G., Cantrell, and Peters.

Peterson, Oscar R., Peoria, and L. L. Hyler, Washington, Ill., assignors to R. G. Le Tourneau, Inc., Stockton, Calif. Adjustable push grader. 2,408,268; Sept. 24.

Peterson, William R., Oswego, assignor to St. Regis Paper Company, New York, N. Y. Valve bag filling, weighing, and discharging apparatus. 2,408,225; Sept. 24.

Peterson, William R., assignor to Vapor Car Heating Company, Inc., Chicago, Ill. Thermostatic controller for water temperature. 2,408,269; Sept. 24.

Pfeiffer, Andrew: *See*—
Findlay, John H., Dawley, and Pfeiffer.
Slack, Charles M., Bawley, and Pfeiffer.

Phillips, Maxwell E., Stockton, Calif. Transport tower. 2,408,151; Sept. 24.

Phillips Petroleum Company, assignee: *See*—
Carney, Samuel.
Foster, Arch L.
Hepp, Harold J.
Matuszak, Maryan P.

Pickert, Lynn I., Watertown, N. Y., assignor to The New York Air Brake Company. Variable load brake. 2,408,123; Sept. 24.

Pierce, John S., Richmond, Va., and J. H. Wotiz, Pittsburgh, Pa.; said Wotiz assignor to said Pierce. Polyhydroxyamino compounds. 2,408,096; Sept. 24.

Pike, Otis W., Schenectady, N. Y., assignor to General Electric Company. Heating apparatus. 2,408,339; Sept. 24.

Porcelli, Alfonso, Brooklyn, N. Y. Antiskid canvas device. 2,408,152; Sept. 24.

Pott, August F., Zella-Mehlis 11, Thuringia, Germany; vested in the Alien Property Custodian. Calculating machine for performing division. 2,408,097; Sept. 24.

Poupitch, Ougljesa J., assignor to Illinois Tool Works, Chicago, Ill. Fastening device. 2,408,340; Sept. 24.

Price, H. C., Company, assignee: *See*—
Elliott, Bernard V., and Price.

Price, Harold C.: *See*—
Elliott, Bernard V., and Price.

Pringle, Mark A., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control scheme. 2,408,226; Sept. 24.

Proulx, Jean, Hull, Quebec, Canada. Cover for the suction boxes of papermaking machines. 2,408,176; Sept. 24.

Publix Metal Products, Inc., assignee: *See*—
Nisenson, Jules.

Radio Corporation of America, assignee: *See*—
Kilgore, George R.
Lakatos, Louis L.
Roberds, Wesley M.
Turner, Alfred H.

Ramsey, Jesse A., Wenonah, N. J. Tiltable shelves drill holder case. 2,408,227; Sept. 24.

Ratchford, William P., Willow Grove, and C. H. Fisher, Abington, Pa., assignors to Claude R. Wickard, as Secretary of Agriculture of the United States of America, and his successors in office. Improved process for the manufacture of methyl acrylate by the thermal decomposition of methyl alpha-acetoxypropionate. 2,408,177; Sept. 24.

Rau, Harry A.: *See*—
Goebel, George, and Rau.

Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.

Rebholz, Elmer F., Chicago, Ill., assignor to James F. Barnes, as trustee. Game. 2,408,270; Sept. 24.

Reeve, Elmer W.: *See*—
Fay, Frank H., and Reeve.

Remco Electronic, Inc., assignee: *See*—
Toomim, Hershel.

Richards, Carrol H., Boston, Mass. Impact tool mechanism. 2,408,228; Sept. 24.

Richardson, Henry K., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lamp base. 2,407,998; Sept. 24.

Rightmyer, Holden W., assignor to The American Swiss Company, Toledo, Ohio. Vehicle door latch. 2,407,999; Sept. 24.

Rigrod, William W., Bloomfield, and D. G. Clifford, Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Coaxial terminal assembly. 2,408,271; Sept. 24.

Roach, Earl M., assignor to Arvey Corporation, Chicago, Ill. Structural toy. 2,408,272; Sept. 24.

Roberds, Wesley M., Collingswood, N. J., assignor to Radio Corporation of America. Electrical heating apparatus. 2,408,229; Sept. 24.

Rodda, John L., Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y. Alloy. 2,408,341; Sept. 24.

Rodda, John L., Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y. Alloy. 2,408,342; Sept. 24.

Rolfes, Hans J., Melrose, Johannesburg, Transvaal, Union of South Africa. Safeguarding electric igniters of blasting detonators against accidental firing. 2,408,124; Sept. 24.

Rolfes, Hans J., Melrose, Johannesburg, Transvaal, Union of South Africa. Safeguarding electric igniters of blasting detonators against accidental firing. 2,408,125; Sept. 24.

Ross, John E.: *See*—
Coyne, Howard L., Kuhn, and Ross.

Rothweiler, Charles O., Milwaukee, Wis. Level. 2,408,343; Sept. 24.

Ruberoid Co., The, assignee: *See*—
Dantz, Thomas M.

Sager, Robert H., University Heights, Ohio. Sunshade and other auxiliary spectacles. 2,408,273; Sept. 24.

St. Regis Paper Company, assignee: *See*—
Peterson, William R.

Salvage & Marine Company of Egypt, assignee: *See*—
Peillon, Paul.

Salvin, Victor S.: *See*—
Seymour, George W., and Salvin.

Sandusky, Julius, Toronto, Ontario, Canada. Electrolyte level control device for storage batteries. 2,408,178; Sept. 24.

Schade Valve Manufacturing Company, assignee: *See*—
Schiller, Joseph F.

Schiller, Joseph F., Drexel Hill, assignor to Schade Valve Manufacturing Company, Philadelphia, Pa. Valve. 2,408,000; Sept. 24.

Schirm, Erik: *See*—
Hentrich, Winfrid, and Schirm.

Schleicher, Harold E., West Hartford, assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Spring mounting and assembly for snap-action electric switches. 2,408,274; Sept. 24.

Schon, Pierre, assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind. Dual motor control. 2,408,098; Sept. 24.

Schubert, William: *See*—
Truax, Robert C., Stiff, Schubert, Patton, and Youngquist.

Schuetz, Thomas J., assignee, et al.: *See*—
Schuetz, Thomas J., and Turnquist.

Schuetz, Thomas J., and E. W. Turnquist, assignors, by mesne assignments, to J. E. Mabee, T. J. Schuetz, and L. Stephenson, all of Tulsa, Okla. Friction brake. 2,408,179; Sept. 24.

Schülle, Georges C., Buenos Aires, Argentina. Apparatus for inflating tires. 2,408,126; Sept. 24.

Scurrah, William, Toronto, Ontario, Canada. Coat hanger or wall rack. 2,408,344; Sept. 24.

Seymour, George W., and V. S. Salvin, Cumberland, Md., assignors to Celanese Corporation of America. Condensation process. 2,408,127; Sept. 24.

Shaeffer, Harvey E., assignor to Arvey Corporation, Chicago, Ill. Toy flying machine. 2,408,275; Sept. 24.

Shell Development Company, assignee: *See*—
Gutzeit, Carlos L.

Shelton, Robert S., Mariemont, and M. G. Van Campen, Jr., Deer Park, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Composition of matter and method. 2,408,345; Sept. 24.

Sherman, Albert, Hampton, Va. Variable-area nozzle for jet-propelled aircraft. 2,408,099; Sept. 24.

Shimek, Edwin J., and W. B. Hemphill, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Gain-control system for seismic amplifiers. 2,408,001; Sept. 24.

Shipley, Frank F., Tenafly, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph permutation code signal translator. 2,408,100; Sept. 24.

Shoupp, William E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Measuring apparatus. 2,408,230; Sept. 24.

Shrader, Chalmon J., Henrico County, Va. Electrical ground clamp. 2,408,276; Sept. 24.

Shurtliff, Alfred J., Pocatello, Idaho. Baby jumper. 2,408,002; Sept. 24.

Silver, Albert L., and A. Stein, Dallas, Tex. Shirt construction. 2,408,180; Sept. 24.

Simonton, William L., assignor to The Joyce-Cridland Company, Dayton, Ohio. Lifting mechanism. 2,308,181; Sept. 24.

Simpson, John K., assignor to Automotive Products Company Limited, Leamington Spa, England. Liquid pressure remote control system. 2,408,003; Sept. 24.

Skilton, Harry A., Watertown, Conn. Tiltable rotary power-driven work-holding unit. 2,408,231; Sept. 24.

Slack, Charles M., Glen Ridge, and C. E. Dawley, and A. Pfeiffer, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Constant voltage field emission arc discharge device. 2,408,004; Sept. 24.

Slatis, Abraham, Chicago, Ill. Shell pattern and casting therewith. 2,408,005; Sept. 24.

Slotterbeck, Ober C.: *See*—
Boettger, Charles R., Jr., Chambers, and Slotterbeck.

Slotterbeck, Ober C., Rahway, N. J., assignor to Standard Oil Development Company. Electrolytic production of pinacols. 2,408,101; Sept. 24.

Smith, Herschel G., Wallingford, T. L. Cantrell, Lansdowne, Pa., and J. G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa. Oil compositions. 2,408,102; Sept. 24.

Smith, Herschel G., Wallingford, T. L. Cantrell, Lansdowne, Pa., and J. G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa. Mineral oil composition. 2,408,103; Sept. 24.

Smith, Herschel G., Wallingford, and T. L. Cantrell, Lansdowne, assignors to Gulf Oil Corporation, Pittsburgh, Pa. Chemical compounds and processes. 2,408,232; Sept. 24.

Smith, Kaye A., Overland, assignor to Lincoln Engineering Company, St. Louis, Mo. Piston. 2,408,346; Sept. 24.

Smith, Sydney H., Manchester, England, assignor to Imperial Chemical Industries Limited. Screw-threaded closure device. 2,408,233; Sept. 24.

Smith, Thomas R., assignor to The Maytag Company, Newton, Iowa. Hydraulic valve construction. 2,408,006; Sept. 24.

Society of Chemical Industry in Basle, assignee: *See*—
Holbro, Theodor, Kern, and Sutter.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Meadow, Jacob R.
Shimek, Edwin J., and Hemphill.

Soenke, John E., assignor to The Glenn L. Martin Company, Baltimore, Md. Gun control device. 2,408,277; Sept. 24.

Speare's, Alden, Sons Co., The, assignee: *See*—
Thompson, Willis F.

Spencer, Percy L., West Newton, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company. Tunable magnetron. 2,408,234; Sept. 24.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. High efficiency magnetron. 2,408,235; Sept. 24.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Magnetron casing. 2,408,236; Sept. 24.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Tunable magnetron. 2,408,237; Sept. 24.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Space discharge device. 2,408,238; Sept. 24.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electronic discharge device. 2,408,239; Sept. 24.

Sperry Gyroscope Company, Inc., assignee: *See*—
Carter, Leslie F.
Herzig, Henry A.
Hull, Harvard L., Gorrill, and Frost.
Hull, Harvard L., and Munroe.
Varian, Russell H.

Sperry-Sun Well Surveying Company, assignee: *See*—
Bazzoni, Charles B., and Millington.

Sprouse, Verner E., Columbus, Ind. Worm adjusting double wrap hose clamp. 2,408,347; Sept. 24.

Squires, Walter, Jr., and P. T. Parker, Baton Rouge, La., assignors to Standard Oil Development Company. Coagulation process. 2,408,128; Sept. 24.

Staley, A. E., Manufacturing Company, assignee: *See*—
Hansen, Donald W.

Standard Oil Development Company, assignee: *See*—
Boettger, Charles R., Jr., Chambers, and Slotterbeck.
Gerbes, Otto.
Harper, Orvie D.
Patterson, John A.
Slotterbeck, Ober C.
Squires, Walter, Jr., and Parker.
Voorhies, Alexis, Jr.
Wadley, Edward F., and Horeczy.
Walsh, David C., Jr., and Camp.
Williams, Philip S.

Stanton, Gladys P., administratrix: *See*—
Stanton, Warren F.

Stanton, Warren F., Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y. Fuel mixture control. 2,408,104; Sept. 24.

Stanton, Warren F., Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y. Fuel mixture control. 2,408,348; Sept. 24.

Stanton, Warren F., deceased, by G. P. Stanton, administratrix, Pawtucket, R. I., assignor, by mesne assignments, to American Car and Foundry Investment Corporation, New York, N. Y. Fuel mixture control. 2,408,349; Sept. 24.

Starret, Howard A., U. S. Army. Storage tank. 2,408,105; Sept. 24.

Steans, Lionel H., and E. R. Andrews, Los Angeles, Calif. Fastening device. 2,408,153; Sept. 24.

Stearn, Franklin A., Westfield, N. J., assignor to Federal Telephone & Radio Corporation. Drop signal with vibration lock. 2,408,106; Sept. 24.

Steel Processing Company, assignee: *See*—
Urquhart, Norman J.

Stein, Abraham: *See*—
Silver, Albert L., and Stein.

Stephenson, Logan, assignee, et al.: *See*—
Schuetz, Thomas J., and Turnquist.

Stewart, Robert J., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Apparatus for mixing and filling beverages. 2,408,107; Sept. 24.

Stiff, Ray C., Jr.: *See*—
Truax, Robert C., Stiff, Schubert, Patton, and Youngquist.

Stokes, Edward A.: *See*—
Vokes, Cecil B., and Stokes.

Stone, Andrew J., New York, N. Y. Quick-freezing apparatus for food articles. 2,408,154; Sept. 24.

Stone, Ordell E., Lake Mills, Wis. Sanitary pipe washer. 2,408,240; Sept. 24.

Strickland, Harold A., Jr., Detroit, Mich., assignor, by mesne assignments, to The Budd Company, Philadelphia, Pa. Electric furnace machine. 2,408,350; Sept. 24.

Stroup, Philip T., and C. B. Willmore, New Kensington, assignors to Aluminum Company of America, Pittsburgh, Pa. Metal recovery. 2,408,278; Sept. 24.

Stroup, W. L., assignee: *See*—
McClure, Fred B.

Sturbelle, Lucien C., New York, N. Y. Production of aluminum. 2,408,241; Sept. 24.

Submarine Signal Company, assignee: *See*—
Batchelder, Laurence.
Benioff, Hugo.
Turner, Edwin E., Jr.

Sudduth, Henry N., Watertown, N. Y., assignor to The New York Air Brake Company. Air brake. 2,408,129; Sept. 24.

Suits, Chauncey G., Schenectady, N. Y., assignor to General Electric Company. Current-limiting fuse. 2,408,351; Sept. 24.

Sun Chemical Corporation, assignee: *See*—
Wekeman, Stephen N.

Superdraulic Corporation, assignee: *See*—
Hoffer, James F.

Sutter, Paul: *See*—
Holbro, Theodor, Kern, and Sutter.

Swartzel, Karl D., Jr.: *See*—
Lovell, Clarence A., Parkinson, Swartzel, and Weber.

Swern, Daniel: *See*—
Wells, Percy A., and Swern.

Taylor, George E.: *See*—
Hetzel, Eugene N., and Taylor.

Taylor, James L., Mfg. Co., assignee: *See*—
Hall, Selden H.

Teal, Gordon K., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Television image production. 2,408,108; Sept. 24.

Technical Securities Corporation, assignee: *See*—
Fodor, Ferenz H.

Technical Surfaces Ltd., assignee: *See*—
Eaton, Gregory Y.

Ten Brink, Karl C.: *See*—
Garrison, Allen D., and ten Brink.

Texaco Development Corporation, assignee: *See*—
Garrison, Allen D., and ten Brink.

Texas Company, The, assignee: *See*—
Atwell, Harold V., and Gross.
Keating, George H.

Thomas, Robert M., Union, and D. C. Field, Linden, N. J., assignors, by mesne assignments, to Jasco, Incorporated. Recovery of low-temperature polymerization products. 2,408,007; Sept. 24.

Thompson, Willis F., Portland, Maine, assignor to The Alden Speare's Sons Co., Cambridge, Mass. Pump. 2,408,109; Sept. 24.

Thornbury, Sydney G., assignor to Turco Products, Inc., Los Angeles, Calif. Composition for and method of cleaning and coating metal. 2,408,155; Sept. 24.

Thresh, Frank R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun-charging mechanism. 2,408,110; Sept. 24.

Tipton, Elizabeth B., executrix: *See*—
Tipton, William D.

Tipton, William D., deceased, Stoneleigh, Md.; E. B. Tipton, executrix. Hydrodynamic transmission. 2,408,008; Sept. 24.

Titus, Charles H., Philadelphia, Pa., assignor to General Electric Company. Gas cooling arrangement for circuit interrupters. 2,408,352; Sept. 24.

Titus, Thomas L., assignor to The Wyott Manufacturing Company, Cheyenne, Wyo. Fountain pump. 2,408,009; Sept. 24.

Titus, Thomas L., Cheyenne, Wyo., assignor to The Wyott Manufacturing Company, Cheyenne, Wyo. Measuring trap chamber with barometric cutoff. 2,408,156; Sept. 24.

Toomim, Hershel, Douglaston, assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y. Regenerative bass compensation circuit. 2,408,242; Sept. 24.

Toulmin, Harry A., Jr., Oakwood, assignor, by mesne assignments, to Chemical Developments Corporation, Dayton, Ohio. Pigmented resin gel. 2,408,353; Sept. 24.

Trimbach, Clem G., Eggertsville, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation. Arresting gear. 2,408,354; Sept. 24.

Truax, Robert C., R. C. Stiff, Jr., W. Schubert, and J. R. Patton, Jr., U. S. Navy, and R. Youngquist, Annapolis, Md. Two-stage rocket system. 2,408,111; Sept. 24.

Truax, Robert C., R. C. Stiff, Jr., W. Schubert, and J. R. Patton, Jr., U. S. Navy, and R. Youngquist, Annapolis, Md. Rocket motor cooling system. 2,408,112; Sept. 24.

Turco Products Inc., assignee: *See*—
Thornbury, Sydney G.

Turner, Alfred H., Collingswood, N. J., assignor to Radio Corporation of America. Concentric line oscillator. 2,408,355; Sept. 24.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,408,113; Sept. 24.

Turnquist, Edwin N.: *See*—
Schuetz, Thomas J., and Turnquist.

Union Switch and Signal Company, The, assignee: *See*—
Fereday, Frederick T.

United Shoe Machinery Corporation, assignee: *See*—
Jorgensen, Bernhardt.
Thresh, Frank R.

Urquhart, Norman J., Scenery Hill, assignor to Steel Processing Company, Pittsburgh, Pa. Furnace atmosphere control. 2,408,114; Sept. 24.

Valcourt, Louis E., East Providence, assignor to Kestenman Bros. Mfg. Co., Providence, R. I. Clasp for watch braclets or the like. 2,408,279; Sept. 24.

Van Campen, Marcus G., Jr., assignee: *See*—
Shelton, Robert S., and Van Campen, Jr.

Vapor Car Heating Company, Inc., assignee: *See*—
Peterson, William R.
Varian, Russell H., Wantagh, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Stereoscopic viewer. 2,408,115; Sept. 24.
Vartanian, John G., Hanford, Calif. Hose coupling. 2,408,243; Sept. 24.
Vokes, Cecil G., and E. A. Stokes, said Stokes assignor to Vokes Limited, London, England. Filter cleaning mechanism. 2,408,130; Sept. 24.
Vokes Limited, assignee: *See*—
Vokes, Cecil G., and Stokes.
Von Hippel, Arthur, Weston, Mass., assignor to Federal Telephone & Radio Corporation. Selenium coated elements and making them. 2,408,116; Sept. 24.
Voorhies, Alexis, Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Dehydrogenating hydrocarbons. 2,408,131; Sept. 24.
Wadley, Edward F., and J. T. Horeczy, Baytown, Tex., assignors to Standard Oil Development Company. Purification of ethylene. 2,408,010; Sept. 24.
Walsh, David C., Jr., and E. Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company. Preventing the corrosion of distillation equipment. 2,408,011; Sept. 24.
Walter, Zachary T., Los Angeles, Calif. Mold and forming plastics thereon. 2,408,245; Sept. 24.
Walter, Zachary T., Los Angeles, Calif. Aerial cargo landing container. 2,408,246; Sept. 24.

Mack, Wayne E.
Wilcox, Philip E., New York, N. Y., assignor to The Leavitt Machine Company, Orange, Mass. Apparatus for refacing gate valves. 2,408,280; Sept. 24.
Wilkin, James G., New Hurley, N. Y. Window sash. 2,408,281; Sept. 24.
Willard, Waldo W., Schenectady, N. Y., assignor to General Electric Company. Sighting mechanism. 2,408,356; Sept. 24.
Williams, Philip S., Tulsa, Okla., assignor to Standard Oil Development Company. Well logging. 2,408,012; Sept. 24.
Willmore, Charles B.: *See*—
Stroup, Philip T., and Willmore.
Wineman, Wade H., Michigan City, Ind., assignor to Joy Manufacturing Company. Pumping apparatus. 2,408,013; Sept. 24.
Wineman, Wade H., Michigan City, Ind., assignor to Joy Manufacturing Company. Pumping apparatus. 2,408,014; Sept. 24.
Wirkler, Walter H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Azimuth radio direction finding system. 2,408,118; Sept. 24.
Wirkler, Walter H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Heterodyne radio direction finding system. 2,408,119; Sept. 24.
Wirkler, Walter H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Radio direction finding system. 2,408,120; Sept. 24.
Wirkler, Walter H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Direction finding system with frequency shift. 2,408,121; Sept. 24.
Wirkler, Walter H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Heterodyne direction finder with single receiver. 2,408,122; Sept. 24.
Wisconsin Alumni Research Foundation, assignee: *See*—
Wolf, Frank M.
Wolf, Frank M., assignor to Wisconsin Alumni Research Foundation, Madison, Wis. Fuel distribution system for high-temperature pebble bed furnaces. 2,408,282; Sept. 24.
Wolfe, Asher M., Bloomsburg, Pa. Navigation computer. 2,408,357; Sept. 24.
Wollin, Morey E., Brookline, Mass. Lock. 2,408,283; Sept. 24.
Wood, George, Toronto, Ontario, Canada. Automatic drain device for cooling system. 2,408,183; Sept. 24.
Wotiz, John H.: *See*—
Pierce, John S., and Wotiz.
Wynn, Arthur H. A.: *See*—
Bell, David A., and Wynn.
Wyott Manufacturing Company, The, assignee: *See*—
Titus, Thomas L.
Yates, Sheppard B., Hamlet, N. C. Distributor for stokers. 2,408,358; Sept. 24.
Yeager, Frank W.: *See*—
Cubberley, Richard H., and Yeager.
Young, Norman H., Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Reproduction of intelligence. 2,408,117; Sept. 24.
Youngquist, Robertson: *See*—
Truax, Robert C., Stiff, Schubert, Patton, and Youngquist.

LIST OF DESIGN INVENTIONS

Animal figure, Fluffed yarn. V. J. and J. M. Kritski. 145,634; Sept. 24.
Boot. C. J. Roos. 145,637; Sept. 24.
Bottle. G. D. Runnels. 145,645; Sept. 24.
Brooch mounted watchbase or similar article. E. Deutsch. 145,614; Sept. 24.
Brooch or similar article. A. Katz. 145,628–33; Sept. 24.
Cabinet, Food dispensing. A. Bach. 145,609; Sept. 24.
Canister, Food. A. J. Gerber. 145,617; Sept. 24.
Case or similar article, Lipstick. E. N. Graham. 145,620; Sept. 24.
Casing for washing machines, drying machines, or the like. C. W. Sundberg. 145,640; Sept. 24.
Coat. J. Freedman. 145,616; Sept. 24.
Coat. H. Goldberg. 145,618; Sept. 24.
Compact or similar article. E. N. Graham. 145,621; Sept. 24.
Cover for food receptacles. D. C. Severance. 145,646; Sept. 24.
Dress. L. Hoshafian. 145,623; Sept. 24.
Game board. W. C. Wymer. 145,644; Sept. 24.
Hammer head, Chipping. B. L. McClure. 145,636; Sept. 24.
Handle for cooking utensils. R. B. Wemyss. 145,643; Sept. 24.
Holder, Bottle. E. M. Butterfield. 145,611; Sept. 24.
Jar and bottle cap remover. B. H. Stewart. 145,647; Sept. 24.
Lens, Magnifying. M. Rosenberg. 145,638; Sept. 24.
Mailbox. V. Aleks. 145,608; Sept. 24.
Massager, Scalp. J. K. Kahn. 145,626; Sept. 24.
Opener, Bottle. F. O. Labich. 145,635; Sept. 24.
Plate. C. W. Carlson. 145,612–13; Sept. 24.
Rack, Tie. F. H. Fisher. 145,615; Sept. 24.
Reel and rod seat, Combined fishing. E. P. Hurd. 145,625; Sept. 24.
Scarf. R. Gottschalk. 145,619; Sept. 24.
Scarf. M. B. Graham. 145,622; Sept. 24.
Timepiece face. S. Banick. 145,610; Sept. 24.
Toy figure. H. M. Kass. 145,627; Sept. 24.
Vehicle, Child's wheeled. E. C. Huebner. 145,624; Sept. 24.
Vise. J. B. Thomson. 145,641; Sept. 24.
Washing machine and wringer or similar article, Combined. C. W. Sundberg. 145,639; Sept. 24.
Washing machine and wringer or similar article, Combined. J. H. Walter. 145,642; Sept. 24.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 24TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive articles. S. S. Kistler. 2,408,319; Sept. 24.
Absorber, Inertia. H. A. Herzig. 2,408,067; Sept. 24.
Acid compositions, Barbituric. M. T. Bush. 2,408,289; Sept. 24.
Acid sodium pyrophosphate and making it, Stabilized. E. N. Hetzel and G. E. Taylor. 2,408,258; Sept. 24.
Adjusting mechanism, Stitch length. C. W. Johnson. 2,407,986; Sept. 24.
Aerator. A. F. Flournoy. 2,408,306; Sept. 24.
Aerial cargo landing container. Z. T. Walter. 2,408,246; Sept. 24.
Air brake. H. N. Sudduth. 2,408,129; Sept. 24.
Air filter. H. E. Belsher. 2,408,158; Sept. 24.
Alkali-soluble methyl cellulose, Preparing. A. T. Maasberg. 2,408,326; Sept. 24.
Alkylation process. J. R. Meadow. 2,408,329; Sept. 24.
Alloy. J. L. Rodda. 2,408,341–2; Sept. 24.
Aluminum, Production of. L. C. Sturbelle. 2,408,241; Sept. 24.
Ammunition. C. de Ganahl. 2,408,252; Sept. 24.
Antenna, Direction finder. D. Bellare. 2,408,034; Sept. 24.
Apparatus for cultivating of plants. P. C. McLemore. 2,408,328; Sept. 24.
Apparatus for embedding an elongated flexible member in a moldable material. L. W. Miller and S. D. Mahlstadt. 2,408,149; Sept. 24.
Apparatus for inflating tires. G. C. Schule. 2,408,126; Sept. 24.
Apparatus for mixing and filling beverages. R. J. Stewart. 2,408,107; Sept. 24.
Apparatus for multicolor printing with electro lines of force. W. C. Huebner. 2,408,143; Sept. 24.
Apparatus for railway signal systems. F. T. Fereday. 2,408,206; Sept. 24.
Apparatus for refacing gate valves. P. E. Wilcox. 2,408,280; Sept. 24.
Apparatus for submarine signaling. E. E. Turner, Jr. 2,408,113; Sept. 24.
Apparatus for vacuum testing sealed articles. R. H. Dickman. 2,408,202; Sept. 24.
Arrangement for circuit interrupters, Gas cooling. C. H. Titus. 2,408,352; Sept. 24.
Arresting gear. C. G. Trimbach. 2,408,354; Sept. 24.
Article made of fibrous material. J. B. Brennan. 2,408,038; Sept. 24.
Atmosphere control, Furnace. N. J. Urquhart. 2,408,114; Sept. 24.
Automatic dilution system control valve. L. T. Miller. 2,408,266; Sept. 24.
Automatic means responsive to quantity of material in discharging receiver for controlling delivery from source. J. L. Michel. 2,408,221; Sept. 24.
Axle for motor vehicles, Driving. F. B. McClure. 2,408,264; Sept. 24.
Badge, Campaign. J. B. Palmer. 2,408,224; Sept. 24.
Bag filling, weighing, and discharging apparatus, Valve. W. R. Peterson. 2,408,225; Sept. 24.
Band and protector, Wrist watch. C. J. Watkins. 2,408,244; Sept. 24.
Base, Lamp. H. K. Richardson. 2,407,998; Sept. 24.
Beam structure, Walking. R. G. De La Mater. 2,408,200; Sept. 24.
Bearing, Expanded metal load. W. E. Mack. 2,408,082–3; Sept. 24.
Bituminous compositions. R. H. Cubberley and F. W. Yeager. 2,408,297; Sept. 24.
Blade and making same, Diamond charged saw. T. Longbotham. 2,408,148; Sept. 24.
Blowpipe for piercing metal bodies. R. B. Aitchison. 2,407,972; Sept. 24.
Body, Refuse. W. C. Anthony. 2,408,284; Sept. 24.
Bottle carrier. L. H. Cohn. 2,408,249; Sept. 24.
Brake: *See*—
  Air brake. Variable load brake.
  Friction brake.
Brake beam, Railway. E. G. Busse. 2,408,015; Sept. 24.
Calculating machine. D. Broido. 2,408,134; Sept. 24.
Camera. S. N. Wekeman. 2,408,247; Sept. 24.
Canvas device, Antiskid. A. Porcelli. 2,408,152; Sept. 24.
Carrier: *See*—
  Bottle carrier.
Cartridge, Waterproof explosive. A. W. Baker. 2,408,189; Sept. 24.
Case: *See*—
  Tiltable shelves drill holder case.
Casing, Magnetron. P. L. Spencer. 2,408,236; Sept. 24.
Casing structure, Toaster. J. R. Heilman. 2,407,984; Sept. 24.

Catalyst, Dehydrogenation. C. L. Gutzeit. 2,408,140; Sept. 24.
Catalyst manufacture. H. V. Atwell. 2,408,187; Sept. 24.
Catalyst preparation. A. L. Foster. 2,408,164; Sept. 24.
Catalyst production. G. H. Keating. 2,408,215; Sept. 24.
Catalytic alkylation process. H. J. Hepp. 2,408,167; Sept. 24.
Cellulose matter with terebene, Treating. C. Luckhaupt. 2,407,989; Sept. 24.
Cellulose matter with terpene dihydrochloride, Treating. C. Luckhaupt. 2,407,988; Sept. 24.
Chemical compounds and processes. H. G. Smith and T. L. Cantrell. 2,408,232; Sept. 24.
Circuit: *See*—
  Telephone repeater circuit
Circuit arrangement, Electrical. H. D. Garretson. 2,408,017; Sept. 24.
Circuit breaker. J. M. Cumming and R. C. Cunningham. 2,408,199; Sept. 24.
Circuit controller, Electric. J. K. Huber. 2,408,213; Sept. 24.
Clamp: *See*—
  Electrical ground clamp. Worm adjusting double
  Hydraulic internal line-u warp hose clamp.
  clamp.
Clasp for watch bracelets or the like. L. E. Valcourt. 2,408,279; Sept. 24.
Clays, Treatment of. A. D. Garrison and K. C. ten Brink. 2,408,207; Sept. 24.
Cleaning and coating metal, Composition for and method of. S. G. Thornbury. 2,408,155; Sept. 24.
Cleaning mechanism, Filter. C. G. Vokes and E. A. Stokes. 2,408,130; Sept. 24.
Closure device, Screw-threaded. S. H. Smith. 2,408,233; Sept. 24.
Clothes hanger. C. M. Derderian. 2,408,201; Sept. 24.
Clutch. C. M. Eason. 2,408,301; Sept. 24.
Clutch mechanism, Fluid pressure. L. O. McLean. 2,408,327; Sept. 24.
Coagulation process. W. Squires, Jr., and P. T. Parker. 2,408,128; Sept. 24.
Coat hanger or wall rack. W. Scurrah. 2,408,344; Sept. 24.
Coating compositions, Vinyl resin. G. H. Morey. 2,408,174; Sept. 24.
Coffee extracts, Making. J. L. Kellogg. 2,408,260; Sept. 24.
Collector, Cyclone dust. J. Crites. 2,408,250; Sept. 24.
Comb. E. L. Hollenbeck. 2,408,142; Sept. 24.
Communication system. L. A. Meacham. 2,408,085; Sept. 24.
Commutator construction. F. A. Heddleson and A. C. Weierich. 2,408,210; Sept. 24.
Composition of matter and method. R. S. Shelton and M. G. Van Campen, Jr. 2,408,345; Sept. 24.
Compounds, Highly used. W. J. Peppel. 2,408,095; Sept. 24.
Compressional waves, Sending and receiving. L. Batchelder. 2,408,028; Sept. 24.
Computer, Navigation. A. M. Wolfe. 2,408,357; Sept. 24.
Condensation process. G. W. Seymour and V. S. Salvin. 2,408,127; Sept. 24.
Condenser: *See*—
  Counter-current condenser.
Condenser, Countercurrent. H. E. Byer. 2,408,290; Sept. 24.
Connecting means, Pavement slab. F. W. Abel. 2,408,133; Sept. 24.
Connector: *See*—
  Line connector.
Constant voltage field emission arc discharge device. C. M. Slack, C. E. Dawley, and A. Pfeiffer. 2,408,004; Sept. 24.
Constant width synchronized pulse generator. E. Labin and D. D. Grieg. 2,408,078; Sept. 24.
Contactor, Rotor type. G. C. Armstrong. 2,408,185; Sept. 24.
Container: *See*—
  Aerial cargo landing container.
Control apparatus, Burner. L. L. Cunningham. 2,408,047; Sept. 24.
Control device for storage batteries, Electrolyte level. J. Sandusky. 2,408,178; Sept. 24.
Control device, Gun. J. E. Soenke. 2,408,277; Sept. 24.
Control of objects, Automatic positional. H. L. Hull, W. S. Gorrill, and W. F. Frost. 2,408,068; Sept. 24.
Control scheme. M. A. Pringle. 2,408,226; Sept. 24.

Control system. W. Ernst. 2,408,303; Sept. 24.
Control system. G. E. King. 2,408,217; Sept. 24.
Control system, Liquid pressure remote. J. K. Simpson. 2,408,003; Sept. 24.
Controller for water temperature, Thermostatic. W. R. Peterson. 2,408,269; Sept. 24.
Cooling system, Rocket motor. R. C. Truax, R. C. Stiff, Jr., W. Schubert, J. R. Patton, Jr., and R. Youngquist. 2,408,112; Sept. 24.
Copper from zinc, Stripping of. J. C. Lum. 2,408,220; Sept. 24.
Cord-locking construction, Venetian blind. J. Nisenson. 2,408,333; Sept. 24.
Corrosion of distillation equipment, Preventing the. D. C. Walsh, Jr., and E. Q. Camp. 2,408,011; Sept. 24.
Counter, Photoelectric. L. R. Hunter and O. C. Levander. 2,408,313; Sept. 24.
Coupling: *See*—
  Hose coupling.
Coupling arrangement. A. C. Beck. 2,408,032; Sept. 24.
Coupling device and system, Ultra high frequency. M. D. Fiske. 2,408,055; Sept. 24.
Coupling system. A. C. Beck. 2,408,033; Sept. 24.
Cover for the suction boxes of papermaking machines. J. Proulx. 2,408,176; Sept. 24.
Cutter: *See*—
  Rotary cutter.
Dehydrogenation process. C. L. Gutzeit. 2,408,139; Sept. 24.
Detector and the like, Fire and smoke. K. O. Donelian. 2,408,051; Sept. 24.
Device for rotating rounds. S. C. Hurley, Jr. 2,408,170; Sept. 24.
Dial. S. E. Butler. 2,408,042; Sept. 24.
Diamines, Preparation of. H. G. Johnson. 2,408,172; Sept. 24.
Diazodinitrophenol, Manufacture of. F. M. Garfield and H. W. Dreher. 2,408,059; Sept. 24.
Dilution system, Automatic. L. T. Miller. 2,408,265; Sept. 24.
Direction finder, Electronic rotation. H. G. Busignies. 2,408,039; Sept. 24.
Direction finder, Instantaneous visual. H. G. Busignies. 2,408,041; Sept. 24.
Direction finder receiver, Distorting. H. G. Busignies. 2,408,040; Sept. 24.
Direction finder with single receiver, Heterodyne. W. H. Wirkler. 2,408,122; Sept. 24.
Direction finding system with frequency shift. W. H. Wirkler. 2,408,121; Sept. 24.
Direction method and system, Radio. E. M. Deloraine and E. Labin. 2,408,048; Sept. 24.
Discharge device, Space. P. L. Spencer. 2,408,238–9; Sept. 24.
Discriminator, Pulse. E. Labin and D. D. Grieg. 2,408,079; Sept. 24.
Dispenser: *See*—
  Hygroscopic dispenser. Pocket dispenser.
Distribution system for high-temperature pebble bed furnaces, Fuel. F. M. Wolf. 2,408,282; Sept. 24.
Distributor for stokers. S. B. Yates. 2,408,358; Sept. 24.
Draft mechanism for railway cars. A. Campbell. 2,408,195; Sept. 24.
Drain device for cooling system, Automatic. G. Wood. 2,408,183; Sept. 24.
Drilling apparatus. J. C. Curtis and E. G. Gartin. 2,407,976; Sept. 24.
Drive, Landing wheel. F. H. Fodor. 2,408,163; Sept. 24.
Dyestuff and making same, Vat. T. Holbro, W. Kern, and P. Sutter. 2,408,259; Sept. 24.
Electric iron. W. L. Gould. 2,408,209; Sept. 24.
Electric switch. C. A. Adams. 2,408,157; Sept. 24.
Electrical apparatus. D. A. Bell and A. H. A. Wynn. 2,408,192; Sept. 24.
Electrical ground clamp. C. J. Shrader. 2,408,276; Sept. 24.
Electrode for field emission discharge device, Controlled. J. H. Findlay, C. E. Dawley, and A. Pfeiffer. 2,407,979; Sept. 24.
Electron discharge device, Beam deflection. G. R. Kilgore. 2,408,216; Sept. 24.
Engine: *See*—
  Free piston internal-com- Two stroke piston control
  bustion engine. engine.
  Internal-combustion engine.
Erection device for gyroscopes. L. F. Carter. 2,408,044; Sept. 24.
Ethylene, Purification of. E. F. Wadley and J. T. Horecz. 2,408,010; Sept. 24.
Exercising and game apparatus. L. G. Brunner. 2,408,160; Sept. 24.
Fastening device. O. J. Poupitch. 2,408,340; Sept. 24.
Fastening device. L. H. Steans and E. R. Andrews. 2,408,153; Sept. 24.
Feeding and injection apparatus for oil-burning engines, Fuel. C. L. Cummins. 2,408,298; Sept. 24.
Feeding device for injection or extrusion machine. B. D. Ashbaugh. 2,408,285; Sept. 24.
Fillets, Producing. H. P. Moyer. 2,407,995; Sept. 24.
Filling arrangement for ball-pointed fountain pens. I. Florman. 2,408,256; Sept. 24.
Filter: *See*—
  Air filter.
Fire hose reel. C. C. Calabrese and J. S. Herold. 2,408,043; Sept. 24.
Fixture, Adjustable. V. G. Jarman. 2,408,316; Sept. 24.
Folding machine, Plan. E. C. McFarlane. 2,407,992; Sept. 24.
Fountain pump. T. L. Titus. 2,408,009; Sept. 24.
Frame: *See*—
  Quilting frame.
Free piston internal-combustion engine. E. S. L. Beale. 2,408,031; Sept. 24.
Friction brake. T. J. Schuetz and E. W. Turnquist. 2,408,179; Sept. 24.
Fuel, Igniting liquid. H. A. Beckstrom. 2,407,973; Sept. 24.
Furnace: *See*—
  Hot-air furnace.
Furnace machine, Electric. H. A. Strickland, Jr. 2,408,350; Sept. 24.
Furnace repair unit, Open-hearth. J. J. Cain, Jr. 2,408,016; Sept. 24.
Fuse, Current-limiting. C. G. Suits. 2,408,351; Sept. 24.
Gain-control system for seismic amplifiers. E. J. Shimek and W. B. Hemphill. 2,408,001; Sept. 24.
Game. E. F. Rebholz. 2,408,270; Sept. 24.
Garment hanger. E. L. Johnson. 2,408,145; Sept. 24.
Gluing machine, Continuous. S. H. Hall. 2,408,064; Sept. 24.
Gear: *See*—
  Arresting gear.
Generator: *See*—
  Constant width synchro- Pulse generator.
  nized pulse generator. Stable pulse generator.
Governor, Speed. R. C. Darnell. 2,408,161; Sept. 24.
Governor systems, Acceleration-responsive. C. R. Hanna and S. J. Mikina. 2,407,982; Sept. 24.
Grader, Adjustable push. O. R. Peterson and L. L. Hyler. 2,408,268; Sept. 24.
Guard or protector for electric cables. B. A. Diebold. 2,408,253; Sept. 24.
Gun-charging mechanism. F. R. Thresh. 2,408,110; Sept. 24.
Gun positioning system. H. L. Hull, W. S. Gorrill, and W. F. Frost. 2,408,069; Sept. 24.
Handling apparatus, Article. G. Goebel. 2,408,019; Sept. 24.
Hanger: *See*—
  Clothes hanger. Garment hanger.
Harness, Improvement in parachute. J. Miller and B. L. Kauffman. 2,408,088; Sept. 24.
Hat construction, Interchangeable. A. I. Josephs. 2,408,318; Sept. 24.
Heater and air circulator, Combined electric. J. M. Auflero. 2,408,286; Sept. 24.
Heating apparatus. O. W. Pike. 2,408,339; Sept. 24.
Heating apparatus, Electrical. W. M. Roberds. 2,408,229; Sept. 24.
Heating of thin-walled nonmagnetic metallic tubes, Magnetic induction. R. M. Baker. 2,408,190; Sept. 24.
Hinge, Adjustable. C. M. Jahn. 2,408,071; Sept. 24.
Hoist and transporting device. H. McKee. 2,407,993; Sept. 24.
Hold-down device, Resilient. W. J. Miller. 2,408,330; Sept. 24.
Hose coupling. J. G. Vartanian. 2,408,243; Sept. 24.
Hot-air furnace. J. C. Miles. 2,408,087; Sept. 24.
Hydraulic device. R. J. Parsons. 2,408,338; Sept. 24.
Hydraulic internal line-up clamp. B. V. Elliott and H. C. Price. 2,408,255; Sept. 24.
Hydrocarbon materials, Treatment of aromatic. M. P. Matuszak. 2,408,173; Sept. 24.
Hydrocarbons, Catalytic conversion of. H. V. Atwell and H. H. Gross. 2,408,186; Sept. 24.
Hydrocarbons, Catalytic conversion of. S. C. Carney. 2,408,294; Sept. 24.
Hydrocarbons, Dehydrogenating. A. Voorhies, Jr. 2,408,131; Sept. 24.
Hydrocarbons, Dehydrogenation of. K. K. Kearby. 2,408,146; Sept. 24.
Hydrolysis of aliphatic sulphonyl chlorides. T. E. Dillon. 2,408,300; Sept. 24.
Hygroscopic material dispenser. W. F. Gallagher. 2,408,058; Sept. 24.
Igniter of blasting detonators against accidental firing, Safeguarding electric. H. J. Rolfes. 2,408,124–5; Sept. 24.
Image production, Television. G. K. Teal. 2,408,108; Sept. 24.
Improved manufacture of methyl acrylate by the thermal decomposition of methyl-alpha-acetoxypropionate. W. P. Ratchford and C. H. Fisher. 2,408,177; Sept. 24.
Impulse system. L. A. Meacham, M. E. Mohr, and C. V. Parker. 2,408,086; Sept. 24.
Indicating and supervisory system, Electrical remote. E. A. H. Bowsher, H. M. M. d'Assis-Fonseca, and H. J. Ward. 2,408,037; Sept. 24.
Indicating mechanism, Work. W. K. Andrew and J. J. Lenert. 2,407,970; Sept. 24.
Induction apparatus, Electrical. J. K. Hodnette. 2,408,211–12; Sept. 24.

Injection apparatus, Fuel. A. T. Bremser. 2,408,288; Sept. 24.
Insecticide. S. I. Gertler and H. L. J. Haller. 2,408,307; Sept. 24.
Intelligence, Reproduction of. N. H. Young, Jr. 2,408,117; Sept. 24.
Interlock for elevator doors, Electro-mechanical. E. W. Fenn. 2,408,054; Sept. 24.
Internal-combustion engine. F. A. I. Muntz. 2,408,089; Sept. 24.
Internal-combustion engine of the free piston type. H. O. Farmer. 2,408,057; Sept. 24.
Iron: *See*—
Electric iron.
Isoascorbic acid, Derivatives of. P. A. Wells and D. Swern. 2,408,182; Sept. 24.
Isomerization process. O. Gerbes. 2,408,018; Sept. 24.
Isoprene, Separation and purification of. J. A. Patterson. 2,407,997; Sept. 24.
Jumper, Baby. A. J. Shurtliff. 2,408,002; Sept. 24.
Lapping and honing machine. M. E. Early. 2,408,204; Sept. 24.
Lapping method and machine. D. S. Oliver. 2,408,334; Sept. 24.
Latch: *See*—
Vehicle door latch.
Lens support and lens hood for folding cameras, Combined. T. M. Aiken. 2,408,184; Sept. 24.
Level. C. O. Rothweiler. 2,408,343; Sept. 24.
Life saving device. E. R. Hawkins. 2,408,166; Sept. 24.
Lifting mechanism. W. L. Simonton. 2,408,181; Sept. 24.
Limes and reducing the plasticity of aqueous suspensions thereof, Hydrated dolomitic. C. C. Loomis and W. J. Barrett. 2,408,324; Sept. 24.
Line connector. T. R. Cottrell. 2,408,045; Sept. 24.
Liquids, Treatment of. R. A. Hill. 2,408,021; Sept. 24.
Loaf package, Banded bread. A. T. Jones. 2,408,317; Sept. 24.
Lock. M. E. Wollin. 2,408,283; Sept. 24.
Locking mechanism. S. Larsson. 2,408,024; Sept. 24.
Locomotive, Multiple-cylinder steam. F. W. George, Jr. 2,407,980; Sept. 24.
Logging, Well. P. S. Williams. 2,408,012; Sept. 24.
Machine for performing division, Calculating. A. F. Pott. 2,408,097; Sept. 24.
Machine for shaping uppers over lasts. B. Jorgensen. 2,408,022; Sept. 24.
Machine for winding fin stocks. J. D. Lear. 2,408,322; Sept. 24.
Machine tool. F. W. Henke. 2,407,985; Sept. 24.
Magnetron, High efficiency. P. L. Spencer. 2,408,235; Sept. 24.
Magnetron, Tunable. P. L. Spencer. 2,408,234; Sept. 24.
Magnetron, Tunable. P. L. Spencer. 2,408,237; Sept. 24.
Measuring apparatus. W. E. Shoupp. 2,408,230; Sept. 24.
Measuring device, Ultra high frequency. J. W. Coltman. 2,408,198; Sept. 24.
Measuring instrument, Electrical. B. B. Grace, J. Handley, and G. Gilliver. 2,408,060; Sept. 24.
Measuring instrument, Electrical. B. E. Lenehan and G. J. Wey. 2,408,218; Sept. 24.
Mechanism for contact printing. G. L. Hassler. 2,408,310; Sept. 24.
Metal recovery. P. T. Stroup and C. B. Willmore. 2,408,278; Sept. 24.
Microscope, Electron. C. H. Bachman. 2,408,287; Sept. 24.
Mineral oil composition. H. G. Smith, T. L. Cantrell, and J. G. Peters. 2,408,103; Sept. 24.
Mirror, Rear view. L. F. Hofer. 2,408,168; Sept. 24.
Mixture control, Fuel. W. F. Stanton. 2,408,104; Sept. 24.
Mixture control, Fuel. W. F. Stanton. 2,408,348; Sept. 24.
Mixture control, Fuel. W. F. Stanton. 2,408,349; Sept. 24.
Mold and forming plastics thereon. Z. T. Walter. 2,408,245; Sept. 24.
Molding composition, Starch-melamine. D. W. Hansen. 2,408,065; Sept. 24.
Motor: *See*—
Reversible single-phase capacitor motor.
Motor control, Dual. P. Schon. 2,408,098; Sept. 24.
Mount for telescopic sights. W. H. English. 2,407,977; Sept. 24.
Mounting and assembly for snap-action electric switches, Spring. H. E. Schleicher. 2,408,274; Sept. 24.
Mounting construction, Rectifier stack. M. Enderlin. 2,408,052; Sept. 24.
Mounting for electric switches, Portable. H. R. Harrison. 2,408,309; Sept. 24.
Multichannel system. E. Labin. 2,408,077; Sept. 24.
Multipolar winding, Polyphase. M. Liwschitz. 2,408,219; Sept. 24.
Multistage centrifugal pump. E. G. Landberg. 2,407,987; Sept. 24.
Net, Making. M. G. Grabowsky. 2,408,308; Sept. 24.
Network, Frequency changing. C. M. L. Eyre and J. O. Gilderdale. 2,408,053; Sept. 24.
Nonreturn valve. H. O. Farmer. 2,408,056; Sept. 24.
Nozzle for jet-propelled aircraft, Variable-area. A. Sherman. 2,408,099; Sept. 24.
Observation system. H. Benioff. 2,408,035; Sept. 24.
Oil compositions. H. G. Smith, T. L. Cantrell, and J. G. Peters. 2,408,102; Sept. 24.
Oil well pump. F. Kowalski, Jr., and R. L. Harper. 2,408,075; Sept. 24.
Oils, Lubricating. S. Musher. 2,408,090; Sept. 24.
Oscillator, Concentric line. A. H. Turner. 2,408,355; Sept. 24.
Oven, Air-conditioned electric cooking. H. E. Mills. 2,408,331; Sept. 24.
P-amino-benzene-sulphamide derivatives. W. Hentrich and E. Schirm. 2,408,066; Sept. 24.
Package, Blade. J. Muros. 2,408,222; Sept. 24.
Padlock. R. K. and R. L. Gray. 2,408,137; Sept. 24.
Pattern and casting therewith, Shell. A. Slatis. 2,408,005; Sept. 24.
Pinacol production, Electrolytic. C. R. Boettger, Jr., T. S. Chambers, and O. C. Slotterbeck. 2,408,036; Sept. 24.
Pinacols, Electrolytic production of. O. C. Slotterbeck. 2,408,101; Sept. 24.
Pipe wrench. B. L. Lurie. 2,407,990; Sept. 24.
Piston. K. A. Smith. 2,408,346; Sept. 24.
Pocket dispenser. W. C. Moeller. 2,408,150; Sept. 24.
Polyhydroxyamino compounds. J. S. Pierce and J. H. Wotiz. 2,408,096; Sept. 24.
Polymerization products, Recovery of low temperature. R. M. Thomas and D. C. Field. 2,408,007; Sept. 24.
Predictor, Artillery. C. A. Lovell, D. B. Parkinson, K. D. Swartzel, Jr., and B. T. Weber. 2,408,081; Sept. 24.
Press control. L. S. Hubbert. 2,408,312; Sept. 24.
Printing. W. C. Huebner. 2,408,144; Sept. 24.
Process. A. A. Pavlic. 2,408,094; Sept. 24.
Prospecting apparatus, Electrical. C. B. Bazzoni and J. W. Millington. 2,408,029; Sept. 24.
Protein base materials, Treating synthetically shaped. F. C. Atwood. 2,408,026; Sept. 24.
Protein fibers, Treating synthetic. F. C. Atwood. 2,408,027; Sept. 24.
Pulse generator. L. L. Lakatos. 2,408,261; Sept. 24.
Pump: *See*—
Fountain pump.
Multistage centrifugal pump.
Pump. W. F. Thompson. 2,408,109; Sept. 24.
Pumping apparatus. W. H. Wineman. 2,408,013–14; Sept. 24.
Pyridine-3-acetic acid and derivatives therefor, and preparing the same. M. Hartmann, K. Miescher, H. Kaegi, and W. Bosshard. 2,408,020; Sept. 24.
Quick-freezing apparatus for food articles. A. J. Stone. 2,408,154; Sept. 24.
Quilting frame. R. N. Fancher. 2,408,205; Sept. 24.
Rack: *See*—
Coat hanger or wall rac
Radio direction finding system. W. H. Wirkler. 2,408,120; Sept. 24.
Radio direction finding system, Azimuth. W. H. Wirkler. 2,408,118; Sept. 24.
Radio direction finding system, Heterodyne. W. H. Wirkler. 2,408,119; Sept. 24.
Range apparatus. H. E. Cossin. 2,408,295; Sept. 24.
Receiver, Multiplex. D. D. Grieg. 2,408,063; Sept. 24.
Receptacle: *See*—
Spectacle or eye glass receptacle.
Receptacle for toilet paper, Storage. T. R. Black. 2,407,971; Sept. 24.
Recording and reproducing machine, Sound. J. M. Kuhlik. 2,408,320; Sept. 24.
Recording device for automobiles. E. E. Eriksson. 2,408,302; Sept. 24.
Reel: *See*—
Fire hose reel.
Refractory product, Cast. T. E. Field. 2,408,305; Sept. 24.
Regenerative bass compensation circuit. H. Toomin. 2,408,242; Sept. 24.
Regulating system, Electrical. R. C. Olesen. 2,408,091; Sept. 24.
Regulator. B. O. Austin. 2,408,188; Sept. 24.
Relay, Simplified ground. S. L. Goldsborough. 2,408,208; Sept. 24.
Releasing device, Pipe. O. J. McCullough. 2,407,991; Sept. 24.
Repeater system, Telegraph. F. H. Fay and E. W. Reeve. 2,408,304; Sept. 24.
Reproducing signals, Visually. L. A. de Rosa. 2,408,050; Sept. 24.
Resin gel, Pigmented. H. A. Toulmin, Jr. 2,408,353; Sept. 24.
Resinous condensates, Water-soluble. W. L. Morgan. 2,408,332; Sept. 24.
Resistance and making same, Wire-wound. E. M. Patterson. 2,408,092; Sept. 24.
Resistance devices, Making wire-wound, card-type. E. M. Patterson. 2,408,093; Sept. 24.
Resistance unit, Electrical. H. L. Coyne, J. J. Kuhn, and J. E. Ross. 2,408,046; Sept. 24.

Rest attachments for telephone instruments, Cushion. J. P. Bourdius. 2,408,194; Sept. 24.
Resuscitator insufflator aspirator. Le R. G. Fox. 2,408,136; Sept. 24.
Reversible single-phase capacitor motor. W. E. Menzies. 2,407,994; Sept. 24.
Rocket system, Two-stage. R. C. Truax, R. C. Stiff, Jr..
Setscrew. G. A., G. A., Jr., H., and L. Moore. 2,408,267; Sept. 24.
Roof, composite. T. M. Dantz. 2,408,251; Sept. 24.
Roofing. V. A. Cardarelli, Sr. 2,408,292; Sept. 24.
Rotary cutter. A. S. Fodor. 2,408,257; Sept. 24.
Rotary gate valve. H. G. Nash. 2,408,223; Sept. 24.
Rubber, Reclaiming. F. H. Cotton and P. A. Gibbons. 2,408,296; Sept. 24.
Sanitary pipe washer. O. E. Stone. 2,408,240; Sept. 24.
Sash, Window. J. G. Wilkin. 2,408,281; Sept. 24.
Saw-tooth setting device. I. L. Church. 2,408,197; Sept. 24.
Seal, Shaft. O. Jacobsen. 2,408,314–15; Sept. 24.
Selenium coated elements and making them. A. von Hippel. 2,408,116; Sept. 24.
Setscrew. G. A., G. A., Jr., H., and L. Moore. 2,408,267; Sept. 24.
Sewing machine attachment. C. W. Martin. 2,408,025; Sept. 24.
Sheet, Transfer. R. M. Kneale. 2,408,147; Sept. 24.
Shifter, Phase. H. E. Beste. 2,408,193; Sept. 24.
Shirt construction. A. L. Silver and A. Stein. 2,408,180; Sept. 24.
Sighting mechanism. W. W. Willard. 2,408,356; Sept. 24.
Signal translator, Telegraph permutation code. F. F. Shipley. 2,408,100; Sept. 24.
Signal with vibration lock, Drop. F. A. Stearn. 2,408,106; Sept. 24.
Signaling system, Selective. R. F. Davis. 2,408,299; Sept. 24.
Sole and heel, High traction. H. A. Husted. 2,408,214; Sept. 24.
Spectacle and eyeglass receptacle. G. Y. Eaton. 2,408,162; Sept. 24.
Spectrophotometric system. A. P. Kruper. 2,408,023; Sept. 24.
Speed change unit. J. D. Christian. 2,407,975; Sept. 24.
Sprinkler head. R. E. Carlson. 2,408,196; Sept. 24.
Stable pulse generator. D. D. Grieg. 2,408,061; Sept. 24.
Stairway, Moving. W. F. Eames. 2,408,203; Sept. 24.
Starter, Fluorescent switch. L. A. Harrawood. 2,408,165; Sept. 24.
Stoker. H. F. Lawrence. 2,408,321; Sept. 24.
Stool or the like, Knockdown. W. C. Panzer. 2,408,337; Sept. 24.
Storage tank. H. A. Starret. 2,408,105; Sept. 24.
Stroboscopic apparatus for phonographs. W. L. Nies. 2,407,996; Sept. 24.
Sulphur in recovery of nickel, Removal of. R. C. Hills and M. F. Dufour. 2,408,311; Sept. 24.
Sunshade and other auxiliary spectacles. R. H. Sager. 2,408,273; Sept. 24.
Supporting structure, Level work. J. F. Hoffer. 2,408,169; Sept. 24.
Supporting structure, Sliding window screen. E. Gutoski. 2,408,138; Sept. 24.
Suspender for artificial legs. C. I. Kickland. 2,408,073; Sept. 24.
Suspension unit for vehicle wheels. S. du Pont. 2,408,254; Sept. 24.
Switch; *See*—
Electric switch.
Switchboard, Teletypewriter. P. V. Koos. 2,408,074; Sept. 24.
Syringe, Hypodermic. M. L. Lockhart. 2,408,323; Sept. 24.
System for positioning heavy objects. H. L. Hull and D. J. Munroe. 2,408,070; Sept. 24.
Tank: *See*—
Storage tank.
Telephone repeater circuit. K. S. Johnson. 2,408,072; Sept. 24.
Television system. A. M. Carmel. 2,408,293; Sept 24.
Terminal assembly, Coaxial. W. W. Rigrod and D. G. Clifford. 2,408,271; Sept. 24.
Tiltable shelves drill holder case. J. A. Ramsey. 2,408,227; Sept. 24.
Toaster. V. Mazzarisi. 2,408,263; Sept. 24.
Toggle system for injection molding machines. T. H. Eyles. 2,407,978; Sept. 24.
Tool: *See*—
Machine tool.
Tool mechanism, Impact. C. H. Richards. 2,408,228; Sept. 24.
Top. S. L. Long. 2,408,262; Sept. 24.
Top, Automatic. S. J. Weeks. 2,408,132; Sept. 24.
Torque wrench. D. S. Oliver and J. Kanuch. 2,408,335; Sept. 24.
Tower, Transport. M. E. Phillips. 2,408,151; Sept. 24.
Toy. T. Hell. 2,408,141; Sept. 24.
Toy flying machine. H. E. Shaeffer. 2,408,275; Sept. 24.
Toy, Structural. E. M. Roach. 2,408,272; Sept. 24.
Translator, Signal. D. D. Grieg. 2,408,062; Sept. 24.
Transmission. P. Orr. 2,408,336; Sept. 24.
Transmission device, Power. E. C. Lloyd. 2,408,080; Sept. 24.
Transmission, Hydrodynamic. W. D. Tipton. 2,408,008; Sept. 24.
Transmission system, Intelligence. L. A. de Rosa. 2,408,049; Sept. 24.
Transmitter, Pulse. E. Labin. 2,408,076; Sept. 24.
Trap chamber with barometric cutoff, Measuring. T. L. Titus. 2,408,156; Sept. 24.
Treating machine. Q. C. Barber. 2,408,248; Sept. 24.
Tubular article, Working. C. L. Luce and N. B. Duncan. 2,408,325; Sept. 24.
2-methyl-1, 2-propanediamine, Preparation of. H. G. Johnson. 2,408,171; Sept. 24.
Two stroke piston-controlled engine. E. S. L. Beale. 2,408,030; Sept. 24.
Ultra high-frequency device. D. G. Clifford and I. E. Mouromtseff. 2,407,974; Sept. 24.
Valve: *See*—
Automatic dilution system control valve.
Rotary gate valve.
Valve. J. F. Schiller. 2,408,000; Sept. 24.
Valve construction, Hydraulic. T. R. Smith. 2,408,006; Sept. 24.
Vaporizing apparatus. J. W. Martin. 2,408,084; Sept. 24.
Variable load brake. L. I. Pickert. 2,408,123; Sept. 24.
Vehicle door latch. H. W. Rightmyer. 2,407,999; Sept. 24.
Viewer, Stereoscopic. R. H. Varian. 2,408,115; Sept. 24.
Voting machines. A. N. Gustavson. 2,407,981; Sept. 24.
Washer: *See*—
Sanitary pipe washer.
Washer, Pulp. H. M. Barnett and R. C. Mosher. 2,408,191; Sept. 24.
Welding, Electric underwater. P. Peilion. 2,408,175; Sept. 24.
Welding material and process. C. A. Cadwell. 2,408,291; Sept. 24.
Wells, Completion of. O. D. Harper. 2,407,983; Sept. 24.
Winding machine, Yarn. L. M. Cotchett. 2,408,135; Sept. 24.
Work-holding unit, Tiltable rotary power-driven. H. A. Skilton. 2,408,231; Sept. 24.
Worm adjusting double warp hose clamp. V. E. Sprouse. 2,408,347; Sept. 24.
Wrapper, Packing. G. W. Boh. 2,408,159; Sept. 24.
Wrench: *See*—
Pipe wrench.
Torque wrench.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 24, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

2— 116: 2,408,180
